The scheme of borrowing and conversion, which is such a remarkable feature of the present Budget, demands a passing notice. It is proposed to raise a loan of Rs. 6 crores, which under certain circumstances may be raised to 12 crores. This proposal is accompanied by an offer to convert the three, and three-and-a half per cents. All subscribers to the new 4 per cent. loan have the option to convert into 4 per cent. an equivalent amount of 3 per cent. and 3½ per cent. paper. The rates of conversion are to be fixed later on and the privilege is open for three years. This step was dictated by the need of maintaining the price of India's premier security. At the same time the Government had to consider that the holders of any particular form of security did not get any special advantage. As far as can be judged at present, this new policy is likely to be eminently successful.

On the whole, finance in India during the War has been better managed than in England. India has every reason to be proud of the part she has played in this World War. Besides sending the flower of her manhood to fight in the battles of the British Empire, she has rendered timely and important services in furnishing supplies, in training the troops, in fitting out transports. "The total value of the supplies and services of all sorts which she has undertaken on behalf of the War Office amounted to £10 millions in 1914-15, and is estimated at £18 millions in 1915-16 to £20¾ millions in 1916-17." These services, moreover, do not include a recoverable outlay of £850,000 in 1915-16, and a million in 1916-17 for services rendered by this to the Australian Government. We have increased our taxation, arrested the material development of the country and added to the unproductive debt. That we have not been able to do more is due not to any want of zeal but rather to that shortsighted policy which has prevented the full development of the resources of this country. The Government cannot borrow very much in this country because the savings of the people are limited. We cannot bear additional taxation because our ability is so limited. Let us hope that the lessons of this War will not be lost. If a serious effort is conscientiously made to develop the industries of India, if a judicious outlay is made upon works that directly add to the productiveness of the land, there is every reason to hope that India would be able to bear any unusual strain upon her with relative ease; and that she will be a source of undiluted strength to the Empire of which she is no insignificant part.

GOKHALE'S SPEECHES AND WRITINGS.

The first Part includes all his utterances in the Supreme Legislative Council; the second and third Parts contain his important Congress speeches and his notable utterances on the South African Indian question; in the fourth Part we have his speeches in appreciation of Mr. A. O. Hume, Lord Northbrook, Mr. Dadabhai Naoroji, Mr. Mahadev Govind Ranade, Mr. W. C. Bonnerjee, Sir P. M. Mehta, Sir William Wedderburn, and others; the fifth Part comprises selection of miscellaneous speeches delivered in England and India. The sixth Part contains his Evidence before the Welby Commission and full text of the Note prepared by him for the Royal Commission on Decentralisation. In the Appendix will be found his paper on "East and West in India" read at the Universal Races Congress, and the Constitution of the Servants of India Society founded by him in 1905. With seven Illustrations and an Index.

Crown Octavo 1236 *Pages. Price: Rs. 3. To Subscribers of "The Indian Review," Rs. 2-8.*

THE RETURN FROM ERZERUM.

GERM-HUN KAISER—What! The Bear's hug has done it all! I expected you to tear his claws and draw his teeth!

TURKEY—Yes, Sire, and I attempted and failed! Following your instruction and advice has brought me to this pass!

[PETROGRAD, February 16.—The Grand Duke Nicholas has telegraphed to the Tsar:—God has accorded the valiant troops of our army in the Caucasus such great help that Erzerum has been taken after five days of unprecedented assault. I am inexpressibly happy to inform Your Majesty of this victory.]

AIRCRAFT IN THE EUROPEAN WAR

BY MR. J. W. MADELEY, M.A., M. INST. C.E., M.AM. SOC., C.E.
(*Special Engineer, Madras Corporation.*)

THE present European War is the first in which aircraft have been extensively employed by the belligrents on both sides. In the Balkan War, very few aeroplanes and no airships were used. In the invasion of Tripoli, aircraft were confined to the Italian side. Hence there was little on which to form an opinion of the services that aircraft could render to armies and navies. In the present war, the effect of aviation has been so profound as to modify greatly the character of military operations.

Uses of Aircraft.—The principal uses to which aircraft have been put in the present war are for :—(1) Reconnaisance. (2) Directing of artillery fire. (3) Attack of localities. (4) Driving off of hostile aircraft.

By far the most important of these are reconnaissance, and the direction of artillery fire.

Reconnaissance.—Reconnaissance may be defined as the examination of territory for the purpose of ascertaining the strength and the positions of the enemy. This work, which is of the greatest possible importance, has in the present war been carried out almost entirely by aircraft. Thus aircraft have relieved cavalry and infantry of a dangerous but important duty for which they are much better suited because : (1) They can scout infinitely more quickly than horsemen, and at comparatively small risk. (2) They can explore far behind the enemy's fighting line.

So much better than cavalry are aircraft for this purpose that commanders have, as never in the past, been supplied with information, both accurate and detailed, concerning the movements of the enemy, traffic on railways, troops on the march, and position and composition of hostile forces.

Owing to their high speed, aircraft have been able to place the army commanders in possession of details of enemy movements within a very short time of the movements being initiated. As a result, Generals have, in this war, possessed a much fuller and more accurate knowledge of the position and movements, both of their allies and of the enemy, than in any previous war. The consequence has been the almost *complete elimination of surprise*. This is the most notable result of employing aircraft in the present war. It is only at night that troops can be moved without being observed by enemy aircraft, and, in view of the fact that aircraft are now being provided with powerful search-lights, even this opportunity to move unseen is likely to vanish to a considerable extent during the present war. For reconnaissance purposes then, aircraft have usurped the function of cavalry.

An example is afforded by the recent reconnaissance by the Roumanians when, according to a telegram dated 18th February 1916, "the Roumanian Government are anxious regarding the movements of German and Bulgarian troops and have sent three squadrons of aeroplanes over Bulgaria. The airmen, despite heavy fire, discovered a few new trenches and 50,000 troops, but no heavy artillery."

When it is remembered that it is only from the information obtained from strategical reconnaissance that the plans of campaign are made, it becomes obvious that aircraft are now of the very greatest possible importance as the eyes of the Commander-in-Chief.

Method of Carrying out Reconnaissance.—There are two methods of carrying out aerial reconnaissance which are in general use. In the first, the observer is directed to pass over a selected line of country, and in the second, to travel above a certain area, and record everything of value that he sees. The latter is comparatively slow and is only resorted to when detailed information is required.

Qualities of an Observer.—It has been found that a good observer must possess qualities of the highest order. He must possess extensive military knowledge, in order that he may know what to look for, and that he may understand what he sees. He must be able to read a map quickly, and must be able to record on it accurately anything that is of Military importance. The observer must be courageous, and able to endure hardships, such as driving rain or snow in a temperature many degrees below freezing point. He must be able to work when the machine is pitching and rolling in a gale as a ship pitches and rolls in a heavy sea. Above all, the observer must have the power of concentration. While his machine is under shell fire, and while bullets are continually piercing the planes, he must be able to concentrate his attention on his objective. Observers have been found to require careful training and practice before they can bring accurate and complete information.

Height during Reconnaissance.—Before the present war, 3,000 or 4,000 feet was usually consid-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ered safe. That height still continues to be practically safe from rifle fire. Anti-aircraft guns have, however, been developed to such a degree that to be safe, it is now necessary to fly at an altitude not less than 8,000 feet. But at 8,000 feet it is impossible to obtain much detailed information, and it therefore becomes necessary for aviators to take risks to obtain information, that is to say, they have to descend to altitudes where they are liable to suffer damage from anti-aircraft guns. Having once obtained the required information, an aviator should immediately ascend to safety in order that he may preserve, not only himself and his machine, but also the information which he has obtained.

Direction and Control of Artillery Fire.—The most striking successes achieved by aircraft have been in the directing and controlling of artillery fire. In fact, aircraft have become indispensable to the artillery, and have given it an importance that it has not possessed since the days of Napoleon.

Before the present war, it was essential that the fire director should see the target. Now it is not necessary. He can fire from behind a hill, taking his line and range from a map. For instance, suppose an enemy battery is doing mischief and has to be silenced. The fire commander instructs the aircraft commander to locate the battery. He indicates as nearly as he is able what he considers to be the position of the battery. An aviator takes up a map of the district which has been carefully divided into squares, and searches the country until he locates the battery. He then marks its position on one of the squares of the map and returns to the fire director. From the position thus marked on the map, the fire director determines, and gives instructions as to range and direction. The aviator goes up again and, noting where the shells strike, signals back the corrections necessary until a hit is registered and the battery destroyed. This is known as "firing off the map."

Again, if it is required to drop shells on distant trenches that may be on the other side of a hill, an aviator flies to the trenches and signals when he is over them, perhaps dropping a smoke ball, so that the fire director may have a fairly stationary object on which to range. The fire director then opens fire, which is observed and corrected by the aviator until the trench has been thoroughly searched.

An interesting result of the control of artillery fire by aircraft is that, where artillery is used, infantry trenches are usually placed on the reverse side of a hill and fairly close to the summit, because it is in this position that it is most difficult for artillery to hit them. If they are on the near slope of a hill, artillery can render them untenable, unless they are extremely deep and well protected, and such trenches can only be made at the expenditure of much time and labour, that is, in semi-permanent positions.

Aircraft in Attack.—Aircraft have been used to attack aircraft stations, railway stations, convoys, bridges, trains, troops, and railways, also to precede the infantry attack by a storm of darts and bombs dropped on the enemy, and to pursue him in retreat with the same weapons. Up to the present, however, no great success has been achieved. Probably the most successful have been the raids by fleets of British and French aeroplanes to destroy airship sheds, interrupt communications, and prevent the effective bringing forward of reinforcements. The aeroplane has proved much more effective than the airship in attack. As a result of their Zeppelin raids on England, the Germans, up to 30th August 1915, had killed and wounded 278 civilians and 7 soldiers. The raids were brutal, but from a military point of view quite ineffective.

The most common weapons used by aircraft have been explosive bombs and incendiary shells, which when dropped on vulnerable points cause great damage. It has, however, been found very difficult to hit vulnerable points. Another weapon of offence that is used against troops is the dart, which takes the form of a light steel rod, pointed at one end, and feathered at the other to ensure descent point downwards. It has been found that from as low an elevation as 600 ft. such a dart has the power of a rifle bullet to kill or wound. In a Munich paper Dr. Volkmann has stated that a dart which struck a man on the shoulder traversed the whole of his body. The wounds inflicted are almost always mortal. An aeroplane can carry some 15,000 of such darts. If a cloud of darts is launched against troops in close formation, a great deal of damage will be done.

Zeppelin Raids on England.—For the attacks referred to above, aeroplanes are usually employed. The Germans have, however, used Zeppelin airships for attacks on English towns. While in some cases these attacks have been on objects of military importance, there is no doubt that most of the raids have aimed at producing a moral effect, and causing panic among non-combatants. They certainly have produced a moral effect, but not that which the Germans desired; for, instead of causing panic, they have aroused the bitterest anger

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and determination to punish the murderers, who have caused such suffering to many innocent women and children, without any attempt to achieve a military object.

It may be asked why the Germans do it? The reply is that they know themselves to be in a severe predicament. Their effectives are nearly exhausted. Their armies are beginning to dwindle in numbers, and they hope by such demonstrations of "frightfulness" to hearten their own men, and to dishearten the British, and thus bring about a condition of public opinion that would be favourable to a peace which would leave intact the Prussian military system.

Should we adopt reprisals? Thoughtless people have replied yes, and large meetings of citizens of London have urged Government to do so. The proper reply is *no*. We should use the whole of our military forces to destroy the German power. We should not deflect one single airship, one plane, or one bomb from its military work—the destruction of the German armed forces. The use of military might to achieve 'frightfulness' argues weakness in the Germans. It would do the same with us. Further, there is the moral standpoint. We must not lightly give up the higher plane on which we are fighting, and the moral superiority that it gives us over the Germans.

Defence of Cities against Air-raids.—While, on the one hand, air raids have not produced any striking military results, on the other hand, the defence against air raids has not been notably effective. In the last air raid on London, it is stated that only one of the aeroplanes that went up was able to sight a Zeppelin, and it was not able to overtake it. The best scheme of defence has yet to be worked out. In defences, which are a combination of aircraft, and of anti-aircraft guns, the airman has to be very careful not to enter the "dangerous zone" of the gunner, otherwise he is likely to be destroyed by his own side. Likewise, the gunner has to take care that he fires in such a manner that the shells do not inflict damage on the area that he is protecting. Obviously the protection of cities should be stationed some distance away, for instance, in the case of England, the large cities would be best defended by aircraft stations along the coast, with a second line of defence between the coast and the cities to be protected.

One reason why the defences of London have not been particularly effective is that we have no airships that can compete with Zeppelins, and it is difficult to oppose an airship with an aeroplane. An airship would not venture into the aeroplane sphere during the day time. It can only attack in the dark, or in foggy weather. While this militates against its doing good and effective service, it also makes it difficult for aeroplanes to destroy airships, because it is very risky for an aeroplane to fly in the dark. If it endeavours to do so, it will have to come down in the dark, and make a landing that is very likely to be converted into a fatal mishap. Finally, it is not easy to find an airship. We all know how difficult it was to catch the "Emden," which could only move in two dimensions. She found little difficulty in slipping past our ships. The difficulty of discovering and catching an airship is much greater, for she is not confined to the surface of the land and sea, but can cruise anywhere amid vast expanses of the atmosphere.

Naval Air Service:—The daily reports of work done by aircraft refer chiefly to the Army Flying Men, but the Royal Naval Air Service is doing at least equal work, though for the most part it is less conspicuous than that of sister service. A great deal of this work is carefully concealed, as a knowledge of it would be valuable to the enemy, The following summary of work done is taken from the Navy League's circular:—

(1) Since the war began seaplanes have maintained continuous patrol of the Grand Fleet, and both seaplanes and aeroplanes have secured most valuable results by 'spotting' objectives for ships' guns.

(2) Seaplanes, from seaplane carriers, enabled H. M.'s ships to smash up the German cruiser *Koenigsberg*, and a similar 'spotting' has been carried out in the Dardanelles.

(3) Kite Balloons of the Royal Naval Air Service, operating from ships, have also contributed to render naval gunnery effective in Gallipoli.

(4) The Cuxhaven raid was successfully carried out by seaplanes from a British Flotilla.

(5) Projectiles dropped from seaplanes have sunk several Turkish ships in the Sea of Marmora.

(6) In anti-Zeppelin operations coastal patrols have given warnings of approaching raiders, and on various occasions have succeeded in driving off the invaders.

(7) The Royal Naval Air Service Detachment at Dunkirk:—

(*a*) Destroyed at least six German airship sheds, two of these having airships inside.

(*b*) Damaged one Zeppelin and destroyed another in the air.

(*c*) Destroyed another Zeppelin on the water which had previously been damaged by anti-aircraft guns.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(*d*) Damaged submarines in the Cockerill Yard, at Antwerp, and

(*e*) Continuously worried submarines in Zeebrugge and Ghent harbours.

A submarine was also sunk by Naval Aircraft off Ostend.

(8) The Royal Naval Air Service Kite Balloon Sections in Flanders have been co-operating with artillery with excellent results.

(9) Various naval airships and other aircraft have been doing most useful work, *which cannot be detailed.*

(10) Attacks have been made by the Royal Naval Air Service on works of military importance on German territory at Dusseldorf, Cologne Friedrichshaven, and Cuxhaven.

Future Development of Aircraft.—What are the lessons to be learnt from the present war? The chief lesson undoubtedly is that the mastery of the air will be of the very greatest importance in all future conflicts. This mastery of the air will entail profound modifications in warfare—modifications which we can at present but dimly conceive.

At the beginning of the present war, aeroplanes were used by the Allies solely for scouting. Subsequently, some of them were transformed into fighting machines, and now there are large double-engined battle planes of high speed, great carrying capacity, and able to remain in the air for long periods. There is no doubt that, in the future, aircraft will largely increase in size, speed, and air worthiness. It is quite possible that in times to come, great battles may be fought by aerial fleets with land-forces used to occupy conquered country.

To-day aeroplanes penetrate some 200 miles with hundreds of pounds of explosive. Before long, their scope will be greatly increased, and it is probable that we shall have large heavily laden, comparatively slow machines, carrying large quantities of explosives, or numbers of men, and protected by fighting machines. Aircraft in those days, will act in fleets rather than individually, and air fleet commanders will direct operations as admirals control navies. Possibly there may be airships carrying a hundred or more men, and much explosive. There certainly will be aeroplanes of this capacity. The sea and land fortifications will be of little use against invasion by the air, for aircraft can pass over such obstacles and can descend at unexpected and undefended spots.

Further, the nation which possesses the mastery of the air will be able to use its aircraft to clear the sea of hostile ships, of thus facilitate the landing of its troops.

The development here foreshadowed cannot take place during the present war, for the design and construction of the aircraft will take years to complete, neither could the necessary men be trained in time. Nevertheless, if any of the belligerent powers can develop a fleet distinctly superior to the others, that power will secure a very important advantage over the others. There is no doubt that the war staffs of the nations are to-day doing all they can to obtain this superiority.

THE NEW SPIRIT

BY MR. HEMENDRA PRASAD GHOSE, B.A.

THE speech Lord Hardinge delivered at the Simla United Service Club Dinner shows a bold and statesmanlike recognition of the New Spirit in India which is the direct, palpable, legitimate and inevitable outcome of British rule in the country. Lord Hardinge said :—

> England has instilled into this country the culture and civilisation of the West with all its ideals of liberty and self-respect. It is not enough for her now to consider only the material outlook of India. It is necessary for her to cherish the aspirations of which she has herself sown the seed, and the English officials are gradually awakening to the fact that, high as were the aims and remarkable the achievements of their predecessors, a still nobler task lies before them in the present and the future in guiding the uncertain and faltering steps of Indian development along sure and safe paths. The new rôle of guide, philosopher and friend is opening before you, and it is worthy of your greatest efforts. It requires in you gifts of imagination and sympathy and imposes upon you self-sacrifice, for it means that slowly but surely you must divest yourselves of some of the power you have hitherto wielded. Let it be realised that great as has been England's Mission in the past, she has a far more glorious task to fulfil in the future in encouraging and guiding the political self-development of the people. The goal to which India may attain is still distant and there may be many vicissitudes in her path, but I look forward with confidence to a time when, strengthened by character and self-respect and bound by ties of affection and gratitude, India may be regarded as a true friend of the Empire and not merely as a trusty dependent. The day for the complete fulfilment of this ideal is not yet but it is to this distant vista that the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

British official should turn his eyes; and he must grasp the fact that it is by his future success in this direction that British prestige and efficiency will be judged.

It is a recognition of the New Spirit which appeared on the distant horizon of Macaulay's imagination and loomed large before the far-seeing eyes of Rickards, which rose as a vision before the eyes of Bright and was welcomed by Minto, which Lord Curzon was unable to crush, and Lord Morley could not fail to notice.

The East India Company's Charter was renewed in 1833 for twenty years, dating from April 1834. Macaulay was in the House of Commons when the Act was passed. And his speech made on the 10th July 1833 "in a thin House" shows how he looked forward to the day when this New Spirit will quicken the atrophied veins of the East. There was a clause of the Act which ran thus :—

> And be it enacted, that no native of the said territories, nor any natural born subject of His Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office, or employment under the Company.

Macaulay spoke on this clause. And his famous speech will bear repetition :—

> We are free, we are civilised, to little purpose, if we grudge to any portion of the human race an equal measure of freedom and civilisation. Are we to keep the people of India ignorant in order that we may keep them submissive? Or do we think that we can give them knowledge without awakening ambition? Or do we mean to awaken ambition and to provide it with no legitimate vent? Who will answer any of these questions in the affirmative? Yet one of them must be answered in the affirmative by every person who maintains that we ought permanently to exclude the natives from high office? I have no fears. The path of duty is plain before us, and it is also the path of wisdom, of national prosperity, of national honour."

Macaulay went on to say :—

> The destinies of our Indian Empire are covered with thick darkness. It is difficult to form any conjectures as to the fate reserved for a State which resembles no other in history, and which forms by itself a separate class of political phenomena; the laws which regulate its growth and its decay are still unknown to us. It may be that the public mind of India may expand under our system till it has outgrown the system; that by good government we may educate our subjects into a capacity for better government; that having become instructed in European knowledge, they may in some future age demand European institutions. Whether such a day will ever come I know not. But never will I attempt to avert or to retard it. Whenever it comes, it will be the proudest day in English history. To have found a great people sunk to the lowest depths of slavery and superstition, to have so ruled them as to have made them desirous and capable of all the privileges of citizens, would indeed be a title to glory all our own. The sceptre may pass away from us. Unforeseen accidents may derange our most profound schemes of policy. Victory may be inconstant to our arms. But there are triumphs which are followed by no reverses. There is an empire exempt from all natural causes of decay. These triumphs are the pacific triumphs of reason over barbarism; that empire is the imperishable empire of our arts and our morals, our literature and our laws.

After an interval of about a century, during which the bonds of union between England and India have been tightened by mutual understanding and trust, and India has been converted into an integral part of the British Empire, as one reads these remarks one thinks that Macaulay rose on the wings of prophesy when he spoke of the awakening of ambition in the Indian mind, the demand for European institutions in India and the capacity for better government.

And as we read these remarks and admit that though India lay outside the range of Macaulay's actual experience, it certainly lay within the range of his imagination. We recall the remarks of another Englishman made the year previous to the renewal of the Charter. In 1832, Mr. Rickards had published his "Essays on India" in two volumes. In one of his essays he had referred to the English writings of Indians and remarked :—

> With all these facts before us, with the sincerest conviction of my own mind of their importance, as well as truth, I now again appeal to the constituted authorities in England; and solemnly say: Beware! Recollect, gentlemen, that 'knowledge is power.' You have now laid the foundation of it among an acute and intellectual people. Its diffusion is inevitable. The schoolmaster is abroad with his primer, pursuing a course which no power of man can hereafter arrest. A light is now rising in the East, destined to attain meridian strength and splendour, and to 'shine more and more unto the perfect day.' Through the medium of schools, literary meetings and printed books, all the learning, and science of Europe will be greedily imbibed, and securely domiciled by the Hindoos of India. Knowledge, gentlemen, is power. The immortal tree is at length planted in India; and if its growth be skilfully directed, may yield to Britain the fruits of everlasting honour, and of permanent prosperity. . . . Your institutions must be reformed. . . . . The natives of India are now in a state to desire your protection; and they will greatly return the boon if it be granted with real liberality and justice. The groundwork of the future fabric should be co-operation with the natives in the government of themselves.

At the time when Macaulay made his famous speech "in a thin House," the average English statesman had not begun to take an intelligent interest in the affairs of England's vast dependency beyond the seas. And Trevelyan in his *Life of Lord Macaulay* explained the thinness of the House as "a circumstance which may surprise

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

those who are not aware that on a Wednesday, and with an Indian question on the paper, Cicero replying to Hortensius would hardly draw a quorum." But circumstances had so changed in about fifty years that when Bright and Gladstone —bright constellations in the English political firmament—were in the zenith of their influence, both of them paid attention to Indian questions. John Bright speaking at Manchester on the 11th December 1877, said :—

> I believe that it is our duty not only to govern India well now for our sakes and to satisfy our own conscience, but so to arrange our government and so to administer it that we should look forward to the time when India will have to take up her own government and administer it in her own fashion. I say he is no statesman—he is no man actuated with a high moral sense with regard to one great and terrible moral responsibility—who is not willing thus to look ahead and thus to prepare for circumstances which may come sooner than we think and sooner than any of us hope for, but which must come at some not very distant date.

The change from Macaulay's doubt—"whether such a day will ever come I know not," to Bright's conviction that the changed circumstances "must come at some not very distant date" must be considered significant and proof positive of Bright's insight into the changes rapidly taking place in India, changes which had not yet manifested themselves in the changed policy of her political agitation as found in the Congress and the Conferences which have now assumed so much importance. These institutions may be said to owe their origin directly to the unfortunate attitude of Anglo-India towards the Ilbert Bill, by which the Government of Lord Ripon sought to redress a wrong and remove an uncalled-for disability. Now when the dust of that controvesy has cleared away and the name of Lord Ripon is held in everlasting honour, as one examines the provisions of the Bill, one cannot help saying that they were not sufficient to satisfy the natural ambition of the people. The measure of self-government with which Lord Ripon's name is associated also was meagre, but the precursor of greater reforms.

Then came the Congress movement. And men like Raja Rajendra Lal Mitra hoped that it would be a movement by which the scattered units of the race will coalesce and come together to make us live as a nation. For good or for evil we are committed to this form of political agitation and although our way may sometimes lead through the wilderness, he is no true leader who would advise a return to the onions and garlic of the older form of agitation. We may feel disappointed at the slow realisation of our ambition —but we must not lose heart :—

> If what shone afar so grand
> Turns to nothing in thy hand,
> On again, the virtue lies
> In the struggle, not the prize.

And the prize—it also will come sooner or later.

From Bright we come to Lord Morley for years Secretary of State for India. In his first Budget Speech (1906) he spoke of the "continuous, rational improvement in the Indian system of Government," and thus recognised the New Spirit in India :—

> Everyone—soldiers, travellers, and journalists—they all tell us that there is a new spirit abroad in India. Be it so. How could you expect anything else? You have now been educating the peoples for years with Western ideas and literature. You have already given them facilities for communication with one another, How could you suppose that India could go on just as it was when there was little higher education, and when the contact between one part and another was difficult and infrequent? How could you think that all would go on as before? As for education, let the House think of this little fact. There is this year a Senior Wrangler from India; and I am told by the Master of Trinity that he was Senior Wrangler after two years' residence, when all the others in the class had three years' residence. I mention that as showing that you cannot go on narrowly on the old lines. We should be untrue to all the traditions of this Parliament and to those who from time to time and from generation to generation have been the leaders of the Liberal party, if we were to show ourselves afraid of facing and recognising the New Spirit with candour and consideration.

He gave the Congress the recognition it had sought in vain from successive administrators and which Lord Curzon had declined to extend to it by his refusal to receive Sir Henry Cotton as the President of the Congress. And he even said: "Our own reforms and changes have been achieved by dissatisfied men who were no more disaffected than you or I." He advocated the introduction of the spirit of British institutions—"the spirit, the temper, the principles, and the maxims of British institutions" in this country. But his shortcoming lay in his not being a practical politician. His acquaintance with India was made through the medium of books, and his views about Indian questions were borrowed from the utterances of "sundried bureaucrats." This was evident when His Majesty the King Emperor unsettled his "settled fact"—the Partition of Bengal. To combat his view—"India for a long time to come, as far as my imagination could reach, would be of absolute and personal government." We need only say that the Moderates—whom he said, "it would be the height of political folly for us at this moment to refuse to do

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all we can to rally to the cause of the Government, simply because the policy will not satisfy the Extremists," have preferred the direct control of the British Parliament to absolute and personal Government. Even a cautious Moderate like the late Sir Pherozeshah Mehta did not hesitate to say :—

It is safer to rely on the ultimate sense of justice of the whole British nation which in the end always asserts its nobility than on the uncontrolled tendencies of an officialdom trained in bureaucratic tendencies, and not free from the demoralising prejudices incident to their position in the country.

But Lord Morley's "Man on the spot," Lord Minto understood the situation better. He came to India after a period of feverish activity evidenced by that theatrical personality of Lord Curzon, whose fatal genius for misplaced energy had created complex questions but left them unsolved. In a Note, Lord Minto drew up for circulation among his colleagues, he wrote :—

The growth of education which British rule has done so much to encourage is bearing fruit. Important classes of the population are learning to realise their own position, to estimate for themselves their own intellectual capacities and to compare their claims for an equality of citizenship with those of the ruling race, whilst the directing influences of political life at home are simultaneously in full accord with the advance of political thought in India. * * * * But we, the Government of India, cannot shut our eyes to present conditions. The political atmosphere is full of change. Questions are before us which we cannot afford to ignore and which we must attempt to answer, and to one it would appear all important that the initiative should emanate from us ; that the Government of India should not be put in the position of appearing to have its hands forced by agitation in this country or by pressure from home; that we should be the first to recognise surrounding conditions and to place before His Majesty's Government the opinion which personal experience and a close touch with the every-day life of India entitle us to hold.

That personal experience and close touch had made Lord Minto take a correct view of the situation one must admit. To quote the words of the late Mr. Gokhale, he found the whole East "throbbing with a new impulse—vibrating with a new passion," and said that : "a volume of new feeling was gathering, which required to be treated with care." And he openly said :—

I recognise that politically India is in a transition state; that new and just aspirations are springing up amongst its people, which the ruling power must be prepared not only to meet but to assist. A change is rapidly passing over the land, and we cannot afford to dally.

Even greater candour prevailed in his speech on the occasion of the debate on the Sedition Bill :—

I am well aware of the growing strength of political hopes and ambitions in this country, and I welcome them as the natural results of the education British administrators have done so much to introduce and to encourage. I have said so over and over again, and I deny the accusation of a disregard of the growing influence of the educated classes in India. Far from wishing to check the growth of political thought, I have hoped that, with proper guidance, Indian capacity and Indian patriotism might earn for its people a greater share in the government of their country. . . . The Government of India would be blind indeed to shut its eyes to the awakening wave which is sweeping over the Eastern world overwhelming old traditions and bearing on its crest a flood of new ideas. We cannot check its flow, we can but endeavour to direct it into such channels as may benefit the generations that are to come. We may repress seditions—we will repress it with a strong hand. But the restlessness of new-born and advancing thought we cannot repress. We must be prepared to meet it with help and guidance.

Thus the recognition of the New Spirit in India by generations of English statesman responsible for the good government of India is complete. And the help and guidance which British statesmen are willing to lend it will surely result in its inaugurating in the country a new era not of restlessness and chaos but of peace and prosperity.

And those who have striven to foster this New Spirit in the country when—

Hope was ever on her mountain ; watching
[till the day begun—
Crown'd with sunlight—over darkness—from
[the still unrisen sun.

need not lose heart at occasional excesses. The exuberance of energy which characterises the beginning of a new movement often breaks dams and floods fields, but it passes away rapidly leaving behind a rich silt of new thoughts and ideas which fertilise the fields. So it was in France—

France had shown a light to all men, preach'd
[a Gospel, all men's good ;
Celtic Demons rose a Demos, shriek'd and
[slaked the light with blood.

But it was fertile in new ideas which have exerted so much influence on the political thought of Europe. Let us then not lose heart, but "Follow Light, and do the Right."

THE LEGALITY OF WAR

BY MR. C. E. ODGERS.

THIS is in many ways a remarkable book* and deserves to be read by not only lawyers, to whom it naturally chiefly appeals, but by every thinking man who cares to enquire into the sources of the various steps recently undertaken for the defence of the Empire; the rights and liabilities of allies and enemies and their property and those of the persons who have dealings with them during a state of war; the laws of war on land and sea and many various topics in connection therewith. We do not remember to have previously come across a book which combines a summary of what is strictly International Law, *i.e.*, the rules of law as between sovereign states, with a digest of the Municipal Law regulating the raising of the Army and Navy and the Indian and other Forces; the extraordinary powers taken by the Crown to regulate the life and habits of the people during the war; the scope of the Regulations promulgated to provide for the public safety—which range from a prohibition against allowing any light to escape from the windows of a private house to forbidding an alien resident in Great Britain to change his name—during the course of the war. The work shows evidence of great research and very considerable learning on the part of the authors. In their criticisms of the Regulations made under the Defence of the Realm Acts they display much acumen especially in the argument as to what powers the Crown possesses over the people in the case of a war waged outside the realm—as in the present case. They come to the conclusion (page 93) that in the case of war outside the realm the Crown is not invested with such powers over British subjects within it, but may on the other hand take such steps as it pleases against alien enemies within it. Amongst the powers taken by the Regulations is the power to destroy private property, and the argument of the learned authors is that such power is *ultra vires* of the Statute. A perusal of the Statutes and the Regulations made in pursuance of these justifies the conclusion that "certainly never in our history has the executive assumed such arbitrary power over the life, liberty and property of British subjects. The net of restrictions is now so finely woven, so ingeniously developed that it enmeshes every activity of the citizen."

Living as we do in India and as far as the ordinary avocations of life are concerned practically untramelled as we are, it is a little difficult to realize that our fellow citizens in the United Kingdom are living under a state of military law, whereby any action almost may be called in question either by the military or civil authorities. It is of course on account of the very propinquity of the country to the scenes of operations and to the presence therein at the commencement of the war of thousands of alien enemies—also to the extensive commercial relations hitherto existing between our own people and those of the enemy, that these stringent regulations are undoubtedly necessary. Another interesting topic and one treated with great ability by the authors is that of contracts with alien enemies. Story laid it down some time ago that "no principle is better settled than that all contracts made with an enemy during war were utterly void." This sounds simple, but what if the alien enemy has a neutral agent resident in the enemy country, or the alien enemy is himself resident in a neutral country? Can either insist on performance? If a failure of performance takes place can either sue in a British Court. The cases cited are chiefly American but as these arose during the American Civil War there is reason for holding that they are not authorities for cases arising in an International War. Trading with the enemy is equally well-treated and this subject as well as that of contracting with the enemy should prove useful to all merchants and others who at the beginning of the war had business dealings with any of the subjects of the countries with which we are at war. This remark will also apply to the chapters on the Moratorium—or postponement of payments. The first of these was effected by the Proclamation of the 2nd of August when war was imminent and continued with extensions subsequently. Enough has perhaps been said to show that the book is of very varied interest. It deals with subjects of vital importance at the present day, for many of which there has been hitherto very scanty authority in our law—and in many cases what authority there is has hitherto escaped the legal text writers and lain hidden in our reports. The investigations and research of Professor Morgan and Dr. Baty have now brought much of this to light, and the result has been not a dry legal text book, but discussions in a thoroughly logical way of points of interest to us all at the present crisis.

* *War: Its Conduct and Legal Results*, by T. Baty, D.C.L., LL.D., and Professor T. H. Morgan, M.A., London: *John Murray*, 1915. *10s. 6d.*

FROM THE VOICED TO THE UNVOICED.*

BY DR. JAGADISH CHANDRA BOSE, M.A., D.SC., C.I.E., C S.I.

In tracing the characteristic phenomenon of life—from simple beginnings in that vast region which may be called Unvoiced, as exemplified in the world of plants, to its highest expression in the animal kingdom one is repeatedly struck by one dominant fact, that in order to maintain an organism to the height of its efficiency, something more than a mechanical perfection of its structure is necessary. Every living organism in order to maintain its life and growth must be in free communion with all the forces of the universe about it. Further it must not only constantly receive stimulus from without, but must also give out something from within. And the healthy life of the organism will depend on these twofold activities of inflow and outflow. When there is any interference with these activities then morbid symptoms appear, which ultimately must end in disaster and death. This is equally true of the intellectual life of a nation. When through narrow conceit a nation regards itself self-sufficient and cuts itself from the stimulus of the outside world then intellectual decay must inevitably follow. So far as regards the receptive function. Then there is another function in the intellectual life of a nation—that of spontaneous outflow—that giving out of its life by which the world is enriched. When the nation has lost this power, when it merely receives but cannot give out then its healthy life is over and it sinks to a degenerate existence which is purely parasitic.

THE FUNCTION OF A NATIONAL UNIVERSITY.

How can our nation give out of the fulness of the life that is in it and how can a new Indian University help in the realisation of this object. It is clear that its power of directing and inspiring will depend on its world-status. This can be secured to it by no artificial means; nor can any charter assure it. This world-status can only be won by the intrinsic value of the great contributions to be made by its own Indian scholars for the advancement of world's knowledge. To be organic and vital our new University must stand primarily for self-expression and for winning for India a place she has lost.

Knowledge is never the exclusive possession of any particular race nor does it recognise geographical limitations. The whole world is interdependent and a constant stream of thought had been carried out throughout the ages enriching the common heritage of mankind. Although science was neither of the East nor of the West, but international in its universality certain aspects of it gained richness by reason of their place of origin. Has India then any great contributions to offer for the advance of human knowledge ? And we have also to realise in this connection : What has been her strength in the past and what is the weakness that has been paralysing her activities ?

CONDITIONS FOR SCIENTIFIC SUCCESS.

For the accomplishment of any great scientific work there must be two different elements and these must be evenly balanced; any excess of the one at the expense of the other would be highly detrimental of the discovery of truth and advancement of knowledge. These elements are : first, a great imaginative faculty, and second : a due regulation of that faculty in pursuance of rigid demonstration. An aimless experimentation can lead to no results, while an unrestrained imagination will lead to the wildest speculation, which is subversive to intellectual sanity. A true inquirer has, therefore, to guard against being self-deceived; he has at every step to compare his own thought with the external fact; he has remorselessly to abandon all in which these are not agreed. Thus what he slowly gathers is certain, forming a sure foundation of what is to come. Even in this path of self-restraint and verification, he is making for a region of surpassing wonder. When the visible light ends he still follows the invisible. Where the note of the audible reaches the unheard even then he gathers the tremulous message.

How have these wonderful feats been rendered possible ? First by the recognition of man's own limitations and then undaunted by these in setting about the creation of artificial organs, which would require great genius for invention and extraordinary skill in construction. Indian inquirers had even at an early stage clearly understood our physical limitations. They recognised that there are *infra*-sensible phenomena, which exist but cannot be detected on account of the imperfection of our senses. For want of finer instruments—which are in reality artificial means for extending the range of our perception—the progress of knowledge was arrested. The cause of our scientific ill success has been just this want of a true recognition of the experimental side. This may have been due to decline of national life, however brought about, or to the general distraction consequent on the unsettled condition of the country. No great experimental work can be carried out unless the mind of the inquirer remains

* Address delivered in connection with the inauguration of the Benares Hindu University.

undisturbed, unless he be connected with an institution having great and inspiring traditions where constructive skill of great mechanicians has been handed down from generation to generation. Whatever the reason might be, the mind gradually drifted from the irksome curb of slow experimental verification to the fascination of unrestrained speculation. What could be more enchanting than that delightful story in the Arabian Nights when the prince presses a pin in the neck of a mechanical horse and the machine flies through space! To confuse romance with reality is but one step. It is by the contact of the hand with real things, that the brain receives a constant stream of stimulating message; and the answering impulse of the brain gives the hand its cunning. Without action, the mind must lose its vigour and will succumb at last. It will begin to think that great achievements in science may perhaps be won by some lucky chance or by certain feats of jugglery. I cannot think anything so deadening to progress as this attitude of mental degeneracy.

LIFE OF AN INVESTIGATOR.

It is no easy life that lies before a scientific investigator. He has to steel his body and nerve to the utmost. There is to be for him no life of ease. It is to be one of unending struggle. Even after all this there is no assurance whatever of success to reward him for his ceaseless toil. He has to cast his life as an offering, regarding gain or loss, success or failure, as one. This will perhaps be better realised when I recount the real history of the conquest of air. I had the unusual opportunity of coming in close contact with the work of the man to whom this great achievement is ultimately due. Many lives had previously been sacrificed in various ineffective attempts till the investigation on the supporting power of moving surfaces was scientifically taken up by Langley in America. After many years of patient experimentation new data were obtained which were contrary to all previously accepted theories of aero-dynamics. Then the question of light motors presented insuperable difficulties. After these had been overcome Langley took up the question of flying machines and a small model of automatic flying machine ascended the air on the 6th of May 1896, for the first time and after describing a series of special curves in the air safely descended on the Potomac river, having accomplished the length of flight of over 3,000 ft. I had this recounted to me by his friend, Graham Bell, the inventor of the telephone who watched this flight. Great interest was aroused, and the American nation keenly watched for the occasion when a larger machine was to make its flight before the public. In this public demonstration a small screw was left loose by the carelessness of a workman, with the result that the machine instead of rising was precipitated into the river. A chorus of derision arose which was magnified by the Press, and Langley died of a broken heart.

This has often been the fate of great inventors and discoverers. But the lure that draws heroic souls is not the success which can easily be achieved but defeat and tribulation in the pursuit of the uattainable. I have seen at the Smithsonian Institution this machine failed at the first experiment. But after Langley's death the experiment was repeated, and the aeroplane rose into the air like a bird that has been set free after a long period of imprisonment.

THE MENTAL FACTOR.

I spoke in some detail of the source of the weakness that had so long arrested our scientific advance. This was our neglect of the experimental factor. I shall show later how this defect can be remedied if we once realised and faced it. I shall now take up the other factor, the mental, in which fortunately we do possess certain advantages. It is to be remembered that every experiment has to be carried out first in the inner region of the mind. To keep the mental vision clear great struggles have to be undergone, for the clearness of the inner vision is lost too easily. The greatest wealth of external appliances is of no avail, where there is not a concentrated pursuit of a great object. Those whose mind rush hither and thither, those who hunger for public applause or personal gain instead of truth, by them the quest is never won In pursuit of knowledge an Indian inquirer has the burning imagination which could extort truth out of a mass of disconnected facts, a habit of meditation without allowing the mind to dissipate itself. If he, caught with his scientific imagination a glimpse of a wonder-working ray as yet unknown to man, and believed that experiment would reveal its properties and potentialities, he would go on working ceaselessly through a long life and dying hand on his task to his disciples.

POWER OF DETACHMENT.

And what about the fruit of knowledge that has been acquired and its applications. It is well known that a moving machinery in increasing its unrestrained pace is rushing towards destruction, unless it has a self-checking governor to restrain it before the danger limit is reached. In the West there has been no cheque or limit to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

competition for personal gain and lust for power in exploiting the application of knowledge not so much for saving as for causing destruction. And on account of the absence of this restraining force, Western civilisation is trembling to-day in an unstable poise on the brink of ruin.

Let us now look at the innate restraining power that governs Indian life and culture. We may call it the force of detachment or for want of a better phrase, the impulse of spirituality. Let us see how this common heritage reacts on the Indian mind. As an extreme case let us see how one of the greatest of warrior kings became suddenly transformed under its dominating influence even at the moment of his greatest victory. In the ninth year of his reign his arms were successful and the extensive territories of Kalinga were incorporated with his Empire. This is what the Emperor Asoka writes on imperishable stone as the record of his triumph :

"His Majesty feels remorse on account of the conquest of the Kalingas, because during the subjugation of a country, slaughter, death and taking away captive of people necessarily occur. And for this his Majesty feels profound sorrow. Although, a man should do him injury, he holds that it must be patiently borne. His Majesty desires for all security, peace of mind and joyousness."

And the chiefest conquest is through righteousness. So much about the man of the sword. As regards the other man who truly dedicates his life for quest of knowledge in our country, any longing for personal gain or misuse of his knowledge would be worse than sacrilege. Poised as he is between the infinity of the past and the infinity of the future, between universes of worlds and universes of atoms—can anything be worth his while for so sorry a prize? Can his mind be satisfied with anything less sublime than to be merged in the rhythmic sweep of the world-spirit itself.

SYNTHESIS OF SCIENCES.

The excessive specialisation in the West has led to the danger of our losing sight of the fundamental truth that there are not sciences but a single science that includes all. India is perhaps through her habit of mind better fitted to realise a wider synthesis. One of the greatest contributions in the realm of science would undoubtedly be the establishment of a great generalisation, not merely speculative, but based on actual demonstration of an underlying unity amidst bewildering diversity. Shall this great glory be for India to win? In my investigations on the action of forces on matter, I was amazed to find boundary lines vanishing and to discover points of contract emerging between the Living and non-Living. My first work in the region of invisible lights made me fully realise how in the midst of a luminous ocean we stood almost blind. But out of the very imperfection of his senses, man has dared in science to build for himself a raft of thought by which to make daring adventures into the great seas of the unknown.

LIFE UNVOICED.

Just as in following light from visible to the invisible our range of investigation transcends our physical sight, so also the problem of the great mystery of Life and Death is brought a little nearer solution, when in the realm of the living we pass from the Voiced to the Unvoiced. Is there any possible relation between our own life and that of the plant world? The question is not one of dreamy speculation but of actual demonstration by some method that is unimpeachable. This means that we should abandon all our preconceptions, most of which are afterwards found to be absolutely groundless and contrary to facts. The final appeal must be made to the plant itself, and no evidence should be accepted unless it bears the plant's own signature. This meant first the discovery of some compulsive force which would make the plant give some answering signal; then instrumental means have to be supplied for the automatic conversion of these signals into an intelligent script; and last of all we have ourselves to learn the nature of the hieroglyphic.

THE INNER HISTORY OF PLANT LIFE.

It was to be the discovery of the inner history of the plant hidden under a placid exterior, the detection of the subtle impress left on by storm and sunshine, by the warmth of summer and frost of winter, by a passing breeze or a drifting cloud. It can easily be imagined how extraordinarily delicate the instruments must be which would detect all these and reveal the secrets of the unvoiced and hidden life. It has to measure the twitching throb under a shock, the time it takes the plant to perceive it, and measure the rate of impulse with which the message is being sent along the conducting path of the plant. It has to measure its living pulsation and the stupor that comes under the action of narcotics and signal the exact moment of death under the action of poisons.

I said that the slur against Indian competence in science has chiefly lain in regard to lack of the experimental skill and the power of invention and construction of apparatus of extreme delicacy,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

To this the sufficient answer is, that the instruments just described have all been devised in India and constructed by Indian mechanicians. Their great perfection and extreme delicacy may be gauged from the fact that though these instruments have been widely exhibited in all the scientific centres of the West and though America boasts the possession of the greatest mechanicians of the world, yet even in America they found it impossible to repeat these instruments. And requests have in consequence been made by the different Universities in Europe and America for the supply of duplicates of instruments from my Laboratory these being regarded of essential importance for furthering the new investigations relating to life.

It will thus be seen that when we put our whole strength into the accomplishment of any object, all difficulties vanish and the impossible becomes possible. But this cannot be the outcome of easy complacency. For twelve years a single man had to bear the brunt of the fight against the whole scientific world and after years of drudgery and many failures success came to me at last.

You may ask whether dreamy speculations have been of any help to me. Twenty years ago I had to write a magazine article on the life of plants. It was written in one hour under the free play of an unrestrained imagination. It told of wonderful things, and it is not at all surprising that some of them did come out true; but the rest of the speculation was quite wrong. It is not the likelihood of something coming out right that is of the least importance in science. What really counts is the absolute certainty of demonstrated fact which is true for all time; and on this sure foundation alone can great superstructure be raised. How necessary it is to observe extreme caution in being misled by speculation will be obvious when we realise that we may be led astray by appearances which we accept as well-ascertained fact. All of us, for instance, have regarded 'Mimosa' as delicately sensitive, shrinking from touch, while most of tho ordinary plants were supposed to be devoid of all sensibility. My investigations show that the so-called sensitive plants are really paralysed, this motor paralysis being confined to one side; while many of the so-called insensitive plants are far more sensitive than the much-vaunted Mimosa. Again who has not been struck by the closing of the leaflets of certain plants at the onset of darkness, this being unhesitatingly regarded as the sleep of plants. In reality, closure of leaflets has nothing whatever to do with true sleep; my investigations show that plants, generally speaking, do not go to sleep in the evening but keep wide awake nearly all night long and fall asleep only about six in the morning! This will show how necessary it is for the discovery of truth to maintain a spirit of absolute detachment and perfect freedom of mind from all preconceived bias. The hardest struggle is to protect oneself from being self-deceived, and one has to guard against it and keep vigilant all the time.

THE WIDE VISTA.

It was after repeating every one of the innumerable tests by which animal life is usually differentiated that I was able to prove that the phenomenon of life with all its multiplex variations are identical in plant and in animal. In other words, all life is One. This identity has been proved to be so real that after discovering some new reactions in plants, I have been able to predict its occurrence, hitherto unsuspected, in the animal, and my predictions have come out invariably true. The unexpected revelations in the life of plants have opened out vast fields of inquiry in physiology, in medicine, and even in psychology. Many problems long regarded as insoluble have been brought within the region of experimental investigation. In physiology the new inquiry is concerned in the determination of the characteristics of life and death, and in unravelling the mystery of automatism. In medicine it deals with the fundamental reaction of drugs on protoplasm itself, by which its practice is raised from empiricism to science. It tries to solve the anomaly of an identical drug inducing two opposite effects on different individuals. In psychology a new chapter has been opened out by the discovery of nervous impulse in plants. Certain new phenomenon discovered in plant-nerve shows that the intensity of the nervous impulse which colours our sensation, as pleasure or pain, is not solely determined by the intensity of the external blow, but that the character of the sensation is capable of modification according to the predisposition which can be imparted to the vehicle that carries the sense-bearing message.

There are but a few of the many sided inquiries which have had their birth in India, and which cannot but affect many branches of science. Shall these remain the offering of an individual worker to come to an end with him, or shall there rise a school of science to hold the need of recognition which has been so hardly won and maintained

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a continuous and living tradition of India's gift to the world in the realm of science.

HOPE FOR THE FUTURE.

In any case if India has to make any contribution to the world, it should be as great as the hope we cherish for her. Let us not talk of the glories of the past till we have secured for her her true place among the intellectual nations of the world. Let us find out how she has fallen from her high estate, and ruthlessly put an end to all that self-satisfied, little-minded vanity which has been the cause of our fatal weakness. What is it that stands in her way? Is her mind paralysed by weak superstitious fears? Not so; for her great thinkers, the Rishis, always stood for freedom of intellect, and while Galileo was imprisoned and Bruno burnt for his opinions, they boldly declared that even the Vedas are to be rejected if they do not conform with truth. They urged in favour of persistent efforts for the discovery of physical causes yet unknown, since to them nothing was extra-physical but merely mysterious, because of the hitherto unascertained cause. Were they afraid that the march of knowledge was a danger to true faith? Not so; for to them knowledge and religion are one. Do they now lack devotion to a life consecrated to knowledge? Not so; for they have still the *sanyasin* spirit which utterly controls the body and can meditate or inquire endlessly while life remains, never for a moment losing sight of the object, never for a moment let it be obscured by any terrestrial temptation.

These are the hopes that animate us. For there is something in the Hindu culture which is possessed of extraordinary talents and strength, by which is resisted the ravages of time and the distructive changes which have swept over the earth. And indeed a capacity to endure through infinite transformations must be innate, in that mighty civilisation which has seen the intellectual culture of the Nile, the Valley of Assyria, and of Babylon, wax and wane and disappear, and which to-day gazes on the future with the same invincible faith with which it met the past.

Asphyxiating Gases of Modern Warfare.

BY PROF. RAM RATTAN KHANNA, B.SC.

IT was never imagined that certain gases could be used as a formidable weapon, until quite recently Germany, in the teeth of all opposition offered by the civilised world as well as the distinct doctrines of international law, took the lead in using such cruel methods of inflicting havoc on the enemy's numbers. In the Concise Oxford Dictionary a "stink-ball" is defined as "a vessel containing explosive, etc., generating noxious vapours, used formerly in naval warfare and still by eastern pirates." The Germans have shown the world how science may be degraded in its application to the purposes of the pirate, and our military commanders have now to deal with a new weapon previously unheard of in the field. The Allies were quick to perceive the call upon their scientific resources and were prepared for the new emergency of the field. Steps have already been taken to provide protection for our men in the field. A survey of the whole question of the composition and the properties of the gases which have been, or are likely to be used, would be of sensational interest both to the chemist engaged in research work for his national welfare, and to a lay man interested in the world and what is happening in its sphere.

The Chemical Laboratory would be able to provide a very large number of offensive and poisonous gases and vapours. For practical purposes such vapours and gases would be limited to those which possess the following qualities:—

Firstly, they must be much heavier than air, because gases and vapours which are lighter than air or are of about the same density would be practically useless as weapons of destruction by suffocation. The reason is obvious. Carbon dioxide commonly called carbonic acid gas, which is, heavier than air, bulk for bulk, would thus be suitable as an agent for suffocation.

Secondly, they must be producible in large quantity in the form of a portable liquid, or solid, which in its turn will evaporate rapidly from the containing vessel so as to produce the gas. Ordinary liquids which give the most powerful fumes, acute in their irritating power and intolerate for their suffocating effects, are mostly useless for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

purposes of the field because they would not evaporate with sufficient rapidity to show a marked effect. The enemy becoming aware of the presence of such fumes in the neighbourhood would hastily retire in the direction of greater security. Thus we see that vapours in order to be effective should be condensed gases.

Thirdly, they should not be excessively soluble in water or much would be lost in rolling over moist ground. Every reader of the daily newspapers has now become familiar with the frequent reports of huge masses of clouds rolling along the ground at great speed. The atmosphere always contains a certain amount of moisture which is exhibited to students of Elementary Science by holding a tumbler containing an iced drink to them. More especially this is observed every morning in winter on grassy plots wetted with dew. If moisture is largely capable of absorbing these gases or vapours, much of their value as effective weapons would be lost.

In the newspaper accounts from eye-witnesses of the cloud of gas sent out by the enemy, it has several times been described as presenting a reddish colour. If this statement is based on correct observation, and it has been corroborated by chemist observers in the field, it is probable that the gas used on these occasions must have contained either bromine or peroxide of nitrogen, both of which have an orange-brown colour. Germany has lately been experiencing a nitric acid famine owing to a huge demand for nitric acid which is so largely used in the manufacture of explosives, etc. Moreover, nitric acid is an expensive article both for its own value and for the value of the nitrates from which it is derived. It, therefore, seems improbable that oxides of nitrogen would be so ruthlessly used. Bromine, however, is made from the salts in the Stassfurt deposits of Germany, and from this source up to the outbreak of war much of the bromine and bromides of commerce was obtained. Possessed of a large amount of mineral wealth in the form of these deposits, Germany would in all probability make the largest use of her natural resources. Thus, for economic reasons, the chances are in favour of the copious use of bromine or bromides in preference to nitric acid and the nitrates.

Bromine is at common temperature a liquid but it evaporates very easily and produces a vapour which is about five and a half times as heavy as air. It is not necessary that bromine should be pure for these purposes. Probably the amount of bromine available would be insufficient for the production of the enormous quantities of vapour required in these operations if used by itself. It is clear that the object of these manufactures is not the production of pure bromine but of something that will suffocate. Therefore the material used for this purpose may consist essentially of chlorine, an element closely allied to bromine, accompanied with a quantity of bromine sufficient to produce a suffocating effect. This reasoning also accounts for the colour ascribed to these masses of vapour by eye-witnesses in the field.

At the ordinary temperature chlorine is a pale green gas. It is about two and a half times as heavy as air. It is not largely absorbed by moisture and is also easily condensible into a liquid under moderate pressure. Thus it satisfies all the requirements of asphyxiating gas as used in the war. The gas was discovered by the Swedish chemist, Scheele, in 1744, and has been used for bleaching purposes since the end of the eighteenth century. It acts rapidly on nearly all metals if moisture is present either on the metal or with the gas. When free from moisture it does not act upon iron. For this reason it has been produced commercially in very large quantities for many years past in the liquid state and preserved in iron bottles. There can be little doubt that the infernal material from which our men have been suffering is sent into the trenches in iron cylinders. The suffering and death which are consequent upon getting the gas into the lungs have been ascribed to the gaseous chlorine which may or may not be accompanied by bromine. Other substances of a volatile nature have been suggested as possibilities. Phosgene, a compound of carbonic oxide gas and chlorine, is a heavy gas, about three and a half times as heavy as air. This also is easily liquifiable and the liquid evaporates rapidly on exposure. Phosgene has been manufactured by Germany as a commercial article for a fairly long time on a fairly large scale. Thus it seems possible that phosgene may also have been included among other poisonous gases.

Sulphur dioxide is a gas of common observation and is obtained by burning sulphur. As regards its fitness as an asphyxiating gas it would be sufficient to say that it is easily liquifiable, so much so that every chemical laboratory possesses liquid sulphur dioxide. Also the liquified gas evaporates rapidly, and is not absorbed by moisture to a very large extent.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The other side of the question is probably of greater interest and importance at the present juncture. How is it possible to counteract the effect of these gases? Is it possible for a solider at the front to move about in a cloud of the asphyaiating gas without materially injuring his faculties? These are questions to which an answer is being found in the numerous research laboratories of Great Britian and her Allies. A brief summary of what has already been done may be of interest:

Fortunately all these fumigating agents resemble one another, in that it is possible to absorb them by passing them over or through strongly alkaline substances. The effectiveness of the latter would be considerably enhanced by the addition of a proportion of sodium thiosulphate, the familiar "hypo" of the photographer, if it were established that the gas cloud consist mainly of a mixture of chlorine and bromine. It is important to notice that it has been found useful to have a strong alkali and in sufficiently thick layers. Carbonate of soda has been found very useful for this purpose.

The War Office has been quick in supplying masks to the troops which are partially effective in counteracting the asphyxiating gases. Essentially these masks consists of material saturated, though not dripping, with a strong solution of common washing soda (sodium carbonate) mixed with an equal quantity of "hypo," to which 2 or 3 per cent. of glycerine has been added to keep the whole damp.

Another mixture which has been suggested would be the granular mixture of lime and caustic soda known in every chemical laboratory as soda lime. Glycerine may be left out of this.

It is interesting to note that many private persons actuated with a well-meant desire to help their soldier friends at the front have sent ineffective pads. Most of these attempts have not only been found to be imperfect but really dangerous to the men by leading them to consider themselves immune when practically there is no protection. No doubt, measures have since been adopted by the War Office to prevent such individual misfortunes.

NATIVE STATES AND INDUSTRIES.

BY RAO BAHADUR SARDAR M. V. KIBE SAHEB, OF INDORE, M.A.

COMMERCE and industries prosper under certain circumstances only; some of them are natural while others have to be created. The environment is the chief thing. Considerations of time, space and situation affect it. It is, therefore, not always easy to bring about a suitable environment, and in any case it has its limitations. Their just appreciation alone leads to success.

The number of Indian states is legion; so are their varieties. While some are independent as regards their internal administration, others exercise only limited sovereign rights. The finance of none of them, however, is national. It is either sub-national or local. This puts out of consideration any encouragement to the commerce or industries by means of the tariff. But there are several other ways of helping them.

It was not until the Crusades familiarised the routes that impetus was given to the inland trade in Europe. The opening up of the means of communication is a powerful factor in the flourishing of commerce. This means is within the reach of every Indian State, whatever its extent or rights might be. Monetary considerations are the only limitations.

The bright example of the Railways in general in India is worthy to be followed. If the cheaper mono-rail suceeds, it will solve the problem of communications as no other devise can. But in its absence, the metre and small guages in India are useful. For the purposes of opening up communications, states should combine and may even incur debt. Next to the railway come, macadamised roads. Where on account of the physical features the construction of a railway is unduly expensive, a motor car traffic can be established on main roads. It is, however, neither so certain nor so useful as a railway.

Next to the opening of the country comes the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fostering of Industries. Capital and technical skill are the main factors in it. The one industry to which all the Indian States can and should devote attention is agriculture. This industry is capable of expanding in the direction of intensiveness, as well as of giving a better class of out-turn. Better seed will give better fruit, lessen dangers from diseases and command a paying market. The supplying of manure, irrigation and seasonable sowings will increase the output. The use of labour-saving machines ought to reduce the cost of cultivation, which means an increase of profits.

Allied to agriculture are sylvan industries. The advantages of a forest policy have been only lately understood. It is a host in itself. Worked within its natural limits, it gives both direct and indirect advantages. The forests of India are capable of starting several new industries, such as paper making, production of dye-stuffs and oils, and sericulture.

The exploitation of minerals may be advantageous to some states. The methods employed and the opportunity are the two determining factors in it. Generally speaking in the present stage of the development of the industries of India, this industry had better lag behind.

The advance made by science in the electrical engineering has placed a new power at the service of man. In several native states are water-falls, the energy of which is running to waste. There are also natural places where with a small labour and at a trifling cost artificial water-falls can be made. It will be of great use to harness them. Their energy can then not only be utilised for affecting economics in lighting, conducting trams and similar other things, but it can bring new industries into existance.

By nature Indian states, which are mostly situated in hilly tracts, are best fitted for starting glass-making factories. Waterfalls and quartz can be found in juxtaposition and at a comparatively small cost things of glass can be manufactured. India must be able to produce all such things required by it. The energy of water-falls can also aid many industries connected with forests.

If careful and minute attention is paid to local circumstances, many industries can be fostered, resusciated or even started. Chief among these is the handloom industry. There are certain kinds of fabrics in the making of which powerlooms are powerless. It is here where the handloom comes in. Owing to neglect and greater attraction of the work in mills, the condition of the weavers on handlooms has become deplorable. Its reformation is a necessity on more than one account.

The making of cutlery, metal utensils, toys and games and similar other things would not only find bread for many, but give the purchasers better articles at the same or perhaps lesser cost than the present.

The Courts of Indian rulers yet afford shelter to indigenous medicines. It is a matter for regret that, in spite of the vast stores of the raw materials at hand, neither any individual nor a combined attempt has been made to systematise the practice of the production of indigenous medicines.

The principle of the Government in native states is of the greatest help to the undertaking of new projects. These states are governed as autocracies. Every thing the state possesses belongs to the ruler personally and therefore, he can utilise his possessions in any way he likes. He can invest his money in commerce or industries.

For a great many of the states it will be convenient (and perhaps the only means of starting new industries,) if they themselves undertake to do so. They can command capital and technical skill which no institution of their subjects can. But some states at least can and must associate their subjects with themselves. This can be done by guaranteeing the interest on certain concerns, by partly subscribing to the capital or even by bounties.

The Governments of many Indian states can utilise the suggestions made to the Government of India in a paper contributed to this conference last year. The Mysore Government has set a good example by appointing a Director of Industries. It is, however, not easy to get a qualified man for the post. There are not many Chattertons. For bigger states it will be advantageous to send men to foreign countries and let them be trained. Smaller states may continue to secure such men. The establishment of technical schools of more or less quantity according to the ability of a state to incur the expenditure is one of their chief duties. The work of creating or fostering industries is not one which can be accomplished by a stroke of the pen or by arm-chair advisers; it requires patient and steady endeavours and minute and detailed surveys no less than enthusiasm, money, wide outlook and luck.—*Paper prepared for the Indian Industrial Conference.*

LORD CURZON'S WAR POEMS.

BY MR. STANLEY P. RICE, I.C.S.

IT is not given to every one to be a poet and probably Lord Curzon would be the first to disclaim any such title for himself. There is hardly anything original in his book of *War Poems* (War Poems and other translations by Lord Curzon of Kedleston: John Lane, London), but there are many admirable translations. If the main impression left upon the reader is that, here is the work of the scholar and not of the poet, yet the renderings are for the most part both elegant and faithful. And their impression of scholarship is enhanced by the inclusion of several classical pieces—not only translations from Greek and Latin into English but also experiments in lyric and elegiac Latin verse. The author does not shrink from comparison with the originals which are very wisely printed opposite to the translations, so that the reader has the opportunity of reading either separately or both together.

The first part of the book is entitled "War Poems," but out of the series of 18 pieces only the first eight are directly connected with the War of 1914, and of these seven are from the pen of the Belgian writer, Emile Cammaerts. The "Song of the Belgians" is distinctly reminiscent of Aytoun. Here is a stanza at random :—

Come with flaming beechen branches
And the music of the drum;
Come and strew them on the earth-heaps
When our dead lie buried, come!
Choose a day like this, my brothers,
When the wind a pattern weaves
'Mid the shivering poplar tree tops,
When the scent of fallen leaves
Floats like perfume through the woodland,
As it doth to-day, that so
Some sweet odour of our good land
May be with them down below.

There is no attempt here to conform in any way to the French metre. It is well known that the absence of accent in French makes it particularly difficult to adhere to the metre and in this particular song the original verse is of the irregular type.

There is a good marching swing about "The Belgian Flag," which begins thus :—

Red for the blood of soldiers
Black, yellow and red—
Black for the tears of mothers,
Black, yellow and red—
And yellow for the light and flame
Of the fields where the blood is shed.

The lines are very close to the original and the rendering is very spirited, in spite of the fact that the translator is in 3 of the verses bound by the necessity of the 2nd and 4th lines : "Black, yellow, and red." It is one of his difficulties of translation that though the ideas are ready made, the exigencies of rhyme and rhythm sometimes compel the translator to abandon a close fidelity to the original, or on the other hand, where the *form* must be retained at all costs, to choose words which fail to reproduce a particular conceit or point of the author. This is especially the case where each verse ends in a kind of refrain, either repeated without change or varied according to the sense of what went before. Thus in Swinburne's "Rococo," the alternate verses end :—

..... pleasure
..... pain
and ..... remember
.. .. forget

Any translation which ignored this, would change the form and thereby lose the conceit of the poem. In "Bells of Flanders," Lord Curzon is hampered in this way. The poem describes in a series of four verses a quiet Flanders before the War, the approach of the enemy, the ruin of the country and, lastly, the ultimate revenge and victory. The refrain in the first verse is :—

Va! Sonne! Sonne gaiement!
Leger Carillon Flamand!

And in the succeeding verses "leger" becomes respectively "Vaillant," "noble" and "libre." The first three words are appropriately rendered by English dissyllable, but the word "libre" which is also a dissyllable, becomes "free-born, evidently because there is no appropriate dissyllable in English. But the point is lost. Flanders has emerged from her bondage into a new freedom; "free-born" entirely fails to give this idea. And while we are still concerned with details, it is worth while to mention several false rhymes. In "The Wounded Soldier," "impatience" is made to rhyme with "patients"; in "The Spring Road," "love" is made to rhyme with "love" twice over. This kind of rhyme is sometimes legitimate as in Verlaine's "Romance Sans Paroles", but in the "Spring Road," one fancies that the translator was driven to the repetition. Other instances of this occur in the translation from Dante, in some respects the best poem in the book. We find there "course" rhyming with "discourse," and "Universe" with "perverse."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

"The Wounded Soldier" is a spirited piece, the metre of which reminds one of Praed :

A veteran he with fierce moustache
The triple stripe he's wearing—
All prudes and hypocrites he loathes
And starts by loudly swearing.

* * *

What use to him their faithful watch,
The care that never ceases!
He knows his leg is lost and done
And he'll be hacked to pieces.

Of the epigrams, epitaphs and inscriptions, the worst is the famous couplet on the "Spartans at Thermopylae." One would like to quote the Greek but failing this the following is offered, though no special merit is claimed for it :—

Go, tell the Spartans, thou that passest by
That here, obeying their commands, we lie.

Lord Curzon has attempted the classical elegiac metre thus :—

Stranger, go hence and say to the men who hold [Lacedaemon—
Here, far away, we lie, proudly obeying her words.

It is well known that the elegiac metre does not suit the English language which has never yet produced really great hexameters and pentameters. Moreover, in order to get the metre a great deal of padding is put in. The Lacedaemonians do not "hold" Lacedaemon as the Germans hold Brussels, but as the French "hold" Paris in peace time, and the expression is hardly to be justified. These is nothing in the lines of Simonides which corresponds either to "far away," or to "proudly." Both the simplicity and the vigour of the original have disappeared. A more successful effort in this sort of thing is the following :—

Colley fell ill and is no more
His fate you bid me to deplore ?
But what the deuce is to be said ?
Colley was living, Colley's dead.

The three longer poems in the book are the Francesca da Rimini episode from Dante, the Myth of Er from Plato's Republic and the Vision of Mirza from the Spectator. The two last are an attempt to throw into verse material which is in the form of prose poetry. The task sounds perhaps harder than it really is, for the subjects are eminently poetical and the writer is not hampered by the form : he can be as free as he likes. Gilbert Murray has so treated the plays of Euripides, for the choruses especially must have been translated into English prose before they took lyrical shape.

All the three poems are in the metre of Tennyson's Palace of Art, but we have only space to dwell on one. The Dante is a distinctly happy effort and the verses keep very close to the original, though one must inevitably miss the famous lilt. We may compare :—

Io venni in loco d'ogni luce muto
Che megghia, come fa mar per tempesta
Se da contrari venti è combattuto.
To a spot I came
Void of all light which like a sea
Lashed with opposing winds that naught can tame
Bellows in agony.

One is tempted to quote more but of course attention is attracted to the two most famous passages in the episode :

Nessun maggior dolore
Che ricordarsi del tempo felice
Nella Miseria."

Which, not too happily, becomes :—

There is no greater woe
Than to old happiness from grief to turn.

and again :—

Quel giorno piú non vi leggemms avante.
That day
We read no more,

which is admirable in its simplicity.

For various reasons it does not seem desirable to offer any comment on the English translations into Latin. As Lord Curzon says in the preface to the book : "It is an exercise of much attraction and has provoked the expenditure of no small ingenuity. But one cannot help wondering what an ancient Greek or Roman would have thought of the Iambics or Elegiacs of even the most erudite of modern classical scholars, much more of the mediocre practitioner." Apart from the fact that such poems are probably "caviare to the general" in the case of the majority of the readers of this "Review," it would be presumptuous in one who is not a Professor of Latin, and who for many years has not tried seriously to cultivate the little he knew, to attempt to criticise. If the translations do not reach the highest watermark of translation into the English language, they are at any rate admirable and on the whole a successful effort. An example of the author at his best may fitly close this paper :—

Give me your hands ; give me your eyes
Your eyes that sparkle in my dream ;
My troubled heart to exorcise
Give me your hands ; give me your eyes,
Stars that beguile me as they gleam,
Give me your eyes, give me your hands,
Your hands with their magician's spell ;
To guide me through the unknown lands,
Give me your eyes, give me your hands,
Your hands Princess in mine to dwell.

INDIAN CULTURE AND ITS CLAIMS.*

BY PANDIT SRI KRISHNA JOSHI.

It is now generally recognised in the learned world that the culture which has influenced the largest part of the human race is of Aryan origin. Historians, philologists, ethnologists and other scholars of Europe and America trace the descent of the principal nations of those continents from a common source, *viz.*, an Aryan people who are believed to have lived in remote times somewhere in Central Asia, and to have sent out colonies not only to different parts of Europe, but also to Persia and India. These people of the parent stock are supposed to have spoken a language of which Sanskrit, Persian, Greek, Latin, and the principal languages of modern Europe are regarded as dialects; and to have worshipped the great powers of Nature as divine manifestations. They are credited with having lived under a regular Government and having practised several useful arts, and employed mechanical devices which point to some advance in civilized life. The Greeks and the Romans are acknowledged to be pre-eminent among the groups of colonists who migrated to the West, because it was from them that Europe received its civilization. . . . . .

If Aryan culture played so important a part in the West, its developments in the East were no less remarkable. The Aryans of Persia founded a State which rose to such eminence that one of its kings, Cyrus, conquered the ancient and powerful kingdom of Babylon and subjugated Greek territories in Asia Minor. Another king, Dariaus, invaded the very home of the Greeks. Although the heroes of Marathon did not allow him to gain a footing in their country, Xerxes won victories and his son made conquests in Greece, and it required all the resources of the Athenians and Spartans to save themselves and their neighbours from falling under the Persian yoke. . . . . .

Far away from Persia and farther away from Greece and Rome, the Aryans of India, cut off from the rest of the world by the barriers of the Himalaya and the Ocean, reared a civilization of their own which is acknowledged to be no less developed than that of Rome or Greece, and to have reached an advanced stage of progress long before the Romans or the Greeks began to organise themselves into civilized communities. One of the most important landmarks in the history of Indian civilization is, the great war which is the subject of the Mahabharat and which cannot be placed later than the thirteenth century before the Christian era, even by those who exercise the greatest stringency in admitting proofs of the antiquity or the excellence of that civilization. According to Indian chronology based upon astronomical and other data, that war took place more than 2,400 years before Christ. Many of the greatest achievements of the Aryans of India had been completed long before that war. They had built cities and states, and their sovereigns had ruled over an empire stretching east and west as far as the ocean, that is to say, from the Bay of Bengal to the Arabian sea of modern geography. This is evident from even earlier records than the Mahabharat. Among other authorities may be mentioned the *Aitareya Brahmana*, which contains a most impressive description of the ceremonials observed at the coronation of the paramount ruler, who is referred to as the one sovereign of the world extending to the ocean, आऽन्तादा परार्धात्प्रायण्ये समुद्रपर्यन्तायाएकराट्. The *Rajasuya* and the Asvamedha were performed to signalize the assumption of suzerainty over the then civilized world which was confined to India in the age of those sacrifices. The ritual for these sacrifices is laid down in the Yajurveda, which is regarded by modern scholars to be older than the *Aitareya Brahmana*. These functions belong to an age long before the formation of Greek States or the buliding of the City of Rome, which is said to have commenced about 750 B.C., and which was the nucleus of the Roman Empire and the starting-point of Roman civilization.

The Aryans of India not only made conquests of territories but did far greater things. They made conquests in the domains of thought, knowledge, and spirit. All the great civilizations of the world are well known to have had their beginnings in religion. The religion of ancient India, *viz.*, the Vedic religion, is not only the oldest of the religions of which any records exist, but can substantiate its claim to the highest spiritual and moral truths that are to be found in any religion. It is the highest form of monotheism ever conceived. Evidence is being slowly discovered which some scholars regard as pointing to the Vedic religion as the ultimate source of all the world-religions. There is no doubt about

* Paper read in connection with the Benares Hindu University Opening Ceremony.

Buddhism, which is known to count 40 per cent? of the world's population among its followers, being derived from the Vedic religion. It may, in fact, be regarded as a Protestant form of that religion. The very founder of Buddhism says that his teaching is the ancient religion of India एसोधम्मो सनत्तनो (एष धर्मः सनातनः) occurs again and again in the *Dhammapada*. Modern scholarship has discovered that the highest truths of morality taught by Christianity formed part of Buddhism centuries before the birth of Christ, that the Sermon on the Mount was anticipated in Asoka's edicts, that the Buddhist monks in Palestine, known to the Greeks as the Essenes, had been preaching their religion in Asia Minor at and before the time of Christ, and that the foremost sacrament of Christianity, *viz.*, baptism was adopted from Buddhism by John the Baptist, and through him by Jesus who was afterwards honoured with the appellation of Christ for reasons similar to those for which Siddhartha Gautama came to be called the Buddha. These facts were incorporated by the late Mr. Romesh Chunder Dutt in his *History of Civilization in Ancient India*, and summed up in the remark that: 'Christianity, as an ethical and moral advance on the religions of antiquity, is indebted to Buddhism as preached in Palestine by the Essenes when Jesus was born.' Mahomedanism may be said to be even more intimately related to Christianity than Buddhism is to the Vedic religion; for the Old Testament of Christians is a part of Mahomedan scriptures, and Christ is honoured by all Mahomedans as one of their prophets.

Whether the religion of India is or is not the parent of other religions is, however, of far less importance than the question how far that religion provides for the material, moral, and spiritual welfare of humanity. This question may, to some extent, be regarded as answered by the very terms in which the word religion, as understood in ancient India, is defined:—

यतोऽभ्युदय निःश्रेयस सिद्धिःसधर्मः

(That is religion which conduces to temporal prosperity and eternal bliss). Equally well known and equally authoritative are the oft-quoted texts of the Mahabharat to the effect that religion is so called because it unites and maintains individuals in communities, that its purpose is to make them prosperous and powerful, and that he alone understands religion who is friendly to all and devoted to the good of all by actions, mind, and speech:

धारणाद्धर्म इत्याहुर्धर्मेण विधृताः प्रजाः
यःस्याद्धारणसंयुक्तः स धर्म इति निश्चयः
प्रभवार्थाय भूतानां धर्म प्रवचनं कृतम् ।
यः स्यात् प्रभवसंयुक्तः स धर्म इति निश्चयः ॥
सर्वेषां यः सुहृन्नित्यं सर्वेषां च हिते रतः ।
कर्मणा मनसा वाचा सधर्मं वेद जाजले ।

These texts are not merely on paper but were for ages observed in actual life. Those who have the privilege of direct acquaintance with the pictures of life in the societies regulated by the Vedic religion, and the codes of law and morals based upon the Vedas, cannot but feel a longing to live that life. It is true that there were wars and conquests in India in very ancient times, when civilization was being substituted for savagery, but it is equally true that those times were followed by a long era of peaceful life and true civilization in which moral force is substituted for brute force, and in which justice and freedom take the place of aggression and serfdom—a state of things which Europe is longing and struggling to secure. Prosperous communities lived under the government of their own chiefs and under the protection of a central power, which preserved peace and acted as the arbitrator between conflicting interests. That state of things is pithily described by Kalidas in the line:

नृपा इवोपप्लविनः परेभ्यो धर्मोत्तमं मध्यममाश्रयन्ते ।

The form of government mostly prevailing in those communities was limited monarchy. There were very few democracies, if any, like those of ancient Greece; but the most thorough-going democrat may be tempted to hail a monarchy in which the king is bound by law to see that his subjects do not suffer from hunger, preventible and curable disease, or from exposure to heat and cold. That the king was so bound is evident from such texts as the following from *Apastamba Dharmasutra*:—

न चास्य विषये क्षुधा रोगेण हिमातपाभ्यां वाऽवसीदेत कश्चित्

It is also evident from the Mahabharat that the king was expected to find means of living for his subjects, protect their possessions, promote their prosperity and prevent disease, avoidable mortality, and other dangers. This is concisely expressed in the couplet:

राजमूला महावाहो योगक्षेमसमृद्धयः ।
प्रजासु व्याधयश्चैव मरणं च भयानि च ॥

That Vedic religion offers a complete scheme of the highest civil and spiritual life to its followers can be proved to any intelligent person who is prepared to undertake a moderate amount of trouble in studying the records of that religion. This may of course be claimed, to some extent, for all great religions which lay down rules of morality and insist upon their observance in order to make corporate life possible; they also enjoin devotion to God or other means of spiritual progress. But there are many features of the Vedic religion in which it can be proved to excel all other religions. No other religion can claim to allow liberty of conscience and freedom of thought and speech to the extent enjoyed by the followers of the Vedic religion. Europe has known martyrs of free-thought from the time of Socrates down to the days of the Inquisition. In India even downright atheists like the Charvakas were allowed to disseminate their views unmolested. Kapila never suffered any persecution for declaring that the existence of God could not be proved. On the contrary he has been given the unique distinction of being included among the seven fathers of Sankya philosophy called *Sanakadi Sapta manushyah* who are offered libations known as *turpuna* by all who offer them to their ancestors. This honour is not paid to the founder of any of the most orthodox systems of philosophy or to any one else, except Bhishma, the renowned hero of the Mahabharat, who is so honoured for his surpassing wisdom, virtue and valour. Gautama Buddha who broke away from the Vedic religion, and made converts of the followers of that religion, was never persecuted. On the other hand his renunciation of a kingdom, his lofty character and his humane teachings were rewarded by his deification as an *avatar* of Vishnu. His followers were allowed to live in peace along with the followers of the Vedic religion.

Another point in favour of the Vedic religion is, that it does not come in conflict with science. On the other hand, science in its onward march is vindicating and demonstrating the tenets, beliefs, institutions, and practices of that religion. A few instances will suffice to support this statement. One of the principal tenets of that religion is, that all this universe is a manifestation and modification of the spirit as is evident from such texts as सर्वं ह्येतत् ब्रह्म अयमात्मा ब्रह्म, (मांडूक्य १, २) पुरुष एवेदं विश्वं (मुण्डक २,१,१०). India is proud that this tenet has been scientifically proved by the epoch-making discoveries and demonstrations of her distinguished son, Jagadish Chandra Bose. Another tenet of that religion is that the spirit, of which the universe is a visible manifestation, is smaller than the smallest and larger than the largest. अणोरणीयान् महतो महीयान्। The first part of this Vedic text is supported by the theory of electrons and other recent conclusions of science regarding the constitution of matter; and the second part was proved some centuries ago by Copernicus who found with the aid of the telescope that the boundless space around us is full of countless worlds immensely larger than the earth on which we live, and who suffered dire persecution for the heresy of communicating this discovery to his contemporaries in Europe. In India this discovery had been made many ages before. It is referred to in the *Yoga-Vasishtha*, which cannot but be regarded as much older than the time of Copernicus. The idea has been beautifully brought within the comprehension of average intelligence by comparing the innumerable worlds of stupendous magnitude journeying with tremendous velocity over their orbits in the infinite space, with imaginary giants dancing in a vast wilderness pervaded by awful darkness.

भीमान्धकार गहने सुमहत्यरण्ये
नृत्यन्त्य दर्शित परस्परमेव मत्ताः ।
यक्षा तथा प्रवितते परमान्धरेन्त
रेवं स्फुरन्ति सुबहूनि महा जगन्ति ॥

The said Vedic text will receive a still further confirmation if it is satisfactorily proved, as attempts are being made by astronomers to prove that the solar orb, which is the centre of our planetary system, is itself a planet revolving around the Canopus which is known to Indian astronomers as Agastyamuni, which has now been computed to be thousands of times larger and brighter than the sun which gives us light and life. सूर्य आत्मा जगतस्तस्थुषश्च is another Vedic text which has been verified by modern science. It says that the sun is the source of all life, animal, and vegetable; and so say the science of chemistry and the physical theory of conservation of energy. So much freedom of thought has been allowed in India in the interests of truth which is regarded as the highest form of religion.

सत्यान्नास्ति परो धर्मः is a dictum which is unreservedly assented to by all followers of the Vedic religion. They are, therefore, bound to accept all well-established conclusions of science, for those conclusions are confined to matters within the ken of our senses, and in such matters the testimony of the senses is the highest authority according to the well-known canon of *Mimamsa*, which limits the authority of revelation to matters beyond the reach of the senses, a canon which is accepted by so high an authority as Sankaracharya who ratifies it with the remark प्रत्यक्षादि प्रमाणानुपलब्धेहि विषये श्रुतेः प्रामाण्यं न प्रत्यक्षादि विषये and boldly declares that if a hundred revelations could be produced to prove that fire was cold and devoid of light, they would have no weight. न हि श्रुति शतमपि शीताऽग्निरप्रकाशो वेति ब्रुवन् प्रामाण्यमुपैति. Another leading feature of the Vedic religion is that it brings all human activities within its purview. It does not regard secular life as distinct from religious life. Every human act is to be performed as a religious duty. Marriage is a religious duty because society must be made numerically strong. What would not the President of the French Republic pay to have marriage recognized as a religious duty? Education and cultivation of knowledge are a religious duty because without them society would lapse into barbarism. Household life and pursuit of some useful avocation is a religious duty because wealth must be produced to make society prosperous. Fighting is a religious duty because society must be guarded against aggression and allowed to work peacefully for its welfare and enjoy the fruits of its work. It need scarcely be said that fighting without a just cause is an offence against religion. Even the preparation of daily meals is a religious duty. The Gita voices Vedic teaching when it says: those who cook for selfish enjoyment 'eat sin.' भुञ्जते ते त्वघं पापा ये पचन्त्यात्मकारणात्. Life should, according to that teaching, be a series of services and sacrifices for the good of the society. The very name for a householder's life, गृहमेध, implies sacrifice. Services and sacrifices for the welfare of society are regarded as offerings to God. In this sense society which is the direct beneficiary of services and sacrifices is metaphorically spoken of in the famous पुरुष सूक्त as God Himself. Morality was never placed upon a surer and a higher basis than it has been in the *Purusha Sukta*, which teaches us to regard ourselves as members of one body, *viz.*, the body politic.

Health, safety, refinement, and progress in useful knowledge and prosperity are special concerns of the Vedic religion, which devotes an *Upaveda* to each of these interests. The aim of the Ayur Veda, as we all know, is to maintain society in health. Dhanurveda is unfortunately lost; but its aim is stated by Madhusudhana Sarasvati, who has given a brief epitome of that Upaveda, as taught by Visvamitra, to be the protection of society from its enemies. He has given such epitomes of all Vedas, Vedangas, Upavedas and other authoritative works in commenting upon the word प्रभिन्ने प्रस्थाने which occurs in the verse of the *Mahimna Stotra*, which says that God is the goal of all religions as the ocean is that of all rivers. नृणामेको गम्यस्त्वमसि पयसामर्णव इव.

The aim of the Ghandarvaveda is to refine society and lead it to higher life through the influence of music. Little or nothing has been preserved of the *Sthapatya Veda*, but it is known that it consisted of sciences and arts relating to the production of wealth. Philosophy, poetry, sciences, and arts are all regarded in Europe as secular subject. But in India they have always been accessories of religion. Their very origin has been traced to religion. The Vedas are well known as the source of philosophy and poetry. Readers of Romesh Chander Dutt's history know how geometry and astronomy arose in Vedic times. Architecture, sculpture, painting, drama, and music have always been cultivated in India chiefly for religious purposes. In fact, the whole civilization of India is based upon religion and is the creation of religion. Law and jurisprudence, which are the first essentials of civilized life, are known in India as *Dharma Sastra*. Civilization is in reality the product of knowledge and thought, and no other country cultivated knowledge and thought-power as systematically and scientifically as India. The sole aim of Indian religion and philosophy is to attain true knowledge, and the Indian system of cultivating thought-power, as taught in the Yoga philosophy, stands unparalleled and unapproached. Equally unrivalled is the Yoga system of moral and spiritual discipline summed up in the words Yama and Niyama. The knowledge of Nature is regarded as essential to the knowldge of God. The Vedic religion

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

therefore lays down two paths, one of activity and the other of renunciation, प्रवृत्ति and निवृत्ति. The former is to be pursued by discharging the duties of one's position in society, by obtaining temporal prosperity, and by the enjoyment of legitimate pleasures of life; and thus pursued, it leads to the latter path which is that of unlimited knowledge and eternal bliss. Nature, including matter and mind, is described in Patanjali's *Yogasutra* as having experience and emancipation for its purposes. प्रकाश क्रिया स्थितिशीलं भूतेन्द्रियात्मकं भोगापवर्गार्थं दृश्यम् The *Vyasa Bhasya* on this aphorism explains experience (भोग) as a complete knowledge of all that is good and evil in Nature. तत्रेष्टानिष्टगुण स्वरूपावधारणमविभागापन्नं भोगः And this is a direct incitement to the cultivation of science, which of course is nothing but the study of Nature. It is not possible to notice even the leading characteristics of Indian culture in one discourse; but what has been said now is sufficient to indicate that that culture is the product of a highly civilized state of society and to show that what remains of it is worthy of being preserved. It is acknowledged by Western scholars who have studied some works of Sanskrit literature and have formed some idea of the remains of that literature, which have hitherto been catalogued and examined that those remains are much larger in volume and not inferior in value and merit than the remains of Greek and Latin literatures which are now in existence. Sir William Jones who was the first European to learn the Sanskrit language declared it to be 'more perfect than Greek, more copious than Latin, and more exquisitely refined than either.' Many scholars in Europe and America have since studied that language, made researches in its literature, written accounts of their discoveries and recorded their appreciations of Indian culture, which it would require volumes to reproduce. They have traced the beginnings of several sciences such as geometry, algebra, astronomy, and medicine to India. Even so old an art as that of extracting metals from ores was, many years ago, stated by Sir George Birdwood to have been discovered by the Aryans of India. Much still remains of Sanskrit literature to be studied and understood. Emerson says that there are not more than a dozen scholars in any age who fully understand the writings of Plato, whom he regards as the source of all that is good and great in the religion and literature of modern Europe and America. When such is the case with Greek literature, which is so largely studied in Europe and America, it is not surprising that abstruse subjects written in so highly complex and so foreign a language as Sanskrit should not be fully understood in the West. The question of the extent, to which European civilization is indebted to India, may remain unsettled for a long time; but there is no doubt about the influence of Indian culture having dominated the religion, art, literature, and other constituents of civilization over the greater part of Asia. It is worthy of note that while Roman culture was imposed upon conquered peoples, Indian religion, laws, philosophy, art, and other phases of culture were voluntarily and reverently adopted in China, Japan, Tibet, Burma, Assam, Siam, Ceylon, and other parts of Asia. Roman culture was disorganised by Teutonic conquests and remained in abeyance during the dark ages of Europe. Indian culture similarly came to a standstill after the establishment of Mahomedan supremacy in this country. It is true that Mahomedans were not an uncivilized people like the old Teutons, but their language and civilization were very different from those of India. When Persian became the State language, it was cultivated not only by those who sought service under their Mahomedan rulers but by all who aspired to any status in their eyes or cared for the advantages to be derived from intercourse with them. Thus Indian culture fell into disuse. It is showing some signs of revival under the British Government as Sanskrit has been given a place in the curriculum of schools and colleges; but as examinations for Government service and the learned professions have to be passed in English, the option of taking Sanskrit as a second language is not availed of by many, and most of those who pass examinations in that language rarely possess much more than an elementary knowledge of it. European culture and European mode of living are being adopted as eagerly as Mahomedan culture and Mahomedan ways of living were assumed in former days. Indian religion and Indian institutions are being neglected or unintelligently worked, and evils arising from the apathy or ignorance of the workers are being urged as arguments in support of ill-informed attacks on that religion and those institutions. These cannot be satisfactorily worked without an adequate and widely extended knowledge of Sanskrit literature. When that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

religion was in full force and its institutions were in full working order, India was the most prosperous and most civilized country in the world. This was acknowledged even by the Greeks who are said in Europe to have been the teachers of the world. The testimony of Herodotus that Indians were a greater nation than any people of his time in Greece is well known to scholars. It is true that Greece made much progress after the time of Herodotus; but India made still greater progress. No one who has even a second-hand knowledge of Sanskrit literature derived from Western orientalists, will dispute the claim that no country has produced profounder thinkers, braver warriors, wiser law-givers and greater teachers of mankind than India. It is well known that the arts, manufactures, and wealth of India were the envy of the world within comparatively recent times. To-day, however, we all know that India is one of the poorest, most illiterate, and most helpless countries. She is dependent upon the outside world for many of the barest necessities of civilized life. Even needles for sewing clothes are not made in this country. Owing to the disorganisation due to war, we are threatened with a famine of needles as of many other requisites of our daily life. Two months ago at least a dozen needles could be bought for one pice. At present needles are said to be selling, at Benares, at the rate of one for a pice. Let us hope and pray that peace may soon be restored to the world; but if war lasts another year or so, we may have to revert to very primitive conditions, and those who have adopted European dress and European mode of life will be the greatest sufferers. Men of plain living and high thinking—the old ideal of India—can live a highly civilized life, at least to their own thinking, with two pieces of unsewn cloth. Still it is not desirable that those who wish to wear sewn clothes should not have that little instrument which is necessary for sewing. Science and arts are necessary for maintaining a civilized life, and they cannot really become the possessor of India so long as they cannot be learnt through the vernaculars of India. These vernaculars can only be enriched from the treasures of the Sanskrit literature, as European languages are enriched from Latin and Greek. There is a widespread agitation in the Western world for the substitution of what is called modern education for Latin and Greek; but the best minds in Europe and America are convinced that their civilization should not be cut off from its real source. Latin and Greek therefore continue to be taught in schools and colleges not only in Europe but in the more go-ahead America. No one is regarded in the West as a really educated man who has had no classical education. Sanskrit ought to be in India what Latin and Greek are in Europe and America. Indian vernaculars must be nourished on their mother's milk, if they are to thrive and grow to a full stature. The terminology and the structure of the language of sciences and arts must, in India, be based upon Sanskrit as they are based upon Latin and Greek in the West. Indian vernaculars must be the medium of instruction if education is to reach the mass of the Indian population. But if agriculturists, artisans, mechanics, and petty traders must be taught through the vernacular, the leaders of thought and life, and builders of science and literature, must be well grounded in the Sanskrit language and literature, and if India is to rise to greatness once more, the characters of her leading men must be built upon the great principles of her religion and morality, and must be moulded on the models supplied by the great characters of ancient India. It is great men who make great nations. It is great thoughts which make great men, and really great thought was never conceived and expressed in a foreign language.

India still possesses the makings of a great civilization. Her soil is as fertile as any other land. She is still rich in mineral and sylvan wealth. But her greatest asset is the rich heredity of talents and aptitudes produced by the institution, which was designed to secure the highest social efficiency by assigning the various functions of a civilized life to the classes best fitted to discharge them, and by recognising the great truth that faculties for doing superior and efficient work are best developed by hereditary transmission. If this great wealth of heredity is brought to bear upon the wealth of India's material resources, she can make her way to the vanguard of the world's civilization in the near future as surely as she did in the past.

"All About the War—The Indian Review War Book."—A comprehensive and authentic account of the War with numerous illustrations, portraits, cartoons, maps and diagrams contributed by officers of the Indian Civil, Military and Medical Services, Ministers of Native States, Engineers, Educationists, Journalists, Lawyers, Publicists and other Specialists. Edited by G. A. Natesan, with an introduction by His Excellency Lord Pentland and an appreciation by H. E. Lord Hardinge. Price Rs. 4. To Subscribers of the *Indian Review*, Rs. 3.

Gokhale's Speeches.—A new and up-to-date edition, 1240 pages, Crown Octavo, with seven Portraits and Index. Cloth bound. Price Rs. 3. To Subscribers of I.R., Rs. 2-8-0.

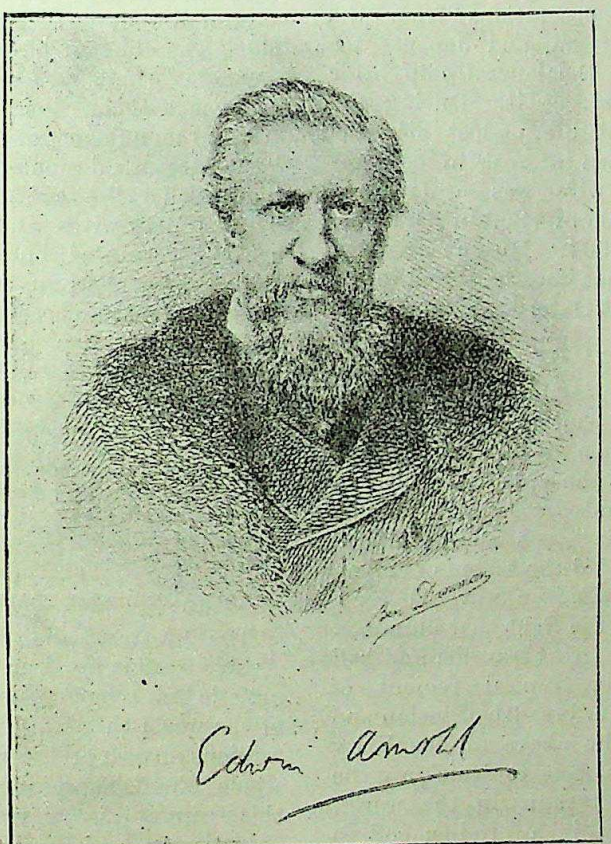
Sir Edwin Arnold & His Interpretation of the East

BY MR. K. S. RAMASWAMI SASTRI, B.A., B.L.

SIR Edwin Arnold was born on 10th June 1832, at Gravesend. He was the second son of Robert Coles Arnold, of Whartons Framfield, and elder brother of Sir Arthur Arnold. He was educated at King's School, Rochester, at King's College, London, and at University College, Oxford. He graduated in 1854 and became a Master of Arts in 1856. Although he got only a third class in the final classical school, he read classical poetry with a great deal of love and enthusiasm. In 1852, he obtained the Newdigate prize with a poem on *Belshazzar's Feast*. He published it in 1852 and afterwards included it in his volume entitled "Poems Narrative and Lyrical" published in 1853. He was second master at Birmingham in the King Edward's School for a short period. In 1856, he was nominated Principal of the Deccan College, Poona. It was his stay in India that enabled him to steep his soul in the outer and inner glories and enchantments of India. In his book on *Seas and Lands*, he says :—

I would wish to see cultivated those fields of Eastern philosophical thought which I have so feebly and hastily traversed, as affording a sweet sovereign medicine against the fever of a too busy national life.



He became a Fellow of the Bombay University and studied Eastern languages including Turkish and Persian. He translated *Hitopadesa* and his translation was published with fine illustrations by Harrison Weir. He wrote a pamphlet on Education in India in 1860, pleading for a more scientific grafting of Western knowledge on the learning of the East. He wrote also a History of Lord Dalhousie's administration. His kind and sympathetic attitude during the troubled times of the great Indian Mutiny won for him the love of the people and the appreciation of the Government of India. He returned to England in 1861, and got the post of leader writer on the *Daily Telegraph*. George Augustus Sala describes how early in 1862, a sweet and attractive Eastern note began to be felt in the leading articles of the *Daily Telegraph*. He was since then connected with the paper as editor also. He became the chief editor in 1873. As Editor for 28 years, he had a staff that included Edward Dicey, James MacDonnell, and H. D. Traill. On 1st January 1877, he was made a C. S. I. He was all this time busy with the great life-work of interpreting the life and thought of the East. In 1879, he published his epic poem : "The Light of Asia," to which he owed most of his fame. By the end of the century it went through sixty English and eighty American editions. His poem on "The Light of the World" (1891), was however not a success. It dealt with Christ as the previous poem dealt with Buddha. Other books by him are: *Pearls of the Faith*, *With Sa'di in the Garden*, *The Secret of Death and other Poems*, *The Song Celestial or Bhagawad Gita*, *Poets of Greece*, *Indian Idylls*, *Lotus and Jewel*, *Tenth Muse and other Poems*, *Adzuma or the Japanese Wife*, *Potephar's Wife and other Poems*, *In my Lady's Praise*, *Indian Poetry*, *The Voyage of Ithobal*, *Wandering Words*, *Japanica*, *Seas and Lands*,

East and West, India Revisited, In Tent and Bangalow, The Queen's Justice, etc. In 1888, he was made a K. C. I. E. In 1889, he started with his daughter upon a travel, chiefly to the Pacific Coasts and Japan. He repeated his visit to Japan later on as he was fascinated by the artistic and social sides of Japanese life. His books on Japanese life spread optimistic views of Japanese progress in England. While he was editor, he arranged on behalf of the Proprietors of the *Daily Telegraph* in conjunction with the *New York Herald* for the journey of H. M. Stanley to Africa to discover the course of the Congo. He must also be credited with the first idea of a great trunk line traversing the entire African continent. In 1891, he undertook a reading tour in America and also received foreign decorations from the rulers of Turkey, Persia, Siam, and Japan. He expected the reversion of the laureateship after Tennyson died but did not get it. During the last nine or ten years of his life, he lost his sight but still maintained his keen interest in contemporary affairs. His third wife was a Japanese lady. He died at his house in Bolton Gardens, London, on 24th March 1904. He was cremated at Brookwood, and his ashes were bestowed in the chapel of his old College at Oxford.

HIS PERSONALITY.

Arnold's nature was gentle and loving, and his poems and books of travel contain numerous personal touches bearing ample testimony to the sweetness of his soul. At the same time he had great strength of nature and courage of convictions. His "Light of Asia" was anathematised on many pulpits and offended the taste of many devout Christians. But he never wavered for a moment in his worship of the light that illumined his soul. Again, he was a great traveller and had a special love for the bright tropical regions of Asia. His travels gave him breadth of vision and depth of love and lifted him above all insularity of outlook and narrowness of heart which are the root causes of hatred and tyranny in the world. His brief career as Principal in an Indian college gives us glimpses of other rare traits of his character—his refinement, his sympathy, and his love. Above all, his insight into Indian life and character and art and his love of India are among the highest elements of his nature.

His revelling in Indian poetry and his passionate love for it are well known. For Indian philosophy and religion he had true love and genuine reverence. He says:

> The Hindu is quite assured that he has lived many previous lives and has many more to experience, and whether Vaishnav or Saivite, is troubled with none of the dismal doubts of modern materialism.—*India Revisited.*

It is in his insight into the true glory of Indian manhood and womanhood and his sense of the immemorial greatness, serenity, and refinement of the Indian race that we find the most perfect manifestations of his rare gifts of vision and love. He says: "Wherever you encounter Parsis in India, you will find intelligence, enlightenment, and energy."—*Ibid.* He says of Indian refinement: "There is nowhere greater grace or cordiality of greeting than among the educated families of India; but, in truth, this is the land of fine and noble manners."—*Ibid.* He says of Rajputana: "Rajputana is measurelessly old. The bluest blood of Europe is but of yesterday compared with that of the haughty families of this region." Of the wonderful architectural monuments of Moghul rule, he says that "the Moghuls designed like giants and finished like jewellers."—*Ibid.* He says of Indian women: "The Indian wives and mothers, among whom are to be counted humble saints and angels by the lakh—gentle, patient, laborious, faithful, pure, contented, cheerful, and affectionate souls."

What true love and insight throb beneath his fine farewell to India!

> I leave my heart behind me on leaving these Indian peoples, who have taught me, as I have wandered among them, that manners more noble and gentle, learning more modest and profound, loyalty more sincere, refinement more natural, and sweeter simplicities of life and love and duty exist in the length and breadth of British Asia than even I had gathered from my old experiences, before India was revisited.—*Ibid.*

NATURE AND TRAITS OF ARNOLD'S ART.

The greatest and most admirable trait of Arnold's art is his deep and vivid insight into the artistic and religious ideals of the great cultures of the world that still live and mould the lives of millions of men and women. The debt that the whole English-speaking world owes to him in this respect is immense. Islam, Buddhism, Christianity, and Hinduism have all been interpreted by him with a sincerity, an insight, and a passion of love that carry conviction to our hearts. Great and loving souls like Arnold's do more to soften the animosities of ages born of imperfect sympathies and partial comprehension than all the diplomats, the governors, and the evangelists put together. Wherever they bear their uplifted torches of love and learning, the darkness of the heart flies afar routed by the forces of light.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Another aspect of his art that deserves prominent mention is his passionate love of beauty. It is so deep and dominating in him that he has been criticised for oversensuousness. In this respect he carries forward the great literary tradition of Keats and Tennyson. It was Keats who said :

> Beauty is Truth ! Truth Beauty ! That is all
> Ye know on earth and all ye need to know.

Keats' atmosphere of dainty and luxuriant fancy, his plastic and pictorial imagination, his exquisite sensitiveness to beauty—beauty of nature, beauty of sentiment, beauty of phrase and sound—and his approach into the shrine of beauty through the doors of sense-perception created a powerful literary tradition. Tennyson carried forward this tradition, though in breadth of outlook, variety of appeal, intensity of spiritual vision, and modernness of note he has a range that Keats who died in his glorious youth did not attain. Arnold, though far below them in the above characteristics, displays the same qualities as Keats.

Another great characteristic of Arnold's art is his catholicity of taste. He was equally at home in the literatures and arts of Islam, India, and Japan. Each great race looks through the window of its soul upon the ocean of beauty and records its experiences in radiant prose and rhythmic verse. The duty of every great soul is, while preserving its individuality and the special glories and graces of the race to which it belongs, to make its own the conquests made in the realm of beauty by the adventurous spirit of man, to which the quest of beauty is even more delightful and fascinating than her conquest and which seeks to set free everywhere some fair imprisoned beauty whether she be the presiding genius of arts, or the spirit of social love, or the pure-souled vestal virgin of religion guarding from tempests of doubt the lighted flame of faith on the altar of the heart. In this respect we who desire to set India free from her ancient chains and enable her to regain her inalienable birthright as the mother of religions, the queen of beauty and romance, and the model for the whole world in every respect, should learn this lesson of Arnold's life aright so as to serve our motherland wisely and well.

But Arnold was deficient in originality. His was not the higher type of mind that evolves out of the elements of beauty and glory brought within reach by study and observation a new cosmos of beauty that will shine and be a joy for ever. There is not a single original work by him. Nor had he much of lyric fire, or dramatic genius, or vivid story-telling power. Hence he belongs only to the second rank of poets though by his interpretative power he has done a great service to the cause of truth and love in the world.

ARNOLD'S STYLE.

He has an ornate style and felicitous versification. His blank verse is on the Tennysonian model, but, though fluent and sometimes grandiose, it is lacking in distinction and melody.

Arnold's blank verse is smooth, copious, and attractive, if it does not attain the great excellences of blank verse in the hands of the greater poets. In his heroic verse and other rhymed stanzas he carries forward the tradition of Keats and hence his style is somewhat loose-knit and lacking in strength. But on the whole he must be said to belong at least to the second rank of poets and has a fine feeling for beauty and harmony. His poems have much wealth of local colour and have frequently considerable beauty of description. His prose style is picturesque and attractive, and his volumes of travels are particularly interesting.

SOME FRUITFUL IDEAS FROM ARNOLD'S WORKS.

One great idea that he was never tired of repeating is, that the East should not give up its peculiar graces and glories but preserve them while assimilating the most modern culture from the West. He says in respect of Japan :—

> You cannot, gentlemen, import our civilisation; you must make science Japanese by time and patience . . . . But I cherish the hope that your path of progress will never lead you entirely out of sight of your own peculiar refinements, and that the primary duty of national self-assertion will never finally efface that which is so special and so precious in your own charming civilisation.—*Seas and Lands.*

He gave the same advice often to Indians also.

Arnold realised and said that the highest womanhood is the greatest glory of each civilisation. He quotes with approval President Eliot's remark : "The lady is the consummate fruit of human society at its best." It has been well said : "Men are very much the same all the world over : They are like the coarse grass which grows everywhere. But the flowers, you know, are different in every country." It is the duty of Indians to preserve the highest elements of true womanhood, the realisation of which was and is one of the great dreams of our race.

Above all he pleaded for more beauty, grace, and repose in individual and national life and for religious toleration and the attainment of a truly

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

self-sacrificing and spiritual life. He was himself an example, a living embodiment, of the great ideas that he gave to the world, and his ideas have a special value and appeal to us Indians as those of a man who had the deepest love and reverence for India while possessing perfect clarity of vision and insight into the great dreams and ideals of the East and the West.

ARNOLD'S FOUR GREAT RELIGIOUS POEMS.

The volume of poems entitled *The Pearls of the Faith* is of great beauty in parts though it does not maintain a uniformly high level of poetic achievement. The most beautiful and inspiring elements of the great religion of Islam are well depicted therein. A genius who turns his powers to the uplifting task of discovering the universal elements of beauty present in all religions —elements by which they live for ever, though creeds, rituals, and other outer vestments of faith change from age to age—is one who does the greatest of all services to humanity, and from this point of view Sir Edwin Arnold is entitled to a high place in all men's hearts.

The following description of Allah is sublime :—

Allah ! there is none other God but He,
The Living God, the self-subsistent one ;
Weariness cometh not to Him, nor sleep ;
And whatso is belongs to Him alone
In heaven and earth ; who is it intercedes
With Him, save if He please ? He is aware
What is before them and what after them,
And they of all His knowledge nothing share
Save what He will vouchsafe. His throne's foundation
Sits splendid, high above the earth and sky,
Which to sustain gives Him no meditation ;
Mightiest He is, Supreme in Majesty.

Sir Edwin Arnold's poem "The Light of the World" describes the holy life of Christ and all that He accomplished for man to make him realise His essential divinity. It was evidently written as a companion poem to "The Light of Asia," but somehow lacks the serene beauty, the uplifting power, and the harmony of numbers that make the poem on the Buddha a poetic work of great beauty and power. The treatment of the subject is inadequate, and there are frequent infelicities due to his not rising to the height of the subject. There is no unity in the story, and the poem leaves the impression that the poet did the work as a task set by himself to himself and not because his heart and imagination were fired by it. The life of Christ is narrated in smoothly-flowing lines by means of a long dialogue between Mary Magdalene and one of the three wise men of the East, who were led by the star of Bethlehem to the place where Jesus was born. The poet says :

High cause had they at Bethlehem, that night
To lift the curtain of Hope's hidden light,
To break decree of silence with Love's cry,
Foreseeing how this Babe, born lowly,
Should—past dispute, since now achieved is this—
Bring Earth great gifts of blessing and of bliss.

The Light of Asia is perhaps the most widely known and most beautiful of his works. It tells the story of the life of one of the greatest spiritual leaders of the world ; it maintains a lofty ethical tone while delineating a great variety of incidents and thoughts ; and it is written in a style fluent, impassioned, musical. It is wonderful that he has been able to attain such vivid local colouring and to assimilate so thoroughly the faith of the enlightened (the Buddha) as is evident from the poem. The scholar and the philosopher in him are not less remarkable than the singer. The supreme ethical fragrance of the flower of Buddha's doctrine is felt in every page of the book. He says of it in his preface : "It has been composed in the brief intervals of days without leisure, but is inspired by an abiding desire to aid in the better mutual knowledge of East and West. The time may come, I hope, when this book and my "Indian Song of Songs" and "Indian Idylls" will preserve the memory of one who loved India and the Indian peoples."

Various translations of the poem by Sir Edwin Arnold have appeared in almost every European and numerous Oriental languages. It has been well said :

It may probably be claimed for it that many people otherwise well-read and educated would never have had more than the faintest notion of the exquisite beauties of the Buddhistic faith, had they not been presented to them in so delightful and at the same time so accurate a form as by the "Light of Asia.

Various Oriental scholars have found fault with the presentation of Buddhism as contained in the *Light of Asia*. But whatever its imperfections, the essential elements of Buddha's gracious message to the world are well brought out in it, while the poem contains permanent elements of beauty in its presentation of the picturesque and pathetic elements in the story of Buddha's life.

One of the finest passages in the poem is that where the old sage Asita sees the babe Buddha and tells Buddha's father King Suddhodana :

Know, O King !
This is the Blossom on our human tree
Which opens once in many myriad years—
But opened, fills the world with wisdom's scent
And Love's dropped honey ; from thy royal root
A Heavenly Lotus springs.

The episode of the wounded swan, which first made Buddha meditate upon the ills of life, is beautifully narrated.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He saw
The thorns which grow upon this rose of life.

King Suddhodana's attempts to fetter Buddha's soul in silken bonds of love and luxury and Buddha's shaking them off and going forth in a passion of love for all to seek a sovereign remedy for the diverse ills of life are very vividly and imaginatively described.

Buddha's meditation and penances in search of truth are next described. The following description of sunrise is worth quoting:

At first a dusk so dim
Night seems still unaware of whispered dawn,
But soon—before the jungle-cock-crows twice—
A white verge clear, a widening, brightening white,
High as the herald-star, which fades in floods
Of silver, warming into pale gold, caught
By topmost clouds, and flaming on their rims
To fervent golden glow, flushed from the brink
With saffron, scarlet, crimson, amethyst;
Whereat the sky burns splendid to the blue,
And, robed in raiment of glad light, the King
Of Life and Glory cometh!

Buddha's attainment of illumination under the *Bodhi* tree and his giving of his gracious message to the world are delineated in verses throbbing with feeling and full of splendour of style and sound. I shall quote here only a few stanzas describing Buddha's doctrine.

Ye are not bound! the Soul of Things is Sweet,
The Heart of Being is Celestial rest,
Stronger than woe is will; that which was Good
Doth-pass to Better—Best.
* * *
Ye suffer from yourselves. None else compels,
None other holds you that ye live and die,
And whirl upon the wheel, and hug and kiss
Its spokes of agony,
Its tire of tears, its nave of nothingness,
* * *
Such is the Law which moves to righteousness,
Which none at last can turn aside or stay;
The heart of it is Love, the end of it
Is Peace and Consummation sweet. Obey!

One of the poet's masterpieces is *The Song Celestial*, which is a translation of the *Bhagawad Gita*. It has great elevation of tone and majesty and dignity of style. The blank verse is strong yet pliable and musical and sweet to the ear. There are many translations of the *Gita* but Arnold's translation has a place apart among them by its accuracy and the grave harmony of the verse.

The translation is dedicated by the poet to India. The dedicatory verses are (Arnold himself has translated them.):—

So have I read this wonderful and spirit-thrilling speech,
By Krishna and Prince Arjun held, discoursing each with each;
So have I writ its wisdom here, its hidden mystery,
For England; O our India! as dear to me as she!

Sir Edwin Arnold says in his preface:

This famous and marvellous Sanskrit poem occurs as an episode of the *Mahabharata*, in the sixth—or "Bhishma"—Parva of the great Hindu epic. It enjoys immense popularity and authority in India, where it is reckoned as one of the "Five Jewels"—*pancharatnani*—of Devangari literature. In plain but noble language it unfolds a philosophical system which remains to this day the prevailing Brahmanic belief, blending as it does the doctrines of Kapila, Patanjali, and the Vedas.

ARNOLD'S INDIAN POEMS.

Sir Edwin Arnold's volume of poetry entitled 'Indian Poetry' contains many exquisite translations and adaptations from Sanskrit literature. The first poem is a rendering of Jayadeva's Gita Govinda. As has been well said: "Nothing could be more graceful and delicate than the shades by which Krishna is portrayed in the gradual process of being weaned by the love of 'Beautiful Radha, Jasmine bosomed Radha, from the allurements of the forest nymphs in whom the five senses are typified." A breeze laden with the odours of Eastern flowers and spices seems to blow through its pages. The supreme literary grace and musical flow of diction which make the original poem unique even in Sanskrit literature are well brought out in Sir Edwin Arnold's translation. The very commencement strikes the key which is the very soul of the poem:

O, Radha, Radha! take this soul, that trembles
In life's deep midnight, to Thy golden house.

The rapturous attainment of divine communion after life-long yearning and search for God is well brought out by the poet who has thus been able to enter into the innermost shrine of the temple of Love and Beauty built to music by Jayadeva's artistic and spiritual genius. The following song in praise of Love is worth remembering:

Love—the mighty Master,
Lord of all the stars that cluster
In the sky, swiftest and slowest,
Lord of highest, lord of lowest—
Manifests himself to mortals,
Winning them towards the portals
Of his secret house, the gates
Of that bright Paradise which waits
The wise in love.....
Mighty love sways all alike
From self to selflessness.

The passage where Radha sends her maid to bring Krishna who was dallying with the *gopis* by whom the senses are typified is equally full of beauty:

To yield him up my bosom's maiden splendour,
And fold him in my fragrance, and braid
My shining hair for him, and clasp him close
To the gold heart of his Rose.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The repentant Krishna yearns for Radha, having risen above the entrancements of the senses. He says:

Yet all day long in my deep heart I woo thee,
And all night long with thee my dreams are sweet.

The poem entitled the *Rajput Wife* does not strike a high note, though the subject lends itself to moving and impassioned narration. It describes how a brave and devoted and true Rajput wife avenged the murder of her loving husband and then followed her husband's soul through the shining gate of fire by performing *Sati*. The *spirit* of *Sati* is one of the greatest graces of womanhood in India though the *form* of *Sati* which was often associated with much cruelty is happily gone.

Other poems in the book describe details of Indian life. One poem deals with the ascension of the Pandava Princes to Heaven, and the other describes the night of slaughter in the Sauptika Parva of the Mahabharata. The volume concludes with translations from that mine of worldly and moral wisdom—the *Hitopadesa*. The translations have great merit and combine true poetic beauty with fidelity to the original. I shall quote here a few of them:

Twofold is the life we live in—Fate and Will together run:
Two wheels bear life's chariot onward—will it move on only one?

The volume of verse called *Indian Idylls* consists of eight graphic episodes from the Mahabharata. They reveal the poet's chief traits—his grace of style and his tenderness of tone—in a remarkable manner.

The poem 'Savithri' describes the heavenly life and the love stronger than death that make the story of Savithri unique in the whole range of literature in point of beauty and uplifting power. But Sir Edwin Arnold's treatment of the story is unsatisfactory as it misses in some undefinable way the high note of deep passion and watchful selfless love which must be movingly and powerfully brought out if the real beauty of the story is to be realised by the poet and communicated to the soul of the reader. The following description of Savithri in her self-chosen woodland home is very beautiful:—

From her neck and arms she stripped
Jewels and gold, and o'er her radiant form
Folded the robe of bark and yellow cloth
Which hermits use, and all hearts did she gain
By gentle actions, self-government,
Patience and peace.

The story of 'Nala and Damayanthi' is the next in the volume and is very long. It also lacks distinction and fire, though it like all other poems of Arnold's has a sweet flow of diction and a uniform elevation of sentiment. The following description of Damayanthi in the forest is very good:—

Those breasts
Beauteously swelling, form of faultless mould,
Sweet youthful face, fair as the moon at full,
And dark eyes by long curving lashes swept.

The poem on 'The Enchanted Lake' describes the episode known as *Yaksha Prasna* in the Mahabharata, and contains the quintessence of Indian thought on life here and hereafter. 'The Saint's Temptation' narrates how the pure-hearted child Rishya Sringa, whose holy presence in a country ensures the coming of rain, was beguilded by the sweet ways of women to go into a land thirsting for rain:

Once more she clasped her soft brown arms
About him, and with eyes fixed on his eyes
Withdrew; having enkindled passion's flame
Where only fires of sacrifice had burned.

The volume entitled "The Secret by Death and Other Poems" contains smooth and polished verse but does not rise to the height of some of the other volumes of his poetry. The 'Introduction' to the book contains a beautiful passage about the wisdom and the beauty contained in the Upanishads:

The subtle thought, the far-off faith,
The deathless spirit mocking Death,
The close-packed sense, hard to unlock
As diamonds from the mother-rock,
The solemn, brief simplicity,
The insight, fancy, mystery,
Of Hindu scriptures—all are had
In this divine Upanishad.

"The Secret of Death" is a translation of the Katha Upanishad. The following lines from it are worth remembering:

Whoso hath laid aside desire and fear,
His senses mastered, and his spirit still,
Sees in the quiet light of verity
Eternal, safe, majestical—His Soul!

Then follow a few Indian folk-songs. 'The Song of the Serpent Charmers' is a fine piece of writing and reproduces the peculiar droning music of the snake charmers:

Great uncle snake! creep forth and dance to-day!
This music is the music snakes love best;
Taste the warm white new milk, and play
Standing erect, with fangs at rest.
Dancing on end, sharp fangs at rest,
Fierce fangs at rest.

The volume of poems called 'Lotus and Jewel' does not contain the poet's best work, but it has the great merit of containing some of his original poems. Arnold's genius was one that was able

CC-0. In Public Domain, Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to sustain a prolonged soaring flight in the poetic empyrean only when he had an Indian poet by his side, and his best and most enduring work is in the field of interpretation of eastern ideals to the waiting West. The poem however shows that Arnold was no mere rhymester and translator but had "the deep poetic heart," and that he had a true ear for melody, a true eye for beauty, and a true heart for love.

The poet's insight into the social life of India which is revealed only to the sympathetic vision of a true friend and which is quite unknown to casual observers and unsympathetic eyes is clear from the following lines :—

Oh and full well I know what happy hearths
Are here in India, and what stainless wives
Live their sweet lives and die their gentle deaths
Under your suns.

There is a sweet and pathetic beauty in the concluding lines :

Life is not life, if we must live thinking of love's last day ;
Oh, never come, my Love and Life ! or never go away.

The miscellaneous minor poems in the volume are not particularly noteworthy. We may however quote here an excellent sonnet bidding adieu to India :

India ! farewell ! I shall not see again
Thy shining shores, thy peoples of the Sun,
Gentle, soft-mannered, by a kind word won
To such quick kindness ! Oe'r the Arab main
Our flying flag streams back ; and backwards stream
My thoughts to those fair open fields I love,
City and village, maidan, jungle, grove,
The temples and the rivers ! Must it seem
Too great for one man's heart to say it holds
So many Indian sisters dear,
So many Indian brothers ? that it folds
Lakhs of true friends in parting ? Nay ! but there
Lingers my heart leave taking ; and it roves
From hut to hut whispering 'he knows and loves !.'

The above are the most important of Arnold's Indian poems. They are of great beauty in themselves and also show how India is yet the true home of romance and idealism despite the stress of materialism and competition. The revelation of the treasures lying unknown in the books, folk-lore, and customs of India is a great work which can be best done by Indians themselves, and the world is waiting for the great Indian genius who shall reveal the supreme ideals of India in poems,

Grateful to hallowed minds, lofty in sound,
And couched in dulcet numbers.
(Arnold's Indian Idylls).

ARNOLD'S MISCELLANEOUS POEMS.

The volume called 'With Sa'di in the Garden' consists of a long poem excellently conceived and executed. It opens with a description of the Taj Mahal and introduces us a learned Mirza, two songstresses, and an Englishman who pass the night in the Mosque attached to the Taj, reading the chapter of Sa'di on 'Love' and conversing thereon. The book consists not only of translations from Sa'di but contains various exquisite lyrics and verse-tales full of oriental passion and picturesqueness. The following opening description of the Taj is full of beauty :—

Not architecture ! as all others are
But the proud passion of an Emperor's love
Wrought into living stone, which gleams and soars
With body of beauty shining soul and thought
In so much that it haps as when some face
Divinely fair unveils before our eyes
Some woman beautiful unspeakably—
And the blood quickens, and the spirit leaps,
And will to worship bends the half-yielded knees,
While breath forgets to breathe ; so is the Taj.

The volume entitled *In my Lady's Praise*, contains the poems called 'A Casket of Gems' which have been collected in the volume 'Lotus and Jewel' and which have been reviewed above, and a few other poems. The other poems are mostly elegiac poems in sorrowful praise of his dead wife. I shall quote here but one beautiful stanza from them :

Well ! One small word tells all things
'Love !' 'Love' concludes, begins, !
Defines—explains—exemplifies,
Conciliates, comforts, wins ;
Assails the sins we could not 'scape,
Sets right our wrong, and ends
All grief of this with one soul-kiss
Which links us lasting friends.

ARNOLD'S PROSE WORKS.

Sir Edwin Arnold's 'Wandering Words' is a book of travels which deals more with the interpretation of the soul of the lands he visited than with the recording of mere outer incidents. It is especially valuable as an interpretation of Japanese and Indian life. He says :

To see popular gatherings alive and brilliant with happy colours, and to find the lost repose and delightfulness of daily life extant, and visible, and placidly prized, one must wander to-day among Indian cities and enter the precincts of the temples of their gods and the courts of the Hindu princes.

Sir Edwin Arnold's *East and West* is a book of traveller's impressions. It contains a few exquisitely narrated stories and some sketches of Indian and Japanese life. The chapter on "The Indian Upanishads" is as remarkable for its insight as for its sympathy. He says :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The days are of gold, and the nights are of ivory, in these natural temples of the Asiatic waste, where the "gymnosophists" of Alexander and Arrian—the *Maharishis* and *Mahatmas* of Indian philosophy—meditated, to depths of abstraction profounder perhaps than Plato or Descartes, than Kant or Hegel, have ever reached, upon those problems which cannot be solved by mortal man while he lives here below, but which he must nevertheless strive constantly to solve, if he would give due growth and training to his soul.

"India Revisited," from which I have already quoted, is an excellent book of travels, full of picturesque description and sympathetic interpretation of the East. The chapter on "New Bombay" gives a full and glowing description of the queen of the Indian Ocean. The description of the Elephanta caves is very fine. He says of the statue of *Ardhanareeswara*:

This statue, of colossal size, is nevertheless very delicately cut, and the limbs and features possess an almost tender beauty. But the right half of the deity from head to foot is male, and the left moiety female. On one side of the figure are the knotted hair, the breast, the limbs of a god-like man; on the other the smooth and braided tresses, the swelling bosom, the rounded contour of a goddess.

The following wise words of Arnold to England and India are worthy of serious attention:—

The time is gone when we could hold India by mere force. She must be 'ours' in the days to come because England is 'hers,' because the basis and purpose of our sovereignty there are her advancement and her benefit; because the best thing for the two populations is that they should dwell sisterly, the stronger protecting the weaker. What is good for India, in the sense of wisely and naturally developing her social and political emancipation, must henceforth be gladly done . . . . . There are no longer two policies—one which suits the Empire, and one which satisfies India; there is but one henceforward, to find and to follow—the policy, that is to say, which is best for India.

Sir Edwin Arnold's "The Marquess of Dalhousie's Administration of British India" is in two volumes and was published in 1862. He finely says at the commencement of the work: "He confesses to approach this labour with a conviction that India should be ruled for the Indians and that no imperial necessity can be stronger than imperial obligations." These are wise and weighty words that deserve to be treasured up in all true hearts. Lord Wellington when he was in India said once: "I would sacrifice every political consideration ten times over rather than sanction the slightest infraction of British good faith." There is a serene jubilation dignified by a high sense of duty in the following passage in Arnold's book:—

Strength, indeed, is sure to be respected in practice; but it demands the regard of the philosopher also, being of its nature divine; and, at least a presumptive title to authority. Strength, inspired by benevolence, needs only wisdom to be the earthly analogue of the Divine Government. The two first are present together on all the pages of the history of the English in India. Sordid those pages sometimes are with the contact of money, blotted sometimes with innocent blood, but they always recite a progress to other gain than gold, and to other conquest besides territory. . . . . But, when all is conceded that envy or candour can ask, there remains that wherein England may challenge the comity of nations to match her work. The mantle of the Roman is descended upon us; bringing a larger gift, and a better spirit. We have overspread the earth; for our own gain, truly, but not for that alone—nor always for that at first. Where we have come, justice, the best we know, is done; benefits, the best we possessed, have been imparted. . . . . If we have not yet gained the affections of India, at least we have never yet despaired of deserving them; and the temptation of a military mutiny has failed to enlist against us the accusation and hostility of her working people . . . . . we have deserved to keep what we have dared to acquire, and they read history ill, and fail beside in duty to their country, who speak of our Indian annals as fair to apologize for them. Let them be written, extenuating nothing and enlarging nothing, and a record will stand which the future will value and the present may be proud of.

We however see in the book a few traces here and there of lack of sympathy for India and the Indian nature—a defect that disappeared altogether in his maturer work. The history of Dalhousie's administration is narrated with considerable fulness and in a spirit of sympathy. A Government that suppressed Thugge, slavery, and infanticide, and consolidated the administration, and gave peace and justice and progress to the governed certainly deserves every commendation, whatever may have been its mania for annexation and its errors and its shortcomings. Arnold says of Lord Dalhousie: "He visited in person every province of the country which he had added to India; he crossed its rivers; dwelt in its cities; rode over its wild plains; and threaded its winding defiles. Wherever his provident glance observed an opportunity, or detected a want, he registered it for improvement or reform." It used to be said of Lord Dalhousie that he wrote "sixty minutes to the hour." Let all Englishmen remember the following precious words of Arnold:—

We are introducing in India an idea unknown to the East, as it was unknown to Europe before commerce and the Italian cities taught it—the idea of popular rights and equality before an impartial and written law. If in that mission we violate justice, and let our ambition get before our duty, we shall spoil our own work; which will else bring the circumference of civilization back to its starting point, and completing the round of human intercourse, repay to the East the heavy debt due to it from the West, in religion, art, philosophy, language—in almost everything but the science of government.

MORE MONEY WITHOUT TAXES

BY MR. S. B. BANNERJEE, M.A.S., (LONDON.)
(*Editor*, "*The Calcutta University Magazine.*")

THE new Budget is out. It is a deficit Budget, as everybody believed it would prove to be. Many new taxes have been imposed, all but two or three of which will affect the well-to-do. As may be expected, the press have criticised some of the "impositions" in more or less strong language, but they are all agreed that the Government had no other alternative open.

There is no knowing when the war will end. Supposing it lasts for another year, we may expect another deficit budget next year. To make up the deficit, fresh taxes will be imposed.

The cry everywhere is "curtail your expenditure." Many excellent schemes are hung up for want of funds. How long they will remain in a "state of suspense," nobody can say. It is just possible that many of them will have to be abandoned for ever. This is not desirable.

The people will have to find more money for education, sanitation, etc. They will not pay subscriptions to funds readily, however high their object may be. High interest may induce a few to invest their spare cash; but high interest is not a healthy sign of Government. For a Government like ours, five per cent. is the highest interest that should be paid. Anything more should be deprecated for reasons of State policy.

Surely education, etc., must not suffer. The people will have to be induced to find money for education, sanitary improvements, etc. The only way of inducing those who are hoarding to invest their spare cash, is to tempt them to invest in Premium Bonds.

Almost all the European countries have their Premium Bonds. Some of them even pay a small interest. These Bonds form an excellent mode of investment, and the big prizes, which are offered, attract the capital of all and sundry.

What I propose is this: The Government of India should arrange to issue Premium Bonds of the value of £100,000,000. The face-value of the bond should be five rupees—to enable the small investor to buy one or more bonds as he likes. Drawings should be held twice a year. There should be one hundred prizes, the first prize being a lakh of rupees and the second fifty-thousand rupees. Not more than ten lakhs of rupees should be distributed in prizes every year. The bonds may be sold through the post offices and banks only. No commission should be charged on sales, and no transfer fees should be levied. In a word, the bonds must be made easily available and transferable. I have no doubt that Premium Bonds will prove immensely popular in India, if they are issued on the lines indicated above. The help of the Press will have to be taken to impress their utility upon the general public. Foreigners must be allowed to purchase the bonds. As these will have the backing of the Indian Government, they will not hesitate to buy them in large quantities. The fact of the creation of the bonds should be advertised in France, Portugal, Italy, Russia, Switzerland, the United States, and elsewhere. If this be done, the whole amount of issue will be snapped up within a year.

The money thus secured must be spent in the spread of education, sanitary improvements, etc. Thus the Government will be able to spend the people's money usefully without having to pay anything for its use. The advancement of the country will thus be rendered easy, bad times notwithstanding.

I am not in favour of lotteries. There is an element of gambling in them and, therefore, lotteries should not be encouraged. Lotteries are still held in Dholpur and certain other Indian States. Their proceeds are devoted to charitable purposes, and so they are patronised by Indians. Premium Bonds will prove more attractive both to the masses and the classes.

I hope and trust that my suggestions will be duly considered by the Government of India and adopted at no distant date.

INDIAN NATIONAL EVOLUTION.

A SURVEY OF THE ORIGIN AND PROGRESS OF THE INDIAN NATIONAL CONGRESS.

BY AMVIKA CHARAN MAZUMDAR.

It is, as we have said, so crammed with information that we cannot pretend to have done more than scratch the surface. But if we have succeeded in sending any reader of these lines to the book itself we are content. Its perusal is an education.—*India.*

Women's Education in India.

THE following Circular letter, dated the 22nd February 1916, has been addressed by Sir E. McClagan, Secretary to the Government of India, to various Provincial Governments :—

I am desired to address you as follows on the subject of female education in this country :

The education of females in India is recognised, in spite of the attention hitherto paid to it, to be in a comparatively backward state. The Education Commission of 1882, while making a number of definite recommendations for the improvement of female education, represented that the difficulties in the way of progress could not be solved except by a growth of public opinion. Certain further suggestions for the encouragement of female education were made by the Government of India in paragraph 27 of their Resolution No. 199-211, dated the 11th March 1904, and the degree of advancement achieved is described in some detail in the Quinquennial Reviews of the progress of education in India for 1902-07 and 1907-12. But in their further Resolution No. 301-C. D., dated the 21st February 1913, the Government of India, while commending certain principles for general consideration, were compelled to acknowledge that the education of girls in this country still remained to be organised.

RECENT DEPARTMENTAL ENQUIRIES.

2. As noted by the Government of India in their Resolution of 1913, the local Governments had already been asked to submit schemes for the improvement of female education in each province. They had been requested in this Department Circular No. 914-922, dated the 1st July 1911, to submit schemes which should take the form of a 10 years' programme for (1) the expansion of girls' education by means of the allocation of funds ; (2) the improvement of facilities for the training of mistresses, and (3) the amelioration of the conditions of service in the case of mistresses and members of the inspecting staff. But before the replies to the above Circular had been received from more than a few of the local Governments, a further enquiry had been made in this Department Circular No. 838-849, dated the 9th May 1913, asking for the submission of a 3 years' programme of expenditure on educational requirements generally, and the previous enquiry of 1911 became absorbed in the subsequent investigation. The local Governments, in reply to the Circular of 1913, intimated that they were ready to undertake very considerable expenditure on female education during the year 1913-14 to 1915-16, but their proposals were not accompanied by any detailed report of the method in which the improvements aimed at would be attained ; and the Government of India are not in full possession of information regarding the progress actually made during the three years in question.

THE DEPUTATION TO SECRETARY OF STATE.

3. In the meantime a memorial was presented to the Secretary of State, on the 12th October 1915, by a deputation introduced by Mrs. Henry Fawcett, which asked that a committee might be appointed to enquire into the whole subject in India. In reply to the Deputation, the Secretary of State, while expressing sympathy with the objects aimed at, stated that he considered the present time inopportune for the appointment of a committee, and he has since forwarded the memorial to the Government of India without making any recommendation on it. A copy of the Secretary of State's despatch No. 191, dated the 5th November 1915, together with its enclosures is forwarded with this letter, and from the enclosures of the despatch it will be seen in what terms the deputation presented its memorial and in what terms the Secretary of State made his reply. A copy is also enclosed of a Memorial presented to His Excellency the Viceroy by a meeting of ladies in Bombay held on the 31st December 1915.

REASONS FOR EARLY RE-CONSIDERATION.

4. The Government of India agree in the view that, apart from other possible objections, the present conditions render it out of the question to appoint at any rate at this stage a committee such as has been proposed to the Secretary of State. But they consider that the present opportunity may well be taken for a reconsideration of the whole question of female education in India. The time would appear to have come for taking such forward actions as is possible in the matter.

GIRLS AS HEADS OF FAMILIES.

Apart from the general reasons for the increasing demand for female education, it may be observed where the joint-family system has hitherto prevailed in India, it is now breaking up. Families composed of only the father and the mother and their children are becoming more common. Girls and young women are, therefore, becoming the heads of families without being able to rely,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as in former days, upon the advice and care of older relations, and the duty of bringing up the children devolves upon them. The health and physical efficiency of the latter is a National concern, and it cannot be secured without the education of mothers and their co-operation.

CARE OF WIDOWS.

For the same reason, namely, the breaking up of the joint-family system, widows have not now the care and protection which that system secured them, and their opportunities of social service confined, though these may have been to the circle of their own and related families, have to a large extent disappeared. It is also necessary that women should receive some appropriate education in this period of transition when the old system is passing away which, though it enforced their subordination, secured them a certain degree of protection and comfort.

SEPARATE CURRICULA FOR GIRLS.

There is, at the same time, a general feeling that the present curricula, whether suited or not for the needs of boys, are as a rule unfitted for girls, and it is necessary to re-consider the nature of the education which should be imparted to girls.

WHAT HAS BEEN DONE SINCE APRIL, 1913 ?

5. The Government of India are, therefore, anxious to resume the consideration of the general question of female education and would be glad of the assistance of local Governments to enable them to take stock of the present position in the matter and to focus the opinions of competent persons on the main questions at issue.

They would be glad, in the first instance, if local Governments would submit a brief report to show what has been done for the improvement of female education since the 1st April 1913, the date from which the schemes prepared in compliance with the Government of India's Circular of the 9th May 1913, took their start. The Secretary of State, in his reply to the Deputation of October 1915, has pointed out that comparatively little can be learnt from the statistics at this moment, and in any case statistics on the subject are already at the disposal of the Government of India, but the Government of India are desirous that the statistical information available should be supplemented by brief reports showing what definite steps of importance have been inaugurated in each province since the 1st April 1913, in respect of (1) the increase of facilities for female education: changes in character of such education given, and the financing and control of such education in primary institutions; (2) the same points with regard to higher institutions; (3) the training of teachers, and (4) the inspection of schools.

NEEDED EXPERIENCED EVIDENCE.

The Government of India are also anxious to obtain the views of local Governments regarding the class of action now to be taken, and they would be glad if, after obtaining the opinion of competent persons on the questions involved, the local Governments would send them to the Government of India an expression of their own views. It is suggested that the opinions of inspectresses, of Indian lady graduates, and of selected local bodies, which are directly engaged in the management of schools for females, would be found of special value, especially if the remarks made by the persons or bodies consulted are confined to the localities, of which they have personal experience, and to the questions which they can answer from their own knowledge or from materials at their disposal. In the case of local bodies, it is thought that the value of the replies given will be enhanced if these bodies have before them a conspectus of the existing state of female education in the areas under their control, and an attempt has been made in enclosure III. of this Circular to indicate certain points, on some of all of which local bodies may suitably provide themselves with data before reporting on the subjects dealt with in this Circular. It is further suggested that, when there is a standing committee on female education, such as has been already constituted in several provinces, the opinion of this committee should also be obtained.

TABULATION OF OPINIONS.

7. It will be convenient if the local Government, in forwarding opinions, would tabulate briefly the results obtained, and will also supply their own views together with their suggestions for securing progress in the immediate future under the four following heads, viz:—(1) The primary education of females; (2) secondary and higher education of females; (3) teachers for females, and (4) inspection of female education. I am to add briefly a few remarks on some points to which the Government of India, as at present advised, would desire to invite the attention of local Governments in connection with each of the above subjects.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

PUBLIC CONTROL OF PRIMARY EDUCATION.

8. It may be urged that, whatever may be the correctness of the view put forward by the Decentralisation Commission, that the control of primary education generally should rest for the most part in the hands of local bodies; this view may be accepted as ordinarily suitable for application to female primary education, because such education must in a special sense be adapted to the needs of the people and cannot make progress without their active sympathy and support. The Government of India would be glad to know how far a policy of this kind commends itself, and to what extent the control of local bodies should be supplemented or replaced by that of special educational committees, and for what areas such special committees can suitably be framed.

CASTE AND MIXED SCHOOLS.

From the position that female education should rest mainly under the control of local bodies, it would follow that in schools which are confined to reading, writing, and arithmetic, the question of admitting boys to girls' schools and *vice versa* is one which might most suitably be left for local decision; it being remembered that if boys are admitted in the girls' schools it may be necessary to fix a maximum number of boys in view of the possibility of girls being gradually made at such schools to give place to boys. It might also in this connection be considered whether, with a a view to increasing the number of girl pupils in the lower grades, a larger use might be made of the practice which prevails in some provinces of offering enhanced capitation grants for girls who study in boys' schools. Similarly, if the control is left to local bodies, it would be for those bodies to decide how far there should be caste or class schools in the areas controlled by them.

It is possible that in some places the admission of a non-caste Hindu might empty the school, and it is not unlikely that the superior degree of education attained by women in certain Native States is, as some contend, due to the fact that in such States non-caste Hindus are not admitted into schools. There may, on the other hand, be other places where schools might be open to various classes, but in such a case it would be necessary to see that local bodies do not turn their attention to the caste schools only to the exclusion of schools for the other classes of Hindus or for non-Hindus. In the schools, which are opened solely for non-caste Hindus, there may be no objection to the admission of caste Hindus, but even in such cases conditions might have to be imposed to prevent the school from becoming exclusively one for caste Hindus.

LOCAL BODIES TO DECIDE CURRICULUM.

10. It may in the same way be argued that it is advisable to leave, as far as possible, the determination of the curriculum to local bodies. There is little doubt that public opinion requires that Indian girls should learn arithmetic and should learn to read and write their own vernacular; but the question, whether subjects other than the above should be taught, might on this principle be left for the decision of local bodies, whose sympathy and active co-operation is necessary to ensure substantial progress. It would in this case appear inadvisable for the Education Department to insist on any prescribed standard course, and the duty of the Department would be confined to putting forward groups of subjects for adoption by local bodies, leaving it to these bodies to select the form of curriculum which seems suitable, with or without modification of the suggestions of the Department; the main object of Government being to encourage any kind of education for girls, which is in itself useful, may be held inadvisable at the present stage to place restrictions on the adoption of any curriculum which will satisfy this requirement.

CONTROL OF SECONDARY SCHOOL CURRICULUM.

11. It will have to be considered whether the principles to be followed in respect of the control of elementary female education should be considered applicable also to that of the secondary education of females, and if difficulty is felt in respect of the control of such education by local bodies, a report should be made by local Government as to the manner in which they would distinguish schools suitable for such control from others. Attention should also be directed to the question whether such separate committees, as may be appointed for the supervision of primary education, should as a rule be entrusted with the supervision of secondary schools, or whether these should be entrusted to separate committees.

FORM OF CURRICULUM.

As regards the form of curriculum selected for such schools, attention may be invited to the considerations urged in favour of leaving the selection largely to local control, such selection being allowed to rest either with the local bodies concerned or with local committees especially appointed for the purpose. The varieties in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

suitable curricula for such forms of education are as great as in primary education. There is, for instance, in many places a general desire for religious education and for education in music. It is also generally felt that women should be educated in all that concerns enlightened mothering, a good standard of maternal physique, better care of infants, appropriate feeding, care and management of children, effective attention to children's diseases and generally their physical condition, good sanitary environment and other matters of domestic concern. Many again think that the girls should also receive English education. The nature of education to be imparted in the same subjects may also vary. Some girls will need an education preparatory to college life, others may only desire to be serviceable in their own homes; while others, again, may wish to make themselves useful to the community. So, too, it might be necessary to proced with great caution in dealing with certain classes or in some localities. A system to be adopted, for instance, among those who view education with disfavour as tending to female emancipation or disregard of *purda* might involve courses of study and require a teaching and inspecting staff, quite different from others. The same remarks will apply where caste or class feeling has to be respected. As in the case of primary female education no uniformity of standard seems possible, and the courses of study may suitably consist of various syllabuses so arranged as to suit the needs as the people understand them of the various classes or localities; unless the cirrculum is in consonance with the feelings of the people chiefly concerned, the girls will be withdrawn from the schools.

FAILURE DUE TO UNPOPULAR CURRICULA.

Some of the local Governments have already recognised that the lack of real progress within their areas is not due to any real deficiency in funds or in the number of schools or even to the want of teachers, but that the real obstacle is to be found in the attitude of the people, with the result that there is a waste of public funds and many of the existing schools serve no useful purpose. It is not improbable that the nature of the school curricula and the unsuitability of the teaching hitherto imparted migh account a good deal for the reluctance of the parents to secure for their girls even such facilities for education as are now available. The main function of the Department of Education would, in pursuance of the above considerations, be to stimulate the efforts of local bodies and to render assistance by proposing various courses for students rather to assume the direct control or to insist on any uniformity of subjects in the curricula.

HIGHER EDUCATION OF WOMEN.

12. With respect to the higher education of women who have received their training under the system above described, it may be observed that women who have received religious education presumably in the classical languages may desire the collegiate instruction in the same subjects, while those who are trained in sanitary and allied subjects may desire to join medical colleges if they have received a general education. For the present the number who wish to receive any higher collegiate education must necessarily be confined to those who have received a secondary education under the existing system, and where these are unable to prosecute their studies but are not sufficient in number to justify the opening of a new high school or college, it may be possible to meet their requirements by awarding them scholarships for further studies in the existing institutions for women or in colleges for boys if they have no objection to join them. All that can be done, in the existing circumstances, is to provide more facilities for admission into the existing high schools and colleges, and if funds are available and the demand justifies such a step, to open more high schools for girls and college classes in girls' high schools.

TRAINING OF TEACHERS.

The Government of India will be glad to learn whether if the facilities at present open for training female teachers and the conditions of training are the same as in the case of males, the continuance of this state of things is considered advisable, and if not what change is recommended. In any case, it must be recognised that the supply of trained teachers is at the present moment exceedingly small, and that although early steps may be taken to increase the supply of trained teachers, it will be impossible to expect progress to be made, if nothing is done until the requisite number of trained teachers is supplied. It will be necessary to see how arrangements are to be made in order to get the best out of the untrained teachers at present available. While it would be difficult to get teachers—even untrained—in other subjects, it is possible that untrained teachers of the vernacular or classical languages

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or of music may be found in many parts of the country: and it has been urged that the present difficulties should be met by a system of itinerant instructors for such teachers, or by allowing such teachers to attend for limited periods or during holidays at the existing training schools.

WORK OF INSPECTION.

14. The inspection of female institutions is, of course, desirable in order to secure efficiency and to prevent waste of public money. In many cases also such inspection will be welcome by the schools as tending to raise their character, and many, who are engaged in female education and feel that they are fighting an uphill battle, will find it helpful to discuss their troubles with an inspector who understands them and will give them a sympathetic hearing. At the same time, there are special difficulties connected with the inspection of female schools, and in some cases social customs might stand in the way of proper inspection. It has been suggested that these difficulties might, in some cases, be met by dividing the duties ordinarily entrusted to Inspectors. The administrative duties connected with the healthiness and character of the buildings, the sufficiency of accommodation, furniture and necessary apparatus, the suitability of fees and the reputation of the school in the locality would, under this system, be entrusted to one class of inspectors, who would ordinarily be men. The inspection of the curricula and the actual teaching would, however, rest with the inspectresses, and as regards qualifications for the task it would ordinarily be expected that an inspectress should be able to take the classes herself, and to this extent to act the part of an itinerant training teacher.

15. The remarks made in paragraphs 8 to 14 above are merely intended to bring to the notice of local Governments certain considerations relating to a few isolated matters connected with female education, and it is not suggested that, in sending the opinions asked for in paragraph 7, local Governments should confine themselves to the points raised in the paragraphs in question.

16. In conclusion, I am to request that a reply to this Circular may be sent by the 1st September next.

CURRENT EVENTS.

BY RAJDUARI.

IS IT THE BEGINNING OF THE END?

THE whole of the last four weeks seem to have centered round the impregnable fortress of Verdun. It has been surmised in many well-informed quarters, not without sufficient reason, that the Teuton having grown desperate was determined to play one or two of his last trump cards with the view to boasting of a seeming, if not real, victory. He thought that the most psychological hour for the purpose was just that time when both in the Balkans and in the Western theatre his opponents would not venture on an offensive on a large scale while the winter was receding and the snow melting. But as in many other respects since the declaration of the War, so in this particular affair, the enemy had miscalculated. Warned by the lessons of the last winter, the Allies, who owing to the deficiency of men and ammunition seriously missed hurling back on the frontier the forces of the enemy after the battle of the Marne, had determined this wintry season not only to conserve their strength in arms and ammunition but very carefully to take into calculation the right hour when the offensive should be hurled but not at the back of the deceiving enemy. The four weeks' tremendous tragedy at Verdun is indeed most deplorable, seeing that over two lakhs of men have been ruthlessly and recklessly sacrificed to achieve the object, namely, to forestall the enemy before he was ready to take the offensive and thus by a *coup de main* to make a rush to Paris. That was the military strategy. But so far as the events have gone to the date of writing this, it has been a signal failure. The Allies throughout the whole of their frontier were prepared to meet the resistance of the Hun at every important point and at every vantage ground. As a result, being forewarned and forearmed as completely as they could be, they have been able both on the banks of the Meuse and on the Verdun frontier to oppose with all their skill their bravery and their superior artillery. It has been proved beyond the shadow of a doubt that the artillery of the British and the French has not only hurled back the phalanxes after phalanxes of the Germans but created the greatest havoc among their forces. Whole battalions have been decimated and thousands injured beyond once more

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rejoining the army. It has also been well known that the troops engaged in the Verdun campaign were no seasoned ones. In fact, the flower of the army has long since been decimated, and the enemy has been putting to the front an exceedingly large number of raw recruits, many of them of 1916. Never was there such a criminal and extravagant sacrifice of men without a single redeeming feature which could go to compensate for such a terrible sacrifice. And yet such is the desperation that the tragedy, as we write, has not yet been concluded. From the Eastern theatre of the War, such troops as could be made available have been drafted to the Western field but to no purpose. Indeed, a pressing demand was made on Austria to send reinforcements to renew fresh attacks on the Verdun frontier. On the other hand, the great General of the French in the field of action has deliberately declared to the wide world that the Verdun strategy is a complete failure from the military point of view and so far a great load has been taken off his mind. He is completely confident now of the ultimate triumph of the Allies. He has gone even so far in his declaration that were Verdun to be captured, it would mean not an iota of loss to the French. As a matter of fact however, not a single advanced position of the famous fortress has yet been taken though so often attacked. So far then, the strength of the Anglo-French army is intact, while the near advent of spring promises to bring to the field fresh well-equipped and well-trained armies to fight the combat to the finish. What new forces the Germans can bring, now that they have entered the point of exhaustion, is a problem.

Meanwhile all accounts, official and non-official, agree in observing that the attrition stage has fairly begun on the side of the invader. Combined with the exhaustion of the military strength there has been going on the slow and steady exhaustion of all material resources, including food and money. The populace is sick of the war and is only suppressed in its sullen discontent by *force majeure*. The bitter truth of the defeat of the so-called invincible German army is beginning to dawn upon the population, and even the soldiers and the officers are tired and would welcome peace at any hour. But the new modern Alexander yet wants to throw his last dice which will no doubt be when the spring has fully set in.

At the same time events in the Near East and the Middle East, so far as they have transpired, go no way to help the desperate situation at Berlin. The Bulgar is kept in check mobilised on his own frontier lest Roumania should attack him. He is not free to move anywhere. Greece finds it to its advantage no longer to be the humble and obedient slave of his relative. She counts more on the great place of arms at Salonica with its strategical fortifications. The Turk is frantic. The Ottoman Empire is divided against itself. There exists bitterest discord between the peaceful royal faction and the unscrupulous war-like faction led by Enver Pasha at the behest of the Germans. In Constantinople, the Turk is on his last legs and would drive away, if he could help, the contingent of German military desperadoes, who dominate the disaffected army now so miserably scattered. Erzerum is now fully occupied by the Russian. Having consolidated his strength there, he is now marching with measured strength to Trebizond, the fall of which is only a question of so many short hours. On the other hand there is growing apace an enveloping movement from Kermanshah, which bids fare to reach Bagdad, say, within the next four weeks, while General Townshend's force is well distributed in Mesopotamia. Even on the east of Egypt, the back of the Turk has been completely broken. There has been an utter rout with the capture of all booty and ammunition. The British army has driven away the Turk fully 150 miles beyond the Egyptian frontier.

In the Balkans, the Roumanian is on the eve of casting his lot with the *Entente* Powers, while Austria is left alone to oppose the Italian on his own frontier on the Isonzo plateau. As soon as the snow melts the Italians are bound to push forward to attain their objective. This then is the whole situation, while Russia is slowly and steadily preparing herself for the coming decisive action in the neighbourhood of Riga with possibly a naval engagement in the Baltic itself. Under these conditions, may it not be inquired whether all this does not seem to indicate the beginning of the end?

It is observed that the coming spring must inevitably see the long-looked-for naval battle between the British and the Germans in the North Sea. Indeed, it is estimated on all sides that a final German effort will be simultaneously both on land and sea. Nothing could be better. Once for all, the supremacy of the sea must be fought and won. But they say that the Teuton is too astute to risk what may after all prove to be his final overthrow. In its own harbour at Kiel the German navy is safe. But what may be its fate, once it should take to the open sea to contest naval supremacy, is a foregone conclusion,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Superior as is the sea power of the British every way, it stands to reason that while the naval contest may cause the British loss of many warships, they will still be able to recoup and recover in exceedingly brief time with all the material resources at their command. On the other hand, the German navy, if worsted in the contest, is bound to be a wreck and a wreck for ever. It will take the Teuton long, long indeed, to rival the great mistress of the sea. Meanwhile, Tirpitz, the invincible Admiral of the Grand Fleet (which he had brought into existence and nursed during the last nineteen years) has been compelled to resign and sulk at the displeasure of his sovereign. But the mad Emperor, bated not a jot, has declared *urbi et orbi*, that the wicked campaign of the submarine to murder wholesale innocent men, women and children will go on mercilessly. Who eventually will be overwhelmed by this murderous policy, the Nemesis of events will record.

DIARY OF THE MONTH.

February 23. Visit of the Czar to the Duma and M. Sazanoff's historic speech.

February 24. H. E. Lord Carmichael opened the Commercial Museum at Calcutta.

February 25. Evacuation of Albania; sinking of the P. & O. S. S. *Maloja* off Dover.

February 26. Cardinal Mercier has left for Belgium amidst great enthusiasm.

February 27. Draft of the Bombay Municipal Farewell Address to H. E. Lord Hardinge is published.

February 28. Great reception to Mr. M. K. Gandhi at Hyderabad (Sindh.)

February 29. Annual Meeting of the Bengal Chamber of Commerce and the Hon. F. H. Stewart the President's Address.

March 1. Hon Sir William Meyer's financial statement and the new taxation.

March 2. Sinking of the British steamer *Morhaby*.

March 3. Death of the Hon. Sir Chinubhai Madhavlal, Bart., the first Hindu Baronet, at Ahmedabad.

March 4. Desperate struggle for Verdun.

March 5. Proposal for a Trade Conference of the Allies in Paris.

March 6. Lord Northcliffe visiting Verdun. Comments on the collossal German losses. His Holiness the Pope's appeal for Peace.

March 7. Budget discussions in the Viceregal Council.

March 8. German Note to America; Mr. Balfour's fighting speech.

March 9. Representative Meeting of Bahawalpur Mahomedans resolves that the Foundation Committee of the Moslem University be requested to settle the University question.

March 10. The Sixth Session of the Ayurvedic and Unani Conference was held at Khusrubagh with H. H. The Nawab of Rampur in the chair.

March 11. The Convocation of the Calcutta University was held this afternoon, H. E. Lord Carmichael presiding. Dr. Sarbhadicary delivered the address.

March 12. Declaration of war between Germany and Portugal.

March 13. Bombay Corporation's annual entertainment to H. E. the Governor.

March 14. The 32nd Annual Meeting of the European Association at Calcutta.

March 15. Discussion of the Bogus Medical Degrees Bill in the Viceregal Council, and Sir Pardey Lukis' demand for improvement of Eastern medicines.

March 16. The opening of the Hardinge Library, at Delhi, by Sir C. Sankaran Nair.

March 17. Bombay Co-operative Conference at Poona, with Mr. Keatings in the chair.

March 18. The *Times* announces that a Commission will be appointed to investigate the industrial possibilities of India.

March 19. The Portuguese residents of Bombay held a demonstration in favour of Portugal's entry into the war.

March 20. The Viceroy's important announcement accepting the Resolution for the abolition of indentured labour.

March 21. Meeting of the Viceregal Council, and Sir Ibrahim Rahimtullah's motion *re*: Indian industries.

March 22. At the Meeting of the Viceregal Council, the Hon. Mr. Surendranath Bannerjee moved that the Calcutta University be placed on the same footing as the Universities of Bombay and Madras.

March 23. Press *communique* regarding the unrest among the Oraons.

March 24. Busts of Sir John Jenkins and Sir G F. Wilson unveiled by His Excellency.

TOPICS FROM PERIODICALS

KALIDASA: THE SPIRIT OF ASIA.

Prof. Benoy Kumar Sarkar, M.A., writes a very spirited article in the current number of the *Modern Review*. In his view, as in the opinion of Mr. Vincent Smith and Sir R. G. Bhandarkar, the age of the Guptas marks a renaissance in India. It was a period of wonderful mental activity and material prosperity. The central figure in this remarkable period is Kalidasa, and Mr. Vincent Smith draws a happy parallel :—

The Gupta period, taken in a wide sense as extending from about A. D. 300 to 650 and meaning more particularly the fourth and fifth centuries, was a time of exceptional mental activity in many fields—a time not unworthy of comparison with the Elizabethan and Stuart periods in England. In India, all the lesser lights are outshone by the brilliancy of Kalidasa, as in England all the smaller authors are overshadowed by Shakespeare. But, as the Elizabethan literature would still be rich, even if Shakespeare had not written, so in India, if Kalidasa's works had not survived, enough of other men's writings would remain to distinguish his age as extraordinarily fertile in literary achievement.

Not only was this the most fruitful period in Indian history but it was the most typically Indian. The writer points out :

If it is at all necessary to single out one name as a synonym for India and Hindu culture, it is not that of Manu, Yajnavalkya, Sakyasimha, Asoka, Samudragupta, Sankaracharyya, Tulsidasa, Sivaji or Chaitanya, but of Kalidasa, the poet of the 4th-5th century A.D. If it is at all possible to regard any one work as the embodiment of Indianism, it is not the *Rig Veda*, the *Arthasastra*, the *Tripitaka*, the *Gita*, *Vedanta*, *Kural* (Tamil work—3rd century A.D.) *Sakuntala*, *Dasa-bodha* (Marathi work—17th century), or *Kavikankana Chandi* (Bengali work—17th century), but the *Raghu-vamsam* of Kalidasa.

Hindu culture thus found its best expression in the mind and art of Kalidasa. From the Kalidasan literature could be gleaned a complete idea of Indian life and thought. For Kalidasa is as representative of his country and age as Dante or Shakespeare or Milton or Goethe, and his works—notably the Raghuvamsa—display the supreme genius of the Orient in its highest and sublimest heights.

It is impossible to study it from cover to cover without noticing how profoundly the greatest poet of Hindusthan has sought to depict this Hindu ideal of synthesis and harmony between the positive and the transcendental, the *bhoga* (enjoyment) and *tyaga* (renunciation). *Raghu-vamsam* is the embodiment of Hindu India in the same sense that *Paradise Lost* is the embodiment of Puritan England.

Kalidasa is thus the spirit of the Orient and the organ-voiced interpreter of the East.

CHINA'S INDEPENDENCE.

In the course of a very sober article in a recent issue of the *Far Eastern Review*, a writer urges on the necessity of maintaining the independence of China. In fact, the independence of China is guaranteed by four important treaties, the signatory Powers of which are, Great Britain, France, Russia and Japan. It is interesting to note that Japan in particular is a party to each of the four great transactions. Moreover, the wording of the portion of these instruments relating to the preservation of the independence of China is almost identical, as will be seen from the following excerpts :—

"The two high contracting parties agree to recognise the independence and the territorial integrity of the Chinese Empire, and the principle of equal opportunity for the commerce and industry of all nations in the said Empire, and they engage to uphold and defend the maintenance of the *status quo* and the respect of that principle by all the peaceful means possible to them."—Russo-Japanese Convention of July 1907.

"They (America and Japan) are also determined to preserve the common interests of the Powers in China by supporting by all pacific means at their disposal the independence and integrity of China, and the principle of equal opportunity for the commerce and industry of all nations in that Empire."—Root-Takahira Agreement of November 1908.

"The preservation of the common interests of all Powers in China by ensuring the independence and integrity of the Chinese Empire and the principle of equal opportunity for the commerce and industry of all nations in China.—Object B. Anglo-Japanese Treaty of Alliance of July 1911."

Thus the importance of maintaining the integrity of China is fully recognised, in fact, it forms the corner-stone, as the writer says, of the Far Eastern policy.

Now, are these treaties binding? "International agreements of a public nature are in a sense a portion of international law, and the right of the world to be notified of their variation or denunciation is generally recognised." But there is in fact no such mutual agreement to the detriment of China's integrity. Still,

it is obvious that a clear definition of internatianal Far Eastern policy is urgently necessary if China is to be enabled to push on with the programme of reform and development that has been decided upon. The restoration of the monarchical system is believed by the Chinese best qualified to form an opinion to be the necessary prelude to a vigorous policy of development, but clearly it will be impossible to carry it out unless China is relieved from the apprehension that her domestic policy, in spite of the general recognition of her independence, is subject to interference by other Powers.

THE KAISER AND ARCHDUKE.

In a highly interesting and enlightening article in the February number of the *Nineteenth Century*, Mr. Henry Wickham Steed, a noted special correspondent of one of the leading English newspapers, makes a case which serves to explain much that has hitherto seemed inexplicable about the murdered Archduke. At Konopisht where the Kaiser and the Archduke met in June 1914, the former is said to have opened to the latter a magnificent horizon and a grandiose plan which promised to place his (the latter's) sons by a morganatic marriage at the head of two vast realms in Eastern and Central Europe. The Archduke's relations with the other members of the Imperial family were very strained; and his solemn renunciation of the succession to the throne for his children might have very well induced him to grasp at the Kaiser's plans. The Archduke was to get the ancient kingdom of Poland with Lithuania and the Ukraine—the Poland of the Jagellons stretching from the Baltic to the Black Sea. This was to be the inheritance of his eldest son; and for his younger son was reserved under his direction a realm including Bohemia, Hungary, most of the southern Slav lands of Austria together with Serbia, the Slav coast of the eastern Adriatic and Salonika. The Kaiser for his part was to give back to the future Poland a part of the Duchy of Posen and to indemnify himself by bringing German Austria with Trieste under care of the Archduke into the German Empire. Between the enlarged German Empire, the reconstituted kingdom of Poland, and the new Bohemian-Hungarian-Southern Slav realm, a close and perpetual military and economic alliance was contemplated. This alliance would become the arbiter of Europe and would command the Balkans and the route to the East. And the House of Hohenzollern would make Austria another Bavaria and the proud Habsburgs would be reduced to the position of the Wittelsbachs and the Wettins. The scheme is plausible and would very likely have fomented the Archduke's resentment towards the Austrian Imperial family and have flattered his paternal ambition.

The scheme has enormous interest and significance; the evidence adduced in its support consists chiefly in the circumstances attending the Archduke's marriage with the Countess Sophie Chotek in 1900; the terms of the marriage declaration to which he was obliged to subscribe; his efforts to emancipate himself, his wife and his children from its restrictions; his close association with the Kaiser; and the feud that had grown up between himself and the other sections of the Austro-Hungarian family. The value of this circumstantial evidence can be only judged by those who are conversant with Austro-Hungarian affairs and in particular with the composition of the Imperial family. Moreover, no convincing explanation has been given of the attitude of the Imperial family towards the funeral of the murdered Archduke, and of the evident intention of the Court authorities to pay as little honour as possible to the dead. The whole becomes explicable if we assume that the Emperor Francis Joseph and the Imperial family obtained, before or after the assassination, knowledge of an agreement such as that alleged to have been made between the Archduke and the Kaiser at Konopisht. How far knowledge or suspicion of the existence of such an agreement may have influenced the authorities in Austria and Hungary in not affording the Archduke any adequate protection against a plot, of which the Austro-Hungarian authorities can scarcely have been unaware, is a question not easily to be answered. For the time being the supposed agreement is put forward only as a remarkable hypothesis, which serves to explain much that has hitherto seemed inexplicable.

A MISSIONARY SURVEY OF INDIA, 1915.

Mr. J. H. Oldham, writing in the the current number of the *International Review of Missions*, deals with the more outward aspects of the existing position of missionary effort in India. Mr. Farquhar's *Modern Religious Movements in India* (1915) describes the living forces which have developed the spiritual life of the people, and which are at the present day the most vigorous expression of their spiritual aspirations. The proposal of Sir S. Subramania Iyer for a reformed Hinduism is curiously misregarded as a striking evidence of the extent to which the foundations of Hinduism have been shaken by the impact of Western ideas. The disaster which has overtaken the work of German missions, the internment of as many as 115 missionaries under military control at Ahmednagar, the withdrawal of Government grants to German missions for educational and philanthropic work, will tax to the utmost the resources of the Indian Church and of the missionary body.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Other missions, besides those from Germany, have suffered through the war, and financial stringency has, in the great majority of cases, postponed all plans for extensions and stopped building operations which are not absolutely essential; and in some instances, itineration in the districts has had to be curtailed, and Indian workers have had to be discharged. Many missions have to do without expected reinforcements from home. Medical missionary work has been temporarily affected by the considerable number of British missionary doctors, who have felt it their duty to offer for medical service with the military forces.

The proposal to establish in the Anglican communion self-governing synods has encountered legal difficulties, and it has been found necessary to restrict the plan to the formation of councils, diocesan and provincial, without the coercive authority which the synods would have had. And among other Christian bodies, the movement for the federation of churches has been advanced by the preparation of a revised scheme. An event of far-reaching importance is the initiation of a thorough survey of the entire Indian mission-field with a view to form a duly co-ordinated policy for each part, and this would enable the Church in India as well as the home-base to realise, in outline at least, the nature and extent of the task committed to it.

The opening of the new Christian College for Women in Madras, in which 12 missionary societies are co-operating, is also noteworthy, and its aim is to make the largest possible contribution from the standpoint of Christian ideals to the education of the women of India. The translation of the whole Bible has been completed in Nepali and in Santali; and there has been a record circulation of Scriptures in India during the war. The first meeting of the All-India Conference of Indian Christians, proposals of the National Missionary Society for developing the share of the women in the work of the Society, and the transformation of the Bishops' College, Calcutta, into a Central Theological College of the Anglican Church in India, under the Indian bishops as the governing body, are among other prominent features in the life of Indian missions.

WOMEN IN SOUTH AFRICA.

Miss Margaret Wilson, a missionary among the Zulus, exhorts in the columns of the January number of *The East and the West* (a Quarterly Missionary Review), the white race domiciled in South Africa to prevent the growing demoralisation of the four million and odd natives—a people 'who under right guidance are capable of much, and who under firm, considerate, and wise rule are easily governed.' The first effects of the transformation of the social system and life of the natives, produced by European civilisation, are not altogether pleasing. Women especially are to be much more guarded against temptation and demoralising influences. If well trained African girls become good and capable servants, they are extremely fond of children and make patient and devoted nurses, and if only white people should be known to look carefully after their native servants, it would be possible for them to obtain trustworthy and respectable girls.

Town life does not generally increase native respect for Europeans, but rather the reverse, and as this respect decreases, it tends to the demoralisation of natives of both sexes. And coupled with town-life is another and more intense deteriorating cause—the illicit sale of liquor to native men and women alike. The Zulu women specially cannot be trusted to work for long without supervision, partly owing to their cheerful forgetfulness and partly owing to their lack of initiative. But they are generally more industrious than the men, and with a little understanding and sympathy they might be made to be much better.

While polygamy remains, it is impossible to hope for better morals, more industrious living, and for the development of individual self-respect. Now that the devastating effect of constant warfare has ceased, the numbers on the male and female side are more equally balanced and the practice of polygamy may become to a larger extent impossible. But it must be definitely abolished, since the richer natives will still continue to surround themselves with wives, leaving a proportion of unmarried men who may become a social menace. Opposition from the women themselves, who are more opposed to change, would also have to be overcome. It is the 'white man's burden' to think of all these problems and attempt to find a remedy for the situation.

THE INTELLECTUALS AND THE WAR.

Mr. Arthur Ponsonby, M.P., writing to the *Socialist Review* (January-March, 1916) expresses his disgust at the attitude towards the war taken up by the intellectuals and men of letters, professors and authors as a body. There are degrees in their controversial style from the blank reactionary to the erstwhile liberal; and a crude and indignant outburst of narrow patriotism appears from time to time in their letters to the newspapers; and they never take a detached and broad view of the struggle, nor care to think that it is only a passing interruption in the normal relations which must exist between the peoples of Europe. Professor Ridgeway's statement, that 'in a world of perfect peace, humanity would perish from its own physical and moral corruption' is only equalled by Mr. Robert Bridges' words, "that it is manifestly a war declared between Christ and the Devil." And Mr. Kipling goes further and says: "There are only two divisions in the world to-day—human beings and Germans. And the German knows it. Human beings have long ago sickened of him and everything connected with him, of all he does, says, thinks, and believes." And many equally crude utterances could be quoted from less prominent men of culture who constantly write to the press, as if the furnace of hatred required fresh stocking, and the call for vengeance a louder chorus.

Again men like H. G. Wells and Arnold Bennett avoid anything in the nature of a Jingo reactionary appeal, but fear to confine themselves to the larger view and fall back on the elaboration of arguments calculated to please the superficial mind. While some defend what *is* and quite forget the ideals they once held of what *might be*.

The men of learning are more incensed at the attitude adopted by those who are looking to the future and preparing for a lasting settlement; they have failed as a body to see above the smoke of combat the lasting factors of human relationship, to try and preserve the nation's sanity and to check the outbursts of vile passions. Abroad it has also been just the same. In Belgium, the great writer Maeterlinck, and the poet Cammaerts, with more justice perhaps, have lost all sense of proportion; while the German professors defend the vilest practices of militarism. While in France the grim determination to continue war at whatever sacrifice has been so strong, that the word peace can hardly be uttered. But among the French, Romain Rolland stands forward as the apostle of humanity, determined in his zeal to reach the ultimate truth, fearless in his condemnation of the excesses of militarism and bent on the preservation of national sanity. He says: "A great people in war time has not only to defend its frontiers, but also its reason. It must be saved from the hallucinations, the injustices, the follies which the scourge lets loose. To each one his task; to the soldiers to defend the soil of the nation; to the men of thought to defend its mind." In England also, a small band of faithful men of this opinion—Lowes Dickinson, Hobson, Russell, etc.—have refused to sacrifice their talents to echoing in academic phrases the clamour of the mob.

INDIAN NATIONAL PROGRESS.

Mr. S. H. Swinny, the sturdy friend of India, in the February issue of the *Positivist Review*, points out that when Indian opinion is united in asking for reforms to satisfy the reasonable aspirations of the thinking and vocal sections of the people, it cannot very well be resisted by the officials. He writes: "For many years there have been two great gatherings in India towards the end of December, the Indian National Congress and the All-India Moslem League. The second, as its name implies, was confined to Mahomedans; the first welcomed and even chose as president men of every religion—Moslem, Parsee, Hindu, Christian or Positivist, but was not usually attended by many followers of Islam. This was due to differences of policy, the Moslems in great part standing aloof from the programme of the reforms proposed by the Congress. The two bodies met at the same time, but in distant cities. This year all has been changed. Both met in Bombay. The Congress closed its sittings on December 29, and the League opened on December 30, under the presidency of my friend, Mr. Mazur-ul-Haque. The President of the Congress and many leading Congressmen occupied seats on the platform and were loudly cheered. In spite of some disturbance by casual visitors opposed to this new departure, a Resolution was carried unanimously authorising the appointment of a Joint Committee with the Indian National Congress to formulate a scheme of Self-Government and submit it to the Government of India. This union of all Indians in support of reform on constitutional lines is the best guarantee for the increase of ordered liberty and the best defence against both anarchy and misgovernment. It is a result for which I have long hoped and, so far as was legitimate to a stranger, worked. But I never can quite feel a stranger in anything that relates to India."

THE LEVANT IN LAST DECEMBER.

Dr. M. Maguire, writing to a recent number of the *United Service Magazine*, explains the state of the British stand, offensive and defensive in the whole region of the Levant, at the end of last year. The Levant has long been the general name given to the localities from Greece and her numerous islands to the Black Sea and thence through Asia Minor to Syria and Egypt. The rôle of Italy in resisting the Austro-Bulgarian aliance in this region is very important. She must resist at all costs the control of Serbia by Austria and Germany, and she will do all in her power to bring help to Serbia to assist in the re-victualling and ammunition supply of the Serbian forces and facilitate their military reconstruction. The English have now established a definite control of all the coast of Syria, the islands of the Grecian archipelago, including Scyros and Lemnos, and Salonika, the best harbour of Macedonia. But the difficulties in the ultimate victory of the English and the Italians seem to be very great. Unless the Russians reverse the present situation, Serbia seems to be ruined, and neither French nor British could pretend to prevent the practical junction of its various invaders. The British were late and, were in any case, hampered by the Gallipoli incidents. But on the other hand, unless the Teutonic Powers intervene on the Lower Danube betimes, if Russia can control Roumania, Bulgaria can be put into a regular climax of military difficulties and the supply of central European stores and ammunition to the Turks can be finally cut off. Every possible strategic contingency in these zones of manouvres has been most carefully worked out by the British Naval Intelligence Department. The German designs to get such an influence in the Balkan Peninsula as would link the Danube with Constantinople through subservient principalities, to cross the Bosphorus, and to control the railways to Arabia and through Asia Minor to Baghdad, were brilliant German naval versions in modern forms of Napoleonic dreams. But notwithstanding any tactical operations during November, samples of treachery by Arab tribesmen, and political failures in Macedonia and Thrace, these great couceptions have been partially foiled by the vigilant action of our fleet. The English are now commanding, with the surly acquiescence of Greece, the north of the Aegean Sea, and all the coasts of the Levant proper from Asia Minor through Syria to the Sinai Isthmus and Egypt, as well as the Lower Mesopotamian valley.

THE WAR AND RAILWAYS.

Science has been pressed into the service of this war in a variety of ways. Invention after invention has contributed to the speedy marshalling disposition and the aggressive power of the belligerent forces engaged. What is the place of Railways in the getting-up of this scientific Armageddon? The *Indian and Eastern Engineer* writes:—

Railway power primarily it was which enabled the German confederacy to launch the thunderbolt of invasion on Northern France through Belgium. The Prussian Railways are of course a State system, which enabled them to take many transport measures before any formal declaration of war, and thus secure that priority of preparation which, in combination with the avalanche of armies would, it was fondly hoped, overwhelm France through the comparatively undefended gap in her defensive fortress chain at the first rush, whereby the campaign in the West was to be a matter of weeks.

The Railway power of Germany proved fully capable of dealing with these enormous demands, but, providentially for the Allies, the German plan of campaign failed just at the point where it almost seemed that crushing victory was in the grasp of the Huns. Again, the factor of Railway power was of supreme importance in the skilful dispositions of the Anglo-French Generalissimo--General Joffre—which led to the outflanking of von Kluck's armies and the German disaster on the Ourcq, which threw back their victorious advance to the line of the Aisne. What the Railways of France achieved during those crucial days, when the fate of the Republic hung in the balance, is only now coming to light but it was literally a miracle of transport work. The giant labour of concentration of the armies, following mobilization, had only just been completed with every hope of successful dispositions, when the flank was turned through Belgium and the horrors of the great retreat from Mons to the Marne had to be struggled with. Then came what was probably the greatest hour of trial, when to take advantage of the situation resulting from von Kluck's endeavour to cause another and greater Sedan, armies were rushed from the very east of France to the north and west of Paris; and it was for hours touch-and-go whether the French would succeed in outflanking the Germans or the Germans the French. The French Railway power however won the struggle aided by its hand-maid motor transport.

ART INDUSTRIES OF JAPAN.

Writing in the pages of the *Mysore Economic Journal*, Mr. C. R. Reddy eulogises the art industries of Japan which are not obstinately conservative but have adopted the best features of Western art and preserve a fine instinct for harmony of form, colour, and setting. Tradition says that the most ancient sculptures and bronzes and wood carving in Japan were made by Indian hands, and in painting both the subjects and treatment were thoroughly Indian in character. As in India, in Japan too, the arts had a religious origin; but they soon outgrew the limitations of their birth and developed into independent representations of ideals or reality as conceived by the artist himself. The traditional restrictions of the arts repressed the tendency towards an anarchical and too individualistic romanticism. Of late years "the influence of the West has weakened the power of the older ideals, and art is becoming more lyrical and romantic, and taking colour and shape from European models. Classical treatment is still in the ascendant and is regarded as peculiarly the national mode of expression; but the Japanese are not obstinately conservative and thick-headed. They will adopt the best features of Western art and modify their work in accordance with the growing taste of the time."

On the other hand, India shows very little development, change or adaptation, to a changing environment which, in the case of the industrial arts, becomes fatal to the sale ability of their products and therefore to their existence. The processes and ideals need not perhaps be altered, but in applying them, thought must be given to what would be useful or attractive to people of the peresent day. What strikes the writer as the most remarkable feature in Japan is, that art-industries like lacquer-work, procelain, tortoiseshell work, embroideries, ivory-carving, Damascene-work, etc., combine a keen and searching eye for foreign markets with all the hereditary excellence that the nation is capable of. They have effected wise adjustment in their trade and industry, have always avoided slovenly and clumsy methods and send out men to study the class of goods in demand in the West and learn the method of producing the desired effects. "If we adopt the familiar distinction between matter and form in art, it might be said that the Japanese show great elasticity of choice as regards matter and a lesser amount as regards form."

ART AND THE WAR.

In the course of an article on the above subject in a recent issue of the *Review of Reviews*, Mr. Bernard Sleigh points out that there has been no body of workers so deeply affected by the labour conditions brought about by the war as the artists of those countries directly engaged in this terrible struggle for existence. And it is these artists, from the very nature of their calling, that are most influenced by the ruthless frenzy of destruction alike of human life and the treasures of antique art so dear to them.

"To us," the writer says, "in our workshops and studies it has been a hideous nightmare to read of the blind onslaught of German fury, crushing Belgium cathedral cities, mediæval towns, and villages of Northern France and Poland, of Austrian aeroplane attacks on the quiet hill-towns of Italy, on Venice and Verona, as though for a moment's space we had returned to the indignation and horror of our childhood's days when reading of some senseless, wooden-headed ogre tramping on fragile fairy-temples and helpless elfin peopie."

This is but too true. But there is yet a hope in all aspiring souls that at the end of all this huge welter of destruction, of this monstrous upheaval of social barriers and cherished traditions, when the world settles down to the mighty task of reconstruction on the basis of mutual amity and goodwill, there will follow a great Renaissance of Art, grander than any that has yet been witnessed in the world. Now if this be so, we cannot, as the writer says, too soon consider how this re-birth may be best prepared for.

To illustrate this new renaissance, the writer considers one form of commemorating the great struggle—the ancient and time-honored use of stained glass as a means of erecting stable memorials to those whose lives have been so willingly given in the service of their native country.

"When this time comes," says the writer, "it will be for us to approach a splendid means of art expression in a new spirit to cast aside once for all those effete, pseudo-Gothic, empty absurdities with which the Churches of our land are so abundantly dishonoured and which have brought discredit upon an honourable craft capable of unlimited development."

Mr. Sleigh then pays a deserved tribute to William Morris and Burne Jones, Christopher Whall, Louis Davis and Henry Payne, and notes with special favour Mr. Davis' magnificent East window in the Cathedral of Dunblane. He then

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

calls upon those responsible for future war memorials not to repeat the folly of giving commissions to purely commercial firms to the detriment of the English native artists and craftsmen.

There is certainly no excuse whatever now for inartistic and meaningless windows, of the kind which has given just cause for the sneers of the man in the street, or to call forth the contempt of the literary man or art lover. Even from the lowest and purely mercenary point of view we should surely obtain the best value for our money by insisting on a trained and proved artist designing and executing these records of unselfishness, and allowing him the least possible hindrance to his freedom of thought and conception; instead of applying to the trade upholsterer to supply our windows at so much per foot and usually at the lowest price possible.

THE GERMANS IN PERSIA.

In an article in the February number of the *Fortnightly Review*, Mr. Robert Machray explains the growth of the German policy epitomised in the phrase *drang nach osten*, and how behind the ostentatious friendliness, which the German Kaiser showed to the Turks, and the construction and control of the Baghdad Railway by the Germans, lay the German objective in the Persian Gulf. Admiral Mahan long ago warned the English that any foreign interference in the area of the Gulf and of Southern Persia would 'imperil Great Britain's naval situation in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Australasia.' More than twenty years back, the Germans under cover of the Turks had twice endeavoured to seize Koweit, and since 1896 the German firm of Wonckhaus & Co., with their head office at Bahrein, have under the cloak of their pearl-shell and other trade been engaged in intrigues with the object of facilitating the Turkish invasion of Persia and of raising the Arab tribes against Great Britain. These aims went beyond the Gulf on which every German attempt to acquire territory in a surreptitious manner was frustrated by British action. Then came the Russo-German compact of 1911, by which both these Powers covenanted to give facilities for international traffic on the Baghdad-Khanikin and the Khanikin-Teheran lines when constructed, and Russia bound herself not to hinder the completion of the Baghdad Railway. Not merely was Russia befooled, but two agreements were on the point of being concluded, one between England and Turkey, and the other between England and Germany, when hostilities began and incontinently quashed them.

In addition to the working upon the not altogether unnatural dislike of the Persians to the condominium established over their country by the Anglo-Russian Convention, German gold was instrumental in the Persian officials themselves conniving at the Turkish invasion of Tabriz and Azerbaijan. The India Office had also uncovered an elaborate plot, of which Afghanistan, the Frontier, and the Indian Army were the objective; and soon there was a violent agitation against the Russians and the British in Bushire and Kermanshah; and Persian tribesmen made a raid into British Baluchistan. It was only the energetic action of the Russians at Kazvin intervening in their own name and in that of Great Britain that brought about the discomfiture of the proposed rising of the Persians. Meanwhile, conditions in Southern Persia are as chaotic as ever, except at Ahwaz, where British troops defend it for some distance up-country. The recent British set-back in Mesopotamia is another disturbing factor; and in Persia, much will depend in the near future on what takes place for or against the British on the Tigris. The Turko-Persian front of the Russians is something like 2,000 miles in length and is in itself very arduous to defend; and the whole situation in the Middle East demands the most serious attention, specially since the German mastery of the Railway from Constantinople into Asia is the pivotal new fact in the War for 1916.

HINDU CULTURE AS WORLD POWER.

Professor Benoy Kumar Sarkar, writing in the March number of the *Modern Review*, explains that the Hindus of the 4th, 5th and 6th centuries A.D. were not living in 'splendid isolation' but kept up cultivating the 'world sense.' Even the mere development of the Indian sense in those days must be regarded as an expression of internationalism of a high order. The internationalism of the Hindus was extra-Indian too; the world of Kalidas's poetry included the whole of India and also the Indian borderland and Persia. In the 5th century the stream of traffic between India and China was augmented—an indication of the 'Asia sense,' that they had been developing. The Mauryans had cultivated relations mainly with Western Asia, the Kushanas had opened up the Central Asian regions, and the Guptas developed intercourse with the Far East. And Chandra Gupta II. and Vikramaditya (375-413 A.D.) were in direct touch with the sea-borne commerce with Europe through Egypt.

Intercourse with Further India and the colonisation of Java form parts of an adventure which was nearing completion in Gupta times; and the 4th century A.D. really commenced the foundation of a 'Greater India' of commerce and culture, extending ultimately to Japan on the East and Madagascar on the West. The travels of Kumara Jiva (405 A.D.), and of Fahien the Celestial Apostle, were things to which the Indians had been long used. The Patriarch Bodhidharma, originally a South Indian prince, reached Canton by sea and was thence invited to Nanking (520 A.D.) Kucha and Khotan, the half-way house between India and China, remained all the time the great emporium of Hindu culture and of Græco-Buddhistic art. And manuscripts unearthed by Sir Aurel Stein and others, both in Karoshthi and Chinese scripts, prove that Central Asian Indianism flourished during the period from the 3rd to the 8th or 9th century; and the great Chinese travellers, Fahien and Hiouen Thsang, traversed the Central Asian route. Thus the people of Hindustan enjoyed in those days the real place in the sun; and the Indianism of Kalidasa's age was the the Hindu culture, which was propagated all over Asia and transmitted to China and even Japan.

BRAHMINS IN THE INDIAN ARMY.

A writer in the *Indiaman* describes the racial characteristics of the classes of Brahmins who are recruited for the army. He deplores the fact that the Government do not recruit from the Drairra or Southern Brahmins and "thus perhaps let some excellent material run to waste in this direction, for the Brahmins of Maharasthra know how to die."

The field of recruitment is limited to the Gaur Brahmins, and here again further limitations apply, for of the five Gaur tribes, viz., the Kanoujiya, the Saraswat, the Gaur proper, the Maithila, and the Utkala, we do not recruit from the last two The above form the tribes of secular Brahmins, from whom we enlist men into the Indian Army. It is curious that, with the exception of a strip of country near Jabalpur and another jutting out from Lalitpur between Tonk and Saugor, all the Brahmins we enlist are to be found in the United Provinces. "The home of the black buck is where the true Hindu is found," so says the proverb, and here we go for our Brahmin recruits. Besides the tribes noted above, there are several spurious and doubtful tribes who are not enlisted. Such are the Tagas, who are half Mohammedans, the Ojhas, or sorcerer Brahmins, and the Achraj, or Maha-Brahmins, who perform funeral ceremonies. The Achraj rides on a donkey and is considered impure, so that in many villages he is not allowed to enter the gates.

BOTHA'S COLOURS.

Writing on this subject in a recent issue of the *English Review*, W. P. Taylor deals with the South African problems, and concludes:—

It is the business of a colony possessing responsible Government to put its own house in order, and General Botha is the man to do it. It may become necessary to introduce a qualification vote that will destroy much of the indigents' power. If such a measure were passed, it would create confidence throughout the world in our ability to solve and master our problems. Politics would thus become a State business and enterprise and work the order of the day. Then the vast wealth of agriculture, cattle, sheep, and mineral industries would all be developed, and South Africa take its place beside Canada and Australia. And in time its vast resources would employ the millions that are being kept away through the stupidity of an ignorant minority. To realise this our confidence to-day must remain with the green and orange of General Botha.

THE WORLD OF BOOKS.

[SHORT NOTICES ONLY APPEAR IN THIS SECTION.]

THE STORY OF LORD ROBERTS. By Harold F. B. Wheeler, F.R.H.S. George G. Harrap & Co., London. Price 3/6 net.

The victor of Kandahar, over whose death the whole Empire mourned last year, has given touches of autobiographical reminiscences in his fascinating study entitled *Forty-one Years in India*. But his is a life of varied activities. He was the last of the trinity of genius who contributed to the making of British India, Clive and Wellington having preceded Roberts. The most distinguishing quality in this soldier-statesman was sincerity, and it was that that marked the late Field-Marshal as a hero and a man of constructive genius. Very clearly has Mr. Harold F. B. Wheeler brought out in the book under review this and the other virtues that characterised the great commander. We have no doubt that the book will be widely read by many all over the Empire.

INDIAN FAMINES. By Dr. H. A. Shah. Rajkote. Price Rs. 5.

This book is now in its second edition, a proof of its worth and a promise of its going through many more. The author has spared no pains to collect information bearing on the subject of Indian famines, and the remedies he suggests therefore have undergone in many cases the test of actual experience. As such the suggestions contained in the book are worthy of attention at the hands of all who have to do with men and animals in famine-stricken areas.

THE HINDU GOD UNIVERSAL. By K. Narayanasami Iyer. Published by the Author, Theosophical Society, Adyar.

This small work contains the substance of several lectures delivered by the author who is a well known theosophical lecturer and translator of some Hindu books. His object is to establish "that Hinduism is very broad and universal in its concept as well as in its worship of God." With this view, he examines the different kinds of divine worship and the symbolisms of Temple worship and private worship. Worship of God in the heart, worship of a Personal God, and *Maya* and other subjects are treated herein. The book will be of interest to Hindu readers generally.

"THE INFLUENCE OF THE ZODIAC UPON HUMAN LIFE." By Eleanor Kirk: J. N. Fowler & Co., London.

This is a readable exposition of the art of astrology as understood in the West, and ought to be an interesting volume to those among us who believe that astrology is a useful science. The character-readings given in the book are suggestive, but whether they are helpful or useful is another matter, which is best left to those who have faith in matters of this sort.

H. H. THE MAHARAJA OF DURBHANGA. Ganesh & Co., Madras.

Here is a short sketch of the life and activities of this Indian Prince, whose self-sacrificing zeal in the cause of the Hindu University at Benares has justly entitled him to the respect of all lovers of India. The sketch gives a detailed account of His Highness the Maharaja's various philanthropic activities and his remarkable munificence in charitable enterprises.

EASTERN FABLES AND FOLK TALES. By J. C. Nesfield, M.A. Macmillan & Co., Madras.

This is a new series of story books for Indian children. From the four booklets on our table—Indian fables from Hitopadesha, Persian Fables from Anwar-i-Sunhaili, the King and the Rubies and fifteen fables from Baital Paschisi—we believe that the series will strongly appeal to children. What with illustrations and clear types and delightful get-up, the booklets will form an attractive series for young ones.

CARMINA BELLI. By J. W. Poe. Thakur Das & Sons, Delhi.

The war has naturally inspired many a minor poet. The profits of the sale of Mr. Poe's eminently readable booklet of war-verses will be given to the Imperial Indian Relief Fund. The book comprises forty short poems—all dealing with various aspects of the great war.

RAJAH SIR DINKAR RAO, K.C.S.I. By M. W. Burway, B.A., Judge, Indore. Price Rs. 2-8.

We thank the author for his sketch of Raja Sir Dinkar Rao, one of India's great statesmen and administrators. The book is replete with accurate information about the life and activities of the departed patriot and contains many valuable suggestions for Indian administrators.

Questions of Importance.

THE KING AMD THE INDIAN TROOPS.

At a parade of the Indian Army Corps before their departure from France, His Royal Highness the Prince of Wales delivered the following message from His Majesty the King-Emperor :—

Officers, non-commissioned officers, and men of the Indian Army Corps :—

More than a year ago I summoned you from India to fight for the safety of My Empire and the honour of My pledged word on the battlefields of Belgium and France. The confidence which I then expressed in your sense of duty, your courage, and your chivalry, you have since then nobly justified.

I now require your services in another field of action; but before you leave France I send my dear and gallant son, the Prince of Wales, who has shared with My Armies the dangers and hardships of the campaign, to thank you in My name for your services, and to express to you My satisfaction.

British and Indian comrades-in-arms, yours has been a fellowship in toils and hardships, in courage and endurance often against great odds, in deeds nobly done in days of ever-memorable conflict. In a warfare waged under new conditions, and in peculiarly trying circumstances, you have worthily upheld the honour of the Empire and the great traditions of My Army in India.

I have followed your fortunes with the deepest interest and watched your gallant actions with pride and satisfaction. I mourn with you the loss of many gallant officers and men. Let it be your consolation, as it was their pride, that they freely gave their lives in a just cause for the honour of their Sovereign and the safety of My Empire. They died as gallant soldiers, and I shall ever hold their sacrifice in grateful remembrance.

You leave France with a just pride in honourable deeds already achieved and with My assured confidence that your proved valour and experience will contribute to further victories in the new fields of action to which you go.

I pray God to bless and guard you and to bring you back safely, when the final victory is won, each to his own home—there to be welcomed with honour among his own people.

Utterances of the Day.

SCIENCE IN ANCIENT INDIA.

The following speech was delivered by Dr. P. C. Ray in connection with the laying of the foundation-stone of the Benares Hindu University:—

* * * *

To the student of Science, Benares is linked with the origin and foundation of the surgical branch of medicine. Tradition has it that Dhanwantari, the revealer of "Salya-tantra" or Surgery, descended on earth in the person of Divodasa, King of Kasi, the teacher of Susruta. It is not necessary to take this what may be after all a mythical origin in its literal sense. There is, however, an underlying substratum of fact, which assigns to Benares the singular honour of being the birthplace of Susruta Tantra. In my history of Hindu chemistry I have been led to reproduce from it in its entirety the chapter on "Ksharapakavidhi" or preparation of caustic alkali. After describing in detail the processes I have concluded by observing that the method is so accurate and scientific that it may be bodily reproduced in any treatise in modern chemistry.

* * * *

Coming to recent times I find again this ancient and sacred city the seat of mathematical and astronomical sciences. The Mana-Mandir or Observatory erected by Raja Jay Sing, who may well be called the Tycho-Brahe of India, is still an object of admiration to visitors from distant parts of the world. It was under his auspices that Pandit Jagannath translated Euclid and Napier's Logarithm into Sanskrit. It is needless to add that Pandits Bapudeva Sastri and Sudhakara Divedi of this city have in our times maintained the traditions of Raja Jay Sing.

* * * *

History repeats itself. Twelve centuries later our astronomer-prince, Sevai Jay Sing, in order to check his own calculations based upon seven years' observation, sent a deputation to the Court of King Emanuel of Portugal, invoking the help of an European expert.

It will thus be seen that in ancient as in modern times the representative Hindus, who were given to scientific pursuits, were anxious to profit by what their European *confreres* had to communicate.

It is now well known that there was frequent interchange of idea between the East and the West at Alexandria, where the neo-Platonists were not slow to absorb the principles of Vedantism; and this intellectual intercourse was kept up during the days of the Kaliphs of Bagdad. "In Science, too," as Professor Macdonell so aptly puts it, "the debt of Europe to India had been considerable. During the eighth and ninth centuries the Indians became the teachers in arithmetic and algebra of the Arabs, and through them of the nations of the West. Thus, though we call the latter science by an Arabic name, it is a gift we owe to India." In my history of Hindu chemistry, referring to the indebtedness of the Arabs and through their intermediary of the Europeans as regards chemical science to the Hindus, I have said, "Mussalman students in their eager thirst for knowledge used to flock to the centres of learning in India (including of course Benares), and there drank deep at the very fountain-head. Indeed, it had come to be regarded as an essential part of completing one's liberal education to travel to India and to learn the sciences first-hand."

It is now the turn of Europe to pay us back her debt, perhaps, with compound interest. Paradoxical as it may seem, the period of Renaissance in Europe is almost synchronous with the commencement of the decline of our intellectual activities. I have spoken above of Jay Sing as the Tyche-Brahe of India; his labours, or of any of his predecessors, did not however result in the making of a Kepler, and there being no Kepler no foundations were laid upon which a future Newton could build his Law of Gravitation. That glory was reserved for Europe. Bhaskara, who probably flourished in the 12th century, is the last star of Indian Astronomy and Arithmetic, as Weber puts it. After his day no further progress was made and the astronomical science of the Hindus became once more wholly centred in astrology, out of which it had originally sprung. What Herbert Spencer calls the "bias of patriotism" has often been the means of leading people astray into dark paths and false moves. We must look about. The whole of Asia is astir and instinct with new aspirations and pulsating with new life. It will not do for us tenaciously to hug the past and live like the proverbial frog in the well. We should invoke the liberal and catholic spirit of Varahamihira and learn at the feet of Western teachers.

ENGLAND'S DEBT TO INDIA.

Dr. H. A. L. Fisher, Vice-Chancellor of Sheffield University, in the course of a lecture on "The Problem of India" observed :—

Where they (Native States) were well-governed, there was found an air of happiness and ease, and he ventured to think that the population was on the whole happier and more comfortable than in British India. If ever India was to obtain a larger measure of self-government than at present was conceded, she would have to exist in the form of a federation of which the various States were component parts. In proposals for the representation of India on an Imperial Conference, it was not sufficient to confine representation to British India; it must be extended to the Native States. The greatest problem was presented by the great variety of types presented by the races over which Britain held sway. The force or power of Western ideas was already a considerable and growing force, and propagated its influence through the Press which in India was gaining greater power every year. These ideas were percolating through the illiterate population, and for that reason it had been of enormous importance in this great crisis that the educated classes had come forward loyally in our defence. When the time came to consider the constitutional demands of the educated classes, it would not be right or becoming to forget the great debt we owed them during the present crisis.

Having discussed the reform programme with the leaders of Indian opinion, he thought that they would demand commissions in the Army a larger share in the higher branches of the public service, an unofficial majority in the Viceroy's and in Provincial Councils, and a national army. He did not say there would not be other demands—he thought it likely—but those were the demands which would sooner or later be pressed on the British Government, and it would be ungracious and impolitic to pronounce an adverse opinion on the programme in view of what India had done. Englishmen ought so to frame their minds as to be prepared to listen with great attention and sympathy and with every desire to make such concessions as could wisely be made when India expressed her wish. * * * But England owed much to India and should show that she trusted her people and desired their progress on the path of self-government and to give them every opportunity of getting posts of responsibility, so that they might feel they had a real part and lot in the management of the Indian Empire.

HON. MR. CARDEW ON EDUCATION.

The Hon. Mr. A. G. Cardew, C.S.I., I.C.S., Member of the Executive Council, Madras, delivered recently an address in opening the Kallidakurichi Secondary School. He said :—

The advancement of education in India must remain, after allowances and exceptions are made, pre-eminently the chief work to be done by the Government and the people. Education is the essential preliminary for future progress, whatever line of enterprise one takes. The first point one is struck by is the need for wider education, whether the branch of study is agriculture, which is the great industry of South India, whether it is veterinary science or industrial development, and it is impossible to exaggerate the extent to which education is needed for the development of the material prosperity of India and its material advancement. Apart from the view of material advantage it is also needed to build up a higher standard of character. To promote the future of India what is wanted is character, and education must be directed to the formation of character. One of the points to which a wider education will lead is the recognition of the importance of Indian national life and of individual life. Education must teach that in order to promote the national life each individual must realise his own responsibilities, and the mind and the spirit must develop in each individual. This question of the importance of the individual spirit is the thing for which the whole of the British Empire is fighting in Europe. It is because we do not want our development to follow the cast-iron methods of the German Government and because we want free play for the human mind and spirit that we are fighting the German attempt to crush our freedom and individuality from the world.

SIR JAMES MESTON ON "RACIAL FEUD."

At the Durbar held recently at Bareilly, Sir James Meston in the course of his speech spoke very plainly on the subject of the relation between the Hindus and Muhammadans which, he said, were far from satisfactory. In the course of his remarks, he said :—

It is sometimes hinted that the Government encourage differences between the Hindus and Muhammadans in order that, by dividing them, it may rule more equally. Whoever says that is a fool. We look upon racial feuds as a stain upon good administraton. They hinder our real work and the progress of the country, and we want to put an end to them. In the sphere of your own influence, each of you can work for this object, and my happy memories of Rohilkhand would be complete, if I saw the spirit of conciliation abroad in this division, and the Hindus and Muhammadans uniting, as they used to do in my earlier years, in everything that makes for public weal.

Indians Outside India.

INDENTURED LABOUR.

Mr. M. K. Gandhi, writing to the Allahabad *Leader*, offers some personal observations and reflections on this question of indentured labour. For facts and figures the reader and the public workers are referred to the late Mr. Gokhale's speeches in the Supreme Legislative Council and Messrs. Andrew and Pearson's report, while Mr. Gandhi makes the following remarks :—

Indentured labour is admittedly a remnant of slavery. The late Sir William Wilson Hunter, when his attention was drawn to it in 1895, was the first to call it a state 'perilously near to slavery'. The hideousness of the system was forcefully demonstrated when the curse descended upon South Africa in the shape of indentured labourers from China for working the gold mines. It was no mere election cry that the late Sir Henry Campbell-Bannerman had taken up when he made the British Isles from end to end ring with denunciation of the system.

Indian indentured labour is not less demoralizing. It has persisted because its bitterness like that of a sugared pill has been cleverly though unconsciously concealed. The one great distinction between the two classes was that the Chinese were brought in without a single woman with them, whereas every hundred Indian labourers must include forty women among them. Had the Chinese remained, they would have sapped the very foundations of society. The Indian labourers confine the evil to themselves. This may be unimportant to non-Indians. But for us, the wonder is that we have allowed the sin to continue so long. This business about the women is the weakest and the irremediable part of the evil. It therefore needs a somewhat closer inspection. These women are not necessarily wives. Men and women are huddled together during the voyage. The marriage is a farce. A mere declaration by man and woman made upon landing before the Protector of Immigrants that they are husband and wife constitutes a valid marriage. Naturally enough divorce is common. The rest must be left to the imagination of the reader. This is certain—that the system does not add to the moral well-being of India. And it is suggested that no amount of figures adduced to show that the labourer is far richer at the end of his contract of labour than when he entered upon it can be allowed to be any set-off against the moral degradation it involves.

There is another most powerful consideration to be urged against the continuance of this system. The relations between Englishmen and Indians in India are not of the happiest. The average Englishman considers himself to be superior to the average Indian and the latter is generally content to be so considered. Such a state of things is demoralizing to both and a menace to the stability of the British Empire.

Since these passages were in the press we have read with great pleasure the announcement of H. E. the Viceroy in the Imperial Legislative Council, that in consultation with the Secretary of State, the Government of India have proposed to abolish the system altogether. This is not the least of Lord Hardinge's title to the gratitude of India.

INDIANS IN RHODESIA.

Although the war in Europe has evoked the highest patriotism of British subjects all over the world and has touched the chord of human sympathy everywhere, yet, says the *African Chronicle*, the Europeans in Rhodesia, despite their professions of imperialism, seem not to have grasped the ties that exist between them and the Indians. It appears that the Rhodesia Indians labour under certain grievances, and owing to the war conditions they refrain from ventilating it at present. But the Europeans taking advantage of the opportunity endeavour to elbow the Indian out of his legitimate sphere of activity, especially in the matter of trade, etc. In support of this statement the *Chronicle* quotes the *Bulawayo Chronicle* representing how deep-rooted the feeling of Europeans is towards Indian traders.

INDIANS IN THE COLONIES.

The *Rand Daily Mail* gives an incident worthy of being recorded while ladies and gentlemen were distributing a liberal supply of refreshments to some soldiers. So generous was the supply that some officers stepped forward to thank the ladies. Imagine their surprise when the ladies said : "You must not thank us. The whole of these refreshments are generously given by an Indian who is employed as *chef* at the Volksrust Hotel." The Indian, when asked what led him to give so liberally, replied : "My brother is fighting in Flanders for our King. I cannot go, but I can help in this way."

INDIAN IMMIGRATION IN NATAL.

From the statistical summary of the Principal Immigration Officer for the Province of Natal, we learn that 108 Asiatic women and children newly arrived in 1915 as against 53 in 1914. The number of Indians repatriated under the Relief Act of 1914 was 993 in 1915 as against 219 in 1914. In 1914, there were 47 appeals noted for the Board, 22 of which were decided in favour of the Department. In 1915, 35 appeals were noted and 17 were in favour of the Department. Six out of seven special cases reserved for and sent to the Supreme Court in 1915, observes the *Indian Opinion*, were decided in favour of the Department. In 1914, twelve out of 18 cases were in favour of the Department. Two cases were decided in favour of the appellant in 1914.

Feudatory India.

THE THAKORE SAHEB OF GONDAL.

The Thakore Saheb of Gondal, who has given a munificent donation of Rs. 5,000 towards the relief of the distressed in Bankura, is one of the most progressive rulers in India. He "has proved a pioneer of educational progress and of general advancement in the country." The Thakore Saheb himself studied at Edinburgh and obtained the degrees of M.D., and LL.D. He is also an F.R.C.P., and F.R.S., A D.C.L, (Oxon.) and a Fellow of the Bombay University. Himself a scholar, says the *Modern Review*, he takes a great interest in education and has built a large college on the hostel system for the education of the sons of landholders. He established the only Girls' School in Kathiawar, and was the first to start a Travelling Dispensary and an Asylum for the maintenance of the poor, who are unable to earn their own living. The prosperity of the State can be judged from the singular fact that it is the only State free from taxation, customs and octroi duties, some 40 taxes having been abolished during the regime of the present Chief.

PROGRESSIVE TRAVANCORE.

The recent Address of the Dewan of Travancore to the Sri Mulam Popular Assembly gives us very welcome information regarding the progress of that State in various directions. Take education, for example :—

Including unrecognised schools, the total number of educational institutions in the State during 1090 was 3,243 and their strength 396,753. The percentage of pupils in all denominations of schools to the total population was 8·9 and to the number of children of school-going age 50·6. There was on an average one recognised school for every 3·5 square miles of the area and for every 1,684 persons of the population of the State. 73·2 per cent. of the boys and 29 per cent. of the girls of school-going age were under instruction in recognised schools. Devicolam is the only taluk with less than 30 per cent. of its children of school-going age attending school, while Tiruvalla, which takes the second rank among the taluks of the State in point of population, shows the greatest progress, with 99·8 per cent. of its children of school-going age attending recognised schools. In this connection, it will be of interest to you to know that the last Administration Report of Baroda states that "Travancore deservedly represents the highest watermark yet obtained in India by the voluntary principle in education."

The record of social improvement, as evidenced from the decrease of toddy shops, is even more praiseworthy.

In connection with reduction of country-liquor shops, the following figures will be interesting :—

Year.			*Number of Shops.*
1082	...	...	7,050
1084	...	...	5,103
1086	...	...	4,634
1088	...	...	2,462
1090	...	...	2,273

It will be seen that, in the course of seven years, the number of these shops in the State has been reduced by 68 per cent.

THE VICEROY ON RULING PRINCES.

In the course of his speech made on the occasion of the investiture ceremony of the Maharaja of Jodhpur, H. E. the Viceroy made the following observations on the policy of the Government of India towards the Ruling Princes and of the part played by the latter in the Imperial Scheme :

Our policy towards them at least during the recent years has been one of sympathy and trust, of sympathy with their aims and sentiments and their noble traditions, of trust in their fervent loyalty to the person of H. M. the King-Emperor and to the Power whose protection they enjoy. We have recognised that, if a State is to be ruled justly and well and to be a source of real help to the British Empire, it is only through the Ruler himself, supported by his Sardars and people, that these results can be obtained.

Irksome restrictions on the exercise of sovereign powers are apt to chafe and irritate a proud and sensitive spirit, with the result disastrous not only to the Ruler and his people, but also to the Empire at large. We have, therefore, made it our aim to cultivate close and friendly relations with the Ruling Princes, to show by every means that we trust them and look on them as helpers and colleagues in the great task of Imperial Rule, and so to foster in them a spirit of responsibility and pride in their work which no external supervision can produce.

Trust begets trust, and I rejoice to say that in my dealings with the Ruling Princes in India I have never found my confidence misplaced. I have called them to my aid on many occasions both individually and collectively, and have appointed a special Secretary to the Government of India to assist me in dealing with their affairs. The advice and help, which they have given me on many occasions, have been most useful to me and to my Government while they too, I venture to hope, have, by closer association with my officers and with their brother-princes, acquired a wider outlook on the life and a true conception of the high part which they have been called on to play in the world in the critical time, through which we have passed since this terrible War began.

The moral and material support given by the Princes and Chiefs of India have been of incalculable value. They took the lead in asserting their enthusiastic loyalty to the King-Emperor, both by word and deed. . . .

The services rendered by the Ruling Princes of India have received the warm appreciation of the King-Emperor, and their devotion and loyalty to the Crown and the person of His Majesty, are landmarks in the history of India that can never be effaced.

Industrial and Commercial.

WAR AND INDIAN TRADE.

In the course of his Budget speech in the Imperial Legislative Council, the Hon. Sir William Meyer referred to the effects of the war on Indian trade in the following terms :—

The depressing effects of the war on the foreign trade of India of course continue, and scarcity and dearness of freight add to the effects produced by the closure of ordinary trade channels and by special restrictions which have been necessary for military and public purposes. As an instance of the way in which freight has risen in the course of the war, and of the diversion of marchant shipping to military and naval purposes, I may mention that recent information shows that jute freights from Calcutta to Dundee are eight times what they were before the war began, while in the case of light seeds from Bombay to Marseilles the increase is ninefold. The general policy throughout has been (*a*) to restrict the trade in foodstuffs and articles capable of being turned to warlike uses in the case of countries whence they can pass to the enemy ; (*b*) to stimulate the export of a few articles to the United Kingdom and allied countries, or countries which are making munitions for the Allies ; and (*c*) to restrict the export of a very few articles owing to their being needed in India. The combined operation of these causes, together with the stoppage of trade from and to enemy countries, has naturally resulted in the contraction of the volume of our seaborne trade. In the year 1914-15, two-thirds of which was under war conditions, the total trade of India amounted to 354 crores (£236 millions) against 491 crores (£327 millions) in in 1913-14, there having been a decrease in respect of private merchandise of 25 per cent. under imports and 27 per cent. under exports.

DUTY ON FOREIGN SPIRIT.

With effect from the first of March, the Lieutenant-Governor of Burma has fixed duty to be paid on foreign spirit manufactured in the distilleries in Burma, licensed under Section 5 of the Act, at Rs. 11-4 per gallon, and His Honour directs that spirits manufactured in British India and imported into Burma, on which the excise duty has been paid at a lower rate than 11-4 per gallon, shall be charged in Burma with a differential duty equal to the difference between the excise duty, which has been paid at Rs. 11-4 per gallon.

INDIGO IN BRITISH INDIA.

A final forecast of the area under indigo in British India gives a total for 1915-16 of 314,000 acres, or 112 per cent. in excess of the finally revised area of 148,400 acres of last year. The total yield of dye is 39,909 cwt. against 25,000 cwt., the revised estimate for 1914-15.

COMMERCIAL EDUCATION IN INDIA.

Mr. K. Subramania Aiyar, the well-known Principal of Aiyar's College of Commerce, Bombay, read an instructive paper on "The Organisation of a Faculty of Commerce at the Benares Hindu University" at a meeting held recently under the chairmanship of the Maharaja of Durbhanga. In the course of his paper, Mr. Aiyar said :—

The scope, extent, and quality of the work to be turned out by a Faculty of Commerce is as great as that now assigned to the Faculty of Arts. The courses to be prescribed for study in the Faculty of Commerce will consist of a certain number of necessary or compulsory subjects and some one voluntary or optional subject for special study. The compulsory portion of the curriculum will include :—

1. Some of the subjects of cultural value taught in Arts Colleges, but equally necessary for students of Commerce, *viz.*, *(a)* English. *(b)* Elementary Mathematics, and *(c)* History.
2. General Economics which forms the basis for the scientific study of Commerce in its various aspects, *viz.*, *(a)* The Elements of Economics. *(b)* The Elements of Statistics. *(c)* The Elements of Banking and Currency, and *(d)* Administration.
3. General Commercial knowledge required in all kinds of business, *viz.*, *(a)* The Elements of Accountancy. *(b)* The Elements of Mercantile Law. *(c)* Business Organisation, and *(d)* Economic Geography.

Among the optional subjects for specialisation in which the Benares Hindu University may with advantage, and in the first instance, provide facilities I would mention :—

1. Railway Economics and Organisation.
2. Economic History.
3. Statistics.
4. Actuarial Science.
5. Advanced Accountancy.
6. Banking.

Mr. Iyer insists on expert Indian advice and on sending a few graduates to Europe for special studies, who should be bound to work for the Hindu University for a specific period in consideration of their having obtained scholarships.

Students of every industry taught in the faculty of technology ought to receive a special short course of lectures on the business aspect of that industry, viz :—

1. The sources of supply of the raw materials required for that industry.
2. The means and cost of transport of such raw materials to the factory.
3. The direct and indirect charges at the factory.
4. The markets for such commodities.
5. The cost of transport to such markets and the facilities for tapping new markets.

The special course of lectures in Commerce ought to enable him to estimate (*a*) the cost of the plant and machinery required for the industry ; (*b*) the fixed and standing expenses of the factory; (*c*) the minimum quantity to be manufactured in order that the profit thereon may at least be fixed charges, and (*d*) the direct and indirect administrative charges. If he is able to do this, he will find capitalists eager and anxious to help him with enough capital, as they will then have a reasonable assurance of the industry proving profitable.

Agricultural Section.

JUTE-GROWING.

A Blue-book containing the proceedings of the inter-provincial jute Conference held in August last in Calcutta under the presidency of Mr. Coventry, Agricultural Adviser to the Government of India, has been published:

The Conference is unanimously of opinion that there appears to exist room for improvement in the existing system of cultivation and production of the jute crop, more especially by better care of the crop in the matter of weeding, thinning, and of drainage in the earlier stages of its growth by the use of more efficient implements, such as the drill, the spring-toother, cultivator, and European hoes, the conservation and use of manures and of green-manuring. It also considers it desirable to keep in view any possible improvement of the present system of retiring and the question of devising new processes for the extraction of the fibre.

BEES AND FERTILISATION OF COFFEE.

This is the subject of a bulletin recently issued by the Government. Mr. T. Bainbridge Fletcher, the Imperial Entomologist, records the results of several experiments and observations made by him.

It is possible to collect the wax without injury to the bees after the latter have deserted their combs, which they do at regular times of the year. Mr. Fletcher recommends that it would be advisable for the Forest Department to refuse to issue permits to collect honey and wax except under special restrictions, as regards the number of nests to be taken or the time of the year at which they may be taken.

PRESERVED MANGOES.

A new industry, the preservation of mangoes, has recently been started in Manila. Although the enterprise is at present on a small scale, says the *Journal of the Royal Society of Arts*, it promises to develop to very considerable proportions. The Philippines is the home of the mango, and for years efforts have been made to prolong the use of the fruit and its excellent flavour, the season for the mango being comparatively short, and the delicate nature of the fruit preventing its retention for any length of time, or its export from the islands. It is stated that a satisfactory process of preserving the fruit in glass jars has been discovered. The preserved fruit is to be known as mango honey.

DETERIORATION OF CATTLE IN BENGAL.

As India is an agricultural country, with the improvement of agricultural grounds, agricultural implements, agricultural methods and agricultural seeds, improvement of agricultural cattle is equally important. But our cattle cannot be improved unless our pasturage is extended and improved. Unfortunately for Bengal, with the rise of population, the price of food-grains and the cost of living, the cultivators have been obliged to bring under plough the village wasteland, which bringing more money into the pockets of the owners, was rather encouraged than discouraged; and hence owing to the want of proper pasturage our cattle have been underfed and consequently have deteriorated. From Mr. Blackwood's "Survey and Census of the Cattle of Bengal," we learn that in the 24 Parganas we have grazed as many as 30 cattle in an acre of pasturage; in Howrah 45; in Pabna 40; in Noakhali 55; and in Faridpore so many as 69! But the case is otherwise in some of the backward districts, where 1 to 3 cattle only are grazed per acre. If the Hindus create Bakri Id riots to prevent the butchery of their cattle, with what face can we allow this slow extinction of these dumb food-givers? —*A. B. Patrika.*

STORAGE OF MANURE.

A new system of storage of manure by Dr. Giuseppe Beccari, of Florence, Italy, is described in a recent publication from the Imperial Institute of Agriculture, and consists in the storing of the manure in turret-covered courts. The court is a rectangular structure of masonry, divided internally into two compartments about 7 feet high. The floor is paved and provided with drains covered with perforated bricks, through which air passes upwards into the manure, while the liquid manure drips through into a tank. In the top of each compartment there is a trap-opening through which the manure is thrown. Between the two trap-openings a turret is situated with the object of collecting and fixing the ammonia compounds evolved from the fermenting manure, which enter by the apertures. In the turret, shelves placed above each other and fixed alternately to either side are charged with solid or liquid alkaline or acid absorbents; these are collected from time to time through a door or other aperture in the turret, which has also openings at the top and bottom for the admission and escape of air. The manure is abundantly sprinkled every four or five days with liquid manure from the tank, and in forty-five to fifty days it is ready for use,

Literary.

MR. HENRY JAMES.

The death of Mr. Henry James, the great American novelist, will be deeply regretted by all who have learnt to love his subtle psychological art. Born in 1843, he studied in France, Switzerland and America, and brought out his first book in 1871. Then followed other volumes in quick succession, but they are now almost forgotten in the blaze and brilliancy of his later works, in which he showed himself the consummate artist he was. His refinements and subtle psychological studies won for him a secure place in the affections of a school of readers, to whom he will always be precious. Mr. James can however never be popular in the sense in which even less gifted novelists can be said to be popular. But "The Golden Bowl" will always have a circle of admiring readers. With none of the epical qualities of a Balzac or a Hardy, Mr. James was almost Meridithian in his "meticulous scrutiny of the finer shades of temperament." There is a beautiful touch of the enthusiast in him when we remember that the great American novelist became a British citizen, as a token of his sympathy with the British cause in the great European War.

GOKHALE SOCIETY IN CALCUTTA.

The "Gokhale Society" was inaugurated at Calcutta on the 19th ultimo on the occasion of the first anniversary of his death. We are glad that Sir S. P. Sinha has become the President of the Society, and several distinguished Bengalees have been taking an active part in the formation of the Society. Its objects are described to be as follows: (1) To establish in Calcutta a well-equipped Library for the study of political, economic, historical, social and administrative questions. (2) To institute prizes and scholarships for the encouragement of a careful study of public questions. (3) To spread elementary education amongst all classes of people. (4) To publish from time to time informing and well-considered books, pamphlets and journals dealing with current public questions and to arrange public lectures and discussions thereon. (5) To train young men for work directed to the improvement of the social, economic, or political condition of the people. (6) To maintain on suitable allowance a body of qualified workers for carrying on work calculated to promote the social, economic, and political welfare of the people.

INDIA IN THE FOREIGN PRESS.

We understand that greater publicity is to be given in the United Kingdom, France and the United States to India's work for the Empire. The display of portrait slides of Indian princes and leaders at cinemas and theatres is an effective method, says a contemporary, as far as it goes, but encouragement should also be given to newspapers and magazines to deal more often with what may be called the human interest of India. People will read matter of that sort who would shy at the average newspaper article on Indian affairs. "We hope that, as the result of what our Indian fellow-subjects have done during this time of trial, their leading men will become far more widely known and appreciated. We are not referring merely to Indian politicians, but also to writers and artists and men of science. But, of course, when one comes to the British masses, it is the more popularly interesting aspects of India that must be dealt with."

MR. SIDNEY LOW ON INDIA.

Mr. Sidney Low, who discusses the claim of India in the Empire in the columns of a local contemporary, "The Madras Mail," is Lecturer on "Imperial and Colonial History" at King's College, University of London, and the author of the standard work on "The Governance of England." As a journalist, he devoted much attention to imperial constitutional problems during his editorship of the *St. James Gazette*, 1888-97, and subsequently as leader writer of the *Standard*. He had the further advantage of having visited India with H. M. King George V. then Prince of Wales, and his impressions, published as "A Vision of India", has a wide reputation for insight and sympathy.

A RUDYARD KIPLING STORY.

Mr. Rudyard Kipling has been writing a series of brilliant articles in the *Daily Telegraph*. There are many stories showing Mr. Kipling's great popularity. At one time Mr. Kipling was in the habit of paying bills, no matter how small, by means of cheques. He was puzzled to find that, however many of these he issued, they did not seem to have any effect on his balance at the bank. At last he discovered the key to the mystery. During a visit to an office, the principal of which was an enthusiastic autograph-collector, he saw hanging on the wall in front of him, in a gilt frame, one of his own cheques. The local shopkeepers, it appeared, were making more by selling them to autograph-collectors than they could by cashing them at the bank.

Educational.

EDUCATION OF WOMEN.

Sir W. Wedderburn writes to *India* :—

Believing that the education of women lies at the root of Indian progress, friends of India in England are anxious to show their sympathy, and in this direction to support the action of educational reformers in India. Accordingly, on the 12th of October last, they approached the Secretary of State in a deputation, which presented a Memorial signed by leading educationists, Indian and British, entitled to speak on the subject. The deputation was introduced by Mrs. Henry Fawcett; and the memorial prayed for the appointment of a representative Committee to enquire into the conditions of female education in India and place before the Government the views of those whose interests are specially affected.

In his reply to the deputation, Mr. Chamberlain indicated the course that, according to his view, should be followed by the friends of the movement. While assuring the deputation that no difference of opinion existed as to the desirability of promoting female education in India, he stated that in his opinion the initiative in the present proceeding should come from within India rather than from London. This declaration clearly constitutes an urgent call to lovers of progress in India to be up and doing; and they should lose no time in following the lead of their G. O M., who from his retreat at Versova has emphasised the call for vigorous action: "Let India," he said, "support this movement whole-heartedly. It is we, the people of India, who must do all we can for this all-important matter."

Further, Mr. Chamberlain made reference to the happy fact that "an Indian gentleman was about to take up the duties of Education Minister in the Viceroy's Council," and before launching an enquiry he desired to await the recommendations of Sir Sankaran Nair out of his special experience and special means of information.

Since these passages were in the Press, Sir Sankaran Nair has taken his duties as Education Minister and his minute on the Education of Women will also be found on another page.

THE PUNJAB UNIVERSITY.

The Punjab University is inviting applications for a Professorship of Post-Vedic Sanskrit in the Oriental College, Lahore. The University requires a graduate in Sanskrit, who possesses a knowledge of language not inferior to a Shastri and who has in addition received a sound training in European methods. The Professor will be expected to instruct advanced classes and to do research work and assist the research students. If a suitable candidate can be found, the appointment will be for five years in the first instance, and salary Rs. 500 a month. If no such fully qualified candidates apply, a temporary appointment may be made, the salary being graduated according to the qualifications of the candidate

INCREASED GRANTS FOR EDUCATION.

The Hon. Sir C. Sankaran Nair in introducing the Education Budget pointed out that "the Bubget estimate for expenditure in 1916-17, is about Rs. 13½ lakhs in excess of the revised estimate for 1915-16, and I think it will be admitted that this increase, though small, is not unsatisfactory at a time when a policy of rigid economy is imposed."

The Hon'ble Mr. Sharp, the Education Commissioner, following the Hon'ble Sir C. Sankaran Nair, laid on the table the annual sketch of progress which showed that, despite the war, institutions had increased by about 4,300 ; pupils by 260,000 ; and expenditure by about Rs. 120 lakhs. The figures of certain Native States were for the first time excluded, and allowance was made for this change in calculating the increase of those employed in educational work by both officials and private teachers. About 79 had gone to military service in different capacities, and the voluntary contributions by schools to war funds formed an interesting record. Improvements were recorded in hostels, schools, hygeine, manual training, and salaries of teachers. Descriptions were given of educational surveys and architectural instruction in Bombay and progress among Mahomedans.

INDIAN STUDENTS IN ENGLAND.

Speaking of the isolation of the lives of Indian students in England, who returned embittered and often seditious, Dr. Fisher observed in the course of a recent lecture on "The Indian Problem," that it was the duty of citizens of the Empire to show hospitality to them and endeavour to create an atmosphere of public opinion in this country which was warm and hospitable to them. The future connexion between Great Britain and India depended upon the kind of influence which these leaders of Indian thought would exercise on their return. It must not be supposed that because a man had a dark skin, he was alien to t' em or below them. He said in all sincerity that he had met in India men of the purest character, the finest intellect, the most courteous manner—men the latchet of whose shoes he had felt himself unworthy to unloose. All over India there were men capable of inspiring even in the best-educated and most intelligent Europeans feelings of profound admiration and whose love of English literature and the tenets of English thought was almost magical. There was a complete unanimity in the determination of the Indian people to stand by the *Raj* in present struggle.

Legal.

TRIAL BY JURY.

In the House of Commons on January 26, Sir John Jardine asked the Secretary of State for India if he could give the date of the introduction of trial by jury into the procedure of court of session of the district of Belgaum, in the presidency of Bombay; whether the right of trial by jury had lately been taken away from that district; if so, what were the reasons for such action; whether it was preceded by any public inquiry; and whether the learned judges of the High Court approved of the action taken by the Government of Bombay.

Mr. Chamberlain said in reply: Trial by jury for certain offences was introduced into the Belgaum district in 1884. In October 1915, it was withdrawn in respect of certain grave crimes, such as murder and forgery, but at the same time extended to many other classes of offences which had hitherto been triable without a jury. In a *communique* to the Press the Bombay Government stated that their action had been taken after inquiry and after reference to and with the concurrence of the High Court, and was based on the inadequate local supply of competent jurors, the increase of violent crime, and the existence of intimidation and organised factions. It does not appear that there was a public inquiry.

NEW PATNA HIGH COURT.

The Patna High Court opened on the 1st instant. The Judges having taken the usual oath, proceeded to the Chief Justice's Court, where the members of the Bar and the public had assembled. The Chief Justice in a very impressive manner announced that the Court had assumed jurisdiction. Mr. Haque on behalf of the members of the Bar, and Raj Sahab Narayan Prasad on behalf of the Vakils, offered to their Lordships a cordial and respectful welcome. The Chief Justice, in his reply, made a few remarks on matters in which the Bar were interested. He said that between 2,500 and 3,000 appeals were transferred to them. Justice delayed was too often justice denied, and he trusted that the Government at no distant date would give them additional Judges to cope with the work in more manageable dimensions. He announced the appointment of a stamp reporter on the Civil side and that powers were given to the Registrar to admit civil appeals, but not to dismiss any.

COMPARATIVE LEGISLATION.

Never before have international problems been studied more assiduously than now. That is one important after-effect of the war in the right direction. The latest issue of the Journal of the Society of Comparative Legislation will therefore be of especial interest as it throws considerable light on the new legal enactments necessitated by the extraordinary circumstances created by the war. The object of the Society as of the journal is to keep all persons interested in legal, economic and social questions fully informed of legislation in the different parts of the Empire and as far as possible in foreign countries.

A specially interesting feature of the present number is the account of war emergency legislation included in a comprehensive review of legislation of the Empire.

The executive committee comprises such well-known names as those of the Earl of Rosebery and Sir Courtney Ilbert. The subscription for membership of the society is one guinea.

A NEW LEGAL MAGAZINE.

We have received the first three numbers of "The Lawyer" edited by Harsidhbhai V. Divatia, M.A., LL.B., and Jinabhai B. Mehta, B.A., LL.B., vakils of the Bombay High Court. The journal publishes not only Digests of Civil and Criminal Cases in Indian and English Courts but has special sections devoted to the Acts of the Provincial, Supreme and Privy Councils. As such, legal practitioners will find it useful for constant reference. The old "Lawyer" is a journal of seventeen years' standing and the present proprietors have improved it in contents and form alike.

LEGAL CHANGES.

As long ago as 1901, the Secretary of State approved a scheme for the amalgamation of the offices of Administrator-General and Official Trustee, Bengal. Subsequent to that time practical difficulties were experienced in effecting the change which was accordingly postponed, but the Government of India have now decided that it should no longer be delayed, and it will be introduced from the 1st April 1916.

THE CEYLON LAW STUDENTS' MAGAZINE.

The current issue of the above magazine is a double number and will be a welcome addition to legal journals and particularly useful to students of Law. There are some interesting character sketches and other contributions which will be read with pleasure.

Medical.

MEDICAL EDUCATION IN VERNACULARS.

Dr. M. N. Bannerjee during the Budget discussions in the Viceregal Council on the 9th instant moved the following Resolution :—

That this Council recommends to the Governor-General in Council that Local Government be asked to consider the advisability of establishing institutions for the purpose of giving medical students a special course of training conducted in the vernaculars so as to qualify them for ordinary medical practice in rural areas and of encouraging and assisting deserving private enterprise to provide such medical education.

In moving the Resolution, he said :—That the question of supplying sufficient men trained in Western methods of treatment had been engaging the attention of the Government even from as far back as 1839, when Hindustani classes were opened in connection with the Calcutta Medical College for the purposes of military services. And now there were vernacular medical schools for Hospital Assistants all over India intended for providing a lower preliminary education with a shorter course and lower standard of examination than was arrived at in Medical Colleges. But that object was being ignored very largely, and the students of these classes were subjected to the whole course of medicine and to attaining knowledge which would be of no use to them in their after life. As the Committee appointed in 1878 by the Bengal Government said, there seemed to be some confusion of ideas between the standard aimed at and that actually realised. The former was complete medical education, and the latter was probably the lowest standard achieved by any medical school; and that evil had been lately aggravated by the local Medical Registration Acts, Rules since framed of having lectures and examinations in English had already affected private institutions. The remedy lay, he said, in going back if possible to the old standard, or, if that was not possible, in starting new institutions with the humble aim of training humble village practitioners. Their aim should be to give a thorough training which would make them efficient practitioners capable of dealing, not indeed with complicated disease, but such as prevailed in the country requiring quiet treatment.

The Hon'ble Sir Pardey Lukis in reply said that he had been informed that there was a steady and increasing demand for the kind of medical practitioners contemplated in the Resolution, and that the difficulty of having vernacular schools before had now disappeared owing to the availability of vernacular text-books, at any rate, in Bengal. Hence Dr. Banerji had his most cordial support, but he would give it only under three conditions : First, these vernacular institutions should be run entirely as separate institutions; secondly, these practitioners should not be entitled to practise outside the rural areas, as their advent into towns would lead to competition with the already practising men and women there; and lastly, in the interests of the public, these institutions should submit to some form of outside control and inspection so as to insure strict adherence to whatever standard was finally agreed upon. On these conditions he would support the Resolution, which he trusted, the Government of India would be able to accept.

THE WAR AND DOCTORS.

The annual meeting of the Bombay Medical Union was held recently with Dr. B. S. Shroff in the chair. The report for the year 1915 read by Dr. R. D. Mody was adopted as well as the accounts. In the course of a review of the report, the President pointed that during the year under review three subjects have engrossed the attention of the Union more than others :

1. The enlistment of the members of the independent medical profession by Government at the local war hospitals, at base hospitals, and at several spheres of the war.

2. The next point of importance is the proposed legislation which aims at minimising what is called the annoyance caused to the profession by unqualified and pretentious medical practice in various garbs.

3. The third is the foundation of another medical college in Bombay with the donation of Rs. 12 lakhs offered by the late Seth Gordhandas Sunderdas Charities.

THE MADRAS MEDICAL COUNCIL.

Our readers are aware of the stir created some time ago by the ill-advised action of the Madras Medical Council in removing the name of Dr. M. Krishnaswami Aiyar from its rolls for managing an Ayurvedic Institution. We are glad that better counsels have at last prevailed in the Council, as is evident from the following communication from the Doctor :—

I repeated once more (at the meeting of the Medical Council on March 6) what I have been stating since the very beginning of these proceedings that I had had nothing to do professionally with the Free Ayurvedic Dispensary at Triplicane and that I never intended to do any professional work there. The Council unanimously accepted the statement and agreed to drop the case.

The definition of "covering" promulgated by the General Medical Council in Great Britain was adopted by the Madras Council with the addition of the words "subject to the laws in force in India."

I am also glad to be able to state that, in answer to an application by a registered practitioner for permission to teach Physiology in the Ayurvedic College of Pandit D. Gopalacharlu, the Council have taken the view that there can be no objection to such a thing.

I need hardly add that I shall continue my connection with the general management of the Ayurvedic Dispensary as before.

MR. K. HARIHARA BHAT, I. M. S.

Mr. K. Harihara Bhat, who was for some time a Sub-Assistant Surgeon in the Cochin State and who has just passed out of the Royal College of Physicians and of Surgeons, has been given a Commission in the Indian Medical Service and posted to India.

Science.

SANITARY PROGRESS.

During the recent Budget discussion the Hon. Sir C. Sankaran Nair sketched the course of improvement in Sanitation. He said :—

The estimates for 1915-16 included the reserve of Rs. 7·70 lakhs for the improvement of sanitation. Out of this sum non-recurring grants, amounting to Rs. 3·70 lakhs, have been made during the year, namely, Rs 1 lakh for the improvement of the pilgrim route to Kedernath and Badrinath ; Rs. 2 lakhs towards the scheme of drainage and of water supply for the Peshawar Municipality, and Rs. 70,000 to Delhi for sanitary improvements. The balance, namely, Rs. 4 lakhs has been surrendered in view of the financial situation. The Indian Research Fund Association received, as usual in 1915-16, an annual grant of Rs. 5 lakhs. Out of the total sum at its disposal the Association made various grants, the chief of which were (*a*) anti-malarial schemes in Delhi and the United Provinces, Rs. 2,52,216; (*b*) Bombay School of Tropical Medicine, Rs. 1,00,000; (*c*) a scheme of experimental research in Lucknow, Rs. 80,000. The Association also conducted various enquiries at its expense on cholera, water analysis, plague, diabetes and tuberculosis. For 1916-17 will be seen that no fresh grants for sanitation will be received. Indeed, in view of the financial situation Rs. 2 lakhs of the sanitary reserve, and Rs. 2 lakhs out of the annual grant of Rs. 5 lakhs placed at the disposal of the Indian Research Fund Association, will be temporarily resumed. The sanitary reserve for 1916-17 amounts to Rs. 3·70 lakhs, of which Rs. 1 lakh has been earmarked for the Kedarnath-Barinath pilgrim route.

ITALIAN SHELLS.

The Italians repeatedly mention the difficulties which they have encountered in overcoming the Austrian heavy artillery, and an account of these guns, which is given by a Russian medical officer, enables us to form some idea of the splendid fighting qualities to which the continued successful advance of the Italians testifies. The effect of the Skoda 17in. howitzers, known as the "Pilseners," is worse, states this Russian officer, than the effect of the Krupp "Fat Berthas." The Skoda shells weigh 2,800lb. (1 ton 5 cwt.), their usual curve is nearly 4½ miles high, and in soft ground they penetrate 20 feet before exploding. The explosion occurs two seconds after impact. The "Pilseners," except in diameter, do not resemble the Krupp 17in. guns. A "Pilsener" shell kills everyone within 150 yards, and kills many who are farther off. The mere pressure of gas breaks in the partitions and roofs of bomb proof shelters. Scores of men who escape metal fragments, stones, and showers of earth are killed, lacerated or blinded by the pressure of the gas. Men who are only a short distance away are torn asunder.—*The Times of India.*

THE NEGLECT OF SCIENCE.

Sir E. Ray Lankester writes to the *Times* :—

What is needed is not a better knowledge of the facts of science by a few, but a widely spread knowledge and understanding of chemistry, physics, and biology in all classes, so that the manufacturer and workman, as well as the Civil Servants of the Government and the members of the Legislature, shall perceive the value of science and insist on the cultivation of it and on the use of it, and the capacity to use it, in all those who are entrusted with the direction of public affairs. It is no less essential that in the management of business enterprises the knowledge and due respect for and utilization of science, and the scientific habit of mind, should dominate and guide our action.

It is sometimes asserted that the classical education at present favoured in our public schools and universities is a general one, and that training in science is 'specialization' and should come later. The truth is the precise contrary of this. An education, in which every branch of natural science is ignored, is not a general one, but foolishly specialised. The great obstacle to the introduction of the natural science, as essential parts in the country of school and university education, has been the deliberate assignment by the Civil Service Commissioners of an overwhelming excess of marks to Greek and Latin and allied subjects, and a negligible quantity to the branches of natural science in the competitions conducted by them for the selection of candidates for posts in the Public Service. Thus the knowledge of science is neglected and is even treated with contempt.

My object in writing this letter is to point out that the one and only way of saving the country from utter inefficiency and consequent ruin is for the Legislature to entirely remodel the competitions for the valuable posts of the Home and Indian Civil Services. These elements of chemistry, physics, and biology should be made a compulsory subject for all candidates, and as much as half total marks in the competiton should be assigned to the great branches of these subjects ; one quarter to mathematics and one quarter to the whole group described as classics, history and proficiency in the use of the English language. It is only when this—or something equivalent to it—has been done that we can hope to see our people enter upon that new phase of efficiency and power, which is surely the first necessary step to the maintenance of our prosperity and independence.

Personal.

CHARACTERISTICS OF G. K. GOKHALE.

In unveiling the portrait of Mr. Gokhale at the Tinnevelly Home in Triplicane, Madras, the Hon. Sir Harold Stuart made the following shrewd observations on Mr. Gokhale's characteristics :

I would first of all lay stress on his self-sacrifice. With his high intellectual attainments and his charming manner, wealth and honours would have come to him in abundance, but he put them all aside and deliberately devoted himself to work for his country, seeking neither riches nor honour. He was singularly devoid of personal ambition, but he was filled with ambition to do public good. His early life was characterised by self-sacrifice that is both rare and highly commendable. The next quality I should lay stress upon is his great industry. He recognised that no man could be properly equipped for a public life unless he was prepared to undergo much toil and labour in acquiring the necessary knowledge. His fine speeches, which my friend Mr. Natesan has recently published, will show how much labour he had given for the purpose of preparation. There was nothing superficial about him, and those of us who heard his debates saw how carefully he must have prepared himself for his immediate task. I commend that characteristic very much to the young men who seek a public career. A mere superficial knowledge can never advance a cause; a few eloquent words will not bring success. Behind the eloquent words there must be complete and detailed acquaintance with the subject. The next great characteristic of Mr. Gokhale is his transparent sincerity, a quality which always struck me very forcibly. He never followed that school which suggests that the end justifies the means. He was no opportunist in the unfavourable sense of that word. He was always studiously careful to avoid exaggeration of statement and of language, with the result that when Mr. Gokhale made a statement it received marked attention. One felt that he advanced no proposition which he was not fully able and prepared to defend. That absence of violence of language which may win applause for the time being, and that studied avoidance of exaggeration, secured success to any cause which is worthy of your attention. The last quality which I wish to mention is his marked fairness. It is a quality which is very often lacking in public men in all countries, and it is a quality which claims for public man the respect of his opponents. If a man is going to devote himself to public life, he must cultivate fairness to his opponents and so secure their respect and gain for himself the influence which is of such great value.

I think I have given a sufficiently hard task for the young men of this Association in mentioning these four qualities. If they will follow Mr. Gokhale in his self-sacrifice, his industry, his sincerity and his fairness, they will have gone a great way towards attaining the goal that he himself reached. Many a young man who earnestly and deliberately sets himself to do so will meet with much disappointment, but I hope that with this great example before him he will strive after failure and strive and strive again, having his ideal to encourage him and so be a lamp unto his feet and a light unto his path.

THE LATE AUDINARAYANIAH.

The death of Dewan Bahadur M. Audinarayaniah Garu removes from the public life of Madras one of its most respected citizens. After thirty years' honourable service in the Mysore State and in the Madras Government, Mr. Audinarayaniah spent his last days in public service in various capacities. There is scarcely an institution in Madras with which he is not in one way or another intimately associated. The Mahajana Sabha, the Industrial Association, the Temperance League, the Indian Bank, the Social Reform Association, each one of these institutions will be the poorer for his death. With a turn for the practical he was the moving spirit of general Swadeshi enterprises. An ardent Social Reformer he presided over the Ninth Provincial Social Conference at Tinnevelly in 1906, when he made a capital speech. To the versatility of his accomplishments must be added the gift of a sort of old-world eloquence, which for his age and experience carried a peculiar weight and authority in all public deliberations.

LORD CHELMSFORD.

Mr. Austen Chamberlain recently entertained Lord Chelmsford to dinner at Claridge's. There were present: Mr. Asquith; the Cabinet Minister; the Vice-President and members of the Council of India; the High Commissioners of the Dominions; H. H. the Raja of Rutlam; H. H. the Aga Khan; Lord Inchcape; Lord Stamfordham; Sir Hugh Barnes; Sir John Nixon; Sir Ameer Ali; Sir Krishna Gupta; Sir Ali Imam; the Raj Kumar Sirdar Singh of Shapura, and Mr. Charles Roberts, M. P. In this connection, the London correspondent of the *Times of India* writes :—Lord Chelmsford is quietly making his preparations, personal and official, for going to India, and is understood to have neither time nor inclination for attracting public attention. He is quite ready to hear privately the views of those who can speak with experience and knowledge of the present-day conditions in India. His personal study of them under the favourable circumstances of the last fourteen months for detached observation has not been merely superficial. While serving with his regiment, he is understood to have cherished the secret ambition that one day he might be called not to the Viceroyalty but to a Governorship of one of the Provinces. His friends report that on the basis of his observations in India, he is entering upon his heavy responsibilities in a spirit of confidence and hope.

Political.

THE WAR AND THE INDIAN BUDGET.

In the closing passage of his speech on the Budget Estimates in the Imperial Council, Sir William Meyer said :—It has been a source of great concern to the Government of India that the last Budget to be presented under Your Excellency's auspices should be marked by the necessity of a large increase in taxation. But we should be flinching from our duty and unmindful of the example which has been set to us in other parts of the Empire, were we to shrink from this, while the increased burdens which we have proposed are small in comparison with those which have to be borne by other countries participating in the war. We may also, I think, derive some satisfaction from the fact that whereas on the last occasion on which additional taxation had to be imposed (in 1910) that necessity arose from the domestic circumstances of India, our present measures arise only through the participation of India in the greatest war which any of us are likely to see and in which the whole future of the Empire is in issue. And when I recall the Resolution unanimously passed in this Council on February 24th, 1915, which affirms 'the unswerving resolution of Indians to support the honour, dignity, and prestige of the Empire regardless of the sacrifice it may entail on them,' I am confident that the measures we propose will receive full acquiescence in the Council and in the country.

THE EMPIRE AND THE WAR.

Mr. Sidney Low, speaking on "The War and the Problems of Empire," at King's College on the 2nd Instant, said that no one would be likely to undervalue the part which India has taken in this war, for the Indian troops had fought with a gallantry, a courage and an endurance not inferior to those of their colleagues from all parts of the Empire. It was a difficult question how far the resources of India might be further utilised. He would make no attempt to go into that question, but he thought it worth pointing out that in the view of some of the most influential and most capable leaders of the Indian community, there was the very strongest desire to increase the capacity of India to take that part.

BURMA ADMINISTRATION.

The administration report of Burma for the past year shows that the total receipts were Rs. 907 lakhs, of which Rs. 357 lakhs were credited to the Imperial Fund. The total expenditure was Rs. 673 lakhs, of which Rs. 77 lakhs were on Imperial account. The province received only Rs. 46 lakhs from Imperial Exchequer, against a contribution of Rs. 357 lakhs in the preceding year.

LAWYERS IN POLITICS.

"A Financial Expert," writing in *The World*, is very severe on lawyers as politicians. The article is entitled "Why Lawyers cannot govern a Country," and begins with a quotation from Shakspeare's *Henry VI.* which says: "The first thing we do, let's kill all the lawyers." Whatever be their reasons for so doing, lawyers have a love for the letters, M. P. after their name :

The present House of Commons is *choc-a-bloc* with lawyers, and that is why the actual governing of the country is a disastrous failure. The Cabinet is choked with lawyers (which is bad enough in times of peace, but sadly deplorable when we are in the midst of a terrible war) whilst hundreds of the rank-and-file of the great army of M. P's are lawyers of various types. They cannot see anything excepting from a legal point of view. Business, finance-organisation, and broad-minded principles and thoughts are not within their ken. As orators and time-wasters they may justly claim the gold medal, but as practical men of business they are absolutely at sea without a lifebelt, and the bitter experiences we are now suffering are simply because the country is not being governed on sound business and financial lines.

He then quotes the eight "good points of law" —the last and not least of which is "Good Luck.',

In strenuous times such as these we do not want the support or interference of gentlemen who are accustomed to trust to luck, who do not appear to grasp or even appreciate the seriousness of a national dilemma—let alone tackle it. In the best of times a country can only be ruled and governed on sound business and financial lines. A country is after all nothing but a huge Store, catering for its customers both at home and abroad. There are many departments requiring expert organisation and management, and at the head of each department there should be a specialist in his particular branch—a specialist brimful of knowledge of the necessary requirements, and with the capacity and intelligence for working out the salvation of his own department and not interfering or meddling with the business of others.

The writer then proceeds to show that as *men of business*, lawyers do not shine. The article is very interesting if we may regard it as a piece of humerous writing.

General.

WHY ARE THE HINDUS DYING?

A very interesting lecture was delivered in the Hall of the Ram Mohan Library by Lt.-Col. U. N. Mukherji, on Saturday the 26th February. Dr. J. C. Bose, M.A. D.Sc., C.I.E., was in the chair :

Lt.-Col. Mukerji insisted on the efforts of elevating the condition of the lower classes whom we hate as the untouchable, but who form a lakh and a seventy thousand the total being two lakhs. In this way we have deprived our countrymen the just privileges of mankind. We have caused them to forget their self-respect, we have made them beasts in the guise of mankind, in fact, we have been guilty of a great sin. He was apprehensive of the future of our race and cited, for example, the history of Egypt which became Greek, Roman, Christian and Mussalman by turns and thus completely lost its national identity. He proved from the history of Japan that the way to keep our nation free from death's grasp is to teach the lower classes and to regard them as our brothers, to reinstate them into their just birth-rights as human beings, thus making co-operation and sympathy possible amongst every member of the nation. Dr. Mukherji vividly described the real picture of our society from different standpoints. Looking to education, he said that ninety per cent. of our countrymen are illiterate. Agriculture is regarded as the hereditary patrimony of the peasants. We try to infuse certain chimerical ideas into the scheme of industry and make it a failure. Trade, Dr. Mukherji said, brings in our mind a thought of going to foreign countries, and we at once give it up for losing our caste. In this way, Dr. Mukherji said, during the last hundred years we have convened no less than fifty lakhs of public meetings to discuss our national welfare, but unfortunately our nation has not been able to gain a step towards the actual realisation of those ideals. Thus the nation fettered in religion, agriculture, trade, commerce, industry, education, and independent thought has no other alternative but to die a natural death.

SIKH HEROISM IN FLANDERS.

In a lecture to the Calcutta Light Horse, Captain C. F. Smith, commanding the Governor's Body Guard, referred to a number of his experiences while in Flanders with the 9th (Hodson's) Horse. These men, (of the Sikh Infantry) he said, had lost all their officers but one. They were in a trench up to the waist in icy water. It was December, and they had been there three days and three nights almost without food. As he waded up the trench, he spoke to some of the men, every one of whom was grey with cold and almost frozen from the waist downwards. They all said the same thing : " Sahib, we cannot move, but we can still shoot. Take your men away. We will stay here until we die." They had to be carried out bodily and in thirty-six hours they were back again.

ROUMANIAN NAVY.

Of the Balkan States, Greece and Roumania now stand aloof. " If Roumania joined the war" —is an interesting speculation. If she did on the side of the Allies, her navy, though small, will be available as an axiliary to the Russian fleet to weaken the resistance of Bulgaria by directly attacking her sea-board Roumania possesses four 600-ton monitors of 14-knot speed, carrying three 4·7 guns each, also a couple of 4·7 howitzers. These monitors, the *Joan Bratiano*, *Michael Cogulnicheanu*, *Alexander Lahovari*, and *Laskar Catargi* are superior to any Austrian craft, being swifter and better armed ; they have also thicker armours. Roumania has also three torpedo-boats suitable for Danubian operations as well as sixteen river torpedo craft.

BOMBAY SOCIAL SERVICE LEAGUE.

We are in receipt of a copy of the fourth Annual Report of the Bombay Social Service League, showing the work done during the period beginning with June 1914 and ending with 31st May 1915. The institution might well be proud of its educational and sanitary work. The promoters of this philanthropic organization deserve to be congratulated on their successful and many-sided activities on behalf of the poorer classes.

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educational Conference was a strong recommendation that the 'Boy Scouts' movement should be introduced into our schools as early as possible in view of the experience of Great Britain and other countries of the value of scouting as a powerful means of moral and physical instruction.

The *Leader* of Allahabad points out that the Conference, in our opinion might have made another recommendation in addition. It might have reasonably urged that our students should be given a certain amount of military training. In the Thomason College at Roorkee European—yes, any European and not only British —and Anglo-Indian students have to join the cadet corps. No option is given to them not to, nor is option given to the Indian students to join it, if they choose to do so. The distinction is racial and invidious, and it is deplorable that their status of inferiority, because they are Indians, should be brought home to them while yet they are students and in the most sensitive and impressionable period of their life in an institution owned and controlled by the Government, whose policy is religious neutrality. It is too late in the day for the splendid advantages of military training to body and mind alike to be seriously disputed by any one. That it is beneficial is tacitly proclaimed by the rule made in respect of the European and Anglo-Indian students. Why then in the name of reason and fairness should Indian young men go without it ?

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.

EDITED BY G. A. NATESAN.

Vol. XVIII. MARCH, 1917. No. 3.

POST-WAR REFORMS : A SYMPOSIUM.

[We are publishing in this issue the fourth instalment of the Symposium on Post-War Reforms commenced in the December number of *The Indian Review*.—Ed. *I.R.*]

Rajah Sir Harnam Singh, K.C.I.E.

The Post-War R[illegible] Memorandum submitted to the Gov[illegible] [illegible] the 19 elected Members [illegible] Legislative Council[illegible] their labd[illegible] the warm support [illegible] cted, it [illegible] been carefully [illegible] have effectively [illegible] by the views [illegible] proceedi[illegible] that those de[illegible] both nat[illegible] ment is [illegible] and teac[illegible] were st[illegible] the go[illegible] be ne[illegible] Gove[illegible] tion[illegible] freed[illegible]

Opi[illegible] count[illegible] not t[illegible] form[illegible] are [illegible] unles[illegible] Domi[illegible] many [illegible] attaine[illegible] have [illegible] and [illegible] opportuni[illegible] being put on [illegible] Dominions.

It has been said that India reformed numerous illustrative upon as a nation because of her variety to the fact and tongues, but the spirit of nationality has been awakened in us, and true love of country knows no barriers of caste and creed or language, as was shown recently when the leaders of the Congress Committee and the Muslim League united on a common platform.

I have carefully gone through the pamphlet that has been presented to the public by Mr. V. S. Srinivasa Sastri, and I think he has made out an excellent case for Self-Government.

A start has got to be made, and I think after the war will be a most opportune time. India's loyalty to the British Throne has been put to the test, and she has come out with flying colours. It will be a shortsighted policy if she is not treated in a most liberal spirit by those to whom Providence has entrusted her destinies—for a contented India will be a far greater asset to Great Britain than a disappointed and discontented nation.

Mr. N. Subbarau Pantulu.

(*Joint-General Secretary, Indian National Congress, & formerly Member, Imperial Legislative Council.*)

"He flies in the face of history who ignores the fact that no people ever stop or ever hesitate in the middle of the road once they begin to struggle for their liberty. Every advance made is an encouragement to take further and faster steps."

Several have been the misconceptions that have gathered round the scheme of Post-War Reforms, which have been embodied in the Congress resolution "as a definite step towards Self-Government." No less a person than Lord Chelmsford and Lordship think that the reforms adumbrated in the "Nineteen Members' Memorandum" *originated* with them and "since received endorsement, by resolutions passed at the National Congress held at Lucknow." It is hardly necessary to point out that under the guidance of Sir S. P. Sinha, the Congress which met in Bombay in 1915, enunciated the principles on which further political evolution should proceed, and appointed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the All-India Congress Committee to frame a scheme of reforms in consultation with the Committee of the Moslem League, and place it before the ensuing Congress. Accordingly, the All-India Congress Committee called for proposals from the various Provincial Congress Committees and, after considering the same, prepared a scheme at its meetings held at Allahabad on the 22nd, 23rd, and 24th April last. Again, on the 17th and 18th November, a joint-Conference of the All-India Congress Committee and the Reform Committee of the Moslem League met at Calcutta, and discussed the scheme and settled it at Lucknow on the 25th, 26th and 27th December. It was further placed before the Subjects Committee of the Congress and finally passed by the Congress and the Moslem League. It will thus be seen that when it was known that the Government of India would address a Despatch to the Secretary of State on the question of the reforms that should be undertaken with reference to the Constitution of the Government, the "Nineteen Members" considered it their duty to give expression to the views of the public without waiting for the assembling of the Congress and submitted the memorandum in October last, following the lines laid down in the scheme prepared by the All-India Congress Committee earlier in April.

Again, it is pointed out by some of our critics that the Congress abandoned its policy of progressive development and put forward a revolutionary claim for Self-Government. It is said that the Congress, despairing of getting individual reforms and convinced of the futility of effecting *steady* reform in the administration, has deliberately changed its policy and has boldy come forward to claim Home Rule at once as the one and sole panacea for all the ills under which India has been suffering. A reference to the history of the Reform Scheme and the Congress propagan[illegible] will show how baseless these criticisms are, [illegible] that the proposals formulated by the Con[illegible]s) form but the natural and next step, in the [illegible]said, tionary progress of the country to meet the [illegible] in a grave situation, and do not in any way [illegible]ecem- a demand for Home Rule. [illegible]d three

To understand the present situat[illegible]ded up necessary to recall the events of 1908 [illegible]every one—hen the Minto-Morley Reform Scheme was [illegible] frozen[illegible]ounced. The Government of India claimed [illegible] the same the scheme that it would "really and effectively associate the people of India in the work, not only of occasional legislation but of actual every-day administration." And Lord Morley, while endorsing this verdict, hoped that by the introduction of these reforms the moral strength of the Government would grow and that the goodwill of the people, "which must after all be the real foundation of our prosperity and strength in India," would be attracted to the Government and "fortify the foundations" of British rule in India. Mr. Asquith, the Prime Minister, on the second reading of the Bill said:—"It is most desirable to give to the people of India the feeling that the Legislative Councils are not mere automatoms, the wires of which are pulled by the official hierarchy. It is of great importance from that point of view that the non-official element should be in the ascendant subject to proper safeguads." Naturally the scheme was acclaimed with joy throughout the country as an honest endeavour to meet the demand [illegible]SERV[illegible]the people and as an earnest of the r[illegible]receipt of a copy [illegible]ongress held in Madra[illegible]port of the Bombay Social[illegible]e general feeling [illegible]ng with June 1914 and ending with

1915. The institution might well be [illegible]ome and this educational and sanitary work. Th[illegible] English st[illegible]ers of this philanthropic organization [illegible]t at this [illegible]t. . . . [illegible] be congratulated on their successful and [illegible]it which ided activities on behalf of the poorer classe[illegible] on the [illegible]ter has [illegible]etween [illegible]tional [illegible]ntries [illegible]e of [illegible]hourly [illegible]duced into our schools as early as possible [illegible]rward view of the experience of Great Britain [illegible]ntative other countries of the value of scouting a[illegible] powerful means of moral and physical instructi[illegible]

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educati[illegible] Conference was a strong recommendation t[illegible] the 'Boy Scouts' movement should be in[illegible] duced into our schools as early as possible [illegible] view of the experience of Great Britain [illegible] other countries of the value of scouting a[illegible] powerful means of moral and physical instructi[illegible]

The *Leader* of Allahabad points out that the Confere[illegible]f the in our opinion might have made another recommen[illegible]tions, tion in addition. It might have reasonably urged t[illegible], and our students should be given a certain amoun[illegible]e vote military training. In the Thomason College at Roo[illegible] European—yes, any European and not only Bri[illegible]ed in a —and Anglo-Indian students have to join the c[illegible]e play corps. No option is given to them not to, nor [illegible]people, option given to the Indian students to join it, if th[illegible]son- choose to do so. The distinction is racial and in[illegible]idious, and it is deplorable that their status of inferi[illegible]grave reas[illegible] they are Indians, should be brought he[illegible] hopes and ex- yet they are students and in the[illegible]ese impressionable period of the actual working of the [illegible]owned and conte[illegible]disappointment caused by the [illegible]Regulations, and the narrow interpretation put upon them, is writ large in the pages of proceedings of the Legislative Council and in the columns of the Indian Press.

The constitution of the Provincial Councils

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has been so manipulated, even where an *elected* majority is given as in Bengal and Behar, that the official continues to dominate over the Council, and the non-official majority has, in practice, become a minority. Though the object of the Reform Scheme is to associate the people in every-day administration, yet Sir Regnald Craddock on behalf of the Government of India said, on the motion of the Hon. Pandit Madan Mohan Malavaya for a larger number of meetings of the Indian Legislative Council, that the main business of the Council was legislative and that no recommendation could be made by the Council to the Governer-General to exercise his discretion in favour of having more frequent meetings! As the scheme is at present worked, nothing can be carried in our Provincial Councils against the will of the officials who, in combination with the elected European members and nominated non-official Indians, [illegible] to keep up the power and [illegible] Government, lord over them [illegible] the elected represen[illegible] their labo[illegible] The elected [illegible] have effectiv[illegible] save their [illegible] proceedi[illegible] or amendm[illegible] that those [illegible] to vote [illegible] defeat, [illegible] to the [illegible] Gover[illegible] numb[illegible] head [illegible] men[illegible] schen[illegible] on th[illegible] ponde[illegible] regar[illegible] tions [illegible] the P[illegible] has n[illegible] a Bil[illegible] Gover[illegible] Counci[illegible] thoug[illegible] to dis[illegible] they are placed [illegible] Government. While [illegible] tion of the benefits of the reforms [illegible] Councils, we cannot shut our eyes to the fact that a feeling of disappointment and resentment has settled on our Councils, and the warning of Lord Morley against the evils of official majorities has been in vain. His Lordship pointed out how the system of official majority "tends to throw the non-official member into an attitude of peevish, sulky, permanent opposition and has an injurious effect on the minds and characters of members of the Legislative Councils." That the practical majority secured by the officials has thrown the non-official Indians into a permanent opposition is borne testimony to even by Anglo-Indian Journals. The *Statesman*, speaking of the United Provinces Legislative Council, says that "the permanent opposition in the United Provinces Legislature is more coherent and more highly organised than it is in most councils, that is to say, the Indian non-official element attacks in masses, and appears to have developed a considerable amount of fire control." The *Madras Mail*, speaking of the Madras Legislative Council, deplored that "hitherto there has been an excessive and artificial unity. To put it crudely, the non-official Indian members have usually resolved to sink differences in order to press more effectively demands, the satisfaction of which, they were agreed more or less, would conduce to progress," and hoped that this state of things would not continue indefinitely. This attitude of permanent opposition, apparent not only in the Legislative Councils but also in the Indian Press, is due entirely to the way in which the bureaucracy has been trying to keep up their artificial prestige. As a matter of fact, that prestige has seriously suffered during these years, and the Government is being discredited in the eyes of the public by the policy adopted in converting a non-official majority into a minority, and by the various devices introduced to thwart the will of the elected representatives of the people. We have come to such an unhealthy state of things that even ardent supporters of the Government do not care to say a good word openly in favour of the Government, even when their action is manifestly right. The *Madras Mail* says that, "to our knowledge there are Indians [illegible] sanability and by no means of ill purpose who [illegible] countenanced public agitations of which [illegible] they did not approve, because a breach to envi[illegible] all might some day be useful." His Lordship the Bishop of Madras points out with his usual insight :—

"The danger of the present situation consists largely in the fact that, with notable exceptions, Englishmen in India are not only opposed to the feelings and sentiments of educated Indians, but also to the inevitable tendency of their work and policy." "We need to realise that we cannot now base the Government of India upon

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

any other foundation than that of the will of the Indian peoples, that we are here as servants of the Indian people and not as their masters, that a foreign bureaucracy can only be regarded as a temporary form of Government, and that our ultimate aim and object must be to enable India to become a self-governing part of the British Empire, and to develop her own civilization upon her own lines."

In the interests of good government, the present state of things ought not to be permitted to continue, and the time is come when it is no longer desirable or safe to leave it to the rules, but the statute itself should provide for a real and effective majority of the people's representatives to control the administration and legislation of the country.

This is not the first time when the rules framed under the statute failed to carry out the intentions of its framers. At the second reading of Lord Cross's Bill of 1892, Mr. Gladstone said:

After the assurances we have had from persons of the highest capacity and the greatest responsibility, I believe we shall be justified in looking forward not merely to a nominal but to a *living representation of the people of India*. What I wish is, that their first steps shall be of a genuine nature and that whatever scope they give to elective principle, it shall be real.

Lord Salisbury, the Prime Minister of the day, said that the machinery provided shall effect the purpose of giving representation not to accidentally constituted bodies, not to small sections of the people here and there, but to the *living strength and vital forces* of the whole community of India. Yet the regulations under the statute were so framed, worked and continued for a period of *sixteen* years in spite of protests from the public that the result was deep discontent throughout the land and a situation of grave anxiety with which Lord Minto had to grapple.

Besides, a striking feature in the public life of the country, during recent years, is its enormou political development to which Lord Harding bore witness shortly before he left these shores. The war has contributed its share in this direction and revealed that, notwithstanding the fulsome praise bestowed on Indian loyalty, ge a sity and bravery in the different theatres ecem- Indian manhood has not been encouraged three part in the war, as has been done in the ded up the Colonies. Further, the *Round Table* propa- y of anda demanding for the Colonies a share in the froze vernance of this country along with Great the sa Britain has revealed how helpless India is and how keenly her people resent the subordinate and dependent position she occupies in the Empire. The situation therefore demands, both in the interests of Great Britain and in the interests of India, that the next step should forthwith be taken in the political advancement of the country, and it is no wonder that in view of the present grave situation all parties, the so-called Moderates and Extremists, Hindus and Mohammedans, sinking all their differences, should have joined hands at Lucknow in unprecedented numbers in making the demand.

For this purpose it is necessary, as urged by Sir S. P. Sinha, President of the Bombay Congress, "that there should be a frank and full statement of the policy of the Government as regards the future of India, so that hope may come where despair holds sway, and faith where doubt spreads its darkening shadow," and that England should make an unequivocal declaration that her policy in the government of this country is to confer Self-Government on India. Sir S. P. Sinha appeals "to the British nation to declare their inflexible re[illegible] in India for her journey to th[illegible] receipt of a copy [illegible] the reforms introduced [illegible]ort of the Bombay Socia[illegible]akeshifts, halting [illegible]owing the work done during th[illegible] pressing neces[illegible]ng with June 1914 and ending wit[illegible]been no step[illegible] 1915. The institution might well be[illegible]ng the re[illegible]s educational and sanitary work. Th[illegible]eges of S[illegible]ters of this philanthropic organization had been [illegible] be congratulated on their successful and [illegible]Services ided activities on behalf of the poorer class[illegible] by the [illegible]tically

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educati[illegible]on in Conference was a strong recommendation t[illegible]ami- the 'Boy Scouts' movement should be in[illegible] ap- duced into our schools as early as possible[illegible]esides view of the experience of Great Britain [illegible] made, other countries of the value of scouting a[illegible]wards powerful means of moral and physical instruct[illegible]en by [illegible]nsibi-

The *Leader* of Allahabad points out that the Confer[illegible] pave in our opinion might have made another recomme[illegible] tion in addition. It might have reasonably urged [illegible] that our students should be given a certain amou[illegible]d have military training. In the Thomason College at Roo[illegible]ld also European—yes, any European and not only Br[illegible] —and Anglo-Indian students have to join the [illegible] United corps. No option is given to them not to, no[illegible]nselves. option given to the Indian students to join it, if t[illegible] policy choose to do so. The distinction is racial and [illegible] and it is deplorable that their status of infe[illegible]red and t[illegible] they are Indians, should be brought [illegible]announcing "that t[illegible]t they are students and in [illegible] pressionable perio[illegible] of British policy is to confer Self-[illegible]ment on India at an early date."

Further, it is essential that the present system of ruling the Legislative Councils by official majorities, whether secured under statute or otherwise, should be abandoned. The constitution of the Legislative Councils should be so modified as to give them an effective control over the acts

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Executive Government, and the voice of the elected representatives of the people should be made supreme, both in the Provincial and Indian Legislative Councils, subject to proper safeguards. With regard to the objection that, if there were no official majority, Legislative Councils might pass any number of wild cat bills, Lord Morley himself pointed out that the power of veto vested in the Head of the Government was ample to check such vagaries. It must be remembered that the power of veto would be a real power in this country unlike that in the Colonies, where Parliamentary Government prevails. Further, the scheme provides that the Indian Legislative Council shall have no power to interfere with the direction of military affairs and the foreign and political relations of India, and that no resolution of the Legislative Council shall be binding on the Governor-General in Council in respect of the [illegible] for the defence of the country [illegible] essary to point out that [illegible] and only indicate their lab[illegible] the reform should [illegible] ns, the main p[illegible] that the Leg[illegible] as to give [illegible] of the Exe[illegible]

sign that now there are other Anglo-Indians, beside myself, who think that, to have kept aloof from Indians in their political campaign for self-government, was a grievous mistake. The telegraph and military medical departments cannot much longer be kept as a kind of close preserves for Anglo-Indians. If an Indian I.M.S. officer is good enough for military service, so is an Indian assistant surgeon, and the position of Government in the telegraph department cannot be maintained much longer. As for volunteering, the opening of the volunteer arm to Indians cuts the last plank away from the Anglo-Indian. What then remains? Anglo-Indians are the gainers by the concessions obtained from Government by Indians, but it is not just that they should hang back and expect their compatriots to pluck the chestnuts from the fire. They must join them. The united voice of Anglo-India must swell the appeal of Indians for self-government. Whether complete autonomy will be given on Colonial lines is another question. Anglo-Indians must seek representation in the Councils of the Empire, they must seek the friendship and earn the goodwill of Indians—to whom they are bound by blood and birth and domicile—and whom they have up to the present time repudiated. As a small, separate, but by no means negligible, community, it is necessary for Anglo-Indians to participate in any scheme of reconstruction of the Indian administration after the War. They must cultivate closer relations with Indian public men, learn to love this great country, cultivate sympathetic relations with the Indian people, and work and strive to make India one of the greatest, if not the greatest, possession in the Empire. The possibilities in this direction are incalculable. No country can be really happy unless she is self-governed. India under self-government may make mistakes, may be involved in troubles, but she will emerge purified, stronger and more able to stand on her own feet. Held up by the Nurse and never allowed the freedom to walk alone, the Indian people will ever remain weaklings. The careful mother is anxious that her toddling child should not walk over a pre[illegible] SERVA[illegible] she does not attempt to hinder[illegible]receipt of a copy [illegible]gain strength and confid[illegible]port of the Bombay Soci[illegible]Under the ægis of [illegible]howing the work done during th[illegible]ill, after some [illegible]ng with June 1914 and ending wit[illegible] I am free 1915. T[illegible]ward for al[illegible]ters of this philanthropic organization [illegible] be congratulated on their successful and [illegible]ided activities on behalf of the poorer class[illegible]

THE RUSSIAN

BY PROF. S. J. CRA[illegible]

IT is premature to write an article on the Russian Revolution, and whatever is said must, in the nature of the case, be hypothetical and full of reservations until lapse of time brings us fuller details of one of the most amazing political transformations of either ancient or modern times. Not even the most experienced of political augurs, though cognizant of certain symptoms indicating that all was not well in the body politic of Russia, can have expected that the disturbing features were destined to lead to so remarkable an upheaval within such a brief period. But the attainment of wisdom after the even[illegible]-not altogether unknown in diplomatic circl[illegible]ee and doubtless within the next few months there will be many an 'I told you so' from those of[illegible]customed to form the political thought of the froze[illegible]age man and woman.

But instead of indulging in more or less philosophic speculations on the events, it will, perhaps, be most useful to try to set forth, so far as we know, what has really happened. To do this it will be well to sketch the Russian constitution as it

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educati[illegible] Conference was a strong recommendation [illegible] the 'Boy Scouts' movement should be in[illegible]duced into our schools as early as possibl[illegible] view of the experience of Great Britain [illegible] other countries of the value of scouting [illegible] powerful means of moral and physical instruct[illegible]

The *Leader* of Allahabad points out that the Confer[illegible] in our opinion might have made another recomme[illegible] tion in addition. It might have reasonably urged [illegible] ur students should be given a certain amou[illegible] military training. In the Thomason College at Ro[illegible] European—yes, any European and not only B[illegible] —and Anglo-Indian students have to join the [illegible] corps. more than 50,000 roubles (a rouble is worth 2s. 1½d.) in value, are electors: the *volosts*, or peasant communities, and manufactories with more than fifty workpeople, are represented in the electoral assemblies by delegates, two for each *volost*, and one for each thousand workmen. Students, soldiers, governors of provinces (in provinces governed by them) and police-officers (in the localities for which they act) may not vote."* Such, then, is the constitution of the Duma which has occupied a prominent place in the Revolution.

But in addition to the Duma, there is another assembly with equal legislative powers—the Council of the Empire, consisting of members partly nominated by the Tsar, partly elected by the Zemstvos or provincial assemblies, and important bodies like the universities, the Synod of the Orthodox Church, etc. The Council of the Empire is, therefore, a k[illegible] Lords, but more popular in it[illegible]. All laws must rece[illegible] their labd [illegible]

The [illegible]cted, it [illegible] in the hands o[illegible] have effect[illegible] for f[illegible] *Senate*, which, [illegible] proceedi[illegible] by [illegible] Court on[illegible] that thos[illegible] both [illegible] which s[illegible] Empire. [illegible] were [illegible] imports[illegible] repugn[illegible] this [illegible] were exempt less liberal all thi[illegible] been granted in England[illegible] generall[illegible] a credit of one anna income such [illegible] income exceeding [illegible] rate of 4 annas per rupee excess. [illegible] doubled [illegible] to 7½ per [Kut-el-[illegible] has Frederi[illegible]de, on Khalil [illegible]re in fu[illegible] British [illegible]ops, and [illegible] Imperial Council [illegible] the Turkish [illegible] [illegible]ach Bagd[illegible] In has a[illegible] their [illegible] munici[illegible] anythi[illegible] sense [illegible] 171,05[illegible] [illegible]ters of the place, classed [illegible]men [illegible] and, secondly, Oxthod[illegible]nery, climate product[illegible] blished [illegible]d. The [illegible]men; th[illegible]ved [illegible] faiths [illegible] older lady Jyeshtha. Is[illegible] [illegible] and reaped the fruit[illegible] [illegible]reof. *Pogrom*[illegible]—Ah, what a [illegible] notori[illegible] Lord, I touch[illegible] on the su[illegible] Ber[illegible] almost equal[illegible] e[illegible] ati on-th[illegible] st acts of the new regime [illegible] been th[illegible] same religious disabilities. It may interest Indian readers to know that in Russia the Mahomedans (13,906,972) come next to the Orthodox in number, and next in number are the Roman Catholics, chiefly Poles.

In the whole Empire, there are less than 7,000,000 pupils in the schools and about fifty per cent. of the population is illiterate. The backward condition of education will be one of the greatest problems for the new Government to solve, and also, we think, one of its greatest dangers.

Some acute person has tried to win fame by the maxim, 'History never repeats itself.' In general this may be true, but the following quotation from M. Ramband, the best known of great historians of Russia, may make us wonder if the old adage had not a good deal of truth in it. Speaking of the reforms of Alexander II in 1861, M. Ramband says, "He felt that the disasters of the Danube and the Crimea were mainly due to the administration, which was protected in its abuses by the silence of opinion, the servitude of the press, and the rigours of the police and the censorship. An important moral was learnt from the events of 1855—a population, of which the majority of the peasants are subjected to serfdom, cannot rival European nations in intellectual, scientific and industrial progress: *Success in modern war is the resultant of all the moral and material forces of the state.*"*

Alexander's maxim was never truer than it is to-day. Success in modern war is still "the resultant of all the moral and material forces of the state"; and it is because the Allies believe that the present Revolution is an attempt to realise the unfulfilled ideal of Alexander II's words, that both for ourselves and for Russia's own sake the Revolution has been so universally welcomed, and we believe that Russia united within, morally and materially, is unconquerable, and that Germany is being defeated, because she has forgotten that the moral is as necessary as the material to success even in war.

Let us try to outline some of what to us seem to be the chief causes of the Revolution.

Whatever opinions we may hold regarding the value of war, no one now can have any manner of doubt of its value as a test of national strength. In our own case the result has been to unite the Empire more firmly than ever and to bring about an interaction of national effort unimaginable in pre-war days; but this result is due to the inherent soundness of our national life. Even as it is, many false gods have fallen never to be replaced in their pedestals. But the storm which sent a tremour through the heart of our [illegible] Empire, causing it to strike its roots deeper and strengthen its hold on its foundation principles, has had a more serious effect on our great ally, for her internal dangers are greater. It is

true that England was threatened by an abortive revolution in Ireland, but the Irish problem was envisaged in quite a different way from that adopted towards national aspirations in Finland and Poland by the Russian bureaucracy which, in spite of pledges to the contrary, has again and again infringed the national rights of its Polish and Finnish subjects. The powers that were in Russia were out of sympathy with the democratic aspirations of these peoples, while the British democracy is anxious to satisfy every legitimate aspiration of the Irish people. Nor was the bureaucracy any more sympathetically disposed towards the ideals of the thinking sections of the Russian people themselves. It is true that the Duma has assembled year by year since 1905, but its members felt that they had no real power, and when their protests became too outspoken, the Duma was dissolved and too many of the most moderate Russian reformers exiled to Siberia. Many of these were men who had no sympathy with Nihilism or the extreme revolutionary party, and were sincerely anxious to see a really constitutional government established in Russia. The outbreak of the war soon proved that large numbers of those in power were not alone antagonistic to reform, but also grossly incompetent to guide the state through the crisis, and, what was worse, corrupt and unscrupulous, or, as recent events have shown, sometimes actually in the pay of Germany.

It soon became apparent that many of those responsible for the conduct of the war against Russia's deadliest enemy, were men who had no desire to see Germany defeated but were anxious to do all they could to promote the interests of the Fatherland in Russia. Not a few were of German descent, though doubtless it would be unfair to say that all the German inhabitants of the Baltic provinces were traitors to Holy Russia; but bitter experience has taught us to suspect Germans in any shape or form. Others, again, had been educated in Germany, and while Russians in name were Germans by training and ideals.

The Russian Revolution appears therefore to be, from one point of view, a reaction of Russian nationalism, and an effort to purge the national life of people corrupt or at least inimical to the growth of a truly national life, and an uprising of outraged patriotism against those willing to betray their country's cause—hence the unanimity which prevails both in the Duma and the army for the cause of the revolution. The repressionists are rightly identified both by the 'Liberals' and the army with the common enemy.

The revolt against the policy of persecution followed by the state church under the restless regime of successive Procurators of the Holy Synod is another feature of new Russia. Unfortunately for themselves, the royal family had identified themselves with this, and fortunately, perhaps, for Russia some of the court ecclesiastics like the notorious monk Rasputin, who was in high favour with the Empress, got mixed up in the pro-German intrigues which were going on in Petrograd. The death of Rasputin has, it would seem, to some extent descredited the established church which was already, to put it mildly, not loved by the 'Liberals'.

The War has also emphasised the economic weakness of Russia and the need for a thorough reorganisation of all its resources. As a recent writer, in the *Asiatic Review*, has cleary shown, Russian trade was largely in the hands of German capitali[illegible]ers, and almost entirely neglected. [illegible]eceipt of a copy [illegible]ers. RAJA RAM MOHAN ROY.*

BY MR. SHAMBU CHANDRA DEY, B.L.

RAJA RAM MOHAN ROY was born at Radhanagar in A.D. 1774, a year memorable in the annals of British India, as in it were established both the Supreme Council and the Supreme Court—the highest Executive and the highest Judiciary. Ram Mohan was happy in his parents. His father Ramkanta was a small zamindar and was held in esteem by people of the surrounding villages as well as of his own. His mother "Phool Thakurani" was a woman of great piety and remarkable firmness of character.

Young Ram Mohan learned the elements of the Bengali la[illegible] village Patshala. But mere [illegible] was not of much us[illegible] their labd[illegible] was still the langua[illegible] ected, it [illegible] wanted to make [illegible] have effecy[illegible] in life never [illegible] by [illegible] well as Persian [illegible] that those de[illegible] both nac[illegible] aced under [illegible] re; and w[illegible] were var[illegible] d a fair [illegible] repugn[illegible] s ninth[illegible] were exempt less liberal [illegible] been granted in England [illegible] one anna income [illegible] income exceeding [illegible] rate of 4 annas per rupee [illegible] excess. [illegible] f [illegible] doubt[illegible] d to 7½ per [illegible] has [illegible] Kut-el-[illegible] Frederi[illegible] de, on [illegible] Khalii[illegible] re in fu[illegible] British t[illegible] ps, and [illegible] Imperial Council[illegible] the Turkish [illegible] ach Bagd[illegible] [illegible] [illegible] [

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the wedded couple commenced to pass their days in peace and comfort. But domestic happiness was not all to Ram Mohan Roy whose mind constantly turned to study, which was the most exhilarating recreation of his life. About this time this indefatigable student was also initiated into some other foreign languages, namely, Hebrew, Greek and Latin. For, Ram Mohan was not satisfied merely with the study of Hindu Shastras; in fact, this study was only the means to an end which was to hold controversies with the Brahmins, and to convince them of their errors. He carried on controversies with the priestly classes upon idol worship and Sati. One very painful circumstance had turned the young man's attention to the latter subject. Ram Mohan had an elder brother named Jaga Mohan. When this man died, his wife, who was devotedly attached to him, burned herself on his funeral pyre. This incident made a very deep impression on his mind, and it was one of the immediate causes which made him declare open hostility to orthodoxy.

The young reformer took up the cudgels against idolatry and several other practices, and renewed the fight with redoubled zeal and energy. Upon this, the leaders of Hindu society tried several means to put down the proud rebel, which resulted in his expulsion from home. This melancholy event took place in the last year of the eighteenth century.

In the very year in which he was cast out of his paternal abode, he had a son born to him. This was his first-born, who was named Radha Prasad after Krishna's favourite wife Radha. Fortunately for the discarded young man, it was not long before he got a clerkship in the Rangpore Collectorate. He afterwards served for some years in the ministerial department of Ramgurh and Bhagulpur until the exigencies of service brought him again to Rangpore. As Ram Mohan was a man of parts and diligence, his rise in the service was almost assured, and he at last rose to the very top by being made Dewan, as the ministerial head was then called. Ram Mohan Roy spent about a decade of his life as Dewan.

While at Rangpore, he did not altogether forget his favourite study of the Hindu Shastras. In the odds and ends of time, he held controversies with the Brahmins on several religious subjects, more especially idolatry and widow-burning.

When Ram Mohan Roy found that he had amassed money more than sufficient for the fulfilment of the great object he had in view, he resigned his appointment and came down to Calcutta with the purpose, as he said, of "engaging in religious culture and in the investigation of truth." This turn in his life took place in the year 1814, when he had attained his fortieth year. Having made enough money he settled down in Calcutta with his mother, Tarini Devi, who had all along managed the family property in pursuance of the arrangement which had been made by her husband, Ramkanta.

With his knowledge of languages, coupled with competence and leisure, Ram Mohan Roy was now free to translate the Vedas and the Upanishads into Bengali and English. In the very year in which he came to Calcutta, he, in concert with a few friends, established the Atmi[illegible]ers; *Brahmo Samaj*) for the worship of [illegible]eipt of a copy [illegible]ers inculcated in the Vedas of the Bombay Soci[illegible]ves the year following the work done during th[illegible]ce Vedanta in Ben[illegible]gaxt year with June 1914 and ending wi[illegible] by a[illegible]15. The institution might well be [illegible]de translati[illegible]ducational and sanitary work. Th[illegible]re the Isha U[illegible]s of this philanthropic organization [illegible]ul9, transl[illegible]e congratulated on their successful and [illegible]ati Upani[illegible]d activities on behalf of the poorer class[illegible]or e same

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educati[illegible]orks, [illegible]onference was a strong recommendation [illegible]re Vedic [illegible]e 'Boy Scouts' movement should be in[illegible] doubt [illegible]aced into our schools as early as possible[illegible] popular [illegible]iew of the experience of Great Britain [illegible] horbid other countries of the value of scouting [illegible] down powerful means of moral and physical instruc[illegible] to its [illegible]

The *Leader* of Allahabad points out that the Conf[illegible]rer of [illegible]n our opinion might have made another recomm[illegible] and [illegible] addition. It might have reasonably urged [illegible] reg[illegible]tudents should be given a certain amo[illegible] studied the[illegible]ean—yes, any European and not only [illegible]e, and acqu[illegible] Anglo-Indian students have to join the [illegible]ge of its [illegible] No option is given to them not to, [illegible] if the Scripture[illegible] to the Indian students to join it, [illegible] of most Christians[illegible] The distinct[illegible] is racial and [illegible] Jesus Chris[illegible] have found place in the four Gospels of the New Testament, he drew upon them and prepared a book on the subject for the edification of his countrymen. This book he styled, "The Precepts of Jesus, the guide to peace and happiness," and published it together with translations into Sanskrit and Bengali in the year of grace, 1820. The chief value of these Precepts lies in the fact of their being recorded in the very words of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Evangelists, so that there could be no doubt about their meaning. But Ram Mohan Roy gave only Christ's precepts, separating them from the other portions which are open to comment.

This separation between the essentials and non-essentials of the religion of Jesus was not palatable to the missionaries in general and to the Serampore Baptists in particular, who protested against what was alleged as the heathen interpretation of, and meddling with, the Christian religion. Then ensued a controversy in which the victory of Ram Mohan Roy was complete, though bigoted Christians denied him the credit. [For a detailed account of the controversy with the Serampore missionaries, the reader is directed to my sketch of Raja Ram Mohan Roy published by Messrs. Natesan & Co., of Madras.]

The Raja's work for the social amelioration of his countrymen was even more successful than his controversies with the Christian missionaries.

(*a*) *The Sati P*[illegible]

The credi[illegible]e pre or ain[illegible]hithm[illegible]ainful matter is due to [illegible]their labo[illegible]ar tat[illegible]rk[illegible]with Carey as the h[illegible]cted, it [illegible]lly [illegible]vasic [illegible]ec[illegible]d, when India w[illegible]have effectcha[illegible]ror f[illegible]ful[illegible]ssion-aries se[illegible]l proceediwhe[illegible]al de[illegible] by [illegible]s, [illegible]llage to villa[illegible]e that those de[illegible]t—or both nac[illegible]s [illegible]nd Calcutta[illegible]rt, be c[illegible]t inquiri[illegible]ibes, bel[illegible]or Hi[illegible]were var[illegible]or P[illegible]t to the [illegible]and regar[illegible] repugn[illegible]can [illegible]r Welle[illegible]ing inc[illegible]this [illegible]were exemo less liber[illegible] feel [illegible]been granted in England matt[illegible]a credit of one anna income[illegible] revivu[illegible]under income exceeding lished[illegible]rate of 4 annas per rupee ally v[illegible]excess. alarmi[illegible]v[illegible]f [illegible] among[illegible]doubl[illegible]d to 7½ per [illegible]has [Kut-el-Frederi[illegible]ds traffde, on Khalil L[illegible]e an[illegible]are in fu[illegible] British [illegible]ops, and [illegible] Imperial Council[illegible]rn[illegible] the Turkish [illegible]ach Bagd[illegible]

Ra[illegible]ov[illegible]tters of [illegible]e place,[illegible] Indeed[illegible]men[illegible]t and, secondly, [illegible]s regar[illegible] in Ben[illegible]enery, climate producti[illegible]sh. It setl[illegible]d. The [illegible]men; th[illegible]wed [illegible] Shastr[illegible]ver lady Jyeshtha. Isl[illegible]du adopt[illegible]e and reaped the fruit[illegible]reof. may Ram [illegible]—Ah, what a [illegible]ph of [illegible]e illegality[illegible]ord, I touch[illegible]on [illegible]e su[illegible]e proved [illegible]ctic[illegible]ti on the basis of traditions and the Code of Manu.

Fortunately for him, the helm of the State was then in the hands of a very good and great ruler. When, after suitable inquires, Lord William Bentinck found to his great satisfaction that Sati was, so far from being supported by law and good custom, directly opposed to them, and that it did not at all form part of the Hindu religion, he, in consultation with his hon'ble colleagues, passed in 1829 a Regulation declaring the practice of Sati illegal, and the persons taking part in it punishable in the Criminal Courts. This victory proved an infinite source of joy to Ram Mohan Roy, and he hastened to offer thanks to Heaven whose:

> "protecting arm," as he says, "has rescued our weaker sex from cruel murder under the cloak of religion, and our character, as a people, from the contempt and pity with which it had been regarded on account of this custom by all civilised nations on the face of the globe."

(*b*) *Kulinism.*

Polygamy, was badly rampant in the time of Ram Mohan Roy. He plainly saw that it was an evil practice and ought to be put a stop to. In his excellent Essay on the *Ancient Rights of Females*, he observes:—

> "This horrible polygamy among Brahmins is directly contrary to the law given by ancient authors; for Yagnavalkya authorises second marriage while the first wife is alive, only under eight circumstances: 1st, The vice of drinking spirituous liquors. 2ndly, Incurable sickness. 3rdly, Deception. 4thly, Barrenness. 5thly, Extravagance. 6thly, The frequent use of offensive language. 7thly, Producing only female offspring. Or, 8thly, Manifestation of hatred towards her husband."

He also cites some other authorities to show that a Hindu is not legally free to take any number of wives, but that, as a matter of fact, during his wife's life-time, he cannot marry again except under certain specified circumstances. Although Kulinism was damnably prevalent among Brahmins and was doing immense mischief in Hindu society, still Ram Mohan Roy did not deem it prudent to distrub it except by making a few sensible remarks against it. In fact, the custom had got so firmly rooted in Hindu minds and had had such long continued use in its favour that, perhaps, he thought that the time had not come for its removal from the social system, and, accordingly, did not busy himself much about it. That well-known statesman and lawyer, Thomas Babington Macaulay, also seemed to have thought in the same way; and when it was suggested to him, very probably by Ram Mohan Roy himself and a few others like him, that polygamy might be put a stop to by a legislative enactment, he did not follow up the suggestion but left the matter to the solvent influence of time and education.

(*c*) *Widow Marriage.*

Widow marriage, which under certain circumstances is very desirable, also attracted the far-seeing eye of Ram Mohan Roy. But it seems that he did not in all seriousness take the matter

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in hand, evidently on some such consideration as had dissuaded him from earnestly interfering with the objectionable practice of polygamy. The time had not then come for active interference; nor had it come even when the venerable Pandit Iswar Chandra Vidyasagar fought tooth and nail for it. True it is that an Act of the Legislature had been passed, legalising such marriages; but except among a handful of men who are a drop in the ocean, it has remained almost a dead letter.

We now turn to his educational activities. Being a highly educated man himself, it was only natural that Ram Mohan Roy should have had more than ordinary regard for education. Though a well-known Sanskrit scholar, Ram Mohan Roy had very little regard for the niceties of Sanskrit grammar, or the subtleties of Hindu philosophy. Accordingly, when, in 1823, it was proposed to establish a Sanskrit school under Hindu Pandits for the purpose of imparting such knowledge as might be derived from a study of Sanskrit grammar and the Darshanas, as Hindu philosophy is collectively called—knowledge which was already pretty prevalent in India, at least among a certain section of the Hindus—he entered a powerful protest against it, and in order to acquaint Government with his views, he addressed a letter to the then Governor-General, Lord Amherst. In that letter he very forcibly urged that if the improvement of the native population was the object of the Government, instead of affording them facilities for learning Sanskrit grammar and Hindu philosophy, it would far better fulfil its object by promoting a liberal and enlightened system of instruction, embracing Mathematics, Natural Philosophy, Chemistry, Anatomy, with other useful sciences, which might be well accomplished with the money sanctioned, by employing a few gentlemen of talent and learning educated in Europe and by providing a college furnished with necessary books, instruments and other apparatus. He, however, did not altogether condemn the study of Sanskrit, which, he admitted, has a value of its own, as it enables one to get a deep insight into the rich and rare stores of Sanskrit literature —a literature which, as Heeran says, "incontestably belongs to a highly cultivated people, whom we may with reason consider to have been the most informed of the East." Such a study might, he thought, be well left to the keepers of *Tols* in the different parts of the country, who were engaged in teaching the Sanskrit language together with other branches of learning, which were intended to be taught in the proposed seminary; and if their more diligent cultivation were desirable, it would be effectually promoted by holding out premiums and granting certain allowances to the most eminent Pandits, who had already undertaken on their own account to teach them, and who would, by such rewards, be stimulated to still greater exertions. The Government, it seems, was impressed with the arguments adduced by Ram Mohan Roy, and it was, perhaps, in consequence of the agitation made by him that the Hindu College was founded in 1817. But though Ram Mohan Roy laboured very hard towards its establishment, still with remarkable disinterestedness he kept himself aloof from its management, fearing that the orthodox leaders of the Hindu community might not like to act in concert with a man whom they looked upon as no better than an outcast. Not satisfied with merely [illegible] David Hare and men of that sort [illegible], English education in this [illegible] of a copy [illegible] established an English [illegible] of the Bombay Soci[illegible]ver tar 1822.

Some[illegible]ng the work done during th[illegible]ce Ve Hindu Colleg[illegible] with June 1914 and ending wi[illegible]gaxrsy be- twee[illegible]s. The institution might well be [illegible]de ation in Or[illegible]ducational and sanitary work. THE BOY SCOUT MOVEMENT.

[illegible]mong the Resolutions of the Educati[illegible]vil obattle [illegible]ference was a strong recommendation [illegible]re eRam 'Boy Scouts' movement should be in[illegible]dcevery [illegible]ced into our schools as early as possibl[illegible]oration [illegible]w of the experience of Great Britain [illegible]n of the [illegible]her countries of the value of scouting [illegible]R[illegible]e gave [illegible]owerful means of moral and physical instruc[illegible]nai[illegible]t sided. [illegible]ou[illegible]h side

The *Leader* of Allahabad points out that the Conf[illegible]pch side our opinion might have made another recomm[illegible]pr[illegible]ontinck, w[illegible] addition. It might have reasonably urged [illegible] who[illegible]idents should be given a certain amo[illegible]of[illegible]t India, [illegible] training. In the Thomason College at R[illegible]es and [illegible]welan—yes, any European and not only [illegible]sti[illegible] sincAnglo-Indian students have to join the [illegible]greatly [illegible]wante[illegible] option is given to them not to, [illegible]ifprove- [illegible]ment an[illegible] to the Indian students to join it, [illegible]e of the [illegible] distinct[illegible]s racial and [illegible] Anglicists. It is very much to be regretted that Ram Mohan Roy did not live to see his laudable efforts crowned with complete success, as the Resolution of the Governor-General on the subject was not passed until the 7th May 1835, more than a year and half after his death.

Ram Mohan Roy was equally in favour of female education. He took his stand on the ancient literatures of India. When the two

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

grand Epics—the Ramayana and the Mahabharata—were written, Hindu women were not kept in seclusion. The Zenana system was quite unknown, and women were allowed to appear in public and attend meetings on great occasions. Learning, too, was not a forbidden fruit to them, and the literature of the times furnishes us with the names of more than one lady who vied with the most learned men of that period in culture and religious knowledge. Gargi, Maitreyi and Lilavati were well able to hold their own against any sage or savant of their times. In fact, female education was quite common in days of old, and it was only in later times that it fell into disuse. Ram Mohan Roy's advocacy of female education helped not a little towards drawing the attention of the public to it; but no tangible measure was taken in that direction until the arrival of Mr. Drinkwater Bethune. He came out as the Law Member of the Supreme Council in succession to [illegible] Macaulay. But though a law[illegible] not slow to turn his a[illegible] their labo[illegible] which the one whi[illegible] ected, it [illegible] was the educatio[illegible] have effec[illegible] found some ea[illegible] proceedi[illegible] by also expected [illegible] that those de[illegible] or both [illegible] ed into [illegible] succeede[illegible] were var[illegible] Calcutt[illegible] repugn[illegible] can [illegible] ing inc[illegible] this [illegible] were exc[illegible] no less liber[illegible] This w[illegible] been granted in England [illegible] annals[illegible] a credit of one anna income [illegible] nearly[illegible] income exceeding [illegible] Moha[illegible] rate of 4 annas per rupee [illegible] raised [illegible] excess. [illegible] condit[illegible] doubled to 7½ per [illegible] desired [illegible]

[Kut-el-[illegible] has Frederi[illegible]ds traffic, on Khalil [illegible]are in fu[illegible] British [illegible]ps, and [illegible] Imperial Council [illegible] the Turkish [illegible] [illegible]ch Bagd[illegible]

Althe[illegible] Mohan R[illegible]y letters of [illegible] which [illegible] and, secondly, [illegible] administ[illegible]enery, climate product[illegible] its deri[illegible]. The [illegible]men; th[illegible] the question [illegible]lder lady Iyeshtha. Ish[illegible] the Honour[illegible] and reaped the fruit[illegible]reof. [illegible] the *tapis*, and [illegible]—Ah, what a [illegible] India were exa[illegible]lord, I touch[illegible] on the subject, the authorities in [illegible] wished Ram Mohan Roy to give evidence before the Select Committee of the House of Commons. His evidence, which possesses high value and importance, shows what a thorough statesman he was, and it places beyond doubt the very wide and extensive range of his mind. This evidence has since been published in pamphlet form under the title of "Exposition of the Judicial and Revenue Systems of India." As to the merit of this performance, it is sufficient to say that it embraces some of the most important questions relating to the administration of India, such as the reform of courts, the jurisdiction of the country's courts over Europeans, the jury system, the separation of the executive and judicial offices, the codification of laws, the advisability of consulting the people in matters of legislation, the establishment of a native militia, the larger employment of natives, the age and education of civil servants, the amelioration of the condition of the tenantry and the framing of laws for their protection, and the last, though not least, the permanent settlement. His arguments in favour of the separation of the judicial and executive offices need to be particularly attended to, now that the question is before the Government of India. As to the manner in which a Code of Criminal Law should be framed suitable to the wants of the people, he thus expressed himself:—

> "A Code of Criminal Law for India should be founded as far as possible on those principles which are common to and acknowledged by the different sects and tribes inhabiting the country. It ought to be simple in its principles, clear in its arrangement and precise in its definition, so that it may be established as a standard of criminal justice in itself and not stand in need of explanation by a reference to any other books of authority, either Mahomedan or Christian."

In his excellent Paper on the Revenue System of India, dated the 19th August 1831, Ram Mohan Roy has clearly shewn that the Permanent Settlement of Bengal, concluded according to the Regulations of 1793, during the rule of Lord Cornwallis, was "advantageous to both the contracting parties, though not perhaps in equal proportion." Indeed, the matter is so very plain and clear that one only wonders how there could have been any difference of opinion about it.

One great feature of Ram Mohan Roy's character, which strikes one on reading his works and letters, is his ardent love of freedom. Liberty of thought and liberty of action he considered the only sure paths leading to the progress and happiness of a people. In 1823, an occasion arose for the exercise of this laudable passion on his part. Lord Hastings left India in that year, and Lord Amherst was appointed to fill his place. But as the latter had not arrived in India when his predecessor left it, Mr. Adam, senior member of the Supreme Council, acted as Governor-General till the arrival of the permanent incumbent. But short as Mr. Adam's tenure of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

office was, he made himself very unpopular by decreeing the removal of the liberty of the Press. This is how this unpleasant affair came to pass. Mr. Silk Buckingham, the Editor of the *Calcutta Journal*, in an evil hour made some severe comments on official acts and officials in his Paper. This appeared to the Government as very unseemly, and the Provisional Governor-General ordered his removal, and he was actually deported from the country. But the matter did not end here. The Government took it into its serious consideration and, on the 14th March, the acting Governor-General passed a Rule and Ordinance—as it was called in the official language of the time, curbing the freedom of the Press. According to the Act of Parliament, 13 Geo. 111, Cap. 63, every Regulation made by the Governor-General had, as the law then stood, to be sanctioned and registered by the Supreme Court before it passed into law. Leave was obtained by Mr. Ferguson, Barrister-at-Law, on behalf of Mr. Buckingham, for protesting against sanction being given to the Rule and Ordinance by the Supreme Court. A Memorial signed by six well-known Natives was also presented to the Court. This Memorial was from the pen of Ram Mohan Roy, who was also one of the signatories, and it was a well-written and well-reasoned document. The matter was heard by the Hon'ble Sir Francis Macnaghten, the sole acting judge of the court; but unforunately for the people his Lordship allowed the Rule and Ordinance to be registered. When the Memorialists found that their prayer, though fair and reasonable, was not heard, they got up a petition to His Majesty King George IV, and sent it to England. This petition, too, was written by Ram Mohan Roy. In fact, he was the guiding spirit in the matter and bore the brunt of the whole work. The petition is a remarkable piece of document and is certainly a masterpiece of its kind. It is a very lengthy document, which concludes:—

"Your Majesty's faithful subjects, from the distance of almost half the globe, appeal to your Majesty's heart by the sympathy which forms a paternal tie between you and the lowest of your subjects, not to overlook their condition; they appeal to you by the honour of that great nation which, under your Royal auspices, has obtained the glorious title of Liberator of Europe, not to permit the possibility of millions of your subjects being wantonly trampled on and oppressed; they, lastly, frozl appeal to you by the glory of your Crown, on which the the say[illegible] of the world are fixed, not to consign the natives of [illegible]ndia to perpetual oppression and degradation."

The petition, however, did not prove successful at the time, but it certainly lent some force to the cause; and when proper time came, the consummation, which was so devoutly wished for, was made. This was done when on the retirement of Lord Bentinck, Sir Charles Metcalfe acted as Provisional Governor-General before the arrival of the next permanent ruler, Lord Auckland. Thus, it happened that what had been taken away by one Temporary Governor-General in 1823 was fully restored by another of the same fraternity in 1836. As a token of gratitude for the entire liberty of the press which Sir Charles allowed, the inhabitants of Calcutta named the public library of their city the Metcalfe Hall, which is now known as the Imperial Library.

We have said that Ram Mohan continually fought against idolatry and polytheism. Many earnest and pious men gathered round him, and the ranks of his 'Salvation Army' went on increasing. He had founded the *Atmiya Sabha* for divine worship and had also established the *Ved Mandir* [illegible]udy of Vedic lore, as well as s[illegible]pt of a copy [illegible]r debate and discussion [illegible] of the Bombay Soci[illegible]jects. But the m[illegible]ing the work done during th[illegible] remained to b[illegible] with June 1914 and ending wi[illegible] earnest in p[illegible]. The institution might well be [illegible] to *believe* in [illegible]ducational and sanitary work. Th[illegible] *worship* H[illegible] of this philanthropic organization [illegible]arch was [illegible]congratulated on their successful and [illegible] Brahmo [illegible] activities on behalf of the poorer class[illegible]hip and [illegible]mmuta-[illegible]eserver [illegible]ry [illegible] help-[illegible]rial of [illegible] through [illegible] work, [illegible], Kali [illegible] Dwarka [illegible] Chakra-[illegible] special [illegible]ok the [illegible]st. He [illegible] its very [illegible] Roy's [illegible] alone [illegible] Nath Tagore [illegible] and took over the charge from his hands. He found a very able and worthy co-adjutant in Keshab Chandra Sen, who latterly abandoned the Adi Brahmo Samaj and established a Samaj of his own, which is flourshing side by side with the parent tree.

Now that he had accomplished the dear object

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educati[illegible] nference was a strong recommendation [illegible] e 'Boy Scouts' movement should be i[illegible] iced into our schools as early as possibl[illegible] iew of the experience of Great Britain [illegible] ther countries of the value of scouting [illegible] powerful means of moral and physical instru[illegible]

The *Leader* of Allahabad points out that the Conf[illegible] n our opinion might have made another recomm[illegible] in addition. of his life and established the Brahmo Samaj on a firm and permanent basis, Ram Mohan was on the look-out for an opportunity to go to England. The Emperor of Delhi,—now reduced to a mere shadow of a sovereign,—having taken umbrage at some acts of the powerful East India Company prejudicial to his interests, wanted to send an ambassador to His Majesty the King of England, for the purpose of having his grievances removed, and as Ram Mohan Roy was, by his ability and experience, eminently fitted to go on such an important mission, he was selected by His Majesty, who, to add dignity and importance to the person of his representative, conferred upon him the title of Raja. Besides representing the Imperial grievances, Ram Mohan Roy had two other objects in view namely, first, to be present at the approaching discussion in the House of Commons for the [illegible] the East India Company's C[illegible] the future Governmen[illegible] their labd[illegible] or for evil, large[illegible] ected, it [illegible] present memorial[illegible] have effec[illegible] Sati and to [illegible] by powerful [illegible] that those de[illegible] both

Ram M[illegible] 15th Nov[illegible] son, Raj[illegible] Ratan M[illegible] in the [illegible] the tim[illegible] Europ[illegible] was, th[illegible] reach i[illegible] nearly [illegible] anythin[illegible] steering [illegible] overtake[illegible] placed in[illegible] crew and[illegible] life. Bu[illegible] sky res[illegible] "Kalapa[illegible]—Ah, what a [illegible] of which [illegible] placed an almos[illegible] in safety. Surely, this was no ordinary feat for a Hindu of rank and position like Ram Mohan Roy, and we cannot but admire his moral courage in having performed it in the face of such serious opposition. By this time Ram Mohan Roy had established his reputation as a scholar, philosopher, and reformer. He had written Bengali works on the *Vedanta*, translated into English some of the *Upanishads*, defeated some very noted Christian Missionaries in religious controversies, and established the Brahmo Samaj. He had, also, given his strong support to the Governor-General Lord William Bentinck, of laudable memory, for the abolition of *Sati* or the burning of Hindu widows on the funeral pyre of their husbands. He had also won the warmest regard of that Prince of Indian Missionaries, Dr. Alexander Duff, and, as a matter of fact, won a very high repute. When such a remarkable man, "the great Apostle of the East," whose name and fame had long preceded him to Europe, reached the shores of England on the 8th April, it is not surprising that he should have received a cordial welcome from the great men of that land. His arrival in England excited considerable interest. No sooner was his advent known in Liverpool than almost every man of distinction in the place hastened to call on him. One of the first visits he received was from the three sons of Roscoe, the celebrated historian of the Medici. They came, not merely on their own account, but to convey to him the "affectionate greetings" of their distinguished father, whom paralytic affection had for years confined to his apartments. Ram Mohan Roy hastened to see the great scientist. The interview was deeply affecting, as it was their first and last meeting on this side of Eternity. Ram Mohan Roy heard of Roscoe's death while residing in London.

The first public place he attended at Liverpool was Mr. Grundy's Unitarian Chapel. The sermon was proper to the occasion, in exposition of the duty of unlimited charity in our judgments of the creeds of other men, and of their principles of belief. He listened to it with the utmost attention and afterwards expressed himself very much pleased with it. After the sermon was over, the congregation, instead of dispersing, thronged up every avenue to get a near view of him; and it was not till they had heard him address them in their own language and shaken hands with him that they would be prevailed upon to allow him to return.

After staying a few days at Liverpool, Ram Mohan Roy started for London. On his way thither, he halted at Manchester to see the great factories.

On the very night he reached London, Mr. Bentham, the great philosopher, came to see h[illegible] Thus, a very warm friendship sprang up between these two great minds, which lasted until death. The Englishman was proud of his Indian friend and gladly addressed him as an intensely admired and dearly beloved fellow servant in the service of humanity. In fact, many of the distinguished

Londoners honoured him and sought his friendship. Among these were Mr. (afterwards Lord) Brougham, Sir William Horton, Sir Henry Strachey and Sir Charles Forbes. With Brougham, then only known as the great advocate of popular education and of the abolition of slavery, Raja Ram Mohan Roy lived on terms of the closest intimacy.

The Raja was also presented to the King, who gave him a cordial reception, and at the grand ceremony of the Coronation, he was given a seat by the side of the Ambassadors of the Crowned Heads of Europe. On the opening of the London Bridge, he was invited by His Majesty to the Royal Dinner. The Court of Directors, though they refused to recognise his embassy and his title, treated him with honour. They entertained him at a public dinner on the 6th July, in the name of the Honourable East India Company at the London Tavern.

The Raja gave evidence before the Select Committee of the House of Commons on the Revenue and Judicial systems of India, presented petitions to the House of Commons for the abolition of Sati and had the satisfaction of being present there, when the appeal against such abolition was rejected on the 11th July, 1832.

While in England, Raja Ram Mohan Roy was taken care of by some English families, not only as a distinguished guest but also as a friend. Of these families, the most notable was the family of his most intimate friend, David Hare, who has done more for the mental and moral improvement of the natives of India than any other foreigner. There he became acquainted among others with Dr. Lant Carpenter, who afterward wrote an excellent memoir of him. This Dr. Carpenter was the father of Miss Mary Carpenter, whose name has almost become a household word in this distant land. She was then quite in her prime, and as she was well able to appreciate real sterling merit wherever it was found, began to cherish deep regard for Raja Ram Mohan Roy, so much so that she there and then conceived a very strong desire to see the wonderland which had given birth to such a great personality. But this desire, though often given vent to, she could not fulfil until the year 1866; and though her stay in Bengal was not long, she had roused the people from their long lethargy and succeeded in directing their energy and attention to matters which most concerned them.

After a short sojourn in France, where he was the recipient of Royal favours, the Raja's health began to fail. He had been invited to visit Bristol and to take up his residence at the house of Miss Castle—a ward of Dr. Carpenter—in the neighbourhood of that city. In broken health he started for Bristol accompanied by Miss Hare, the daughter of his esteemed friend David Hare, who had resided with her uncle in Bedford Square, in the early part of September to spend a few weeks at Stapleton Grove, intending to proceed thence to Devonshire to pass the winter there. Nine days after his arrival, he was attacked with fever. Drs. Pritchard and Garrick attended upon him. Medicine afforded him, however, only temporary relief. His fever returned with redoubled vigour, and grew into what the native physicians would call *Bikar*. The delirium was followed by a stupor from which he never recovered, and he breathed his last a little after 2 a. m., on the 27th September, in the presence of his foster-son Rajaram, and his Hindu servants. Since he had all along been enabled [illegible] of a copy [illegible] in the form in which it was [illegible] the Bombay Society [illegible] him. This tablet records the sorrow and pride with which his memory is cherished by his descendants."

The spot, where stands the memorial of the Raja, is to be regarded, as one of his countrymen has beautifully said, "a sacred place for Hindu pilgrimage," and as a matter of fact, it is almost invariably visited by every Hindu sojourner in England.

WOMEN IN WAR: IN EAST AND WEST

BY MR. J. CLIVE ROOME.

FOR women in Europe, the war has opened new worlds. It has enabled them to achieve silently and without any strenuous effort within two brief years what they had regarded for nearly fifty years as the ideal consummation of their desires for participation in the world's activity. There is now a wide gulf between the Lady of the Lamp and the woman worker of the days of the Somme. Women are now no longer the passive and helpless spectators of the ravages of war which they were in the Crimean War. They have entered what was, not so long ago, regarded as exclusively man's province of labour. In the banks, in shops, in factories and on the fields, women are now doing work of vital importance to the nation which otherwise would have been left undone. The opening of new fie[illegible] to women has brought new p[illegible] of the sexes.

Nowhere [illegible] their labo[illegible] ar[illegible] have women sh[illegible] cted, it [illegible] y [illegible] as in Engla[illegible] have effecty[illegible] for f[illegible] these novel co[illegible] proceedi[illegible] by [illegible] the end of [illegible] that those de[illegible] or both nac[illegible] can even [illegible] peace in th[illegible] were var[illegible] puzzling [illegible] repugn[illegible] ing soci[illegible] this [illegible] were exempt no less liberally been granted in England designa[illegible] a credit of one anna income [illegible] income exceeding rate of 4 annas per rupee excess.

"St[illegible] was not [illegible] but was [illegible] in India, [illegible] the first [illegible] valley of [illegible] when th[illegible] ters of the place, Dravidian men and, secondly, [illegible] Southern scenery, climate, product[illegible] inch by inch. The Aryan men; th[illegible] they wielded lady Jyeshtha. Isl[illegible] their gaping re and reaped the fruit[illegible] proof.

[illegible] omen were con[illegible]—Ah, what a [illegible] rcumstances to take over one prov[illegible] lord, I tou[illegible] another of national activity. The Aryans themselves had no lack of recruits, with the result that they were able not only to maintain the pressure on the Dravidians undiminished in strength but also to consolidate their territorial gains.

[Kut-el-[illegible] to 7½ per [illegible] has Frederi[illegible] ds traffic, on Khalil L[illegible] e are in fu[illegible] British t[illegible] ops, and F[illegible] Imperial Council [illegible] the Turkish [illegible] ch Bagd[illegible]

With the Dravidians, it was a tragic epic. Continually harassed by an untiring enemy, they were fast coming to the end of their resources in men and were unable to divert their attention from military pursuits to the arts of peace. Agriculture was neglected; civil administration grew lax, and their social organisation, in a word, was shaken to its very foundations. In Southern India, they found themselves nearing the limit of their endurance. With no possibility of further retreat and the Aryans as determined as ever, the Dravidians realised that on the issues of the battles in Southern India hung their destiny as a people. They became so engrossed with military cares that they had no time to spare even for the administration of their lands. When, at last, they emerged from the struggle completely crushed and broken-hearted, they found that their social organisation had also undergone a complete revolution. Women owned all the property that was still left to them, amd women had acquired civil rights which reduced men to a very subordinate position in the social system.

That the change in the social order was not superficial is evident from the fact that traces of "Sthri-raj" still persist in Dravidian society in India. The *marumakathayam* law, under which claims to property are decided by descent in the line of a nephew or sister's son, is still valid in Malabar, Canara and Travancore, although it is gradually falling into disrepute and efforts are being made to abandon it altogether.

India is by no means singular in its experience of "Sthri-raj," although the phenomenon of woman-rule seems to have had a fuller scope for its operations in India than in any other country. The concentration of national effort on military efficiency produced in Sparta conditions of "Sthri-raj" more or less similar to those it produced in India. The rigorous system of military discipline, under which the Spartans lived, compelled them to delegate rights to women which, women of no other State in Greece possessed. In Sparta alone, women were placed on a footing of equality with men. With the rise in power of Sparta, the rights of Spartan women also increased in number, and within a short time two-fifth of Laconia belonged to women.

As in Sparta, *Sthri-raj* in India was the ultimate result of a series of events linked together by long years of war. England and the other countries in Europe, now at war, are not likely to see the conditions of "Sthri-raj," as observed in India or Sparta, reproduced line by line but the entry of women into spheres of labour, regarded before the war as exclusively masculine, will bring its own problems in its train.

THE HOME LIFE OF A KANNADA POET

BY MR. M. VENKATESA IYENGAR, M.A.

WE very rarely meet with instances in the literature of our country of an author taking his reader into his confidence, and writing of his life. Beyond the somewhat usual mention of the author's name in the poem, and in some cases of his descent and such other matter-of-fact detail, there is little that is personal in our literary works. This is only one aspect of a larger want, that poverty of historical material is so often mentioned against India by the learned and unlearned of the West. Whether because our writers were entirely devoid of the historical sense, or less appalling cause, writers in our country in the past failed to think the writing of history or biography a proper field of literary activity. To one class of persons this poverty is the direct consequence of an absolute want of the historic instinct; they follow the logic that would say of the Buddha, that because in the prime of life he left wife and child to go to the forest for the grand purpose of thinking, therefore he had not the instinct for home. To others it might seem not improbable that the instinct was there, but was refused free play from considerations of graver import. He who says constantly, "I am Thy servant's servant's servant's servant" is not likely to sit down to write an autobiography. And he who believes that uttering a single syllable of the sacred book would annihilate the deadly sins, and considers poesy as a gift intended for glorifying the Highest, is likely to consider writing biographies a perversion of a noble gift to unworthy ends. So it has come to pass that we have innumerable versions of the Ramayana, and of biography and history very little.

Any passage of literature which brings us into intimate contact with an author is, therefore, of special value and a source of rare pleasure. One such passage occurs in a masterpiece of Kannada literature, Sri-Ramashwamedham,* a poem in prose by Muddana. The story purports to have been told by the poet to his wife, and in the conversations between himself and his wife which the poet has incorporated in his work, we get a glimpse of their happy home-life.

Muddana was poet at a prince's court. We do not know of what land the prince was ruler. Our poet was a young man yet, for he calls his wife Manorama, a romantic, highly affectionate, and very intelligent young woman, all sorts of pretty names; and the young lady, of course, takes them all very coolly, occasionally calling him a pretty name in return. They must have been newly married, for they had in all likelihood no children yet; Muddana's powers of eating are still unimpaired, no doubt from absence of younger mouths to fill; and Manorama feels tired of being alone all through the day, thus showing absence of the all-absorbing interest of a woman's life.

Such were husband and wife. And then came the season of long days and wearisome hours, when the god of [illegible] his wonted vigour and the peacock [illegible] of a copy [illegible] a chataka opened its mouth [illegible] the Bombay Soci[illegible]ieu cuckoo and parrot[illegible] the work done during th[illegible]rer of spring, whe[illegible]h June 1914 and ending wi[illegible]louds, dark an[illegible] The institution might well be [illegible]to[illegible]e southern [illegible]cational and sanitary work. Th[illegible]s of rain. [illegible] this philanthropic organization [illegible] ngratulated on their successful and [illegible] ctivities on behalf of the poorer class[illegible]

THE BOY SCOUT MOVEMENT.

[illegible]ong the Resolutions of the Educati[illegible] erence was a strong recommendation [illegible] Boy Scouts' movement should be i[illegible] into our schools as early as possibl[illegible] of the experience of Great Britain [illegible] r countries of the value of scouting [illegible] erful means of moral and physical instru[illegible]

[illegible]e *Leader* of Allahabad points out that the Conf[illegible] r opinion might have made another recom[illegible] ddition. Sanskrit, I pray you; what have I, a poor unlearned woman, got to do with Sanskrit? Kannada is enough for me. Is not Kannada fragrant as the musk?" "Not so," said Muddana, "there should be Sanskrit words. My prose will be beautiful and limpid, Kannada intermingled with Sanskrit, a necklace of pearls interspersed with precious stones." Manorama agreed. But Muddana would not tell a story for nothing: His stories were valued at court, and he got rewards for them. So he said, "Yes, and what will you give me as reward when I have told you the story? The people at the palace would give me some present for my pains." "I shall give you myself," said Manorama. "Why, what a woman!" said Muddana ——— he was obviously as good a business man as he was poet —— "Do you not know that erstwhile your father and mother gave you to me, that you are mine already, and not yours to give?" "[illegible] I give then?" said Manorama [illegible] story and I shall give you [illegible] people at the palace [illegible] press their press [illegible] have effect [illegible] very well," said [illegible] by [illegible] proceed [illegible] that those [illegible] Asvamedha [illegible] our eyes, [illegible] brother to [illegible] repugn can [illegible] there; he [illegible] were exempt no less liberally [illegible] at this a[illegible] been granted in England [illegible] from La[illegible] credit cone anna income [illegible] Lakshm[illegible] income exceeding [illegible] rate of 4 annas per rupee [illegible] excess. Md.—[illegible] each Bagd [illegible] nery, climate, product[illegible] up to Valu[illegible]der lady Jyeshtha. Is[illegible] then proce[illegible] and reaped the fruit[illegible] reof.

"Here it[illegible]—Ah, what a[illegible]a—."

Mano.—My lord, I tou[illegible]ord, what talk is this? How is he Sitarama, having thrown away Sita? Was that hard-hearted man Rama or Bhima?

Mudd.—My beautiful woman, this is not right. Was he hard-hearted? Do you know how much he grieved at parting with Sita?

Mano.—What, was he executioner and mourner also?

Mudd.—My dear, what mean you? Who was executioner? The man of good name did not want that name to be sullied. You do not mean that he hated her, surely?

Mano.—Hate or no hate, a poor unfortunate was consigned to the forest.

Mudd.—And Rama grieved much.

Mano.—At having no wife, belike.

"Tut, tut," said Muddana, "that will do," and proceeded with the story.

In the course of the story, not unwilling perhaps to draw her into conversation, and to have some respite from the exercise of narration, he said "Devi," addressing her.

"Devi," says Manorama, "Sridevi, or Bhudevi?"

"It was you that I called Devi.

"Are you beside yourself with this long narration that you call me Devi as though I were your mistress?"

"I do not know. Am I beside myself?"

"What Devi do you mean I am?"

"What Devi else? Rathi Devi, of course."

"Then you must be Madanadeva."

"Even so, if such be the goddess's pleasure."

"O! thou Madana, enchanting Manmatha, pray sing of your Rathidevi."

"It is rather large orders," said Muddana. "Can I sing of her?"

Mano.—What sort of a Madana are you if you cannot sing of your Rathidevi?"

Mudd.—I can, indeed, if it comes to that. Am I Madana and can I not sing? Detractors be aside———Here goes: "Thin-bodied, flower-eyed nymph, moon-faced, slender-waisted queen, berry-breasted, elephant-gaited, loose-haired."

Mano.—(Looking at him from the corners of her eyes.) Ah, you are a poet of poets; what can I say to this description of yours, these new-fangled phrases which no one knows? Is your Rathidevi thin-bodied? Perchance she is consumptive? What is the moon in the face, and the flower in the eye? And is she possessed with the devil, that her hair is loose? Go to, you are no Kama, only Bhima.

Mudd.—(Smiling.) Goddess of my ancient house, why all this anger? All this temper comes of my levity. Bear with me a little, I beg of you, and I shall pray to the Goddess of Learning to get control over the treasures of language, and then ———and then, by this sacred thread of mine I swear, I shall sing thee, my Rathidevi, a hundred times greater than that paragon of symmetrical features, the real Rathi.

Hymn to Saraswati.

O Lady of Learning,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Who completely scorning
The birth-mode of all, in the flame of the Four-faced,
With Book and with Pencil,
And singing utensil,
Didst rise in thine armour of Beauty so well-drest,
Give me, great Lady,
The power, I pray thee,
To sing the sweet beauties of this my fair wife;
Send down an army
Of good phrases for my
Necessity, and make me thy debtor for life.

The original is burlesque prose, and I have attempted to convey the sense as far as I can. If "singing utensil" is rather grotesque, it is not much worse than the context needs

"Is the Goddess of Learning, the great Saraswati, propitiated?" asked Manorama.

Mudd.—Yes, by praise and prayer have I learned the favour of the goddess. Now for the description. "Black as the blackness of Mahakali—."

Muddana obviously wanted to describe her fully from head to toe, and began with the hair of her head. But his description was doomed to a premature stop. For Manorama said, "To praise Rathi, you begin with Mahakali."

Mudd.—Ah, you interrupt. Yes, alas, I forgot the obstacle-god, the great Vighnesvara. Because I did not remember him, this interruption has come at the outset. "O, great Vighneswara, thou mighty God of the single tooth and the yard-wide ears, of the crooked nose and the capacious stomach, mouse-riding lord, my obeisance to thee. Grant that no obstruction come in my way in this attempt to sing the beauties of this Rathidevi of mine. If you grant this, I promise to give you first of all a share of the dainties and eatables which my wife, pleased with my praise of her, will be giving me."

Mano.—How will he eat, your obstacle god of the single tooth?

Mudd.—Why, my dear, could the God eat? And if he did, would I offer him a share?

Mano.—You gormandizer! what, then, would you eat all yourself?

Mudd.—Are you sure to give anything?

Mano.—Supposing I did?

"Why, then, I cannot eat all of it myself. *Chakkuli** and *garige* for Kamadeva, *aval** and *hurigadale* for Muddana, the sugarcane for the poet, and the cocoanut for——myself."

"That is clever; what to Rathidevi?"

"It is the Goddess that gives; what will she take?"

"What to Manorama?"

"O I see," said Muddana, "in praising Rathi I have forgotten Manorama. Since all the eatables are exhausted, I suppose I must give her the leavings."

Mano.—What a cruel man; let be, now with your description.

Here follows a description, of course, not to the taste of Manorama, and husband and wife have a discussion over it. This portion does not lend itself to translation, as it is mostly "quips and cranks and jests" and other linguistic tricks. At the end of a little of it, Manorama says:—

"That is fine. Now, what is it that you like best, what shall I give you for this praise?"

"Do not be in a hurry," said Muddana," "wait till I have described her fully and then—"

Mano.—Why wait? To taste of the sea, is it necessary to drink up the oceans as Agastya did? One drop is good enough for a study of the whole.

That is the case of a copy [illegible]de. We shall go to another. [illegible] the Bombay Social Service League.

Mudd. [illegible] the work done during the year [illegible] reception extended [illegible] June 1914 and ending with [illegible] eatrughna that. The institution might well be [illegible] to [illegible] national and sanitary work. The [illegible] gratuitous feeding in this philanthropic organization [illegible] congratulated on their successful and [illegible] Bir wants, activities on behalf of the poorer class[illegible] hinense, and

THE BOY SCOUT MOVEMENT.

[illegible]ong the Resolutions of the Educati[illegible] attend [illegible]rence was a strong recommendation [illegible] ghna's Boy Scouts' movement should be i[illegible] hr [illegible] into our schools as early as possib[illegible] hro do it? [illegible] of the experience of Great Britain [illegible] a small? [illegible]r countries of the value of scouting [illegible], get soon [illegible]erful means of moral and physical instru[illegible]

[illegible] *Leader* of Allahabad points out that the Conf[illegible] hula?" [illegible] opinion might have made another recom[illegible] [illegible]dition. It might have reasonably urge[illegible]-lettered, the[illegible]ts should be given a certain am[illegible] the six-lette[illegible]es, any European and not only [illegible]

"Whatever others of r[illegible] have to join th[illegible]

"By repeating the[illegible] them not to, [illegible] neir gods, and the gods appear to[illegible] nts to join it, [illegible] them what they would have."

"With such formulas to hand the Rishis must be happy, untroubled by want?"

"Yes," said Muddana, rather laconically.

"By the by," said Manorama, "poets like you are mad after writing books, and care not for the needs of home. What of them, what should they eat, and what drink? Is it not desirable that they should learn from some great Rishi some formula such as this one?"

* Kannada names for various eatables.

"You are laughing at the like of us, are you?" asked Muddana. "What do we want for? I suppose the going and learning of a jungle sage is to be done if we have no formula of our own? Is the poet, whose mighty word makes country desert and desert country, smaller than the small old Rishi? His word is truth, his touch is gold. Why say more? By the virtue of their mere word, they can make or mar, praise or blame, raise or ruin, describe, trample, live over the three worlds. Is the poet whose word is so potent a mean person?"

Mano.—(With wonder, whether real or feigned, Goodness knows!) Then you and your class also have formulas?

Mudd.—What doubt?

Mano.—Have you also one?

Mudd.—It is the warp and woof of my being.

Mano.—Then you are also a great man. When and by whom we [illegible] ?

"By my [illegible] tender years."

"My [illegible] their labd [illegible] is."

"Fie [illegible] ted, it [illegible] may not be taug[illegible] have effec[illegible] fun[illegible]

"As [illegible] proceedi[illegible] by [illegible] you to initiate [illegible] that those de[illegible] both nac[illegible] the formula [illegible]

"O I[illegible] were var[illegible] of the fo[illegible] repugn[illegible] can [illegible] ing inc[illegible] this [illegible] were exe[illegible] no less liber[illegible] formu[illegible] been granted in England[illegible] two-l[illegible] a credit ca[illegible] one anna income[illegible] are [illegible] income exceeding two, [illegible] rate of 4 annas per rupee root-f[illegible] excess. [illegible] crown [illegible] doub[illegible] d to 7½ per [illegible] [Kut-el-[illegible] has Manu[illegible] Frederi[illegible] de, on Who fi[illegible] Khalil [illegible] are in fu[illegible] British t[illegible] ops, and [illegible] Imperial Council[illegible] Mudd[illegible] tters of [illegible] the Turkish [illegible] all this[illegible] nt and, secondly, [illegible] ach Bagd[illegible] Manc[illegible] nery, climate product[illegible] [illegible] formula Mudd.—[illegible] men; th[illegible] [illegible] ated it is the elder lady Jyeshtha. Isi[illegible] of yore and reaped the fruits thereof.

Mano.—Ah, what a great formula. My master and lord, I touch your feet, grant me a boon by the love you bear me. Tell me what the formula is.

Mudd.—Why, it is the seven-lettered; I told you.

Mano.—No, I do not want the name; I want the formula itself.

Mudd.—Ha, what an audacious woman. Then she wanted its name, now she wants it. What will she want next? By this sacred thread, by the man's clothes I wear, I tell you, it cannot be told. You have no power to hear or repeat it. It is bad for the eyes, bad for the feet.

The reader might well be wondering what this mighty formula of seven letters is, of which Jyeshtha is the presiding deity, and which Ishwara repeated and reaped the fruits of, and to repeat and pursue which is bad for the feet, and bad also for the eyes. Let him read some more description of it yet, and see what it is.

"Where is the harm in simply hearing it?" asked Manorama. "Does not a woman hear even the Veda?—when it is being repeated? Where is the harm? How proud you are?"

Mudd.—Proud, my dear. I am not half enough proud. The Veda is one thing, and this formula is quite another; like the goat and the elephant. Besides, they say, "Secretest of all things secret is the secret *mantra*." Therefore, neither may I tell, nor may you hear. So let us go to the story. The Rishi having treated the———

Mano.—Go, go, I will have none of your story. I must know the formula; by my neck, by this ring, tell me.

Mudd.—O the constancy of inconstant woman! I tell her I cannot repeat it to her; she will not hear me. How shall I bring myself to divulge and defile this formula, this sacred possession of ours? Alas, this is the lot of us poets——curse the fates,——caught in the toils of beauteous young sirens. (After pretending considerable thought:) Look here, my dear woman, you are never, never, never, on any account, to divulge it to anybody. Do you hear?

Mano.—Never, never.

Mudd.—Then, listen; Bha——va——Put your hand in mine, and promise not to betray.

Mano.—Here is my hand on it. In the name of the God of our house, in your name, I say solemnly, I shall not betray.

Mudd.—Yes. Bhava——thibhi——"Put not your trust in woman," say the wise. If you betray us, then are we undone.

Mano.—My dear master, am I a dunce? Have not I promised secrecy?

Mudd.—Then here goes. "Bhavathi bhikshandehi."* This, my dear, is the seven-lettered formula. Be sure, and do not tell anybody.

Mano.—Leave go, sir; I thought you were serious. Are you bard or buffoon? At this rate only unlearned women like me may like your story, not others.

* A phrase shouted at housedoors by those who come for alms.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Muddana then resumes the story. Towards the end of his narrative, he is describing the condition of Ayodhya, after the return of Sita "Then on all sides reigned peace and happiness, ease and contentment——."

Mano.—So you have reached the end of your story?

Mudd.—Yes; the wretched yarn has somehow come to an end.

Mano.—Fie, call you Rama's story wretched?

Mudd.—No, not Rama's story; but the spiritless, tasteless, valueless, wearisome stuff that I have spun.

Mano.—Did ever wise man praise his own work? That is why you are undervaluing the luscious and fragrant poem you have made.

Mudd.—So you are pleased with the poem?

Mano.—(Forgetting the old covenant regarding the present or pretending to forget,) Why I in particular? All who hear would be pleased.

Mudd.—(Laughing.) You are talking out of love to me.

Mano.—My beloved lover, indeed, no. Even as your name is, your poem is dear to the world.

Mudd.—I am afraid you are playing upon me.

Mano.—Did ever anybody hate good? It is the plain and simple truth. Your beautiful story holds captive the minds of all who read it. Indeed, I feel that I would like to hear it again and again.

Mudd.—Will you swear by me?

Mano.—Yes, by you; the jasmine must please.

Mudd.—By my grandmother?

Mano.—Yes, by your grandmother. I am not jesting. There never was book like this, and I think there never will be either.

Mudd.—Let that be; anyhow you are pleased. That is enough for me.

Mano.—Indeed I am. It is a good poem.

Mudd.—And now, my good girl, bring us your present.

Mano.—(Pretending surprise,) How cunning; I have been deceived. Well, speak the benediction, and I shall give you the present.

Mudd.—I cannot speak the benediction. We should have a feast.

Mano.—Why should we have a feast? Is this thy nuptial day?

"Yes," said Muddana, "yours and mine."

fro[illegible]nd when he had spoken the benediction, the s[illegible]rama got up to go.

Mudd.—(Taking hold of her.) How brave you are. Are there women that can cozen Muddana? You cannot go away till you have given me the present.

Mano.—What present shall I give? What do you ask for?

Mudd.—Am I a beggar and come to your door? I do not ask for anything; I shall take what you give.

Mano.—I told you I was a dependant. What can I give, and how can I give?

Mudd.—I have nothing with what and who. Give something that will please me, that will be worthy of the story and that will meet with the approval of the world.

Mano.—Then here is the present——————

Obviously this was a kiss. One hopes that Muddana did not tell Manorama that her parents had given him that also. And the reader of the above conversations will have no doubt that the kiss was a more valuable present to him than all the wealth of the prince's palace.

You are going on a common road, the land about you quite com[illegible]bushes, brambles, here and there[illegible]ceipt of a copy[illegible]places. To one side is a [illegible]rt of the Bombay Soc[illegible]able, and on the oth[illegible]owing the work done during t[illegible]garden, and som[illegible]g with June 1914 and ending w[illegible] as the land he[illegible]915. The institution might well [illegible]t some wistf[illegible] educational and sanitary work. T[illegible]ing but its h[illegible]rs of this philanthropic organization[illegible]our up- tu[illegible]be congratulated on their successful an[illegible] single th[illegible]ed activities on behalf of the poorer cla[illegible]ion of lo[illegible]nd it g[illegible]nder r[illegible]ph. duced into our schools as early as possi[illegible]How view of the experience of Great Britai[illegible]And other countries of the value of scouting[illegible]shrub, powerful means of moral and physical instr[illegible]soul is

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educa[illegible] Conference was a strong recommendation [illegible] the the 'Boy Scouts' movement should be [illegible]

The *Leader* of Allahabad points out that the Co[illegible] in our opinion might have made another recom[illegible]ure of Mu[illegible]in addition. [illegible]—yes.

Criticism places Muddana at different periods, some holding that he may be some centuries old, others that he is very recent. Whatever the facts, and they are by no means finally established, the mind likes to conjure up that presumably far off time when Muddana, poet at prince's court, arrived home as the soft evening twilight began to envelop the world, and washing his feet and hands with water that his wife brought him, entered the little home of their new-wed life, and sitting in the presence of his household gods, told sweet Manorama stories of the love and travails of the great and noble Rama and Sita.

Native States & the British Government in India

BY MR. P. S. RAMAKRISHNA IYER, M.A., L.T.

THANKS to the present great war, the ruling princes of this country have come into great prominence. Formerly, if they were not altogether unknown or uncared for in the West, certainly very curious and erroneous notions prevailed about them. By reason, however, of the present war and the magnificent services that, in several ways, they have rendered and are rendering still, many of our ruling princes have become quite familiar to Englishmen and the names of a few of them, at any rate, have become almost household words in England. Further, their work and worth have come to be properly appreciated, and it has been seriously mooted if their status and position should not substantially be improved after the war. It is proposed in the present paper to sketch briefly the relations [illegible] States and the British G[illegible] pre or ain [illegible] hithr[illegible] times as well as to mak[illegible] their labo[illegible] ar ta[illegible] rk [illegible] regards the future[illegible]ted, it [illegible]ly [illegible]yaaic [illegible]ec[illegible] have effecy ch[illegible]ror f[illegible] fun[illegible] al proceedi whe[illegible]al [illegible]ec[illegible] by [illegible]

One [illegible] that those [illegible] or both [illegible] nac[illegible] of India is the [illegible] [illegible] [illegible] [illegible] [illegible] mber of Nat[illegible] [illegible] [illegible] [illegible] [illegible] were var[illegible] Fies, occupy[illegible] [illegible] [illegible] [illegible] repugn[illegible] can [illegible]ger or sm[illegible] [illegible] ing inc[illegible] this [illegible] were exc[illegible]no less libe[illegible] by prin[illegible] [illegible] been granted in England[illegible] [illegible] a credit ca[illegible]one anna income[illegible]h Gov[illegible] [illegible] [illegible] [illegible] [illegible] income exceeding [illegible]d fun[illegible] [illegible] [illegible] [illegible] [illegible] rate of 4 annas per rupee [illegible]e state[illegible] [illegible] [illegible] [illegible] [illegible] excess. [illegible]f [illegible]r an a[illegible]e [illegible] [illegible] [illegible] [illegible] [illegible] doub[illegible] [illegible] [illegible] [illegible] [

Digitized by Arya Samaj Foundation Chennai and eGangotri

in Western and Central India a great many states were carved out by adventurous Mahratta Chiefs—Scindia, Holkar, the Gaekwar, etc.

In the case of a few states such as Kashmir, they have actually been created by the British Government in comparatively modern times.

II.

Having said so much about the origin of Native States in India, I will now proceed to consider the successive phases of policy that the British Government have followed towards them from early times.

It is well known that, after the famous battle of Plassey fought in 1757, the supremacy of the English was established in Bengal, and that, a few years later, they acquired Bengal, Bihar and Orissa. About the same time the influence of the English was established in Southern India, too, after the overthrow of French power. It is then about the middle of the eighteenth century that the first real beginnings are to be traced of English power and dominion in this country and that, the East India Company, from being a merely commercial body, slowly developed into a political and ruling power. There were a great many native princes in the land at that time. The policy followed by the Company in relation to the princes for about a century after the battle of Plassey was one of non-intervention or limited liabilty. In other words, the policy may be described as one of ring-fence. The East India Company had its own territories and it was the aim and policy of English Governors-General and Governors during the period to keep themselves strictly within the ring-fence of the Company's territories and not in the least interfere in the affairs beyond. This was the first phase of British policy towards native rulers. Beyond the ring-fence of its territories the Company avoided intercourse with native chiefs, refused alliances with them and regarded with absolute unconcern the course of events that went on. It should not, however, be understood that during this period absolutely no treaties were concluded or alliances made or responsibilities incurred by the Company. What should be noted is that the alliances that were formed or the wars that were waged during the period were generally such as were forced on the Company from motives of self-preservation.

What were the considerations that dictated on the part of the Company a policy of non-intervention such as this? In the first place, it should be noted that the Company was, all through the eighteenth century, but feeling its way in the troubled waters of Indian politics. Its resources were limited; it was but one among many powers, and it felt that it could not act more wisely than by minding its own business and fighting shy of responsibilities as much as possible. Secondly, it must be observed that the development of the Company into a territorial power in India was regarded with no little anxiety and alarm by British statesmen, and the grave abuses that were reported to have crept into the Company's administration in India served no little to enhance that anxiety and alarm. It became then the policy of the British Parliament to suppress the political ambitions of the Company as much as possible and accordingly we find that, in 1793, an Act was passed by Parliament to the effect that

> to pursue schemes of conquest and extension of dominion in India are repugnant to the wish, the honour and the policy of the nation.

Thirdly, it was e[illegible] Company that, with a policy of [illegible]cept of a copy [illegible] its part, the smaller pow[illegible] of the Bombay Soc[illegible]abid by the larger ou[illegible]ng the work done during t[illegible]gaind that a few p[illegible] with June 1914 and ending w[illegible] asradual-ly ari[illegible]ducational and sanitary work. T[illegible]ing

Th[illegible] of this philanthropic organization[illegible] pointed and congratulated on their successful an[illegible]ur[illegible]stead of a f[illegible] activities on behalf of the poorer cla[illegible]sio[illegible]pected b[illegible]nd only

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educa[illegible]nd, and nference was a strong recommendation t[illegible]able. 'Boy Scouts' movement should be [illegible]pl[illegible]coits ced into our schools as early as possib[illegible]ecked ew of the experience of Great Britai[illegible]n heads ther countries of the value of scouting [illegible]sh[illegible]traffic; owerful means of moral and physical instr[illegible]so[illegible]only too

The *Leader* of Allahabad points out that the Co[illegible]ne Jats an opinion might have made se[illegible]another re[illegible]increase the addition. It might [illegible] In a word, the condition of gene[illegible]dents should [illegible] many [illegible] one country became such towards the close of the eighteenth century, that no civilised nation could for a moment regard it with complacency.

In the second place, it must be remembered that, thanks to the policy of non-intervention, the power of the English themselves was, towards the end of the century, threatened with imminent peril. A great many of the Indian princes became openly hostile to the Company and began to carry on intrigues with the French. The intrigues of Tippoo Sultan of Mysore with Napoleon Bonaparte are well known to us. In 1798, Napoleon made an expedition to Egypt, his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

idea being to make Egypt the starting point for an advance against India. From Egypt he wrote letters to Tippoo and raised high his hopes. However, in 1799, Napoleon's grandiose plans of Indian conquest were completely shattered by Nelson at the famous battle of Aboukir Bay. Many of the Mahratta Chiefs, too, were at this time engaged in close relations with the French. French Generals were employed by Scindia, Holkar and other Chiefs to drill and train their armies and French men were enlisted. Seeing that, during the period 1793-1815, England was engaged in a formidable struggle with France, the intrigues of Indian Chiefs with the French could not but cause real anxiety and alarm to the English, who thereby found their interests seriously imperilled in this country. The policy of ring-fence stood condemned and a change of policy was needed.

With the [illegible] of Wellesley as Govern[illegible] their labo[illegible] on a new phase of [illegible]ted, it [illegible] Native States. [illegible] have effecte[illegible] for f[illegible]s that had rise[illegible] proceedi[illegible] by [illegible] being a great [illegible] that those de[illegible] both nac[illegible] this country [illegible] were vari[illegible] no relations [illegible] repugn[illegible] can [illegible] no peac[illegible] were exe[illegible] no less libe[illegible] securit[illegible] been granted in England [illegible] credit ca[illegible] one anna income [illegible] income exceeding [illegible] rate of 4 annas per rupee [illegible] excess. [illegible] doub[illegible] [illegible] d to 7½ per [illegible] has Frederi[illegible] ds traffic, on Khalil [illegible] are in fu[illegible] British t[illegible] ops, and [illegible] Imperial Council [illegible] the Turkish [illegible] ch Bagd[illegible] ties employed towards one another all the complimentary language befitting independent powers, and British interference in the internal affairs of a state was excluded. The native prince bound himself to have no negotiations with foreign powers or states in alliance with the British without the consent of the Company, but he was left with full powers of dealing with certain other states in India. The Company was to supply a subsidiary force to the prince, which was only to be employed on important occasions and the cost of the force was to be met by the prince himself. It will thus be found that, as regards internal government, native princes were left completely free and, further that, as regards foreign affairs, they were only to be somewhat controlled but by no means to be represented by the Company. As a result, the Native States of India, instead of being completely effaced internationally, still continued to exist as international entities to a certain extent. The subsidiary policy of Wellesley, although it was not completely imperial, marks, at any rate, the beginning of British Imperial policy in India.

The policy of Wellesley was, however, renounced by his immediate successors, and a policy of non-intervention resumed. Disastrous results followed once more. Chaos and anarchy became rampant; the Pindaris became more troublesome than ever; the Mahrattas began to prey on their weaker neighbours and spread confusion everywhere. A strong man and a strong policy appeared indispensable.

IV

It was at this juncture that, there came out to India a Governor-General of singular parts and powers, by whom the policy of non-intervention was once for all relinquished and the forward policy of Wellesley was further developed and extended. In connection with the inauguration by the Company of an Imperial policy in this country, the administration of Lord Hastings constitutes indeed a landmark. As Westlake observes :—

> His administration may be singled out as the turning point in the course of shifting the affairs in India from an international to an imperial basis.

While Wellesley was content with merely making the British the preponderant power in India, Hastings made it the paramount power. The British Government now declared that they were not merely the strongest power in this country, but the rightful superior. Native Chiefs were now completely excluded from having any relations at all with other powers and, in future, they were to be represented by the British Government in all foreign affairs. Thus they were completely deprived of their international existence by Lord Hastings.

The policy introduced by Hastings is generally known as the policy of subordinate isolation and military co-operation, and it denotes the third phase of British policy in relation to Native States. In the first place, these States were subordinated to the British Government; secondly, they were isolated from one another, which only meant the negation of an international society; and thirdly, they bound themselves to co-operate

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in maintaining the *Pax-Britannica* in this country. Any the least interference in their internal government was, however, disclaimed by the British Government, and so far as internal government was concerned, the policy of non-intervention was clearly declared. In the time of Lord Hastings political settlements were effected in several distracted areas of native territory, such as Rajaputana and Central India, scores of new states were brought into subordinate alliance with the British Government and its suzerainty was firmly established in the land.

Thanks to the policy inaugurated by Hastings, the rulers of Native States were for many years completely left to themselves in the management of their affairs. Shielded from their enemies by the strong arm of the British and left without any effective control, a great many of the native princes abused their powers, gave themselves up to a life of luxury and debauchery and grossly misgoverned their subjects. Their administration became, in short, a bye-word for oppression and extortion, and their courts became notorious for profligacy and extravagance. This was the case in Oudh, in Satara, in Nagpur and in many other states. In the interests of suffering millions, it now became necessary for the British Government to intervene.

V

It was at this crisis that there appeared in India a Governor-General of brilliant gifts and colossal powers, to wit, Lord Dalhousie, who, for about eight years, guided the destinies of this country with no little capacity and vigour. As regards strength of character, capacity for industry, and devotion to duty, he is certainly deserving of high admiration, although his policy and measures may be somewhat open to objection.

With the accession of Dalhousie, we enter on a new and startling phase of British policy in connection with Native States. It appeared to this Governor-General that the proper remedy for the evil of misgovernment in the territories of native rulers was the annexation of those territories. He appears to have believed that native governments were rotten, and that peace, happiness and prosperity were possible for a people only under British rule. Hence a regular policy of annexation was inaugurated by him, and by the rigid application of the "Doctrine of Lapse" and otherwise, a great many Indian states were added to British Dominion.

With all my admiration for Lord Dalhousie in other ways, I feel constrained to observe in this connection that his policy of annexation was a somewhat mistaken one. In the first place, he appears to have started with a wrong notion, that is, that good government necessarily meant British Government. In the second place, he did not much care to know how his policy and measures would be received by Indian princes and Indian peoples. As a matter of fact, we do find that a great deal of discontent, if not panic, was caused by his policy, which, in no small measure, appears to have been responsible for the outbreak of the Great Indian Mutiny. To say the least, his policy was unwise and inexpedient. Thirdly, he did not sufficiently realise that annexation was only one of the remedies, and not the only remedy, for misgovernment in any state, seeing that annexation could very well have been avoided by a temporary deposition of the Raja and the temporary administrati[illegible] state by the British Government, [illegible]apt of a copy [illegible]ase of Mysore. In case of f[illegible] of the Bombay Soc[illegible]abu[illegible] states, heirs could vet[illegible]ing the work done during t[illegible]gan[illegible] means of adopti[illegible]with June 1914 and ending w[illegible] au[illegible] allowed. Lastly. The institution might well [illegible]t s[illegible]not been for educational and sanitary work. T[illegible]ing[illegible]ld have be[illegible]s of this philanthropic organization[illegible]ou[illegible]le in this c[illegible]congratulated on their successful an[illegible]nce that, i[illegible] activities on behalf of the poorer cla[illegible]sio[illegible]ed even [illegible]nd British

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educa[illegible]nd nference was a strong recommendation t[illegible], the 'Boy Scouts' movement should be [illegible]pg for ced into our schools as early as possib[illegible] spread ew of the experience of Great Britai[illegible] of this ther countries of the value of scoutin[illegible]however, owerful means of moral and physical inst[illegible]and then The *Leader* of Allahabad po[illegible]ced in the r opinion might have [illegible]ountry. The East India Co[illegible]ddition. It m[illegible]ished, and the Company's territories we[illegible]ought under the direct rule of the British Crown. Secondly, Lord Dalhousie's policy of annexation was abandoned, and the right of adoption was granted to all native princes who were thus fully assured of the permanency of their dynasties. An enlightened policy of mutual trust and confidence, of active union and co-operation was inaugurated in relation to Native States. The policy of subordinate isolation was replaced by a policy of subordinate union, and this policy has continued ever since.

VI

The British Government at last realised that the policy of subordinate isolation, at once so sterile and jejune, that had so long been followed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

would no longer suffice and that the native chiefs should be closely connected with the British Government and be made to unite and co-operate with the latter for the promotion of public good. Hence the policy of subordinate union. What were the features of this policy? In the first place, as regards their foreign relations, native rulers were to continue in the same condition as before, i.e., were to be controlled or represented by the British Government. In the second place, as regards internal government, instead of being left completely free as before, they were made strictly responsible for the good government of their states and placed under the constant and vigilant supervision of the British Government, as exercised by the Resident. Native princes now bound themselves

to pay at all times the utmost attention to such advice as the English Government shall occasionally judge it necessary for them to offer with a view to the economy of their finances, the [illegible] of revenue, the administration [illegible] of commerce, the encourag[illegible] and industry, or any oth[illegible] their labi[illegible] ncement of the prince[illegible] the mutual welfare o[illegible] have effec[illegible] for [illegible]

In th[illegible] by [illegible] in a spirit of [illegible] that those de[illegible] both [illegible] Governm[illegible] The follo[illegible] repugn[illegible] ment o[illegible] were exe[illegible] no less liber[illegible]

It mu[illegible] been granted in England [illegible] the sup[illegible] a credit of one anna income [illegible] spirit [illegible] income exceeding [illegible] duced [illegible] rate of 4 annas per rupee [illegible] bility a[illegible] excess. [illegible] the Uni[illegible] [illegible] the Quee[illegible] [illegible] Empire a[illegible] [illegible] internatio[illegible] [illegible] progress of [illegible] [illegible] given to matters of common [illegible] The barriers of isolation have [illegible] the rights and duties of the protected [illegible] gained strength and expansion from [illegible] into which they have entered.

VII

Under this policy of subordinate union, the Native States of this country have been steadily progressing during the last half century. Civilised methods of administration have been introduced; trade and industries have been stimulated; arts, sciences and letters are being judiciously fostered; and in a great many other ways, the prosperity and happiness of their subjects are being zealously advanced by native rulers. Almost all the ruling princes of this country have become active centres of progress, and a few of the states will even be found to be decidedly ahead of British administration in certain respects. Experiments are being tried and reforms introduced in Native States, which however are found impracticable or undesirable in British India. A system of free and compulsory education, for which British India is not yet ripe, has been successfully introduced in a few states, such as Baroda and Mysore. An important judicial reform, which is still found impracticable in British India, has been introduced in certain Native States, and that is the separation of the judicial from the executive functions. In not a few states, industrial progress is being stimulated in many ways, and the activities of the Mysore Economic Conference are well known to us. Further, popular assemblies, the like of which do not obtain in British India, are the common features of many Native States. It seems to me that a bright future lies before these assemblies so long as they are judiciously handled and properly encouraged. From all this, it must be clear, that the condition of the Native States today is not what it was half a century ago; but that, in the matter of enlightenment and progress, they occupy a deservedly high position. All this is only as it should be, seeing that Native States have certain special advantages over territories under British rule. In the first place, Native States are smaller and more compact in area; secondly, the machinery of administration in them is simpler, the ruler being still the important factor; thirdly, there is not the same clash in Native States, that there often is in British India, between Anglo-Indian and Indian interests.

Not only have Native States made remarkable progress in many ways but they have also established their loyalty to the paramount power beyond doubt or suspicion. From time to time they have given clear and undoubted proofs of their loyalty and devotion. The magnificent rally they have made to the Imperial cause in the present war and the magnificent services they have rendered and are rendering still, have exceeded all expectations.

Having regard to these circumstances, it is now recognised in all quarters that the time has come for some modification of British policy towards native rulers and for a substantial improvement in their position and status. It can not be a secret to any of us that, with the growth of education and culture on their part and that with the growing progress of their states, these rulers themselves are coming to feel a spirit of discontent with their position and an ardent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

earning for a position more consistent with a sense of honour and responsibility. Of late, the angle of vision of the British Government towards native rulers has also been slowly changing, and it is being recognised by the paramount power that a policy of trust and confidence, rather than of surveillance and control, should be followed towards them in the future. That certainly was the policy of the late Viceroys, Minto and Hardinge. The following memorable words were uttered by the latter on an important occasion :—

> Our policy towards Native States at least during the recent years has been one of sympathy and trust; of sympathy with their aims and sentiments and noble traditions, and of trust in their fervent loyalty to the person of His Majesty the King-Emperor and to the power whose protection they enjoy. . . . . Irksome restrictions and the exercise of sovereign powers are apt to chafe and irritate a proud and sensitive spirit, with the result disastrous not only to the ruler and his people, but also to the Empire at large. We have, therefore, made it our aim to cultivate close and friendly relations with the ruling princes, to show by every means that we trust them and look on them as helpers and colleagues.

It may further be mentioned in this connection that quite recently the position of our ruling sovereigns after the war was seriously discussed by such an important and responsible paper as the *London Times* and not a few suggestions were made by it in that connection. Having regard to all these signs of the times, it must appear that a bright future certainly looms before the Native States of this country. The present war is going to be followed by a re-settlement not only in Europe but also as regards the British Empire. An imperial council or parliament will probably be formed to keep closely together the scattered members of the British Empire. In British India, a long stride will probably be taken towards self-government. Our native sovereigns, who have made such splendid sacrifices in the war, who have placed all their resources and a few of them, even their lives, at the disposal of Great Britain, cannot certainly be left alone. It will certainly be not too much to hope that, in the course of the re-settlement, their position and status will considerably be improved, that a council of princes, as suggested by the *Times*, will be formed in India itself :

> to establish an organic connection between the Government of India and the ruling princes as a body, to enable them to have a voice in the settlement of questions in which they and their subjects are interested ;

that they will be given some control as regards their foreign relati[illegible] the policy of isolation will be [illegible] of a copy [illegible] and that, in their mutu[illegible] of the Bombay Soc[illegible] allowed to establish[illegible]ing the work done during t[illegible]e another, and [illegible]with June 1914 and ending w[illegible] from all irks[illegible]. The institution might well [illegible] to work out[illegible]ucational and sanitary work. T[illegible] Possessed o[illegible] of this philanthropic organization[illegible] these and [illegible] congratulated on their successful an[illegible] and self-d[illegible] activities on behalf of the poorer cla[illegible] that the [illegible]dily con-[illegible]nd that,

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educa[illegible] nference was a strong recommendation t[illegible]odels of [illegible] 'Boy Scouts' movement should be [illegible]ial and [illegible]ced into our schools as early as possi[illegible] ew of the experience of Great Britai[illegible] ther countries of the value of scoutin[illegible] owerful means of moral and physical inst[illegible]

INDIAN COOLIES IN [illegible]TES

BY MR. KARUMU[illegible]

[illegible] The *Leader* of Allahabad pa[illegible]. [illegible] opinion might have [illegible]dition. It m[illegible]

I beg leave to submit the following report on the condition of Indian emigrants in Ceylon, to ascertain which I visited many estates in several planting districts.

HOUSING AND SANITARY CONDITIONS.

There are many blocks of buildings. In each a long central wall divides two parallel suites of apartments. Each of these, measuring 12 feet fr[illegible] length 10 feet broad and approximately 9 feet high, is provided with one door only (and no window) leading to a verandah 4 feet wide. The walls and floors are of mud, and the roof of corrugated iron sheets and [illegible]metimes of tiles. This is the universal type. Each lodging is meant to house four working coolies. The accommodation on many estates is usually less, and five or six coolies, with their children, occupy each chamber. The drainage is very unsatisfactory. Latrines are seldom provided. The new sanitary department is now getting this defect remedied.

The dwellings are often in the midst of clumps of trees. Ventilation is not specially provided, unless the bad joinings of the doors and the cracks in the walls are considered as sufficient for admitting fresh air in, and letting bad out.

HEALTH AND MEDICAL AID.

The health of the coolies is not gratifying. On all estates and in all lines visited, I met sickly

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

coolies. Malarial fever and anchylostomiasis are very common. Dr. Lunn, Inspecting Medical Officer, Ratnapura, writes of one set of estate cooly lines that he visited :—

"Not a single person in these lines was free from anchylostomiasis, and some had malaria in addition. Diarrhœa, dysentery and skin diseases are not rare. The medical care of the coolies is entrusted to dispensers, in whom the coolies have no faith whatever. I myself met a few dispensers, and I therefore readily believe what the coolies have to say of them. Quinine is said to be their favourite or only drug. The lines of the coolies are required to be visited by that "Doctor" every other day, but in practice this is done only once a week, and it makes no difference whether he does this every day or only once a week."

"SICK RICE."

I believe, it is given rarely and in exceptional cases, though the law requires it in every case. The superintendent must give not only rice, but milk, [illegible] or necessary things according to their labour and tamil work. My impartial [illegible] have effectively [illegible] and identical proceedings [illegible] support [illegible] that those deaths [illegible] least degree [illegible] unless the [illegible] A woman [illegible] bushel of rice [illegible] which [illegible] neither [illegible]

Those [illegible] to send [illegible] offence [illegible] have met [illegible]

The death [illegible] is remarkable [illegible] on Niwitigala died. Last [illegible] 60 infants born on an estate [illegible] district, 45 died.

[illegible] common [illegible] [illegible] by [illegible] the [illegible] die [illegible] were various [illegible] repugnant [illegible] this [illegible] were exempt [illegible] been granted in England [illegible] credit of one anna income [illegible] income exceeding [illegible] rate of 4 annas per rupee [illegible] excess. [illegible] doubled [illegible] [illegible] to 7½ per [illegible] has [illegible] Frederick [illegible] de, on [illegible] Khalifa [illegible] are in full [illegible] British troops, and [illegible] Imperial Council [illegible] the Turkish [illegible] Bagdad [illegible]

FOOD.

Rice is always supplied by the estates. Prices vary from Rs. $4\frac{16}{25}$ to $5\frac{1}{2}$ a bushel. This is not necessarily due to the difference of the rice in quality, but to the fact that the greater the distance of the estate from Colombo, the dearer and the worse the rice is.

A very few estates supply "Coconada Mill" rice which is very good ; a few supply "Rangoon Kallunda" which is also good, but the great majority supply "Sulai" and "Pakkudi" rice, which are extremely bad and even deleterious. The coolies are forced to take these.

The quantity of rice given per week is, men $\frac{1}{4}$ bushel each, women $\frac{1}{4}$ and $\frac{1}{8}$ bushel each, on alternate weeks, and young working boys and girls, $\frac{1}{8}$ of a bushel each. It must be remembered that rice is provided in part payment of wages earned ; unless a cooly works the required number of days in a week, the allowance is reduced and often stopped. In such cases and when coolies fall ill, they are allowed no food. It must be repeated here that coolies do seldom get "sick rice," which the estate is bound to give under Ordinance 11 of 1865, Section 27.

Coolies often have not enough cash to buy curry-stuffs.

Drinking-water is obtained from streams, but often from wells. A few estates have water taps.

The Ceylon Government has kindly provided almost every estate with an arrack tavern near.

No interval is allowed to take mid-day meals. Many coolies take only two meals, one early in the morning before 6 A.M., and another soon after sunset, while some contrive to find an interval to take a mid-day meal.

On all estates, each dwelling has a piece of ground in front of it equal to it in size to grow vegetables upon.

TASKS, HOURS OF WORK AND WAGES.

Cultivation, manuring, weeding, forking and transport are common to all plantation, tea, rubber, cocoa and also to cocoa-nut estates. . . . . Plucking tea leaf, picking and breaking cocoa pods and weeding are always done by women and, to some extent, by young boys and girls. Tapping rubber is also done by women to a certain degree. The rest are done by men. In fact, the tasks are not hard in themselves. But the many supervisors—sub-Kanganies, head Kanganies and conductors—make them hard. Bribing these immediate superiors prevails, many coolies complain. The superintendents are responsible for this, as they are said to be too prone and anxious to hear complaints against the coolies for their "bad work."

The hours of work in some districts are from 6 A. M. to 4 P. M., and in other districts from 6-30 to 4-30 P.M., *10 continuous hours' work a day.* On a tea estate visited by me, the closing horn was heard only at 5-10 P. M. instead at 4-30 P. M. As was said before, no interval is allowed for mid-day meal. This point I discussed with the superintendents who, while admitting the fact, reasoned thus.

a. On big estates, coolies working at a great distance from their dwellings would take a long time to go and return for their mid-day meal, and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the estates could not afford to allow such a lengthy interval.

b. Small estates follow the same custom.

c. When the superintendents, after a light refreshment in the morning, can afford to wait till twelve or one o'clock for their lunch, the coolies, after taking a full meal in the morning, can easily afford to wait a few hours more.

Coolies employed in tapping rubber return home by about 1 P. M. Coolies employed in all other works cannot be back home before 5 or 5-30 P. M. Even if they are released punctually at the exact hours, it takes more than an hour to register their names, etc. Factory work is from 6 A. M. to 6 P. M.

The wages of the coolies, though paid monthly, are calculated at so much per day, and no cooly can claim wages for any day on which he has not worked. The great part of the work is done on daily wages, while tapping rubber and, on some tea estates, plucking leaf are contract work.

By far the great majority of the male cooly from 80 to 90 per cent. employed on all plantations, are paid 33 cents. (5¼ annas) per day. Pruners get 40 cents. (6⅜ annas) per day, but the work goes on only at certain seasons in the year. A considerably low minority of coolies, about 5 per cent., employed in factories, in superintendents' bungalows and in the work of sweeping lines, is paid at 40 cents (6⅜ annas) per cooly per day.

On all plantations the women employed are paid 25 cents (4 annas) each per day. For this pay, they must turn out a certain amount of work, and for more or less than this they are rewarded or fined respectively. Very seldom is their work in excess.

Boys and girls who can show a certain amount of work, each get from 16 to 20 cents. (about 1¾ to 3 annas) a day.

The increased wages for Sunday work, on which day the work is optional, the men getting 40 cents (6⅜ annas) and the women 30 cents (about 4¾ annas) each are paid in ready cash on Monday morning.

Coming to work done on contract on all rubber estates for tapping rubber, and on some tea estates for plucking leaves, wages are calculated on the weight. The rates vary according to the products of the estates. They vary from half a cent to 1½ cents (1/200 of a rupee to 1/70 of a rupee) on each ounce of rubber, and 1 cent to 1½ cent (1/100 of a rupee to 1/70 of a rupee) on each pound of tea leaves.

An industrious cooly can make about 50 cents (8 annas) a day by tapping rubber. By plucking tea leaves by contract, he can get 25 cents.

Some men working 26 days in a month without being in bed make 10½ rupees, while many make only 7½ rupees. Women in the same way can make 6½ rupees, and boys and girls betwen 4 and 5 rupees.

Men and a few women, engaged in the work of tapping rubber, can earn from 12 to 15 rupees and from 8 to 10 rupees respectively.

The above figures cannot be said to be the average income of the coolies if their consequent illness and the time, when women cannot work, are taken into consideration. Most coolies do not get more than three rupees in cash a month. Even those employed in the paying work of tapping rubber get only between 5 and 6 rupees a month in cash. On a tea estate, the accountant showed me the check roll in which I found the wages earned by [illegible] deducting the price of rice [illegible] of the Bombay Soc[illegible] Rs. 5-2-0 a bushel, [illegible]ing the work done during [illegible] which is 20 cent with June 1914 and ending w[illegible] in a few cases 5. The institution might well [illegible]e 2 and 2½ educational and sanitary work. T[illegible]

[illegible]s of this philanthropic organization [illegible]e scarcely [illegible] congratulated on their successful ar[illegible] [illegible] activities on behalf of the poorer cla[illegible]e districts [illegible]h higher [illegible] former coolies. [illegible]lies live [illegible] ages.

THE BOY SCOUT MOVEMENT.

Among the Resolutions of the Educa[illegible] nference was a strong recommendation [illegible] e 'Boy Scouts' movement should be [illegible] ced into our schools as early as possi[illegible] ew of the experience of Great Britai[illegible] ther countries of the value of scoutin[illegible] owerful means of moral and [illegible]ysical in[illegible]

The *Leader* of Allahabad [illegible] opinion might have [illegible] dition. It mi[illegible] these two items of expenditure are, of course, paid by the estate from the wages earned. I give the following table of the other necessaries:—

Salt	.. 1 measure	..	8 cents.
Dholl	.. 1 „	..	18 „
Coriander	.. ½ „	..	9 „
Chilli	.. ½ pound	..	12 „

Mustard, saffron, etc.		..	15 cents.
Vegetables ..		..	25 ,,
Cocoanut oil	¼ measure	..	18 ,,
Gingili oil ..	¼ ,,	..	18 ,,
Lamp oil ..		..	24 ,,
Match box ..	1	..	3 ,,
Betel ..		..	12 ,,
Areeanut ..	¼ pound	..	6 ,,
Tobacco ..		..	15 ,,
Barber ..	one shave	..	6 ,,

(100 cents make one rupee.)

Add the items of rice and dhoby.

The prices of things may slightly differ in each district.

Many coolies do not earn this amount of Rs. $8\frac{1}{50}$. A cooly wants about Rs. 125 a year. Here is the detailed account :—

Rice 13 bushels at the average rate of Rs. 5 a bus[illegible] Rs. 65

Dhoby [illegible] 2·40

Dhot[illegible] their labo[illegible] 6

Up[illegible]ected, it [illegible] have effecth[illegible] al proceedi[illegible] that those de[illegible] Curry stu[illegible]

For wo[illegible] small min[illegible] rupees a [illegible] the wife [illegible] up the l[illegible]

There [illegible] one estate [illegible] about the [illegible] each cooly v[illegible] more. Seldom does a cooly [illegible] The average debt of a cooly [illegible] These debts are said to [illegible] in different ways. First, the amount advanced by the Kangani before recruiting and the travelling expenses; secondly, value of things brought from the Kangany from time to time; thirdly, cash lent by Kangany during illness and on other occasions. These debts are first entered in the hand-books of the coolies by the "Kanakkapillai" and then registered in the check roll. The cooly is defrauded in various ways. More is marked in the book than is really due. A graduate of the Madras Presidency, a reliable gentleman, tells me that when he and a few of his friends visited an estate during their pleasure trip in the planting districts, they actually heard and laughed at a Kangani saying 8 and 5 made 15, to which the coolies assented with an "Em." One knowing the ignorance of the coolies would not be surprised at this. The coolies generally buy cloths from the Kanganies, who give them on credit. The Kanganies' prices are certainly very exorbitant. Still, the coolies prefer buying a thing at double the price on credit to paying half of the price in ready cash. Apart from the debts to the estates, the coolies have private debts of from Rs. 5 to Rs. 15 each. Coolies have a tendency to change estates and do change. Before doing so they have to pay their debts. They are always in gangs of 10 to 20. The head of a gang, called sub-Kangani, obtains a "Tundu," which gives leave to quit the estate after paying the debt marked in the "Tundu." He takes that "Tundu" to another estate and obtains that amount or more, if possible, to pay off the sundry debts and also to keep cash in hand. Out of this cash the sub-Kangani is given a good share as bonus for the negotiation. The coolies sometimes have no idea of the transaction. Thus, the coolies' debts are increased year by year. . . . . .

For the debts the head Kangani is responsible to the estate, and sub-Kangani to the head Kangani, and, of course, the coolies to the sub-Kangani.

When the wife, husband or other members die, the debt of the deceased is put to the account of the living. The law does not certainly bind the wife to the husband's debt, yet this illegality freely prevails on Ceylon estates and is practised by the Kangani, the superintendents countenancing it.

The advances are seldom fully realised. The sub-Kanganies chiefly and Kanganies and, to a small degree, even the estates are said to be the losers. On federated estates a certain amount of the debts of the deceased is written off on estates account.

After a year's service, the travelling expenses of the coolies are cancelled.

It is this cursed advancing system that ruins the coolies. It prevents the estate from increasing the pay, the superintendents say. It turns Ceylon into an Andaman to coolies, for rarely, very rarely, indeed, do the coolies return to India for good. They must return home after paying off debts they are enticed to contract. How can coolies, earning 25 and 23 cents. (4 and $5\frac{1}{4}$ annas) repay debts of hundreds of rupees?

A man going there is like one who is transported to the Andamans for life. This happy method of punishing rowdies has been resorted to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in Kallal, Ramnad district, by Chettiars who, wishing to get rid of them, have presented large bribes to enable recruiting officers to offer them large advances and entrap them in Ceylon for life.

FREEDOM OF COOLIES.

This is in some cases seriously interfered with, while in others it is not.

The coolies cannot easily go to courts. If the coolies are found going out of the estate for such purposes without the leave of the superintendent, they are prosecuted as bolters. Naturally, coolies do not ask leave of the superintendents to go to court against them.

Facilities for meeting friends, celebrating festivals, and performing marriages are quite satisfactory. However, outsiders, other than coolies, are not allowed to meet and talk to coolies inside the estate.

PUNISHMENT.

One is often fined half a day's or a day's wage for bad work. Caning and thrashing also prevail for bad or neglected work or for disobedience. Bolters, when caught, without warrants, are not sent to court for justice, but are punished by the superintendents. When coolies insist on getting "Tundas" and the estate cannot afford to spare them, they are punished, caned and kicked.

TREATMENT OF COOLIES.

That coolies are ill-treated is clear from the foregoing. It is supported by the fact that bolting is common. But for the wife, the little ones and watchmen, many would bolt.

The relation between employers and labourers is bad. This fact is strengthened by the great number of prosecutions before courts.

Coolies are dismissed from the estates when they become unfit for work, and are left to themselves to shift for the rest of their days.

JUDICIAL ADMINISTRATION.

The coolies have many disadvantages. They do not have means to pay for legal advice, to purchase medical certificates to prove they have been assaulted, and have no assistance and do not know to defend themselves. The only witnesses they can call are their fellow-workers, who are unwilling to speak against their masters. Few magistrates attach any weight at all to the statement of the coolies. The Labour Law is too severe, absurd and inhuman. It allows rigorous imprisonment for failing to work, nay, for harbouring them out of compassion.

RECRUITING AND RECRUITERS.

The kind of work and the wages are not correctly represented to the coolies when they are recruited, and many great things are promised. That educated men, teachers and clerks, not to speak of carpenters and engine drivers, have been captivated by the recruiters is a clear proof that they are recruited only under extremely false pretences.

On tea and cocoa estates, the recruiters get Rs. 5 on each cooly recruited, and on rubber estates Rs. 10.

A superintendent of an estate, when giving his evidence before a Commission appointed by the Ceylon Government to enquire into the conditions of Indian coolies, confessed that he gave Rs. 15 on each cooly recruited, and subsequently put that amount to the account of the coolies.

In addition to the recruiting fees, the recruiters—Kanganies—are given "pence money." On every cooly (male [illegible] female) working, the recruiters—Kan[illegible] of a copper [illegible] cents (about one anna) a day [illegible] the Bombay Soc[illegible]ad

For [illegible] the work done during [illegible] wha day, the Kangan June 1914 and ending w[illegible]d in rubber estat[illegible] The institution might well [illegible]e 2the wages are [illegible]tional and sanitary work. T[illegible] so much for this philanthropic organization[illegible]re so to more o[illegible]gratulated on their successful ar[illegible] tivities on behalf of the poorer cla[illegible]e dind "pence [illegible]h [illegible]tly paid.

THE BOY SCOUT MOVEMENT.

[illegible]n [illegible]olies, who [illegible]ong the Resolutions of the Educa[illegible]coond they [illegible]rence was a strong recommendation [illegible]lies: [illegible] Boy Scouts' movement should be [illegible]n[illegible] [illegible]page [illegible] into our schools as early as possi[illegible] deal with [illegible] of the experience of Great Britai[illegible] Rs gravest [illegible] countries of the value of scoutin[illegible] the number [illegible]rful means of moral a[illegible]or than that of men. Trou- *Leader* of Allahabad, randies here are most common. Ah! s[illegible] might have [illegible]nents and Kanganies have necessarily [illegible] moved to kindness by the coolies' wives and daughters.

EDUCATION.

Only a very few estates have provided schools, while the great majority have not.

REPATRIATION.

Seldom can coolies be repatriated for good as said before. When coolies want to go home, he or she has to leave wife or husband and children as security. Without sufficient security, they cannot at all dream of their homes.

Such is a plain statement of the grievances Indian coolies experience in Ceylon, which call for kindly notice and early redress.

A FEAT OF STRENGTH BY THE GREAT ACROBAT MEYER

[Without imposing a new cess on land or a higher tax on salt, Sir William Meyer has made provisions for new taxation in the Indian Budget for 1917-18.]

THE INDIAN BUDGET FOR 1917-18.

The Hon. Sir William Meyer's Budget for 1917-18 was looked forward to with quite unusual anxiety and interest in view of the strong rumours afloat that India would be called upon to contribute heavily towards the tremendous expenditure incurred for the War and bear an increased burden of taxation. Calculated on the present basis of taxation, our surplus would have been about £2¾ million. But the Government of India, in consultation with the Home Government, decided to make a contribution of the sum of £100 million towards the expenses of the war. This requires the Indian Government to undertake, with effect from 1917-18, an annual charge of about £6 million, and in order to meet this new liability, the Government have resolved to raise more than £3 million by additional taxation. It is [illegible] satisfaction that the salt tax is not to be increased, and that there to be any special [illegible] their labour at [illegible] to levy a large exc[illegible]ected, it [illegible] basic [illegible] commercial pr[illegible] have effect [illegible] for [illegible] War has had to [illegible] proceedings [illegible] by

The Gove[illegible] that those de[illegible] for both [illegible] ary income tax ch[illegible] [illegible] be c[illegible] ch as has been [illegible] but [illegible] were var[illegible] F

Ordinary rates [illegible] and repay[illegible] can d, but people having inc[illegible] this [illegible] were exem[illegible] no less liber annum will pay a super[illegible] been granted in England.

The rates will be in addition to the one anna income tax, so that a person possessing an income exceeding Rs. 2½ lakhs will pay in all a rate of 4 annas per rupee or 5 shillings in the £ on that excess.

The export tax on jute will be doubled.

The import duty on cotton goods is raised to 7½ per cent., the excise duty remaining at 3½.

There will be a surcharge on railway goods traffic at the rate of one pie a maund of coal, coke and firewood, and 2 pies a maund on other articles.

The new taxation then will yield :—

Super-tax on Big Incomes	£1,350,000
Additional Export Tax on Jute... ...	500,000
Additional Import Tax on Cotton Goods	1,000,000
Surcharge on Railway Goods Traffic ...	500,000
Total	£3,350,000

The estimated surplus according to the proposed budget would therefore be £130,000, which, as pointed out by Sir William Meyer, "is little enough having regard to the circumstances of the time." The Indian Finance Minister has had to make the best of a bad situation and the thanks of the people of India are due to Sir William Meyer for presenting a budget without inflicting any serious hardship on the poorer classes.

INDIA'S CONTRIBUTION TO THE WAR.

I. The Hon. Sir William Meyer.

We have been subjected to much criticism in certain quarters for not contributing more than we have done, and we have been reminded in this connection of a resolution moved and carried in this Council, on the 8th September 1914, by Sir Gangadhar Chitnavis, to which Your Excellency referred in your speech on the 7th February, in which the Council expressed the opinion that 'the people of India, in addition to the military assistance now being afforded by India to the Empire, would wish to share in the heavy financial burden now imposed by the war on the United Kingdom, and request the Government of India to take this view into consideration and thus to demonstrate the unity of India with the Empire.' Also of a further resolution, moved and carried on the 24th February 1915, by Mr. M. S. Das, which affirmed the 'unswerving resolution of Indians to support the honour, dignity and prestige of the Empire regardless of the sacrifices it may entail on them.' We have been told that it is a very inadequate compliance with the spirit of these Resolutions to be merely bearing the normal peace cost of the expeditionary forces which we have despatched over-seas; and we have been accused, with reference to remarks made in paragraph 14 of my speech introducing the last financial Statement and paragraph 5 of that introducing the final Budget, of having tried to squeeze His Majesty's Government in respect even of these normal charges.

Well, I must remind these critics that Section 22 of the Government of India Act forbids the application of the revenues of India to defraying the expenses of any military operations carried on beyond our external frontiers otherwise than for preventing or repelling actual invasion or under some other sudden or urgent necessity, and that the specific consent of both Houses of Parliament is requisite to set these provisions aside. As the law stands, the whole cost of the expeditionary forces supplied from India was, therefore, primarily debitable to His Majesty's Government, as had been the case, for example, in regard to the troops we lent for operations in South Africa during the Boer War, and in China about the same time. We felt, however, that in the circumstances of the present war, we could not properly claim such full payment, and accordingly, after the passing of Sir Gangadhar Chitnavis' resolution, which I may say was brought forward with the full cognisance and approval of Lord Hardinge's Government, we proposed that we should bear the normal charges. Resolutions to this effect were passed in both Houses of Parliament, first in September 1914, and, again, in November of that year, and the latter resolution governs India's present contribution in money to the war. Its terms are as follows:—

'That, His Majesty having directed military forces charged upon the revenues of India to be despatched out of India for service in the war in which this country is engaged, this House consents that the ordinary pay and other ordinary charges of any troops so despatched or that may be so despatched during the continuance of the war as well as the ordinary charges of any vessels belonging to the Government of India that may be employed in these expeditions, which would have been charged upon the resources of India if such troops or vessels had remained in that country or seas adjacent,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shall continue to be so chargeable provided that, if it shall be necessary to replace the troops or vessels so withdrawn by other vessels or forces, then the expenses of raising, maintaining, and providing such vessels and forces shall be repaid out of any moneys which may be provided by Parliament for the purposes of the said expeditions.'

So long as this resolution is in force, His Majesty's Government and we are equally bound by it, and we can neither increase nor decrease the amount of financial assistance which we render in accordance with its terms. In effect, what the resolution lays down is that, although we sent a large number of our best troops out of the country at a time when mere considerations of local safety might well have dictated their remaining here, we pay for them just as if they were still employed in India and at our beck and call.

Further, as regards what constitute 'normal charges' in respect of the many items of expenditure involved, we are bound to satisfy our auditor-general as to the correctness of the classification or to submit his objections for the decision of the Secretary of State. There have consequently been discussions with His Majesty's Government in regard to the proper interpretation of the term "normal charges" in respect of various items, some of the more important of which were mentioned in the portions of my speeches above referred to. But in every case the discussion has been of the most friendly nature, and whenever there was any reasonable doubt, we have been very willing that the decision should be given against ourselves. I may add that the War Office have cordially acknowledged the fairness and clearness with which the accounts have been compiled on this side, and the credit for this is primarily due to Mr. B. N. Mitra, C.I.E., the Controller of War Accounts.

The gross amount that we shall thus have contributed up to the end of the present year may be taken at £19 million; but against this must be set charges relating to British troops actually serving in India which are being borne by the Imperial Government in pursuance of the provision in the resolution of both Houses of Parliament, that the cost of substituted troops (territorial and garrison battalions) shall be borne by the Home Government. With that adjustment, our total net contribution towards the cost of the war in respect of the Expeditionary Forces is about £11½ million up to the end of the current year, to which we must add another £4 million estimated in respect of 1917-18.

It has also to be borne in mind that quite apart from these charges, we have had to add to our military expenditure very considerably in connection with the war, which has, in particular, rendered it necessary to take special measures for the protection of the North-West frontier. I need not go into details here, but will let the lump figures of military expenditure speak for themselves. The last budget framed under peace conditions, that for 1914-15, assumed a total net military expenditure of £20½ million, which was higher than the outlay for any preceding year subsequent to 1906-07. In 1915-16, the net military expenditure amounted to £22¼ million; in the current year, as I have already explained, it has run up to nearly £25·4 million, while we expect it to amount to close on £26 million in 1917-18. The bulk of the increased expenditure thus shown is directly attributable to circumstances connected with the war, and with the precautionary attitude which further possibilities have forced upon us.

It has also to be remembered that we have been put to very considerable additional expenditure, in conjunction with His Majesty's Government, by reason of the political situation in Persia set up by the war. The total additional cost thus thrown upon us may be taken at £1,200,000 from the commencement of the war up to March 1918.

We have further, as I have already indicated, had to strain our resources very seriously, and to impose prejudicial limitations on legitimate trade activities, in order to finance very heavy charges in this country on account of His Majesty's Government, while we have re-lent them a large part of our recoveries by taking up Treasury Bills through the Paper Currency and Gold Standard Reserves. In all, as I showed in paragraph 37, we have since the beginning of the war put £46½ million into British war securities, of which £35 million represents wholly new investment. And, in 1917-18, we expect that our anticipatory payments for the Home Government will be about as heavy as in the current year, while we must anticipate a recurrence of the attendant difficulties.

Finally, at the cost of cutting down our capital expenditure programme to the [illegible] we have abstained from indenting on the ho[illegible]t with the intention of leaving it fr[illegible] of a co[illegible] vernment's loan operations. [illegible] the Bombay [illegible] the discharge of debt, on the work done during [illegible]ted only to a sum of [illegible] June 1914 and ending [illegible]ar we are making. The institution might well [illegible]re on the contra[illegible] [illegible]debt. Nor do w[illegible]ional and sanitary work. [illegible]et in any way this philanthropic organizatio[illegible] ratulated on their successful [illegible]ers for not ha[illegible]vities on behalf of the poore[illegible] a special wa[illegible] of which would have go[illegible] THE BOY SCOUT MOVEMENT. I need only say that we carefully con[illegible] desirability of such action and came to the co[illegible] that it was at that time not expedient. That conclusion, as the Secretary of State ar[illegible]nced some time ago in the House of Commons, was fully accepted by His Majesty's Government, who realised that the best assistance we could then give was to abstain from borrowing in the home market and rely on India for our own essential requirements.

I now revert to the question whether we might have done more in respect of direct contribution to His Majesty's Government, with reference to Sir Gangadhar Chitnavis' resolution of September 1914. The answer is that the situation at that time did not permit it. Our finances had been most gravely dislocated by the war: We were faced not merely by a large decrease in revenue but by a very serious drain on our Post Office Savings Bank deposits, which had compelled us to borrow £7 million from the Gold Standard Reserve, while the Secretary of State had incurred £7 million of temporary debt in London. In framing the Budget for 1915-16, again, we were faced by what we thought would be a heavy deficit, and having regard to political and financial considerations, Lord Hardinge's Government felt strongly that it was necessary at that time to avoid additional taxation. In connection with a Budget for the current year, such taxation had become a necessity, but the position on the North-West frontier was still so uncertain that we could not safely undertake fresh direct liabilities in connection with the prosecution of the war outside India. We had still, moreover, heavy temporary debt liabilities, £4 million remaining due to the Gold Standard Reserve, while we did not then see our way to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

repaying more than £1½ million of the Secretary of State's India Bills.

We have always felt, however, that if and when our circumstances warranted this, we should take up the question of making a further direct contribution by India towards a struggle in which her own political and economic future is so closely involved, and throughout which her trade and security have been so materially assisted by the command of the sea established by His Majesty's Navy; and we have been in constant touch with His Majesty's Government in regard to this matter. We hold that the time has now come at which we can safely put our wish into effect, and thereby gratify still further the patriotic feelings unanimously expressed in this Council on the occasion of the resolutions moved by Sir G. Chitnavis and Mr. M. S. Das. We are able to do this without misgiving, since we have now, as I have already explained, cleared off the whole of our temporary liabilities, and have accumulated balances strong enough to enable us to carry out our reduced capital expenditure programme without further borrowing in India on our own account next year.

Accordingly, at the beginning of January, Your Excellency addressed a tele[illegible] Secretary of State, from which I quote [illegible] :—

'I feel, and [illegible] the cordial and unanimous [illegible] their labi[illegible] the time has come for Ir[illegible] ected, it [illegible] vaste[illegible] capacity at the [illegible] have effect[illegible] for f[illegible] future, to be utilised to [illegible] by sources and a just[illegible] proceedi[illegible] of her people rend[illegible] that those de[illegible] both [illegible] as His Majes[illegible] We are prepared [illegible] to were var[illegible] for His Majesty's Government, [illegible] can be raised, and to offer for this [illegible] were exemo less liberal than those which have been granted in England. If it should be found that Indian credit can also be usefully employed elsewhere, we should gladly assent to its being so employed, and in so far as the aggregate funds which India can thus directly borrow for the use of His Majesty's Government constitute a contribution not adequately proportioned to her resources, we propose that she should also undertake the service of a portion of the existing British war debt. In this spirit, and in the confidence that such an offer will evoke a generous response from the Princes and Peoples of India, we have addressed ourselves to the task of defining practical possibilities.'

The telegram went on to indicate that we were prepared to accept an ultimate total special contribution of £100 million to the war, and to put forward proposals for increasing our resources in order to meet the consequent recurring liabilities, which may be taken at £6 million a year allowing for the gradual extinction of this debt by a sinking fund. Deducting from this £100 million the amount raised by our borrowing in India for the benefit of His Majesty's Government, and by any special issues which that Government might think it desirable for us to undertake elsewhere, we would liquidate the balance by taking over a portion of the Home War debt.

His Majesty's Government have gratefully accepted this offer, and the £100 million we are thus contributing amounts, I may point out, to nearly double our total Imperial revenue as it stood before the war.—*Budget Speech, March* 1, 1917.

II. The Hon. Pundit M. M. Malaviya.

Men's memories are short and there has been a persistent and regrettable attempt on the part of some people and papers, both here and in England, to belittle the support which India has rendered to the cause of the Empire and of the Allies in this unprecedented war. While we feel grateful that our trade and security have been materially assisted by the command of the sea established by His Majesty's navy, it seems to be forgotten in some quarters that the timely help of the troops and officers, whom India had trained and maintained for years and at enormous expense, was of inestimable value in saving the cause of the Allies in the early days of the war, and that but for that help the prestige of the Empire might have been in serious jeopardy in the East. Though the actual numbers have not been published, I believe I am not wrong in saying that since the war began, India has placed over 25,000 trained soldiers in the service of His Majesty's Government. She has rendered invaluable aid by furnishing supplies of all sorts of foodstuffs, clothing, ordnance, equipment, and munitions by training and despatching horses, by lending to the Admiralty a great part of her Royal Indian Marine fleet, and by fitting out transports. As the Hon'ble the Finance Member said in his statement, the other day, our total net contribution towards the cost of the war in respect of the Expeditionary Forces is about £11½ million up to the end of the current year and £4 million more will be added to it by the end of the next financial year. Besides this, owing to the war, our military expenditure has risen from £20½ millions in 1914-15 to £25¼ millions and will amount to close on £26 millions in 1917-18. We have also had to incur expenditure to the extent of £1,200,000 in Persia, owing to the political situation set up there by the war. In addition to all this we have since the beginning of the war put £46½ millions into British war securities, of which £35 millions represent wholly new investments. When our unkind critics seek to belittle our contributions to the war by comparing them with those of the Self-Governing Dominions, they seem to forget that, unlike the Dominions, we have throughout our connection with the Empire borne our own share of the military burdens. All this has been done not only by maintaining a high level of taxation, but by raising it higher and higher, and is it too much to ask that those who desire that India should make a further direct contribution to the war might, in fairness to her, say so without belittling what she has already done.

Till last year Government set their face resolutely against a special war loan and, if I may say so, they had the best of reasons for doing so. In my humble judgment, the most substantial of those reasons have neither disappeared, nor have they lost their force. The only change that has taken place is that £11½ millions of our debt has been paid, but the Secretary of State and the Government of India have now come to the conclusion that it is expedient to float such a big loan. That decision must now be carried out, in view of the official circumstances of the case. I support the proposal that we should make a further direct contribution to the war. I am at one with the Government here.—*Speech in the Imperial Council, March 7, 1917.*

PUBLIC ADMINISTRATION IN ANCIENT INDIA.*

This is an attempt at constructing a full and connected picture of the ancient Indian polity obtaining between 500 B.C. and 500 A.D., with the help of the Vedic and Buddhist religious literature, the shastras, the epics and the dramas, and the accounts of foreign travellers. The book is written in a simple and clear style, and will be found very useful to the college students. The present edition is rather costly and seems to be intended mainly for libraries. A popular edition, bringing it within the reach of the average Indian student, would be much appreciated.

The book is divided into a number of chapters, which are necessarily of varying interest and importance. Its perusal will show how well developed and efficient was public administration in ancient India. Professor K. V. Rangaswami Aiyangar, of Trivandram, in his Sir Subramania Aiyar Lecture, of 1914, referred to certain historical prejudices and superstitions of Western scholars in the following passage:—

> First, among these is the assumption that in India political conditions have ever been uniform and homogeneous. Next, comes the old belief on the unchanging character of the East—China and Japan alone recently excepted—to which even so subtle a thinker as Mr. Balfour has professed adherence. Then we have the allied opinion that, excepting perhaps for some forms of poetry, almost the only talent of India was for metaphysical speculation and that the characteristic of India in the realm of practical life has been an invulnerable quietism. This opinion has now risen to the rank of a tenet of historical orthodoxy.

Dr. Banerjea's book, like Professor Rangaswami's lecture, shows how unfounded every one of these notions is.

Ancient India had not one form of government; there were republics, oligarchies and monarchies. Tribal government was common even in the time of Alexander's invasion. But as the size of the State increased, monarchy displaced all the other forms of government as it did in ancient Greece and Rome. The monarchy also was a kind of limited monarchy.

> There were various checks on the authority of the monarch. The king had to abide by the law as laid down in the Shastras or embodied in the customs of the country. In the practical work of administration he was guided by his ministers, who occupied an important position in society and wielded the real power in the State. Then, there was the influence of the learned Brahmanas as a class, who were looked upon by the people as the natural guardians of society . . The Shastras he regarded as embodying a sort of political constitution as well as ethical law, and the ancient system may thus be called a constitutional monarchy—the checks being more moral than political.

In the Vedic and early Buddhist days, kings were elected and deposed, and even after the hereditary principle had been universally adopted, an incompetent or diseased heir was sometimes passed over in favour of a near relative, a brother, uncle or someone else. The theory of the divine origin of kings was a later growth. The king was the chief of the nation, not the owner of the land. He received the land and other taxes only in return for services.

> The conception of the king as the servant of the State was one of the basic principles of political thought in ancient India. Thus Bodhayana says: 'Let the king protect (his) subjects receiving as his pay a six part (of their income).'

Several other authorities including Chanakya, the author of the [illegible] given.

> The Aitare[illegible] the Bomb[illegible] he following oath for the[illegible] work done du[illegible] one (during my life), [illegible] June 1914 and endi[illegible] y life and my prog[illegible] you.' The Mahab[illegible] The institution might v[illegible] h in mind, word[illegible]ional and sanitary work[illegible] o the welfare[illegible] his philanthropic organiza[illegible] eme being. Wha[illegible]ulated on their successf[illegible] by the rules of ethic[illegible] behalf of the poo[illegible] abide by. I shall never be ind[illegible]

When the heir-apparent attained proper age, he was made the Yuvaraja or Crown Prince, and given special training in administration. He learnt the political sciences under learned professors and acquired practical knowledge by serving on the great council of the king, or as governor of a province or as a commander in the army.

There were assemblies and councils, which advised the king on all important matters and occasions. In the South Indian State of Kerala, according to the *Mani-Mekalai*:—

> During the first and second centuries of the Christian era there were five assemblies, namely, (1) the assembly of the people, which consisted of representatives of the people summoned from the various parts of the State and which acted as a check on the king; (2) the assembly of the priests who directed the religious ceremonies of the State; (3) the assembly of the physicians which acted as a sort of board of public health; (4) the assembly of the astrologers who fixed auspicious times for the public ceremonies; and (5) the assembly of the ministers, whose chief duties consisted in the collection and disbursement of revenue and the administration of justice.

The council of the ministers was, of course, the most important, being the cabinet where, however the responsibility was individual and not collective, each minister being answerable to the king.

* Public Administration in Ancient India. By Dr. Parmathanath Banerjee. 7s. 6d. net: Macmillan & Co.

Our political reformers will be interested to know that in ancient India the police force was kept in an efficient condition by being required to make good the value of stolen articles in case where they failed to trace the thieves. The Agni Purana says :

The king should pay the owner the price of an article stolen by a thief and reimburse himself out of the salaries of police officers.

The system of the administration of justice was well developed. At the head of the judicial system was the King's Court, which was occasionally presided over by the King himself, but generally by a learned Brahmana assisted by three or four other judges. This court had original jurisdiction over the capital and received appeals from the lower courts, which were established in all important towns and headquarters of districts and sub-districts. These courts had their judges appointed by the central government and received appeals from [illegible] courts in the districts. [illegible] village courts, each compo[illegible] their labo[illegible] ars of the village. [illegible] re were professiona[illegible] have effecy[illegible] se fee, according [illegible] proceedi[illegible] by value of th[illegible] that those de[illegible] both

The sour[illegible] were various, and some of them [illegible] repugnant to modern ideas. Brahmanas were exempted from all taxation, and the military expenditure was very high. As Professor Rangaswami Aiyangar says :—

It is mainly on this account that benevolences, and the fruits of trickery, as well as the existence of State-workshops, institutions for foreign and municipal trade maintained by the State for its own profit, the monopolies in the manufacture and sale of intoxicants, in precious stones and metals, in horses and elephants (referred to by Magasthenes), in salt, in the produce of mines and the forests, the institution of State brothels and gambling dens, and the complicated tariff of import and export duties were all equally acceptable to writers like Kautilya, who likewise apparently reflecting the practice of their day do not hesitate even to recommend them.

Taxes and rents were sometimes remitted in order to encourage the people to repair tanks and canals. Many departments of service had been created, some of which like the forest, agricultural and accounts departments, we are prone to believe, as institutions peculiar to the British administration of India.

The annual accounts of every department were regularly submitted to the accounts department, and after they had been examined by the superintendent they were audited by competent auditors. They were then submitted to the ministers in charge of the different departments, and considered by them sitting together as a cabinet.

COOLIES.

"GRYLLUS DOMESTICUS."

Heu miserande puer!

Virgil. Aeneidos lib. VI.

A piece of cloth tied round the head,
And a basket of iron, or cane,
For carrying earth—or a hat instead—
Or to shelter from sun, and rain—
See reader here, in a splash of the pen,
The foremest of India's laboring men.

That road on which you walk, ride, and bike,
That causeway of granite black,
With pointed stones in two long rows,
O'er which in the monsoon the river flows,
And which also serves as a dyke,

That railroad track,
And that bridge with girders—a hundred tons—
Those buildings five and six stories high,
That tunnel through which the railway runs,
Those great mill chimneys piercing the sky,

That church with steepled bell,
And the yellow wall of the cemetery,
And every grave as well,
And every tombstone you may see—

Look round about—
There's nothing in brick, or stone, or lime,
To the house in which you dwell—
If it had a tongue it would cry out :—

"At some place, or some time,
That poor man there with his mother wit,
That laboring man had a hand in it—
With only a cloth tied round his head,
And a basket of iron, or cane,
For carrying earth—or a hat instead—
Or to shelter from sun, and rain
And a little cloth bundle in which he takes
His breakfast of dry jawari cakes."

THE WORLD OF BOOKS.

[ONLY SHORT NOTICES APPEAR IN THIS SECTION.]

Considerations on some Aspects of Ancient Indian Polity. By Prof. K. V. Rangaswamy Aiyangar. Sir Subrahmania Iyer Lecture, Madras University.

The book under review is a very valuable one and throws light on a very important but obscure branch of Indian culture. Every student of Indian literature and history knows how the science and art of government had been carried to a high state of perfection in ancient India, though they have now to be brought into line with the highest political ideas of the West and applied to the needs of modern life. The learned author first discusses the sources of information on the matter and classifies them under six heads: religious, political, historical, literary, philological and astronomical. In the second lecture he says: "Some implications of this attempt to define the State should also be borne in mind. The first is that *unity* is the inseparable feature of the State and has to be preserved at all costs. The second, naturally following the first, is that the normal form of government is *monarchy*. The third is that the administration is highly specialised. The fourth is that the State rests on a territorial basis. The fifth is that it imagines small States, and the last is that it is founded on a weak international law." A famous chapter in the Ramayana shows what a lofty conception of the State and the institution of kingship the great minds of India's past had and proclaimed; and all our books on Indian polity declare that Dharma rules alike both kings and subjects and show the existence of an excellent and highly organised judicial machinery. The learned author shows how the aim of the Indian State was to preserve the Society and the State in conformity with the established moral order of the universe. This book of lectures is rendered even more valuable by his scholarly notes.

Confessions of a Thug. By Colonel Meadows Taylor. Oxford University Press, Bombay.

Colonel Meadows Taylor's "Confessions of a Thug" is already a classic in historical literature, and the Oxford University Press have done well to include it in their well-known "World's Classics." Mr. C. W. Stewart, B.A., has supplied a judicious introduction and glossary. This handy and pocket edition will now be easily accessible to every lover of historical romance.

The Population Problem in India. By P. K. Wattal, M.A. Bennet Coleman & Co., Ld., Bombay. (Re. One. G. A Natesan & Co., Madras.)

Mr. Wattal's interesting study of the "Population Problem in India" is provocative of a multitude of thoughts. He deals with figures and statistics with perfect ease, and carries the reader through the controversy with great agility. Students of political economy are familiar with the laws of supply and demand, and Mr. Wattal's "Study of the Population Problem in India," with reference to the available means of subsistence opens up a vista of interesting social and economic controversies. It is impossible to give an adequate estimate of Mr. Wattal's extraordinary deductions, but it cannot be doubted that they afford food for ample reflection to the sociologist. Some of his conclusions and remedies may not be quite palatable to [illegible] school of economists, but no[illegible]ency and importance [illegible] the work done [illegible]ed by Mr. Wattal's June 1914 and [illegible]t question of the [illegible]he institution m[illegible]

Auto-Suggestion [illegible]anthropic org[illegible] Parkyn, M.D., C.M. [illegible]n their su[illegible]owler and Company, Lo[illegible]lf of the [illegible]

This thoughtful [illegible]ook supplies new methods of bodily and mental healing. Dr. Parkyn, the author, explains the principles of Auto-Suggestion or Self-Suggestion which, in his practice, has helped to cure general obstinate cases of illness. That the mind largely controls the bodily organs, internal and external, cannot be denied at this time of the day, and the best reply to critics of this system of cure is the number of concrete examples where the cures have been undoubted. We may refer to the Series of "Optimistic Suggestions," at pp. 88-89, to illustrate the authors's methods.

Modern Weapons of War by Land, Sea and Air. By Cyrill Hall. Messrs. Blackie and Sons, London.

In this book the author has avoided as far as possible the use of too technical language and has described and explained to his readers the various weapons and how they are manipulated. It is exceedingly difficult in a book of this sort to avoid its being a mere descriptive catalogue, but the author has more or less successfully done so, for instance, in explaining the highly complicated working of a big gun or a battleship, he simply takes his readers into action with him and gives them quite an exciting time.

The Tilak Case, 1916. Edited by D. V. Gokhale, B.A., LL.B. The Printing Agency, Poona City.

This is a handy volume of 200 pages, containing a complete text of the proceedings against Mr. Tilak, commencing chronologically from the order of the District Magistrate to the date of the judgments in his favour, cancelling the execution of the bonds of security. The book opens with a handsome frontispiece containing pictures of Mr. Tilak, Mr. Kelkar and Mr. Karandikar, followed by those of the judges and lawyers, who took part in the great trial. A verbatim translation of Mr. Tilak's speeches is also given.

The Efficient Life. By Luther H. Gulick, M.D. Published at Garden City, New York, by Doubleday, Page and Company.

This is a vigorously written book on general principles of health, containing practical suggestions and methods to make one healthy and efficient. The author [illegible] their labil [illegible] rk [illegible]cise, sleep, eating, med[illegible]cted, it [illegible]lly [illegible]yanic [illegible]es, which enter into t[illegible] have effect [illegible]ch[illegible]ror f[illegible] functions, and his [illegible]al proceedi[illegible]wh[illegible]al de[illegible] by great practicality fi[illegible] that those de[illegible]r both hackneyed directions wh[illegible] [illegible]f rt, be carried out, and there is [illegible] [illegible] [illegible] the whole book that enlists our attention and regard.

Glimpses of the Bhagavat-Gita and the Vedanta Philosophy. By M. W. Burway, Esq., B.A., Judge, Small Cause Court, Indore.

This is an edition of the text and translation of the Bhagavat-Gita, with an introduction of 128 pages, wherein the author discusses the true principles and doctrines set out in this sacred work. The author maintains that the Gita is an exposition of the Adwaita Philosophy, as taught in the Upanishads and by Shankaracharya. At the same time it is as full of practical wisdom as of speculative law. The author strongly criticises the views of Pandit Tatwabhushan on the teachings of the Gita and the historicity of Sri Krishna, and exhorts his readers not to be influenced by the shallow criticisms of foreign critics and their Indian followers. The author rightly deplores caste dissensions, and points out that they are inconsistent with the lofty principles of the Gita. The introduction will repay perusal by all interested in Hindu religion and philosophy. The text is in bold Devanagari type, and the translation is simple and readable, and mainly follows that of Mrs. Annie Besant.

DIARY OF THE MONTH.

February 22. The southern portion of the Sanna-i-yat position in Mesopotamia was captured in the first assault to-day.

February 23. Operations on the Tigris and successful crossing of the stream in the neighbourhood of Shumran Bend.

February 24. Capture of the Shumran Peninsula and retreat of the enemy in the direction of Bashallah.

February 25. The whole of the enemy position from Sanna-i-yat to Kut-el-Amara has been secured. Kut itself has fallen.

February 26. In the Congress to-day, President Wilson asked authority to establish armed neutrality.

February 27. Public meeting of the women of Bombay to protest against the continuance of the Indenture System was held at Madhav Bahg with Lady Pherozeshah Mehta in the chair.

February 28. At to-day's meeting of the Imperial Legislative Council, H. E. the Commander-in-Chief presented the report of the Select Committee on the Defence of India Force Bill.

March 1. The Indian budget and India's contribution of £100 millions to the cost of war.
Successful raids on the Ancre.
German evacuation of Gommecourt.
German intreagues in Mexico exposed.

March 2. The Mexican revelation of German intreague and Japan's spirited repudiation.
Sinking of Dutch ships.

March 3. The Allied Ministers have presented a memorandum to the Chinese Government sympathising with its attitude towards Germany.

March 4. Second Lieutenant F. I. Thesiger, Field Artillery, heir of H. E. the Viceroy, has been wounded.

March 5. H. E. the Viceroy received a deputation of the Press Association of India at the Viceregal Lodge this morning.

March 6. Startling revelations of German attempts to kill President Wilson and dynamiting factories. The President's appeal for united action.

March 7. Meeting of the Viceregal Council passed many important resolutions—those on India's contribution and super-tax, etc.

March 8. Great recruiting meeting at Madras, with Sir P. S. Sivaswamy Aiyar in the chair.

March 9. A largely attended meeting of Indian Ladies was held at the Ram Mohan Library, under the presidency of Lady J. C. Bose, to protest against the continuance of indenture.

March 10. It is announced that Sir Harcourt Butler succeeds Sir James Meston as Lieutenant-Governor of the United Provinces, while Sir Reginald Craddock will take up the Lieutenant-Governorship of Burma.

March 11. British occupation of Bagdad.
The *Times* testimony to Indian heroism.
Lancashire Deputation to Mr. Chamberlain *re* : Indian cotton tariffs.

March 12. Prohibition of labour emigration from India under the Defence Act.

March 13. Mr. Chamberlain moves in the House of Commons that the Indian war gift of £100 millions be accepted.

March 14. H. E. the Viceroy publishes a special message re[illegible] of a copy [illegible] Loan. Similar messages [illegible] the Bombay Soc[illegible] Sir William Meyer, [illegible] the work done during t[illegible] Sir G. S. Barnes, [illegible]ne 1914 and ending w[illegible]ear.

March 15. [illegible]nstitution might well [illegible]dication of the Czar [illegible]and sanitary work. T[illegible]e of Commons by Mr. [illegible]ropic organizations [illegible] and Duke Michael is appoi[illegible]. [illegible]heir successful a[illegible]

March 16. The Russian national ministry has been formed.
British occupation of Bapaume.

March 17. Post-War Reform Meeting at Madras, with Dewan Bahadur P. Kesava Pillai in the chair.

March 18. German retreat in the Western front. British troops are entering Peronne. The French have taken over 1,000 Bulgarian prisoners.

March 19. The French Cabinet has resigned. M. Ribet is forming a new cabinet.

March 20. The first meeting of the Imperial War Cabinet was held to-day in London at the Premier's house.

March 21. The American steamer *Healdton* was torpedoed to-day. Seven survivors arrived at the Hague.
Rioting in Berlin is reported.

March 22. Stubborn battle in Galicia.
Franco-British forces nearing St. Quentin.
Allied gains in the Balkans.

March 23. Great War Loan Meeting at the Senate House, Madras, H. E. the Governor presiding. About two lakhs of rupees were subscribed on the spot.

INDIA'S CONTRIBUTION TO THE WAR.

Mr. Yusuf Ali, writing in the February issue of *The Nineteenth Century and After*, explains all the various phases of India's contribution to Britain in this war and dispels from the English mind the belief that her effort in the war has not been commensurate with her resources, and that her claim to Imperial partnership is neither an idle dream nor a source of potential weakness to the Empire. The fighting resources of India have done and are doing untold service throughout the far flung British battle line. "With the Canadians the Indian ranks have fought at Ypres; with the Anzacs they were in Gallipoli. They fought against terrible odds in East Africa before General Smuts brought over his triumphant troops from South Africa. Their magnificent work in Mesopotamia, in com[illegible] British troops and in face [illegible] their labo[illegible] factors, has been recogni[illegible]. Indians ar[illegible] have effec[illegible] which their countrymen [illegible] proceedi[illegible]."

India's fi[illegible] that those de[illegible] both public and private, such [illegible] being thrown into the pool. Besides her [illegible] contributions, India has given or released millions in short-time loans and has helped most substantially by refraining from borrowing in every available market at the sacrifice of her own needs and interests. "In estimating India's contribution to the military financing of this war, we must not merely look at the figures of the extra expenditure she is now incurring, but also at her military budget for years past, compared to her local needs and to her own resources, in aid of Imperial defence." India's pre-War insurance for Imperial defence was £18 millions annually, at nearly the rate of 22 per cent. to the total budget revenue. There has been, since the War, a good deal of expansion in India's military budget, a rise of £4 millions per annum. The military charges incurred in connection with Indian troops, when they are out of Indian territory, something like £8 millions annually, are borne directly by the Indian-Exchequer. India's chief wealth consists at present in her raw produce, and she has placed this freely at the service of the Empire and its Allies, at considerable self-sacrifice. "Her food-stuffs have had their influence on the British markets. Her jute has made, and is making, sandbags for the Allied trenches. Her mineral resources, such as manganese and coal, have been of the utmost value. . . Such manufacturing facilities as India possesses have been concentrated in the making of munitions and stores of war, and Government and Railway workshops, as well as private works and technical schools, have put their quota in the common effort."

Mr. Yusuf Ali then criticises the existing military system of India, and suggests several feasible measures for a substantial expansion in India's powers of offence and defence in an Imperial scheme. The present War has shown a shortage of officers, military and the military-medical reserves; and the old-fashioned prejudices which restrict Indian enlistment to a few races deemed warlike, and have to look outside the country for a great portion of the supply of Sepoys, has resulted in a lamentable falling off in recruiting in peace-time. And it is necessary that new sources should be tapped. The so-called volunteer force is practically closed to Indians. It is only the other day, as will be seen from the Viceroy's speech printed elsewhere in this issue, that a Bill to form a United Indian Volunteer Corps was moved in the Imperial Legislative Council by H. E. the Commander-in-Chief. The Anglo-Indians, and the sprinkling of Indian Christians, are not in numbers, physique or education, the stuff which would feed a first-class army. Indian public opinion is ready for a substantial expansion in India's powers of offence and defence in an Imperial scheme, provided that certain elementary conditions are fulfilled. Trust in Indians, improvement in the conditions of enlistment and service for Indian officers and men, the removal of colour and religious bars for Indians, the opening of Commissions to them, the re-examination of recruiting fields in the light of the new evolution of Indian society; the throwing of the weight of Indian defence more and more on the citizens of British India and less and less on the trans-frontier tribes, the making of India self-contained as regards the manufacture of rifles, gunpowder and munitions of war, the development of the Indian Marine into an Indian Navy, on the lines of the Australian Navy; and the building up of a strong, well-trained defence reserve—these are the primary conditions which must be fulfilled, and their fulfilment depends upon those who hold the key of Imperial authority.

FRENCH NATIONALISM.

Dr. H. A. L. Fisher, Vice-Chancellor of Sheffield University, and Minister for Education in the new Government, writing in the *Hibbert Journal* of January 1917, explains the soul and nature of the French nationalist movement. French nationalism is not decisive in the sense in which the term may be applied to the strivings of the pan-Germanic idea or to the restless aspirations of the southern Slavs. It has never obtained entire control of the French Government; it was never a triumphant and overwhelming power in the sphere of opinion. Its central core of doctrine was associated not by inner necessity, but through the tissue of historic circumstances, with suspect causes, Royalism on the one hand, Ultramontanism on the other. And twice within a decade, French nationalism had associated itself with an ill-judged enterprise and experienced a resounding defeat. On the other hand, it may be said that the errors of French nationalism were the result not of corruption but of impatience. It was full of inexperience, ardour and desperate irritation; but was a vital force because it represented an instinct, a tradition and a dream.

The founder of this nationalist movement, Deroulede, was a soldier-poet, who, having fought in the campaign of 1870 as quite a young man, dedicated the remainder of his long and stirring life to the idea of national revenge. He broke through the malady of cosmopolitanism, of self-questioning, of delicate cynicism, of exact intelligent but essentially despondent labour, which hitherto had the field. He despised the great Paris Exhibitions, deeply distrusted colonial enterprises, as likely to divert the nation from its proper work of recovering Alsace-Lorraine, and poured scorn upon the whole tribe of politicians. Up to his time the atmosphere of Paris was saturated with philosophic rationalism. But he deposed from their pedestal the great captains of rationalism; and nationalism received from its catholic and literary exponents all the illustration and support which deep feeling and penetrative imagination could bestow.

"The nationalist leaven in French thought tended upon the whole to sweeten the body-politic and to rid it of some of its more rancorous humours. It is true that it administered in a very deplorable degree to foment anti-Semite prejudice; but if this aspect of its influence be deducted, the general trend of its operation was to infuse a wider and more generous tone into politics, to inculcate a spirit of comradeship, and a higher sense of devotion to the large interests of the State, combined with a greater feeling for the historic glories of France, and for that invisible and imperious bond which binds the living to the dead in a spiritual and efficacious communion. This is the valuable side of nationalism viewed as an ethical agent. It was estimable not because it preached the hatred of Germany, but because it preached the love of France not by reason of its antagonisms but in virtue of its affinities, not because it worked for foreign war but because it endeavoured to compose a domestic peace. Its strength lay in the fact that it did succeed in restoring to the national consciousness a vivid sense of the precious things which had been overlooked, forgotten or trampled under foot" . . . . . "In general the nationalists rendered excellent service by their exaltation of all the natural forms of local and provincial piety, which had been so greatly overshadowed by the centralising polic[illegible] of a co[illegible]nary State. . ."

The weakn[illegible] the Bombay So[illegible] the side of constructive [illegible]e work done during [illegible]hip. It represented eme[illegible] 1914 and ending w[illegible] The one thing which m[illegible]ution might well [illegible]y was the ignominy of belon[illegible]nitary work. [illegible]d and acquiescing nation, [illegible]ic organization[illegible] to spread a passionate full-blood[illegible] successf[illegible]eling about the national problem. On the side of emotion and sentiment, the higher type of nationalist literature contributed in a marked degree to deepen the channels of patriotic feeling and to rekindle a spirit of hope in the destinies of France. Another prominent feature in the nationalist creed was a revolt against the domination of the 'intellectuals' and, in particular, against the cast-iron system of efficient but monotonous education which is part of France's heritage from Napoleon. Patriotism, as understood by the nationalist, is first and foremost the love of a material thing of an extended space upon the globe, and an understanding which vanquishes all reactions of cold discursive intellect.

SCIENTIFIC TERMS IN TAMIL.

The journal of the Tamil Scientific Terms Society is doing a good service in giving the Tamil public an accurate and standard translation for technical English terms. The January-February number contains a list of such words, which students writing in Tamil would do well to take note of. We congratulate the conductors on their painstaking but very useful enterprise in this important work of modernising a beautiful ancient language, so as to make it suit the requirements of up-to-date technical knowledge.

AFTER-WAR ECONOMICS.

Professor A. C. Pigou, the well-known economist, writing to the *Economic Journal* (December 1916) deals with the interesting problems of how far the real rate of interest in England after the war is likely to be effected by Government's prohibition or non-prohibition of the export of British capital, and whether it is desirable that Government should prohibit or otherwise interfere with such exportation. He explains that the real rate of interest, like every other value, is determined by the interaction of the forces of supply and demand. On the supply side, we have to inquire into how far the war would have affected (1) the holding of claims to income from foreigners in the form of interest on capital lent to them in the past; and (2) the current productive power available within the country. On the demand side for capital after the war, there will [illegible] within (1) a considerable volume of their labour and plant which would involve an increased, it may be, basic demand for capital; (2) [illegible] have effected a change for capital to pay off a large proceeding [illegible] obligations to foreigners which that those debts—or another, are now being incurred [illegible] export of capital for new enterprises abroad is prohibited after the war, there would have to be set on the other side the elimination of the large normal demand for British investments in foreign and colonial undertakings.

On the supply side of new capital, with reference to the holding of claims on foreigners, the amount of capital that Britain has called in from abroad since the war began is estimated to be more or less equal to the amount of fresh loans made by Britain to foreign countries, especially to the Allies. And the dimunition in our income might be possibly, say, about £200 millions in respect of capital claims upon foreign countries, which would imply a contraction of income from abroad of perhaps £15 millions a year as against pre-war conditions; and this sum is practically negligible in view of the aggregate income-getting capacity of the nation. As regards the current productive power available within the country, we have to take note of land, industrial plant and organisation, the able-bodied and able-minded population, etc.

The equipment of industries after the war in respect of plant and machinery will be considerably below normal; though not very much smaller than what it was before the war. As regards systems of organisation there are grounds for believing that the situation may have been actually improved by the war. Artificial and conventional barriers restraining women from working in certain occupations, injurious restrictions as to the demarcation of occupations and restrictions of output will have been removed, while the important matter of shift system will be better utilised. And it seems remarkable, on the whole, to expect a distinct improvement in industrial orgainsation as a direct result of the experiences of the war. The various tendencies affecting labour power cannot, of course, be balanced with any confidence; but we may be sure that the net income-getting capacity of the community after the war is not likely to differ substantially from what it was before the war. Out of this income-getting capacity, we will have to deduct (1) the portion that would be absorbed in the up-keep of armaments; (2) the absorption of a larger part of the real income in ordinary consumption owing to the inevitable increase in the dependent part of the population. After the war, the supply of new capital available in response to any given rate of interest will be somewhat smaller than before.

On the demand side, we have seen how, if the export of British capital for new enterprises is not prohibited, the aggregate demand for it is almost certain to be much larger than it was before the war. And balancing the influences of supply and demand respectively, we may say that if the export is left free, the rate of interest will almost certainly be much higher than before the war. The prohibition of free export of capital would inflict a direct and obvious injury upon those persons who are in a position to make savings, and its immediate and direct effect would probably, though not certainly, be injurious to the working classes, as it would prohibit the sending abroad of machinery, etc., which the workpeople help to make, but do not themselves buy. Freedom to export capital will certainly exercise a twofold influence in enhancing the real income of the country at a later time. No economic case could be made for forbidding the export of capital in a sweeping general way, though Government should have power to prevent obviously anti-social investments, and should be influenced by political considerations also.

IMPERIAL EDUCATION.

In the new number of *The Journal of the Society of Comparative Legislation*, Mr. Edward Jenks discusses the various aspects of the problem of Imperial education, which will press for solution at the close of the great war; as that alone will be the most effective agent in maintaining and crystallising the quickened sense of unity, which the war has engendered among the various members of the Empire. The economic requirements of the decade following the war will necessitate an enormous going to and fro of specialists in all branches of industry; and these specialists, being men of intelligence and of force of character, will unconsciously link together the communities which they serve. The first necessity in the repair of the ravages of war will be the improvement of means of communication, which will facilitate intercourse and stimulate unity and mutual understanding in the Empire. Another link of unity is the English speech, which will be associated in the minds of the nations of the Empire with all that is just and generous and profitable and picturesque. The hitherto neglected fabric of Imperial history must be built up by writers and teachers with the gift of imagination; and on it must be placed, as a golden roof of world-wide splendour, the majestic and united achievements of the great war. Even now a school of Imperial historians should be trained, who will be prepared to show how the sacrifices and triumphs of the war are but the natural sequences of generations of honest industry and upright administration and of heroic endurance and self-sacrifice, which have made the British flag respected throughout the Empire.

The British Isles should remain 'home' to all the citizens of the Empire, and a vital link of Imperial unity. The ancient Universities of Oxford and Cambridge, Dublin and Edinburgh, Aberdeen and St. Andrews, should be made, by their charm and influence, to serve as a bond of unity, of unrivalled and enduring power to unite all the educated classes of the Empire. Much has been done already by the efforts of public-spirited men and women, by extension meetings and the Rhodes Trust, to break down that spirit of exclusiveness and privilege which naturally coincided with the very worst period of academic sloth and inefficiency. Barriers of age and sex, of caste and privilege, of religious and social exclusiveness, must be swept away. It is necessary that the direct benefits and priceless essentials of the older university life should be extended to a greatly increased circle of students from all parts of the Empire, with a consequential increase of unifying influence throughout the Empire. Many other and more familiar proposals of educational reform, like readjustment of teaching, to meet the needs and opportunities of adult students, the modernisation of curricula, a genuine co-operation among the different religious bodies, to settle ecclesiastical disputes which still disgrace education—these should be tackled with. Law may very well serve as a bond of unity; and a scheme of Imperial law study, which would build up a Common Law of Empire which, like the Common Law of England, should be the product of the best minds of the ages working in the school of experience.

ORIENTAL MONARCHIES.

In reviewing Prof. K. V. Rangaswamy Iyengar's "Considerations on some Aspects of Ancient Indian Polity" in the pages of the *Modern Review* for March, Prof. J[illegible] Sarkar points out incidentally the [illegible] of a comparison between the ancient and the [illegible] Bombay Sc[illegible] European or Asiatic. The work done during [illegible] of writers on Hindu polity 1914 and ending w[illegible] India there were republics, tha[illegible]tion might well [illegible] himself as merely exercising a [illegible]itary work. T[illegible]t of ministers was held to be no organization [illegible] the people enjoyed self-government. To the mind of the twentieth-century reader, these statements imply the direct influence of the people on the foreign policy of the State, the responsibility of the Executive to the governed, the reign of a law which emanates from a legislature representing the citizens, and the control of government by the will of the people. But every one of these latter connotations is untrue as applied to the ancient Hindu State. The professor assures us that in the ancient Indian State the people were very loosely knit, and the sovereign had no means of making his will felt effectively by the governed. It had local autonomy in parochial matters, but it did not mean the possession of representative government on popular control over the executive and national diplomacy. In ancient times, not the State, but society was omnipotent; and from the tyranny of society the only refuge was the freedom of the homeless man. The sovereign was impotent in the sense in which the modern State is omnipotent for good and evil alike. But the people were equally powerless and devoid of any apparatus for enforcing their will on the government. They could frustrate the royal mandate by passive disobedience, but their united will could not compel the king to adopt any desired line of policy.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The ancient State was weak—both people and king, the king more than the people—because the population was not homogeneous, and there was no organic connection between the king and his subjects, or between the subjects themselves. Within small tribal republics or principalities, however, the dominant race were the rulers, and the State had homogenity though depressed indigenous races were excluded. There was no internal check on the sovereign and no means of preventing evil on his part except the dagger or the poison-cup. In this sense the term 'Oriental despotism' is as applicable to the ancient Hindu State as to the Empire of the Cæsars. In the ancient East and West alike, the people accepted the rule of the Imperator, who had repelled foreign foes and who had saved the people from *Matsya Nyaya*, or who had led them on to a career of conquest. The Vedic kingship was no doubt responsible to the popular assembly of freemen, like the [illegible] of the ancient Teutonic tribe. But their [illegible] were exceedingly small and [illegible], it [illegible] when these kingdoms grew into [illegible] have effectively [illegible] royal power was unlimited by [illegible] proceedings [illegible] machinery of popular and [illegible] that those days—because there was no constitution [illegible] of pious wishes and counsels embodied in *Niti Sastras*.

THE INDIAN VIEW OF CONDUCT.

Srijut Aurobindo Ghosh, in the course of a series of masterly articles on the "Bhagwat Geeta" in the *Arya*, makes some interesting observations with regard to the Indian view of the science of conduct. He says :—

"Indian ethics has always seen the practical necessity of graded ideals for developing the moral and spiritual life of man. The Kshatriya ideal, the ideal of the four orders, is here placed in its social aspect, not as afterwards in its spiritual meaning. "This," says Krishna in effect, "is my answer to you if you insist on joy and sorrow and the result of your actions as your motive of action. I have shown you in what direction the higher knowledge of self and the world points you ; I have now shown you in what direction your social duty and the ethical standard of your order point you, *swadharman api cha vekshya*. Whichever you consider, the result is the same. But if you are not satisfied with your social duty and the virtue of your order, if you think that leads you to sorrow and sin, then I bid you rise to a higher and not sink to a lower ideal. Put away all egoism from you, disregard joy and sorrow, disregard gain and loss and all wordly results ; look only at the cause you must serve and the work that you must achieve by divine command ; so thou shalt not incur sin."

It is the creed of the Aryan fighter; "Know God," it says, "know thyself, help man ; protect the Right, do without fear or weakness or faltering thy work of battle in the world. Thou art the eternal and imperishable Spirit ; thy soul is here on its upward path to immortality; life and death are nothing, sorrow and wounds are nothing, for these things have to be conquered and overcome. Look not at thy own pleasure and gain and profit, but above and around, above at the shining summits to which thou climbest, around at this world of battle and trial in which good and evil, progress and retrogression are locked in stern conflict. Men call to thee, their strong man, their hero, for help ; help them, fight. Destroy, when by destruction the world must advance, but hate not that which thou destroyest, neither grieve for all those who perish. Know everywhere the one Self, know all to be immortal souls and the body to be but dust. Do thy work with a calm, strong and equal spirit ; fight and fall nobly or conquer mightily. For this is the work that God and thy nature have given to thee to accomplish."

THE CABINET REVOLUTION.

Mr. Sidney Low, writing in the last number of the *Fortnightly Review*, points out the main differences between the old Cabinet system and the new one definitely inaugurated by Mr. Lloyd George's ministry and shows that this transformation cuts a deep chasm through British constitutional conventions. The former Cabinet was both ministerial and administrative, it was collectively responsible to Parliament, and officered and recruited entirely from the Parliamentary circle, intimately related to the House of Commons, framed on rigid party lines and conferring with absolute secrecy. The present Cabinet is not the ministry, and it is a body which directs but does not administer. The ministry has exchanged collective for individual responsibility; while the Cabinet has a very loose connection with the House of Commons, and for some purposes it is virtually independent of it; it stands outside the local party divisions, and admits to its confidential deliberations representatives of all the great States of the Empire as well as those of the United Kingdom, and it still holds private but no longer, in the strictest sense, secret meetings.

This new system was superseding the old one before the present Prime Minister came into power. Several of his innovations have been introduced in a more or less incomplete form already; and the ground has been prepared for him by events and the action of his predecessor. Mr. Lloyd George's 'New Model' consists of a Cabinet which is not the ministry, though there are plenty of ministers and more sub-ministers than ever. The four regular members of the Cabinet are relieved of administrative duties; they are not ministers in the old sense; but are only super-ministers. They are a Directory controlling all departments, but not individually responsible for any. As a consequence of this change, the individual ministers can no longer shelter themselves behind the cherished doctrine of collective responsibility. Under this system, the connection between the Executive and the Legislature is much looser. And the present Cabinet is neither a Committee of the House of Commons, nor is it a Party Cabinet. The Premier draws his strength from outside the walls of Parliament and owes his elevation to a kind of informal and irregular, but unmistakably emphatic, plebiscite. The House of Commons did not make him Premier, and it is doubtful whether it could unmake him. The Cabinet ignores parties and has no party-complexion; and it has largely divested itself of the famous and unique character of secrecy. Parliamentary control has been very sensibly relaxed by the War which conferred *quasi*-autocratic authority upon the Executive and the formation of the Coalition.

The most searching and permanent change will be the separation of powers, and the concentration of what may be called Imperial functions in the hands of a group of ministers standing apart from those, who are in the main concerned with the local administration of the United Kingdom. Government will be divided into two compartments or councils, one the real Cabinet of Empire and the other occupied with insular and domestic concerns. And the former will include ministers from the Overseas Dominions. And thus there will be something like a federation of the Empire for executive purposes; the Imperial Cabinet dealing with naval, military and foreign policy and common affairs. [illegible]ation will be regularised and brought [illegible] a co[illegible]y with constitutional principles. [illegible] Bombay So[illegible] Parliament is elected by all [illegible]ork done during [illegible]mpire, and when it has delegate[illegible]14 and ending w[illegible] assembly its legislative and oth[illegible]n might well [illegible]he United Kingdom. [illegible]ary work. [illegible]organizatio[illegible]

RIVER-NAMES IN THE RIG-VEDA.

Sir Aurel Stein, the well known explorer of Central Asia, and the translator of Kalhana's *Chronicle of Kashmir*, gives in the present number of *The Royal Asiatic Society's Journal* an analysis of the river names in the famous "Nadistuti" or "The Song of Rivers" in Hymn X, 75, of the Rig-Veda. The numerous ancient river names of North-Western India therein mentioned furnish an indication more definite than can be found elsewhere, of the area once occupied by or familiar to the Indo-Aryan people. The river names given in the verse strictly prove that they follow each other in strict order from east to west, from the Ganges and the Jumna on the east to the Jhelum, etc., on the west. The exact geographical knowledge thus indicated, ranging over a great extent of territory, may at first sight cause surprise, since it seems impossible to suppose that the composer of the *Nadistuti* could have had before him a topographical record in the shape of either text or map. Yet Stein says that this difficulty is removed by the light thrown by his actual travel experiences in Central Asia, where he has again and again come in contact with men, who, wholly illiterate and unable to keep any but mental records, could

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

yet without any apparent effort give a brief but reasonable account of the successive stages, with passes, streams and other natural features which they had passed on journeys extending over far more than a thousand miles. And it is safe to assume the same facility of obtaining exact information in ancient times; so that the only difficulty which the composer of the Vedic hymn is likely to have experienced, when recording the river names, was how to fit their sequence with his metre.

The rivers, Parusni, Asikni and Maruvradha intervene between the Sutudri-Satlej and the Vitasta-Jhelum. Professor Roth correctly identified the Asikni with the Chenab, whose classical name Akesines is undoubtedly derived from the Vedic form by some kind of popular etymology. The identification of the Parusni with the Ravi, though probable, cannot yet be considered as certain. The Maruvradha also is best identified with the glacier-[illegible] which joins the right bank of the [illegible] till known in Alpine territory a[illegible]cted, it [illegible]van river. And it does not re[illegible] have effec[illegible]ilological argument to prove th[illegible]l proceedi[illegible]harooward van, we have the direct [illegible] that those de[illegible]tive of a form closely linked with [illegible]aruvradha. The rivers Arjikiya and Susoma, which are enumerated in the hymn after the Vitasta-Jhelum, may be identified with the Sohan river and one of the chief tributaries which the Jhelum receives on its right bank. Thus, the analysis of all the river names proves that, leaving aside the still uncertain Arjikiya, they follow each other in strict order from east to west.

RAILWAY MANAGEMENT.

In the course of an article on Company *vs.* State Management of Railways in the February issue of the *Wealth of India*, the writer Mr. B. L. Vaipayee Bhimpuri, B.A , pleads for direct State control of Railways in India. He urges :—

"Although under State management we cannot have all the good results of private initiative, nor the advantages of competition, yet, since the Government are not likely to care so much for their own gains as the companies naturally do, and are not likely to be so shortsighted as the companies, in many cases, have been, and since the Government will probably better encourage the industrial development of India, and since by making a saving of some 19 lakhs annually, by taking over the management of the E. I. R. in 1919, they can reduce the burden of taxation, therefore we advocate strongly the management of the Indian Railways by the State."

ENGLISH NATIONAL EDUCATION.

Dr. Gilbert Murray, in the paper published in *The School World*, February 1917, solves many problems which confront us in the field of education. Some of the charges brought specifically against the English national system of education, he says, are, that too much time is spent on classics and literature, that the system and grade of teaching are not organised according to standards of intellectual capacity, but by distinctions of class, that modern languages are neglected, that the people do not use their time better or take their intellectual work more seriously, that teachers with more real culture behind them are required, and that in secondary schools some large differentiation of teaching is necessary, together with more supervision and help for boys and girls after they have left school.

The charge that the English spend too much time on classics and on literature, and that Germany concentrates on science, is not at all true. Secondary education is far more classical in Germany, where they have more Greek and Latin. English secondary schools give an overdose of classics and literature to upper-class boys, whether they are intellectually fit for it or not; and the middle and poorer ranks are shut out from the possibility of studying the classics at all on the mere ground of social inferiority. It must be made possible for all boys and girls of all classes to have the education for which they are intellectually suited. The alleged neglect of science is probably a case not of neglect but of bad organisation and low standards. The neglect of the study of modern languages is intimately and rather disgracefully true. And though this ignorance is partly due to the fact that English is a great and widely spread language; that English literature is so vast and vital, that literary curiosity might be satisfied without reading much of foreign books, still the neglect and its consequences are glaring and ought to be radically remedied.

Another desideratum is a greater number of real teachers with more real culture behind them, who have not merely the minimum of knowledge, but also an invaluable superfluity of knowledge. We need a further development of medical inspection and care for health, more supervision and help for boys and girls after they have left school, partly by continuation classes and partly by clubs. Both technical and vocational training and the humanistic side, *i.e.*, the culture of the mind and of the imagination must be improved,

LOCAL SELF-GOVERNMENT IN MADRAS.

The February number of the *Local Self-Government Gazette*, in reviewing the progress of local and municipal administration in the Madras Presidency for the last five years, very appropriately congratulates the Hon. Sir P. S. Sivaswami Aiyar on the excellent work accomplished by him during his regime as member of the Executive Council. There are two lines in which it is desirable that Local Self-Government should proceed in this country. One is the association of large numbers of non-officials with reference to the advisory part of the work and the other is the association of equally large numbers in the actual administrative and executive work of Local Self-Government. In either case it is satisfactory to note that Sir P. S. Sivaswami Aiyar's quinquennium shows marked advance on the old system.

"Nine new municipalities were constituted during the period under review; over fourteen councils had their franchise extended, the number of elective seates in them being raised by 63. At the commencement of the quinquennium there were sixty-one councils with a total strength of 896, of which 168 were officials and 728 non-officials, the elective seats numbering 449. At the end of it, the total strength rose to 1,019, officials, and non-officials numbered 186 and 833 respectively, and the elective seats rose to 502. There was a similar broadening of the constitution of district and taluk boards. On the latter the elective seats rose from 331 to 759."

The rules for the election of members to municipal councils and taluk boards have also been revised and the abolition of the separate qualifications prescribed for voters and candidates is a change in the right direction. A steady advance has also been made in the policy of entrusting the actual administration of local boards to non-official chairmen and presidents:—

"Eight councils were allowed to elect their own chairmen—among them important ones like Tanjore and Palghat. But it is in regard to rural boards that the greatest progress was made in this respect. We are as far as ever from non-official presidents of district boards, but the extended employment of non-official vice-presidents of district boards has been a marked feature of this period, the number of these rising from four in 1912 to eighteen in 1916. We may add that, quite recently, the Government have undertaken to try the experiment of elected vice-presidents in selected districts. More important than this, the system of non-official presidents of taluk boards received a large extension. During the period, over 28 taluk boards were allowed to have non-official presidents, three of them elected. More than a fourth of the taluk boards in the presidency were thus given non-official presidents during a period of five years—a rate of progress with which there is no reason to be dissatisfied."

Side by side with this, greater powers have also been conferred on local bodies, though the powers as yet granted cannot be said to remove all the irksome restrictions in matters of detail.

The Government's interest in the *Panchayat* system has considerably enhanced since the report of the Decentralisation Commission, but the policy eventually decided on has by no means given any satisfaction to the people. But the creation of more unions with larger electorates must have a decisive interest in the development of this system.

"Along with the broad[illegible] of the basis of the constitution of local b[illegible] co[illegible] has also been, during this period, a[illegible]mbay So[illegible] make them take an interest in [illegible] done during [illegible] like town-planning and sanitat[illegible] and ending w[illegible]t in recent years has been more fr[illegible] might well [illegible] initiated by Prof. Geddes and dev[illegible]y work. [illegible]anchester. Local bodies have been mad[illegible] ganizatio[illegible] an intelligent interest in planning the growth of towns, not in the haphazard lines of the past, but according to a systematic programme carefully conceived and worked out, and the conscience of the community made alive to the need for enforcing building regulations. This new spirit, which is bound to grow in years to come, has been sedulously fostered and, largely with the aid of Government grants, schemes of extensions on lines approved by experts are being carefully worked out and executed in large towns."

The awakening in sanitary reforms is due to the energy of this department. A scheme of popular health lectures is being tried, and in large towns the appointment of health officers and sanitary inspectors is generally deemed a step in the right direction. Turning to the legislative activity of the period, there is, of course, the Madras City Municipal Bill.

"The provisions of this Bill relating to taxation, have, we think, justly given rise to adverse criticisms, but it cannot be denied that in its essential features the Bill is a distinct improvement on the existing Act and is conceived on more liberal lines. Bills for the amendment of the District Municipalities and Local Boards Act and a Town Planning Bill have also been prepared."

The Public Services Commission

At the Meeting of the Imperial Legislative Council, on the 7th March, the Hon. Sir Reginald Craddock said with reference to the recommendations of the Public Services Commission :—

In communicating the Report, the Secretary of State requested that the Commission's recommendations should be expeditiously dealt with, and that he should be placed in possession of the Government of India's conclusions, regarding them as early as possible. The procedure, which the Government of India, with his approval, have decided to follow, was explained in H. E. the Viceroy's speech on the 7th February, but a detailed description is contained in the Home Department letter of the 25th January to Local Governments and Administrations, a copy of which is placed on the table. The Government of India have no doubt that the Local Governments, will be careful to ascertain non-official opinion, including that of their labl c ai tative Indians on all important ected, it ilry it will be of assistance, and have effecych that the occasion and method of l proceedi when may safely be left to the Local e that those de discretion.

The following is the text of the letter placed on the table :—"Sir, in continuation of the correspondence ending with the Home Department telegram, dated the 21st January 1917, intimating that the report of the Royal Commission on the Public Services in India will be published on the 25th January 1917, I am directed to address you on the subject of the procedure which the Government of India have decided, with the approval of the Secretary of State, to follow in dealing with the recommendations contained in the report. (2) Over a year has elapsed since the report was signed, and many of the subjects, with which it deals, are in varying degrees and for various reasons so urgent and important that it is desirable to make special efforts to deal expeditiously with the Commission's recommendations, and reach definite decisions, to which effect may be given as financial conditions permit in a pre-considered order of precedence. The ordinary procedure of reference to Local Governments, who in turn make a reference to their local officers, leads to voluminous correspondence, and is necessarily slow, and the Government of India have decided to adopt the following method of treatment in order to minimise the delay, which has attended the consideration of former reports. (3) In the first place, the Government of India, will, as expeditiously as possible, form provisional conclusions, regarding the Commission's recommendations, involving general principles and of general application, and H. E. the Governor in Council will be informed, without delay, of these conclusions as a definite indication of the lines which the examination of the report should follow and the limits to which the discussions thereof should be confined. His Excellency in Council will, at the same time, be requested to favour the Government of India within a specified time with his views on the general principles provisionally accepted. On receipt of these opinions, the Government of India will consider whether they should modify their conclusions, and the principles finally settled after such consideration will, subject to the Secretary of State's approval, govern the treatment of all the detailed recommendations. (4) Simultaneously the Government of India will commence their examination of the detailed proposals contained in the annexures to the report in accordance with the general principles provisionally adopted, and will endeavour to carry through this examination as rapidly as possible, in order to place the Local Governments, at an early stage, in possession of their tentative views on the Commission's detailed recommendations. During this interval, the Local Governments should aim at collecting information and completing the preliminary work on the same lines in order to be in a position to deal, without delay, with the references from the Government of India when they are received. (5) In all cases where the issues are not so simple as to render such a course unnecessary, H. E. the Governor in Council will be requested, in these references, to nominate an officer or officers to represent his or their views on the various points to be considered at a series of conferences, which the Government of India will hold with the representatives of all the Local Governments and Administrations. After the conferences have completed their work, the Government of India will again examine their tentative conclusions in the light of the recommendations made, and will then communicate their considered views to H. E. the Governor in Council for a further expression of his opinion. On the receipt of the replies of the Local Governments and Administrations to this final reference, the Government of India will once more consider their position and will decide on the definite recommendations which they will place before the Secretary of State. (6) While the Government

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of India trust that the scheme, outlined above, will enable all the recommendations in the report to be dealt with in a reasonably short time, they do not desire that this endeavour, after celerity in disposal, should obviate the necessity for observing a proper perspective in giving effect to the several proposals. Some of the subjects to be dealt with are obviously more urgent and important than others, and questions concerning the increased employment of Indians in the higher services are among those calling for an early settlement. In the former class, in dealing with each branch of the report, therefore the necessity for expediting the possibility of postponing till financial conditions are easier, the operation of the decision finally reached should be carefully considered, and the due precedence, which should be observed in giving effect to each scheme, should be specifically indicated, so that this matter may be discussed at the conferences referred to in the previous paragraph."

Sir William Meyer on the "Super-Tax."

The Hon'ble Sir William Meyer, in presenting at the Imperial Legislative Council, on March 7, the Select Committee's Report on the Bill to impose a fresh tax, said :—

We are going on the principle of taxing in one year the profits made in the year previous to that. It is the principle already applied in respect of profits of companies and other sources of income in the existing Act. It is, in fact, the only, feasible method, since we tax the profits actually ascertained, whereas if we taxed current profits we should be dealing with uncertainties. In so far as a man is taxed in a year, in which he has not been doing so well on larger profits in the previous year, he will have the compensation that in the third year the poorer business of the second will relieve him of some taxation. We also have to take into account the fact that certain companies, firms and persons have made large profits in 1916-17, owing to the war, and that, as I indicated in paragraph 61 of my budget speech, we propose to secure a portion of these excess profits to the State. It follows that Section 33 of the principal Act, which is quite inconsistent with this system, would be out of place in the principal Act having regard to the method of assessment there adopted, and marked for omission when we come to the general revision of that Act. As regards the argument that it is a hardship to tax profits of a past year that have already been allocated, I need only say that any new tax involves unexpected calls on people's income, and in the present case the tax can hardly have been altogether unexpected, for, there was certainly an anticipation of either an increased income tax, a super-tax or an excess profits tax. As indicated in the Select Committee's Report, we fully debated the question as to taxing companies and firms in respect of undistributed profits. That is the British practice and *primâ facie* we should be quite justified in standing by it. But, as indicated in the Report, we have made an important concession with reference to the special circumstances of India at the present time, that is, besides exempting from the taxable undistributed profits, the Rs. 50,000 previously contemplated in the difference between the total and taxable income, we make a further allowance not exceeding 10 per cent. on the whole profit in the whole sum, on which the ordinary income-tax is paid for amounts left undistributed in the business. Thus, if a company had made Rs. 40 lakhs [illegible] and distributed Rs. 32 lakhs leaving [illegible] lakhs allocated to reserve, or [illegible] one during [illegible] lified to the purposes of the busines[illegible] nd ending [illegible] khs would be reduced by Rs. 50,0[illegible] might well [illegible] the super-tax, so far as undistribut[illegible] work. [illegible] concerned, would be paid on as Rs. 3½ [illegible] only. As has been indicated in the Report, in making this concession we have had regard to the special circumstances of Indian enterprise and industry. We wish to encourage the expansion of capital applied to industrial enterprises by allocation thereto of a part of the profits already made. We have also taken into consideration the fact that assessments this year will be made on profits of 1916-17, and that those profits have, in many cases, been obtained at the cost of a special strain on plant and machinery, which would not be adequately covered by the general allowances made for depreciation. The 10 per cent. concession is intended to cover this also, and I desire to emphasise the fact that it is a very special concession not covered by British practice, and that we reserve to ourselves the liberty to reconsider it later on when things have become more normal, if circumstances seem then to point to the fact that the concession is needless.

Further, I should like to say that it must not be in any way understood that by giving a concession up to 10 per cent. of the total profits, the Government consider that that is the maximum amount which ought to be put into the expansion of the business. Another point which has been brought to my notice by my hon'ble friend, Mr. Bray, is this :—In the case of com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

panies and firms which make profits in India, but have also an English domicile, they are subject to the English income-tax and super-tax as well as to ordinary Indian income-tax. That raises what may be called the double income-tax question, which the Home Government have already promised to consider and which must, indeed, be considered in connection with *post bellum* measures calculated to draw the bonds of the Empire closer, but for the present we must take things as we find them, and we cannot give up any portion of our ordinary income-tax. I may point out, too, that it is not exactly the question of full double income-tax, seeing that for purposes of Home assessment income-tax paid in India is deducted from the assessable income in England. Well, now, as to the application of this to the super-tax, we cannot take into account at present the operation of income-tax and super-tax in England, but the excess profits tax levied there as a temporary measure is on a somewhat different basis, and we propose as a measure of relief, to lay down that where evidence has been given to the effect that in respect of Indian transactions or proceedings under this Bill, a specific sum had been paid to the British authorities in the way of excess profits tax, that amount shall be treated for Indian purposes as working expenses and will not be taken into account in calculating the taxable income. Another point raised in the Select Committee by my hon'ble friends, Mr. Bray and Mr. Wardlaw Milne, was the practical operation of Section 21 of the principal Act, which is one of the sections to be made applicable in the present Bill. That Section runs as follows :—Any person not resident in British India, whether a subject of His Majesty, or not being in receipt through an agent of any income chargeable under part 4, shall be chargeable under that part in the name of the agent in the like manner and to the like amount as he would be chargeable if he were resident in British India and in direct receipt of that income. I was asked whether, if a company or firm remitted directly to a partner or shareholder resident out of India the amounts accruing to such partner or shareholder by reason of profits or dividends, that transaction would be treated as an agency transaction within the scope of Section 21. My reply is that this would be a strained reading of Section 21 as it stands. We should regard the transaction described as a direct remittance to the beneficiary, and the agency provision would only come in where a third party was employed as an agent. We are prepared to make this point clear by executive instructions, our intention in connection with the present legislation being, as I stated at the last sitting, to disturb the existing law and practice as little as possible. As stated in the Select Committee's Report, we desire to treat Hindu joint families on the same footing, as far as possible, as firms. I say nothing more at this stage and would now move that the Report of the Select Committee be taken into consideration.

UTTERANCES OF THE DAY

The Viceroy on "The Indian Defence Bill."

H. E. the Viceroy made the following speech in the Imperial Council, on February 21st, 1917:—

The moment has arrived when the Empire must make a united and concerted effort to finish this war. We have been asked and we have agreed to send every available man to the decisive sphere of action. This will involve the sending away from India of certain British units. The army in India has always been composed of a blend in certain proportions of British and Indian troops, and military experience has shown that this blend constitutes the very best fighting force which we can supply. This principle of blend is no new thing in military history. Historically there are parallels and precedents, wherever armies have been composed of different races, and now to preserve the proportions of this blend, we find it necessary to replace these British units which are required for the decisive theatres of the war. To do this effectively and equitably it is obviously imperative to introduce compulsion in time of war. Volunteering is a broken reed. The Government must have power to give orders and enforce them. This was impossible as the law stood, and we propose therefore to introduce the Bill which will be placed before you. Moreover, as things stood on the basis of volunteering, some men were offering their services while others were getting off scot-free. This is clearly inequitable. There must be equality of sacrifice. To secure this we propose compulsion for all coming under the definition of European British subjects. We have seen it suggested that industries will suffer

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as a consequence of this measure. You cannot have legislation of this nature without the concomittant inconvenience, but the Government of India hope that under the provisions of the Bill and the regulations drawn up under it, no needless hardship will be imposed. Both the Commander-in-Chief and I had many discussions on this subject with leading businessmen in Calcutta. We recognise that in India there is no reserve of elderly men or ineffectives on which to draw for the replacement of those called up, and we hope that under the machinery of the Bill the least possible disturbances of industry of hardship will take place.

I turn now to our invitation to Indians to offer their services. As I pointed out in my opening speech to the Council, compulsion in this case is out of the question on practical grounds, but we will endeavour to deal with those who apply to be enrolled. Hon'ble Members will have realised from my previous remarks that volunteering, as we have known it under the Volunteer Act, 1868, is dead. It is useless to spend money on a military force which is bound to be ineffective under the condition and nature of its existence. So this new force will come under the provisions of the Indian Army Act. It is intended to be an effective military organisation. As the British element under this Act is to be dealt with, on the same lines as those of the British Regulars, so the Indian element will come under the same military conditions, which apply to the Indian Regular Forces, saving the fact in both cases that service is to be within India. I do not think it necessary for me to labour this point. We cannot play at soldiers in these times, nor, I hope, shall we play at soldiers at any future time. Military efficiency must be the sole criterion of our policy.

One last word. This is an urgent measure, but we feel that time lost may be gained if Hon'ble Members will co-operate with us in making this Bill a useful and practical measure. We did not enact it as an Ordinance, for we felt that with the Council sitting it should be brought before the Council for its consideration. We have not put it before you as a war measure to be passed in all its stages at one sitting, for we look forward to your help, advice and co-operation in the passing of this important measure. We recognise that your special knowledge may prove of invaluable assistance, and so I commend our proposals to you in the sure and certain confidence that your minds are at one with ours at this present juncture, namely, to do all within our power to secure the victory of the Allied arms.

Sir Sivaswami Aiyar on "Indian Volunteering"

Presiding over the meeting of the citizens of Madras, held on the 8th March, at the Gokhale Hall, Sir P. S. Sivaswami Aiyar said :—

The object of our gathering this evening is to make an appeal to the people of this Presidency to respond to the call which has been made by His Excellency to contribute our man power towards the formation of the Indian Defence Force. For more than a generation our people have been praying for the privilege of volunteering and for opportunities for participating in the defence of the country. Deeply grateful as we are to the Government for the peace and security we enjoy and for the protection afforded by the British Navy and Army, we have felt aggrieved by the absence of opportunities for military training, so as to enable us to serve in the defence of our own country. What could have been more humiliating than the feeling of abject helplessness and fear which overtook a during [illegible] of Madras and induced them to q[illegible]ending [illegible]nds when a few shells were fired by light well [illegible]bout three years ago? [illegible]y work.

The opportunity for w[illegible]nizatio[illegible]ve waited so long has come at last, and if we do not avail ourselves of it now, it may not arise again. Our whole future, our sense of national self-respect, our advancement in the scale of nations, are all staked upon the answer which the country will furnish to this call to serve our country and the Empire to which we are proud to belong. In the consciousness of a new-born sense of nationality, we have been pressing our claims for political privileges, but what better way is there of proving our fitness for political rights than loyally and cheerfully shouldering the burdens of the Empire and showing by our conduct that we are prepared to incur all the sacrifices necessary for the commonweal? It is by the manner in which we shall rise to our duties, in this hour of trial and of common danger, common not only to our Empire but to the cause of freedom and justice and right, that we shall be judged, and, rightly judged. Our duty at the present moment is to offer our personal services and our material resources to any extent that may be required by the Government, so that this devastating war may be brought to as speedy and victorious a close as possible. We are at present in the dark as to the extent of help required of us in the way of men. You will remember that H. E. the Viceroy drew attention to the possible limitations upon the Government's power of training and equipment,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and he expressed his confident expectation that as many men will offer their services as the military authorities can deal with in the way of equipment and training. Whatever may be the demand, it must be fully honoured. We are also not aware yet of the conditions of training and service, but whatsoever they may be, it would be most unpatriotic to indulge in any carping criticisms and make them a pretext for not joining the Defence Force.

We are all of us anxious that opportunity should be given to train Indians of sufficient status and education as Commissioned Officers and that the ranks of Commissioned Officers should be thrown open to men as and when they are qualified. An announcement to this effect was made by the Secretary of State, but to what extent it will be advisable to carry out this promise must necessarily depend upon military considerations, of which we cannot possibly undertake to judge. Je pue been asked also whether these arrangetheir labd continue after the period of the war. cted, it ll matters which I would ask you to di have effecyour consideration. We may be confl proceedwhen the war is over, all these questic thatthwe dealt with in a reasonable, sympathetic and even generous spirit. I would appeal to the young men to join in as large numbers as the authorities desire. Do not raise questions of pay, rank or privileges. The burdens you will be called upon to bear will be serious, but the risks you run by being called upon to serve in India will be nothing in comparison to those cheerfully faced by millions of young Englishmen of all ranks and classes and by thousands of our own countrymen who are serving abroad. This is not the time for meticulous calculations of self-interest or of prudence. I have received a letter from a friend in Bombay who has passed the age at which people are recruited and who nevertheless applied to the military authorities for enlistment. Many are the men of mature age who wish that they might be young again, so that they might offer themselves for the service of the country.

If your enthusiasm for ideals and for the nation's progress is genuine, join the force in hundreds, if not in thousands. To parents and guardians also I would appeal to let their sons and wards go forth and answer the call of patriotism. I may quote here an appeal which the great Admiral Togo made to a number of young Japanese officers, whom he wanted to send forth to bottle up Port Arthur. He told them: "My lads, if I had only one son, I would send him on this dangerous mission. If I had a hundred sons I would send them all on this dangerous mission." That is the spirit in which the Japanese have acted and that is the spirit which ought to actuate our leaders. We are often in the habit of referring to Japan and to the progress attained by Japan in asking for political privileges, but let us prove that we have got the same sense of chivalry and patriotism as Japan. In a country like India, which has been the nursery of soldiers and of chivalry, it should be unnecessary to appeal to any foreign examples. We are now passing through a most momentous epoch and by our conduct on this occasion shall we be judged. If we fail to respond, we shall cover ourselves with indelible disgrace and lay ourselves open to the charge of incurable effeminacy, and all our agitation in the past for volunteering and military career would signify nothing; but I venture to hope that young India will rise to the call of patriotism and loyalty and the full height of its manhood, and that the response will prove a turning point in history.

Hon. Mr. Sastri on "Compulsory Education."

The following is the text of Mr. Sastri's speech in support of Mr. Sarma's primary education resolution moved in the Imperial Legislative Council on the 28th ultimo:—

I am constrained to remark at the outset that the hon. member for education has failed to come to grips with his subject. He has been content to play the part of the destructive critic which I thought was a special province of the non-official members. The Hon. Sir Sankaran Nair has failed to disclose his hand altogether. Let me remind him that on the historic occasion to which he drew our attention when Mr. Gokhale laid before this Council plans for making elementary education compulsory, his predecessor in office acknowledged it to be the duty of Government to make education universal and he himself looked forward to making it compulsory though not perhaps in so short a space of time as his non-official friends would have it. It was not a purely destructive criticism that Sir Harcourt Butler indulged in. On the contrary having excited hopes that sooner or later Government would embark on a bold programme of elementary education, he concluded with a suggestion, a positive suggestion to this effect: "If hon. members are so keen on having compulsory elementary education, I would suggest to them a more practicable course than this. Let them go into the local Legislative Councils and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

there get measures passed for allowing municipalities and district boards if they cared to make elementary education compulsory." That was a positive suggestion he threw out, not merely to escape the responsibility of adopting compulsion for himself but to suggest what he thought was a more practicable course.

Now some of us took up the idea in right earnest. In Bombay and in Madras and I think in one other province in India, members of local council have brought up a resolution for this purpose. What was the result there? We were thrown back on the Government of India. Every such Government told those members, the Government of India have for the time being decided compulsion, and we wont hear you on that subject here. We are coming here again to ask you once more and if you do not return a satisfactory answer, I can only say that you treat us like the rotten pumpkin in the old story . . . so here we are beaten to and fro between this and the local council but we do not get any further. I really wished to ask the hon. member for education to consider seriously why his department was created. I remember, sir, quite clearly at the time the Department of Education was created and Minister appointed with a whole establishment, it was said in Parliament that it was largely for the purpose of stimulating elementary education in this country, and Mr. Gokhale time after time used to refer to that as an era that marked definite progress in the success of his own campaign for free and compulsory education.

Now not being in the secret, I will not say that the Government of India has been doing nothing, but so far as the outside public is concerned they do not know any programme that has been laid down. On the contrary so far as they can see, they have seen a Patna University Bill which has set the country on very controversial grounds, and they have seen a movement for calling the Calcutta University into account. But what is the programme of elementary education that the department has got to its credit? It is now 4 years since it was proclaimed that 91,000 schools and one lakh of pupils more would be brought into existence. I ask what financial stability for this programme has been arranged by the Government of India? Have they put forward a definite scheme of progress from year to year? Have they taken up elementary education in right earnest as a duty they owe to the people? In point of fact, sir, it has been urged that perhaps as much as war, as much as this desperate war in which we are engaged, elementary education is an important necessity. I would ask the Department of Education to consider that to the demands made on the war, they should add their own as of not less importance and not less exacting, so that after the war year after year so many more schools will be added to the system of elementary education, so many more boys and girls will be brought under the healing influences of education.

I was rather surprised, sir, that the detail of school attendance committee was dealt with to the extent that it was. Well, if we must go into such details, I would ask the Council to consider one or two things. Those committees have never been tried in this country. We have never had any compulsion. What is the occasion to say beforehand, before a single school attendance committee was ever started and had a moment's work to its credit, what is the good of saying those committees will prove unsatisfactory? Sir Verney Lovett told us that school committees won't answer, local boards won't [illegible] municipalities won't answer either, they are [illegible]during [illegible]ed, they have very little money, the people [illegible]nding [illegible]y and so on. Yes, people are busy, but [illegible]ght well [illegible]neglect such duties? If it be found that [illegible]rk. [illegible]tion boards and municipalities are unequal to the task, I shall be one of those to advocate that special bodies be created for the purpose of advancing elementary education within each area. Recently, sir, the Bombay Government appointed a strong committee for the purpose of going into the whole question of the constitution and finances of the local bodies, and they came out with a strong recommendation. I think it was unanimous, to the effect that in local areas it was based for educational purposes to create a special school board. I have felt, sir, for some time that it would be a great advantage to constitute such school boards in every area. Now it may be a difficult question how to work these school boards constitutionally alongside local bodies. That is a point I shall leave experts to decide.

Now, sir, the member for education spoke of the duration of school life as being unduly low. School life is really exceedingly short in this country and do you know—hon. members of this Council may not know—that this shortness of the duration of school life has been recognized to be the greatest evil of this evil system of elementary education that we have in this country, and what was the remedy proposed? Sir Alfred Bourne has written in one of his luminous reports that so long as there is no complusion in this country, it is impossible to increase the duration of school

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

life. Now we were told: you go and persuade people to send their children to school, and we were told last time when the whole matter came under discussion in this Council, that in Japan wise people tried persuasion before they reverted to compulsion. I have no doubt that in England also this experience was similar. Some time in 1817, a committee was appointed to enquire and find out what the effect was of the working of the Act. They produce a very remarkable document, most interesting reading it is. One of the passages relates to this very point of how compulsion has been actually worked. They reported that the cases of people brought before magistrates under the Act were comparatively few and that the results were very good. Their answer was that people went and persuaded who knew where they were, because compulsion had been enacted, a law had declared that it was the parents' duty to send their children to school, and it was penal on the part of a labourer to employ children for their labour. Because these laws had been enacted, it was possible for moral persuasion to have effect, backed as it was, by threat of legal proceedings. Now give us that lever; tell us that there is compulsion in the land, and we promise here also that compulsion will be employed as little as possible and that moral persuasion will be resorted to as far as possible. Another remark that was made on that side of the house reminded me of an old incident in the history of elementary education in England. Some generations ago it was quite the fashion of people to deride the idea of a liberal education for the children of the poor. The methods of educators then ran on special social class lines—one kind of education for the children of gentlemen, another kind of education for gentlewomen and a small amount of rudimentary learning, absolutely contemptible, for the children of the poor. I am glad to hear that that kind of thing has long gone by in European countries. Nobody now thinks that because a man was born the son of a labourer, the best thing to teach that child is how to be a labourer always and never to desire to rise above the rank of his father. To teach children to desire to work humbly in the station to which they were born was an old fashioned ideal from which all Europe, all America and every civilised country in the world has moved off. Then there used to be a prayer I have read, in which the children were asked to pray every day, 'May I be brought up so as to be a humble and dutiful citizen, looking up with reverence to those who afford me this education, and the means of subsistence,' and so on. Now that is a kind of attitude which grandmotherly people like their children to adopt, but it is no longer an ideal of civilised countries. We want children to grow up to the full stature of their ability. Whatever they are competent to do, let them be able to do it. Let no man's capacity run to waste, and let it not be in the power of any human being to say to another, 'you are born to that station, and in that station if I can I will keep you.'

Now I would ask, sir, before I sit down one final question, Is it or is it not the case that the Government of India are going after all to face this question. I think they are going to do so. Though they do not like in this debate to acknowledge their obligation, I am perfectly certain that one day this Government is going to show in the matter of elementary education that they are actuated by precisely the same ideals as we are actuated by. They cannot say: we are a foreign Government, we cannot bear the odium and the unpopularity of a compulsory measure. If the Government were our own, if we were in charge of the portfolio and all the machinery of Government as you are to-day, we should probably have no hesitation in going in for a measure of compulsion. And I dare say, sir, you are all rapidly moving to the attitude when you will recognise that being in our place, that is the place which belongs to us by nature, you should likewise incur our responsibility. Go forward in a bold spirit, I assure you all educated India is behind you; do not raise false phantoms, the people will not come forward and ask for compulsion. If they could ask you for a measure of compulsion, compulsion will be meaningless. Did they come forward in England? Associations after associations in various towns, religious bodies, secular bodies, all composed of leaders of thought, in campaign after campaign covering generations, urged compulsion and, finally, the populace was coerced by Parliament. It is wrong to expect in India, backward as she is, standards of political advancement and political ideals which have been proved impossible in countries like England. I ask the Hon. Sir Sankaran Nair to go forward boldly; let him have no scruples whatever in this matter. I would ask him further to use all influence he has, as head of the powerful department under his control, with the Government of India and get as much for that department as possible. No part of the finances of Government can be better employed than in starting new schools and paying teachers for the purpose.

Prohibition of Labour Emigration.

The following Notification was published as a *Gazette of India Extraordinary*, on March 12,'17:—

In pursuance of Section 2 of the Defence of India Act, as subsequently amended, the Governor-General in Council is pleased to direct that the following amendment shall be made in the Defence of India Consolidation Rules, 1915, namely, after Rule 16-A. The following Rule shall be inserted, namely:—16-B.—No native of India shall depart by sea out of British India for purpose of, or with the intention of, labouring for hire in any country beyond the limits of India, provided that the prohibition imposed by this Rule shall not extend to any person or class of persons, permitted so to depart by a general special license, granted by such authority as the Governor-General may appoint in this behalf.

Explanation:—"Labour" in this Rule means unskilled labour, and does not include any work or other occupation of the nature referred to in Chapter 11 of the Indian Emigration Act 1908.

Commenting on this Notification, *New India* writes:—The Defence Act of India has at last been used for a good end—the immediate stoppage of the emigration of Indians with the intention of labouring for hire beyond seas. . . . The Governor-General in Council has responded to the demand of India, and has struck down the accursed system. It is probable that having thus sharply stopped the abuse of emigration the Government will consider the whole question, and we shall hope to see an Act introduced on the lines of that which passed its second reading the other day in the Madras Parliament. Lord Chelmsford has acted with great courage and decision, and India owes him gratitude. What a comfort it is to see the Government answering India's demand, and acting as a Home Rule Government would act.

Scholarships for Indian Students Abroad.

At a recent meeting of the Imperial Council, the Hon'ble Mir Asad Ali elicited from the Education Member the following reply, regarding the scholarships available for annual allotment:—Two Government of India scholarships; ten technical scholarships; two Oriental scholarships and one scholarship for Indian women graduates. The number of Mussalman candidates who have been awarded such scholarships since their inception is 26, excluding the two who resigned the scholarships awarded them.

Information for Indian Labourers.

Mr. A. H. West, representing Mr. M. K. Gandhi, publishes the following notice:—

(1) Everyone can choose either to re-indenture or to work as a free man.

(2) If a man re-indentures, he will incur no punishment in India by Mr. Gandhi or anyone.

(3) By working as a free man for three years, anyone can make a permanent home in Natal and go to India and return whenever he likes. He must then pay his own passage.

(4) Those who completed their indenture during the past twelve months can claim a free passage to India.

(5) If twelve months have expired, application can be made under the Relief Act for a free passage.

(6) At present, free passages under the Relief Act are suspended. Application should be made in April next.

(7) Those who re-indenture can claim, at the end of their contract, a free passage to India for themselves and their children; but a wife cannot claim such free passage unless she herself re-indentures.

(8) Anyone accepting a free passage to India will not be allowed to return to Natal.

(9) Owing to the war, the Government do not allow gold coin to be taken from South Africa. Returning immigrants may, therefore, deposit their gold coins with the Protector who will issue a receipt, and the money will be paid out at the rate of fifteen rupees for every sovereign in India.

Note.—After putting before the people the facts, I do not advise anyone to re-indenture. Better, by far, accept less wages and preserve their independence and self-respect.—*Indian Opinion.*

A Christian View of the Indentured System.

The *Gnyanodaya* of Bombay writes:—"On behalf of the Indian Christian community and of the Missionary body, we express our wholehearted, most earnest, protest against any prolongation of the Indenture System by which Indian coolies are recruited to four British Colonies. It is an immoral, degrading, humiliating system which has been so effectually shown up, that no delay in ending this bad arrangement should be tolerated by Government. . . . The one and only righteous, and even politic course, is to end the system immediately."

The Nizam's Gift.

H. H. The Nizam of Hyderabad has been contributing to the British navy the sum of £20,000 per mensem from September 1914.

In accepting the gift, the Secretary of State cabled to the Viceroy on the 9th March 1917 :— His Majesty's Government gratefully accept the Nizam of Hyderabad's munificient gift to the Admiralty. Please convey to His Highness the warmest thanks for the splendid generosity, both on behalf of His Majesty's Government and of the Lord Commissioners of the Admiralty, who gladly agree to apply the gift in accordance with His Highness' wishes.

Kapurthala Administration.

The administration report of Kapurthala State for 1915-16, records that the major portion of the State's Imperial Service Infanty has been serving throughout the twelve months in East Africa. The gross income approximated closely to 32 lakhs of rupees, the Oudh Estates contributing to this total rather less than 15½ lakhs. Some 3¾ lakh of surplus funds have been invested in the French war loans, the State co-operative credit societies, and the Hoshiarpur Doab Branch Railways.

Industries in Marwar.

The principal industries of the Marwar State are the different quarries worked by hand power. The marble quarries, at Makrana, last year produced 1,24,654 maunds of marble, which is famous throughout the whole of India. The major portion of the output was despatched to Calcutta for the construction of the Victoria Memorial. Next in importance are the sandstone quarries at Jodhpur, Sojat and Khatu. We are told that these stones are utilised for ordinary and decorative building purposes. The working of gypsum mines at Kairat, Manglode, Chutisan and Chirimatai and of Fuller's earth at Kapurdi and Barmer, we understand, are the other industries on a small scale, while the newly started wolfram, manganese molybdenum and tin quarries near Degana promise to be a thriving industry.

H. H. The Raja of Faridkot.

His Highness the Raja of Faridkot has generously offered to the Government, free of rent, the use of his house at Simla known as "Ravenswood" during the continuance of the war for use as an office. The offer has been gratefully accepted.

The New Diwan of Baroda.

Manubhai Nandashanker Mehta, M.A., L.L.B., who has succeeded Mr.V.P. Madhava Rao, C.I.E., as Dewan of Baroda is the son of the late Rao Bahadur Nandashankar Tuljashankar, the late Diwan of Cutch and Lunawada and the well-known author of the historical novel, "Karan Ghelo" of Guzarat.

Mr. Manubhai entered the Baroda Government service in 1891 as the Professor of Logic and Moral Philosophy, where he enjoyed the highest regard and esteem of the College students. In 1899, he was taken up as the Private Secretary to His Highness the Maharaja and subsequently was made Hazur Kamdar, during which period, in 1900, he had been to the continent with His Highness. In 1905, he was made Nai-Diwan ; he held also the office of Nyaya-Mantri, Famine Commissioner and such other posts of great importance and responsibility till his recent elevation to the Diwanage of His Highness' Government. During all his varied career, Mr. Manubhai enjoyed the implicit confidence of His Highness and highest regards of the people of Guzarat.

Court Language in Patiala.

About a couple of years ago, His Highness the Maharaja Sahib, of Patiala, directed that the language of offices and courts in the Patiala State shall be Panjabi. Some doubt having lately arisen as to the language in which pleaders were expected to address the courts, Diwan Bahadur Daya Kishan Kaul, Financial and Foreign Secretary, has emphasized the previous orders by notifying that the language shall be Panjabi, the mother-tongue of the people.

Indore Chamber of Commerce.

A Chamber of Commerce has been established in the Indore State in accordance with the wishes of the commercial community in the State. At an inaugural meeting held for the purpose, Mr. S. S. Mehta in a lengthy address explained the plan and purpose of the Chamber, and a provision of sub-committee was formed to frame rules and regulations.

H. H. The Nawab of Rampur's Offer.

H H. the Nawab of Rampur has placed at the disposal of Government for the duration of the war his large Brook Hill estate, at Naini Tal, comprising four houses, and also his three Bareilly houses, for the use of the sick and wounded. The offer has been accepted by the Government.

INDUSTRIAL & COMMERCIAL SECTION.

Sir W. Meyer on the Cotton Duties.

In the course of his financial statement in the Imperial Council, on March 19, Sir William Meyer referred to the Cotton tariffs as follows :—

The taxation already described (super-tax) will yield us in all £1,850,000. The way in which we propose to make the bulk of the remaining provision required is one which will, I think, be received with satisfaction in this Council and in the country in general, while the incidence of the tax will be of much more general application than that of the imposts above described. It will be remembered that in introducing the Financial Statement for the current year, I said that we had been anxious to raise the duty on imported cotton goods, while leaving the cotton excise duty, which has formed the subject of such widespread criticism in this country, unenhanced, subject to the possibility of its being altogether abolished when financial circumstances are more favourable. But His Maiesty's Government held that in the then circumstances such a course would be undesirable, and decided to leave the cotton duties question to be considered later on in connection with the general fiscal policy which may be thought best for the Empire and the share, military and financial, that has been taken by India in the present struggle. To-day I am able to announce that in view of the taxation required to make our war contribution worthy of India and of the place we desire her to hold in the Empire, His Majesty's Government have now given their consent to our raising the import duty on cotton goods from 3½ per cent. as it now is to 7½ per cent., which is our present general traiff rate. The cotton excise duty will remain at 3½ per cent. There can be no question of our doing away with an impost which is estimated to produce about £320,000 next year at a time when we have to impose extra taxation. By this means we estimate that we can get an additional £1 million. I am sure that the action of His Majesty's Government, following as it does on their recent association of India with the special Imperial Conference called in connection with the war and the measures to be taken thereafter, will meet with the greatest appreciation in India.

The enhancement of duties, above indicated in respect of imported cotton goods and jute exports must come into effect at once. The application of these duties during the current month will yield about £80,000, and the receipt figures of the revised estimate must be added to accordingly.

Lancashire and the Indian Cotton Duties.

The Members of the Lancashire Cotton Trade deputation waited on Mr. Chamberlain, the Secretary of State for India, on March 12, to protest against the imposition of a tariff on Lancashire exports. They declared that the duty protected the Indian manufacturer and therefore contravened the stipulation laid down and twice expressed in resolutions of the House of Commons. The duty was unjust and was the heaviest blow that the Lancashire Cotton Trade had ever suffered. The speakers asserted that the Government policy might prejudice Lancashire's efforts in the War if the duties were persisted in, and there would be no rest in Lancashire whatever in consequence till justice was secured.

Mr. Chamberlain, replying, said that the Government would be very sorry if any measures, they were obliged to take, interfered with the Lancashire cotton trade, which was a great imperial asset. He again emphasised that the increase in the duty was necessary to enable India to contribute a hundred millions to the War expenses. He was very sorry that the free gift by the people of India, made with genuine goodwill, should occasion strife in England, but he begged the members of the deputation not to under-rate the strength of Indian feeling on the subject.

Mr. Chamberlain pointed out that, while Lancashire imported all her requirements free of duty, the Indian manufacturer had to pay duty on all his requisites. Thus protection hitherto had been on the side of Lancashire. He had been assured that the effective competition of India with Lancashire was less than two per cent. of the whole trade. Within the past ten years, Lancashire's looms had increased by 120,000 which exceeded the total of India's looms. The deputation were dangerously mistaken, if they thought that the Government was merely the tool of a few greedy millowners in India. He emphasised the unanimity of Indian and Anglo-Indian opinion that the special position hitherto accorded to cotton in India was a great injustice to Indian.

The Maharajah of Bikanir declared that there had been an intense feeling of irritation, suspicion and injustice throughout India with regard to the question, and any attempt to upset the recent legislation would revive, if not intensify, the feeling of injustice and humiliation. Such a result would be most deplorable in view of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fact that India had shown every desire to make all sacrifices of the Empire.

Sir S. P. Sinha denied that there was any desire to benefit the Bombay millowners.

Replying to the suggestion that the question should be postponed, Mr. Chamberlain said he was eager to see the fiscal policy of India reconsidered after the war in conjunction with the fiscal policy of the Empire as a whole, and when that was done, he hoped India would bear in mind Imperial obligations and responsibilities and try to frame an Imperial system. He added that the reversal of the Government's decision would be a calamity for England, and he could not hold out any expectation thereof.

A Resolution accepting India's war gift of £100 millions was passed in the House of Commons on March 1914.

Mr. Asquith moved an addendum to the Government motion that the increase should be reconsidered after the war in connection with the fiscal relationships of the Empire.

Mr. Lloyd George accepted the addendum, and the motion, as amended, was unanimously adopted amid cheers, after the amendment of the Lancashire members had been rejected by 265 votes to 125.

Indian Cotton.

Mr. J. M. Todd, Professor of Economics at Nottingham University, in a paper at the Royal Society of Arts recently, on "The World's Cotton Supply and India's Share in it," said the present price was the highest on record since 1869. The high prices were the result of natural and economic causes which might well be repeated if the conditions of supply were allowed to remain as at present. It was desirable to develop other sources of supply of cotton outside America, and it would be to our greatest advantage if it were found in the British Empire. India was the only country in the world from which there was any hope of obtaining an early if not immediate, increase of 1,000,000 bales per annum of new cotton and there was every reason to believe that India could maintain such an increase cumulatively till her present crop was at least doubled. Lord Emmott, who presided, said that India was undoubtedly the only country we could look to for a great and rapid increase in the production of the necessary supplies of cotton for the world's needs. But if the quality of the cotton hitherto sent by India did not show improvement, little relief could be looked for from there, at least so far as Lancashire was concerned.

The Housing of Factory Employees.

By desire of Sir Thomas Holland, Chairman of the Indian Industries Commission, the Consulting Surveyor to the Government of Bombay has issued a circular letter addressed to employers of labour, asking for their co-operation in investigating and finding out the exact conditions as to the housing of factory employees, so that appropriate action might be taken to bring about their amelioration. In the course of his letter, the Consulting Surveyor says:—"It is quite unnecessary to remind you of its extreme importance from the factory and millowners' point of view. It is clearly the business of the employer of labour to consider carefully the conditions which will conduce to increased production and to study the means whereby his increased wealth may lead to an improvement in the physical and social welfare of his employees. In a survey of this nature the proper housing of the working classes must of course take a very prominent place. It is generally admitted that the existing housing of the working classes in this country does not tend to improve their physical, moral or social status, and that indeed is the direct cause of their want of stamina and diminishing earning power."

We understand from the *Eastern Engineering* that a copy of the letter has been forwarded to the Bombay Municipal Corporation, who have sent it on to the Commissioner with a request that if there be no objection, the information asked for by the Consulting Surveyor to Government might be furnished.

Slow Progress of Power-Mills.

It is more than 30 years since industrialism got a firm footing in some of the big towns in India, says a contemperary, and since then the number of power-mills has been steadily growing. Nevertheless, in the course of a whole generation they have failed to make any serious effect on the economic organization of the state. Of the population of India, calculated at 315 millions, 35 millions only are supported by industries; of these 18 millions were classed at the census as dependants, and only 17 millions as actual workers. Of these 17 millions, only 8,23,000 are employed in the 2,983 power-mills now existing in India, while no less than 1,66,92,000 are engaged in small workshops and home handicrafts. The fact that not even 1 million out of 315 millions are at work in power-mills after 30 years of progress suggests that there must be some fundamental difference in the conditions of India and Lancashire which affects this particular problem.

After-War Trade.

At the annual meeting of the Rangoon Trades Association, on March 1915, Mr. W. G. Turner, in his presidential address, referring to trade after the war said: "The British Empire has obligations and duties in connection with her Allies and these do not cease on the day peace is declared. If we are going to give France, Belgium and Poland a chance to reconstruct their shattered industries, it can only be done by prohibitory tariffs against enemy manufacturers, by protecting ourselves against the system of 'dumping,' subsidised shipping and bounty-fed industries. We may not adopt these methods ourselves, but the legislature should make it impossible for alien enemies to continue these insidious attempts to undermine British trade. What was a debatable policy in the past becomes a sacred duty in the future.

"We have another powerful weapon in the coming industrial war. That is the fact that the British Empire is by far the largest producer of raw materials. I see no reason why we should not, by the introduction of import duties, conserve these raw materials or, at any rate, such materials as we hold the monopoly of, for our own benefit. There is not the least doubt that if the enemy held this commanding position, they would take full advantage of it. We often grumble at foreign competition, but at the same time ourselves supply raw materials at cost price."

Paper from Cotton-Stalks.

There appeared a few weeks ago in several English dailies a short report of a continental discovery of far-reaching economic importance. It was reported that a Berlin chemist had succeeded in preparing paper pulp from cotton-stalks. The idea was certainly one which could be taken up in a large cotton growing country like India, and we are glad to learn that at least in one Indian Province successful experiments have been initiated already through the efforts of the Central Provinces Agricultural Chemist, Mr. Slymen. We understand that an Ellichpur gentleman, Rao Saheb G. N. Sahasrabudhe, sent to the Director of Industries of the Central Provinces some cotton stalk samples which had been examined in the Government Laboratory. The results shown are encouraging.

We give below the report on the cotton-stalks by the Nagpur Agricultural Chemist :—

The utilization of cotton stalks in the manufacture of paper pulp has been suggested at various times during recent years chiefly in America. In order to determine the details of the process and the nature of the product obtained, experiments on a laboratory scale were made in the Agricultural Research Institute, Nagpur. The analysis of cotton stalks was first made, and they were found to contain 42·4 per cent. of cellulose, 10·3 per cent. of moisture and 5·8 per cent. of mineral matter. The cellulose was determined by Cross and Bevans' method and was of a good white colour. For the preparation of paper pulp, the cotton stalks were roughly broken up into pieces about half an inch long and digested in a laboratory autoclave at a pressure of 3 atmospheres (145. C.) with caustic alkali solution for about 5 hours. After washing, the stalks were treated with bleaching powder. The pulp obtained is, therefore, a Soda pulp, but the alternative methods of preparing a sulphate or a sulphite pulp might also be tried if the chemicals were easily available.

The important process of beating the pulp could not be carried out very effectively in the laboratory, as no hand beating can take the place of the beating engine of the paper works. Small samples of paper were, however, made which go to show that paper can be prepared from cotton-stalks. The samples do not pretend to indicate what might be obtained by the proper appliances of paper works as no filling or finish has been given.

If Rao Saheb Sahasrabudhe would like to go into the matter further, I would be quite willing to write to leading manufacturers of paper making machinery and get an estimate from them of the cost of plant for a paper works. The local considerations are (*a*) quantity of material available within a reasonable area; (*b*) cost of chemicals and fuel; (*c*) quantity and quality of water supply; (*d*) product to be obtained whether (i) paper completely made or (ii) half stuff, *i.e.*, bleached but unbeaten pulp.

Bengal Home Industries.

A meeting of the Executive Committee of the Bengal Home Industries Association was held at Government House, Calcutta, on the 27th February. The funds of the Association now amount to Rs. 50,000. Premises for the showroom and sale depot have been taken at 3A., Hogg Street, Calcutta, immediately behind the Municipal offices, and it is hoped that H. E. Lady Carmichael will open them shortly before her departure. Much interest is being taken in various districts. Many district committees of the Association have been formed or are in process of formation. It is hoped that substantial financial support will be obtained from the Government.

Measures for Fostering Village Industries.

The *Bengal Co-operative Journal* suggests the following measures for preserving village industries :—

The remedies are two : education and organisation. By education is not meant mere literary training—though, of course, the children of craftsmen must be taught at least the three R's,—but a thorough grounding in the technicalities of their art. Village schools should be established to demonstrate improved machinery suited to the pockets and conditions of cottage workers. Children should be taught to welcome and adopt every labour-saving machine adapted to their needs. A central technological institute should be continually at work, testing new inventions and bringing the most practicable of them to the notice of craftsmen in innumerable village schools. Craft secrets should be investigated, and the best of them exploited. Organisation is needed in the purchase of raw material, in the finance of its manufacture, and in the sale of the manufactured article. Here it is that the co-operative method offers the most promising solution. In Bombay Presidency, 31 co-operative societies have been formed, composed entirely of weavers with the object of buying yarn, dyes, implements, etc., at wholesale prices, advancing cash loans to weavers, and helping to some extent in the sale of cloth during the slack season. Owing to the apathy and ignorance of the weaving classes, the success obtained has not yet been very striking. But here and there results have been remarkable, and there is no reason to think that the plan itself is at fault.

Waste in War Time.

A correspondent writes to the *Times of India*:—

In all the war economies that have been recommended from time to time, there seems to be one very important item of waste that has entirely escaped attention. Throughout India, and especially in Bombay, there are many thousands of maunds of the finest wheat flour used every year for sizing of cloth. This is pure vanity, and this valuable foodstuff goes into waste at the first washing of the cloth. If the use of all edible starches in the sizing of cloths was prohibited throughout India, it would certainly lower the price of wheat and flour, which is surely what the Government are desirous of doing, and if such an excellent regulation was adopted in war time, it might be possible to have it retained in time of peace.

Glass Manufacture.

An Indian glass manufacturer, Rai Saheb Lala Panna Lal, of Ambala City, in a paper contributed to the 12th Session of the Indian Industrial Conference, at Lucknow, gives some useful information regarding business ways in general and glass manufacture in particular. The author gives estimates for the construction of two glass works at Rs. 70,000 and Rs. 25,000 with working capital at Rs. 25,000 and Rs. 10,000 respectively, and gives a history of glass-making as carried on by the old Minhar class of workers. He treats of plant, tools, furnaces and melting pots as a man experienced in the work, and shows an intimate knowledge of the various materials required for the craft, and then turns to blowing machines, presses, emery wheels and the manufacture of bangles. The difficulties of glass manufacture in India seem to centre round the high temperature to which the workmen are exposed, especially during the hot weather. This is a point, observes a contemporary, that the writer does not touch although it is very important. He might obtain some useful ideas from the iron works of the Tata Co., at Sakchi, where every care has been given to the comfort of the men who are exposed to the heat of the foundry and rolling mills. Lofty roofs allow a free escape to the heated air, and in certain parts electric fans are provided. Much may be done in even a small glassworks to increase the comfort of the men. A coat of limewash on the outside of an iron roof will reduce the temperature of the metal at least 26 degrees. Fah. Tiled roofs and brick walls may be similarly treated. A ventilating fan, driven from the same source of power as the grinding wheels, might supply a current through passages below the floor to openings where the men are stationed when at work, and this air might be cooled from 10 to 15 degrees by suitable humidifying.

Industrial Training of Indian Women.

A Bombay correspondent of the *Tribune* says there is in Bombay alone opening for 300 literate women to be employed as supervisors and forewomen in factories which are suitable for middle class women. There are, he says, not a few nurses, mid-wives, and trained female teachers who earn a precarious living, but if they were to divert their attention to the mills, they would better their prospects and quadruple their income. This side of the industrial question undoubtedly requires larger attention.

Export of Articles from India.

A Press *communique* dated Simla, March 14, states :—With reference to the revised list of interpellations together with the rulings published by the *Board of Trade Journal* of the 19th October 1916, which was republished in Notification No. 35 C. W. D., dated the 6th January 1917, the following telegram has been received from His Majesty's Secretary of State for India:—It has been decided to revoke with effect from 2nd April the general licenses for importation into the United Kingdom of the following articles under the heading (A) Wood,(B) wood:—Manufactures of beetwood, boxwood,dogwood, greenheart, hickory, lancewood, lingumvitæ, piadouk, sabieu, sandlewood, birch, timber in logs, barrels : tops and bottoms and wooden tops for birch, maple and persimmon blocks and squares for bobbins, reels, shuttles and spools box, shooks box, board screws made of wood, tool handles and brush handles, painters of ash and hickory case boards, empties returned flooring boards: planned and prepared, tongued and grooved of non-prohibited woods, rules measuring of wood, cars made from ashwood, pine block for match making, plywood wooden pulleys, wood wool. Consignments *enroute* to this country on or before 12th March will be admitted on production to the customs officer of the date of despatch, and licenses will usually be granted for the consignments paid for the consignees on or before that date.

Import Duty on Cotton Goods.

The following comment of the *Madras Mail* on the increase of import duty on Lancashire goods will be found interesting :—

"The increase of the import tax on cotton goods is important politically, for it marks the breakdown of the detestable Cobdenite system of penalising India in the interests of Lancashire. It has not, however, been possible to go the whole way and abolish the countervailing cotton excise, for no money can now be gone without. Still, since the excise remains at 3½ per cent. and the import duty has been raised from 3½ per cent. to 7½ per cent., our main purpose is served. We congratulate Mr. Austen Chamberlain on having allowed the inequitable system hitherto in force to be scrapped."

The Jute Trade.

Members of the Indian Jute Mills Association have agreed to short time of five days weekly from April to September 30th. The decision has not influenced gunny on the share market which continue inactive.

Millionaires in Japan.

A contemporary writes :—There are altogether 2,201 people in this country, worth more than 500,000 yen, according to a census taken by the *Jiji* quite recently. This is the third such investigation conducted by the paper; the first was in 1901, and second in 1911. The number of such persons has increased by 1076 since the second investigation, when it was 1025. In other words, in 5 years of 1911-16, the number of well-to-do people has increased just 115 per cent. The aggregate wealth of these 2,201 persons is estimated at 3,470,000,000 yen. Those possessing over 10,000,000 yen number 43 ; over 5,000,000 yen, 73 ; over 3,000,000 yen, 80 ; over 2,000,000 yen, 108 ; over 1,000,000 yen, 451; over 500,000 yen, 1,433. Classified by professions, businessmen head the list with 1,433, including 53 engaged in shipping ; next come landowners with 423 ; then directors of banks and other companies, with 289; factory and mineowners number 51 and 35 ; while peers on the list are 105. There are also 142 not belonging to any of the above items. Of the whole number 2,201, Tokyo-Fu has 595 or 27 per cent. ; Osaka 382 or 17·3 per cent. ; while Ibaraki Prefecture has only 7, the lowest figure. Comparing the number of these wealthy people with the whole number of families in Japan, which was 9,720,000 in 1913, we find that every 10,000 families have 2·19 such persons. This, of course, varies with locality ; for, in Tokyo, there are 8·15 persons for every 10,000 families which is the highest, while ·32 for every 10,000 families in Ibaraki Prefecture is the lowest.

India and the Economic Conference.

The Hon Sir George Barnes, replying to Sir Fazulbhoy Currimbhoy's question at a recent meeting of the Imperial Legislative Council regarding the re-nomination of a representative from India to the Economic Conference to be held after the War, said :—

The Government of India are fully aware that there is a strong feeling in commercial circles that India should be represented at any conference on the economic policy to be pursued after the War, and have been in communication with the Secretary of State for India on the subject. We have, I am glad to be able to inform the Hon. Member, that the definite assurance of the Prime Minister that when the conference is held, India shall be represented.

India's Cotton Crop.

The increase compared with the previous year in the yield of India's cotton crop for 1916-17, as estimated in the final general memorandum, says the *Pioneer*, is shared by all the principal cotton-growing provinces except the Central Provinces. The total area reported under the crop in the whole country is 21,212,000 acres, or nearly 19 per cent. more than the revised figure of last year. The total estimated yield is 4,557,000 bales, which is 22 per cent. above the revised figure last year. Of this total the estimate for Bombay Presidency is 1,348,000 bales, showing an increase of 44 per cent. on last year. The Central Provinces, which comes next in importance among the cotton-growing provinces, has an estimated yield of 884,000 bales, which is 20 per cent. short of last year. This shortage in estimated yield is in spite of an increase of 8 per cent. in the acreage under cotton. Climatic conditions at sowing time were favourable, but heavy and continuous rain later on retarded weeding operations, damaged the crop and stunted its growth on heavy soils in nearly all the Southern districts. Madras shows an increase compared with last year of 54 per cent. in its yield, the Punjab an increase of 30 per cent., and the United Provinces an increase of 18 per cent. Hyderabad (Deccan) has the largest area under cotton among the Native States, and the acreage for 1916-17 is estimated at 3,200,000, an 8 per cent. increase on last year. The yield is estimated at 500,000 bales, being 11 per cent. increase, while the yield of Central India is estimated at 309,000 bales, an increase of 43 per cent.

Agricultural College, Punjab.

It is announced that the next session of the Punjab Agricultural College commences on the 27th August 1917, and applications received before the 15th March 1917, will receive prior consideration. Application received after that date will only be entertained if vacancies are then available.

Punjab Sugarcane.

The final forecast of the Punjab sugarcane crop for 1916, gives an area of 410,043 acres under the crop, an increase of 18 per cent. as compared with 1915, due to the high price of *gur*. The season was quite favourable, and the outturn is estimated at 346,276 tons of *gur*, which is 26 per cent. better than last year.

Sugarcane in the United Provinces.

The work at the cane research station, at Shajahanpur, shows there is a definite limit to the yield of sucrose from most of the indigenous canes, and heavy manuring merely gives rise to an excessive vegetable growth without any proportionate formation of sucrose. This is amply confirmed by the returns over a series of years from different farms. The only way to increase the yield is to introduce better varieties and to improve methods of cultivation. Even here the climate is an important factor to contend with, and it is pointed out that one acre of Java produces as much sugar as 14½ acres in the United Provinces. It is thus easy to understand why, with a total average of 300,000 acres, Java supplies India with most of our crystalline sugar and why the United Provinces, with 1½ million acres, lags behind. . . Under these conditions it is futile to expect any large development in sugarcane growing in the provinces, though doubtless some improvements can be effected, provided they are not costly and yield a proportionate income. If there is no great probability of the United Provinces or other provinces of India growing sufficient sugar to supply the internal wants of the country owing to climatic conditions and other difficulties, the policy of raising the custom duty on imported sugar is economically unsound. —*The Tribune.*

German Substitute for Cotton and Wool.

Spinners and weavers of Germany claim that they have found in their own country a satisfactory and inexpensive substitute for cotton and wool. The plant is called the typha and is a sort of cat-tail that grows exensively in marshes. This year's crop is estimated at between 1,500,000 and 6,000,000 tons. The yield of the finished product is 10 per cent. of the raw product. Samples of cloth made from this material are said to show that it is suited to making a large variety of fabrics. Leading German merchants, spinners, and bankers have subscribed capital for the manufacture of the new cloth. They call attention to the fact that Napoleon's embargo on sugar resulted in developing their great beet-sugar industry, and predict that a similar development will take place in the cloth industry. One point in favour of the typha is that it can be grown on land not needed for cultivating other crops, and it can be harvested from June until frost.

Agricultural Co-operation.

In the course of a paper, advocating the cause of the co-operative movement in India, Babu Shiva Charen Lal, of Gwalior, points out :—

Agriculture is the first thing which should claim the attention of co-operators in India, and this statement is fully borne out by the recommendations of the committee on co-operation. There seems to be a bright future in store for co operation in India, and to quote from an article from me, which appeared in the *Leader* of the 16th November 1916, we are anxiously looking forward to the time when "organization for purposes of credit will lead to concerted action in other important matters. . . when primary education, sanitary measures, medical and charitable relief will all claim the attention of the village society," and "when our village co-operative societies will be on a miniature scale the replica of our larger municipalities which enjoy the advantages of local self-government."

There are at present some 15,000 co-operative credit societies, mostly rural, working in British India; nearly all the important and enlightened States of India, such as Hyderabad, Mysore, Gwalior and Baroda have also introduced and extended the principle of co-operative credit within their jurisdictions; and the writer has good reasons to believe that the Kashmir Durbar is also shortly to follow suit. These co-operative credit societies, coupled with a slight relaxation of demand on the produce of the cultivator will, in course of time, tend to materially improve his condition.

A Soil Sampler.

The sampler, says an expert writer in an English Agricultural Journal, consists of a brass tube 11 inches long, with one end made into a cutting edge. This cutting edge is so made that the soil is not appreciably compacted when the sample is taken. The end, having the cutting edge, is furnished with a tight-fitting brass cap 2 inches in height. The open end, plugged with absorbent cotton, makes the sample complete. In using the apparatus, the complete sampler is first sterilized. It is then taken into the field, the cap is removed, the driving head is inserted above the cotton plug, and the sampler is driven into the ground to the desired depth. It is then pulled out, the cap is flamed, replaced, and the sample is ready to be taken to the laboratory. This sampler is easily sterilized, easily kept clean, easily manipulated, and durable.

Agricultural Holdings.

The average area of land enjoyed by an Indian landholder, observes the *Wealth of India*, is something less than 5 acres, and no man can be reasonably expected to live a decent life on land which is anything under 40 acres in extent. The many sub-divisions of landed estates allowed at present are said to be against the adoption of scientific methods, which again mean large capital and big efforts. Mr. G. A. Stuart, Director of Agriculture, Madras, in his evidence before the Industrial Commission, referred to this problem. He said :—

The improvement of agriculture, which was the basis of many industries, was hampered by the extremely scattered nature of the holdings in Madras. That applied especially to irrigated land, much of which was held in minute scattered plots. This system reduced the efficiency of all agricultural operations. He thought that more might be done to encourage the gradual formation of compact holdings, but it would be difficult to do very much unless the Hindu law of partition was altered.

An Agricultural Exhibition.

The eighth Chinsura Agricultural and Industrial Exhibition came to a close on the 24th ultimo. The exhibits were numerous. There was a large gathering and many gold and silver medals and certificates were awarded. Mr. Bradley-Birt, I.C.S., President, before distributing the awards, said that the agricultural portion of the Exhibition was not as representative as it might have been.

Irrigation Economy.

A useful enquiry in connection with the Agricultural Departments in India, observes a local contemporary, would be to ascertain the duty of water in the matter of the irrigation of crops. We do not recollect if this has been undertaken yet, but we have an idea that systematic enquiry would show that in the matter of irrigating crops a good deal more water is used than is actually required, just as it had been discovered in paddy cultivation that more seed was being used than was actually required and with less successful results. . . . . The experiments proved that with much less water than it was customary for the ryots to give their crops and with special means of breaking up and preparing the land for cultivation, it was possible to get an outturn of wheat and *bhusa* that made the ryots open their eyes with astonishment and offer large areas of land for similar treatment.

Literary.

THE PRESS DEPUTATION.

H. E. the Viceroy's amazing reply to the Press deputation that waited on him, on March 5, at Delhi, has naturally caused much disappointment. The reply which was ungenerous has been resented all over the country as altogether an unusual Viceregal utterance and of a highly controversial nature, which it was presumably His Excellency's desire to avoid. His Excellency's criticism of the Judges is quite ill-conceived and uncalled for. The *Bombay Chronicle*, whose Editor Mr. B. G. Horniman headed the Deputation, has the following comments on the speech :—

"We are unable to understand Lord Chelmsford who says that anything in the nature of muzzling the press strikes right across the whole grain of his being, and then proceeds to justify the existence of a muzzle which can be applied in the most arbitrary fashion, without resort to the law courts, by the quotation of a few casual extracts from one or two journals, one of which, and the one that seems to have impressed him most gravely, has actually been held by two Judges of the High Court, under the wide and comprehensive terms of the Act which he defends, to be of an unobjectionable character. But it is characteristic, we regret to say, of the whole of the Viceroy's justification of the Act, that in referring to this extract, he quoted with profound emphasis the opinion of a High Court Judge and completely ignored the differing view of that Judge's two colleagues by whom he was overruled. We have too great a confidence in Lord Chelmsford's desire to deal fairly with a great question of this kind to suppose that he can possibly have been aware when he delivered his speech, that he was quoting mere *obiter dicta* on a point, in regard to which the settled judgment of the Court holds an opposite view. But we fear that this instance gives the clue to the manner in which the material for Lord Chelmsford's guidance in this matter has been prepared."

LITERATURE FOR HOSPITALS.

The Women's Branch of the Bombay Presidency War and Relief Fund has made a strong appeal to the public, to remember the troops who want books to read. One Army Corps in Mesopotamia wants a library of 2,400 books, and another wants 1,600 books. Hospitals and Convalescent Homes need a weekly supply of 5,000 newspapers.

SUBSIDISED NEWSPAPERS IN INDIA.

In reply to a question by the Hon'ble Mr. Mir Asad Ali Khan at a meeting of the Imperial Legislative Council, on March 10, the Hon'ble Sir Reginald Craddock stated :—The Imperial Government do not subsidise any Indian or Anglo-Indian newspapers or periodicals, but merely takes such number of copies as are required for departmental purposes. In 1911, the following newspapers were subsidised by the Local Governments named : Bombay, *Jagat Vritta*, 10,000 copies, amount of subsidy per annum Rs. 16,000; Bengal, *Sulav Samachar*, 25,000 copies, amount of subsidy per annum Rs. 62,000; United Provinces, the *Independent*, 300 copies, amount of subsidy per annum Rs. 9,000; Eastern Bengal and Assam, *Biswa Barta*, copies 11,000, amount of subsidy per annum Rs. 32,000. The subsidies in the last three cases were withdrawn after a year and have not been renewed. The period for which a subsidy was sanctioned in the case of the *Jagat Vritta* has not yet expired.

MADRAS WAR FUND COMPETITION.

The term for entries for the Madras War Fund Literary Competitions has been extended to the 1st July. Prizes will be given, as already announced, for the best (1) limerick ; (2) riddle ; (3) rhymed double acrostic ; (4) amusing anecdote or incident ; (5) sonnet or poem, or parody of not more than sixteen lines ; (6) story, descriptive sketch or dialogue of not more than 2,000 words with the scene in South India ; (7) illustration in black and white, relating to 4 or 6 ; (8) caricature in black and white.

BISHEN NARAIN DHAR AS A LITERARY MAN.

A recent number of the *Canning College Magazine* (Lucknow) devotes considerable space to the late Pandit Bishen Narain Dhar. The late Pandit was famous for his devotion to English literature, and in this connection an interesting story is told of him. When Morley's bulky "Life of Gladstone" in three volumes came out, he devoured it in six days and then exclaimed, "Oh, I wish I had a fourth volume to go on with."

THE "MYSORE UNIVERSITY MAGAZINE."

We have received the first number of the *Mysore University Magazine*, the organ of the new Mysore University. It records the intellectual, athletic, and social phases of the life of the University. It hopes to become a valued organ for the expression of the views of all classes of the members of the University and of the outside educated community.

Educational.

ORIENTIAL STUDIES SCHOOL.

Opening the School of Oriental Studies, on February 23, H. M. the King emphasised the wide scope and vast importance of its work, affording fresh opportunities for study to those services which had been the pioneers of progress and instruments of good government in India and Egypt, and furnishing with fuller technical equipment the pioneers of commerce and industry who, in each successive generation, undertook the duty of upholding the honoured fame of British trade in the East. Its work would also serve to develop the existing sympathy between Britons and Japanese. If the School succeeded in imparting to pupils, sent out as teachers of unselfish government and civilised commerce, a clearer comprehension of the thoughts and lives of the diverse races of the East, the good effects thereof would extend far beyond immediate tangible results. The ancient literature and art of India were of unique interest in the history of human endeavour. His Majesty looked to the School to quicken public interest in the intellectual tradition of India, and to promote and assist the labours of students in these departments of knowledge to the advantage of both countries. The school was about to open its doors in the midst of an unparalleled crisis in the world's history. For more than two years, the peoples of His Majesty's dominions had loyally and devotedly vied with each other in offering blood and treasure for the prosecution of a righteous war—(cheers)—and the sense of common sacrifice and endeavour had drawn us all nearer one another in feeling and sympathy. Meanwhile, the peaceful labours of the School, in spreading accurate and scientific knowledge of Eastern life and thought, would foster a spirit of loyalty and patriotism and knit together still closer the many nations of the Empire.

In conclusion, the King said :—"May God bless the labours of this school in the advancement of learning, unity and good government among people of every race and language."

Lord Curzon trusted that the school would become a sort of clearing house of ideas between East and West,

THE HINDU UNIVERSITY SCHOOL.

We learn from the *Hindu College Magazine*, that as soon as the College and Pathashala can be moved to Nagwa, the school will be divided into three branches :—

(1) The present school; (2) the Oriental School in which all subjects would be taught through the medium of Hindi; and (3) the Industrial School in which students would be trained so as to be able to make their living by trade and industry.

INDIANS AND RESEARCH WORK.

In the course of his convocation address, the Vice-Chancellor of the Calcutta University, referred in these terms to the labours of Indians in Research work :—

"Special work with promising results has been undertaken by Dr. Brajendranath Seal, Mr. Raman, Dr. Ganesh Prasad and Dr. P. C. Ray in their respective branches of knowledge. Dr. Seal's work on the positive sciences of the ancient Hindus has served its purpose as a contribution to the history of scientific and philosophical thought of the Hindus, and has won unstinted recognition from scientific journals like *Nature* and the *Lancet*.

"A department of experimental psychology has been opened at the college of science. This department can be built up only slowly, for though this fascinating branch of knowledge has long been included in our curriculum, no one had succeeded in graduating in it, in absence of facilities for practical work. I, therefore, welcome with pleasure our first Master in the subject—Babu Manmatha Bannerji, whose Second-Class is no index of want of merit but largely of the handicap I have mentioned.

"Dr. Ganesh Prasad has published four original papers on Acoustics, etc. He has three research scholars under him, each of whom has published an original paper. The work of one of the Sir Rashbehary Ghose scholars is a brilliant investigation of a difficult hydro-dynamical problem, and that of the other is an interesting piece of research in the dynamics of a particle. The student, who was awarded the Premchand Roychand Studentship last year for his investigation as a Sir Rashbehary Ghose scholar, has published an important paper on aerial manes in the *Philosophical Magazine* of London."

Legal.

SIR SHAMS-UL-HUDA.

The King has approved of the appointment of Nawab Syed Sir Shams-ul-Huda as a puisne judge of the Calcutta High Court in succession to Mr. Justice Chatterjee. Sir Shams-ul-Huda is at present a member of the Executive Council of the Governor of Bengal. He is to retire in April.

COURT-MARTIAL SENTENCES.

At a recent meeting of the Viceregal Council, H. E. the Commander-in-Chief introduced the Court-Martial Sentences Bill. He said it was unnecessary to deal at any length with the Bill, but briefly it put into the hands of high officers the power to condone any acts hastily committed by young officers which lay the officers open to be tried by court-martial. Some officers were young and impulsive, and did not always consider what might be the result of their acts, and the Bill empowered certain officers to endorse on the reports that the question of their being tried by court-martial should be suspended for the present, and the officer be given an opportunity by good conduct to rehabilitate his character and to earn the remission of the suspended sentence.

The rules of business having been suspended, the Bill was considered and passed without discussion.

THE CALCUTTA BAR.

Mr. B. C. Mitter, Bar.-at-law, the Standing Counsel, has been appointed to act as Advocate-General in the place of Sir S. P. Sinha, and Mr. S. R. Das, Bar.-at-Law, has been appointed to act in the place of Mr. B. C. Mitter. Mr. Mitter is the son of the late lamented Sir Romesh Chandra Mitter, and he has enjoyed an extensive practice for several years on the original side of the High Court at Calcutta. Mr. S. R. Dass has acted more than once as Standing Counsel on previous occasions.

THE NEW INDIA APPEAL.

The judgments of the High Court of Madras, in the *New India* case, nine in all, together with the grounds of appeal, and the arguments on them, go to England for an application to the Judicial Committee of the Privy Council for the leave to appeal refused here. Where a great principle is concerned, observes that paper, it is necessary to fight to the end, whether one loses or wins.

LITIGATION IN ANCIENT INDIA.

The eighth monthly meeting of the Dacca Sahitya Parishat came off recently at Dacca under the presidency of Mr. R. K. Dass, Bar.-at-Law. After the adoption of the last meeting's report which was read by the Secretary, and the election of new members, Dr. Naresh Chandra Sen, M.A., D.L., read an interesting paper on "Litigation in Ancient India."

Before reading his paper, he said that the subject was so vast that he had been investigating it for the last 5 or 6 years without being able to obtain anything like a thorough mastery of it. He could not exhaust the subject in a single paper; he, therefore, proposed to deliver a course of lectures at the Dacca Sahitya Parishat on the above subject. The proposal was received by the audience with enthusiastic cheers. He then read his paper, the first part of which was mainly introductory dealing chiefly with the authorities consulted and their relation to one another. In the second part, the writer gave an account of the way in which litigation was dealt with in the various works constituting the Dharma Shastras. The subject dealt with, in the earlier treatises especially, might seem to be very meagre, being confined to theft, adultery, assault and defamation in criminal law and topics relating to debts in civil law. But the writer remarked that Panchayets used to decide a considerable amount of litigation concerning adoption, marriage, succession, inheritance, etc., and those matters scarcely came up before the King's Courts. Hence the mistake of foreigners like Megasthenes in attributing meagreness to Hindu Law.

SIR DONALD JOHNSTONE.

Sir Donald Johnstone, on the occasion of retiring from the Chief Judgeship of the Lahore Chief Court, bade farewell to the Court in the presence of all the other Judges of the Court and a large gathering of members of the Bar and Court officials. The Hon. Mr. Shafi, Vice-President of the Chief Court Bar, paid an eloquent tribute to the courtesy and ability of the retiring Chief Judge.

Sir Donald Johnstone was subsequently entertained to a farewell dinner by members of the Punjab Club. Sir Michael O'Dwyer, who presided, said that no one could have done more than Sir Donald to maintain the dignity and independence of the judiciary.

Medical.

THE VITAL STATISTICS OF INDIA.

Reviewing the Report on Sanitary Measures in India in 1914-15, the *New Statesman* points out :—

The health of the European Army, in 1914, was remarkably good. The table of the mortality from all causes shows that from 1881 to 1903 the death-rate per 1,000 troops ranged from 13 to 22, but the average was fairly constantly in the neighbourhood of 17. Since 1903, the death-rate has fallen steadily and rapidly, and, in 1914, was only 4·3 per 1,000. This is a remarkable and highly creditable improvement. Malaria was the chief cause of sickness, accounting for 262·8 admissions to hospital per 1,000 of strength, or more than one-quarter of the total admissions from all causes. Venereal diseases were responsible for 55·2 admissions per 1,000 troops, a rate which was a small increase on that for the previous year, but is substantially lower than the average rate 91·7 for the years 1904-13. The health of Indian troops has shown an equal improvement since 1903, and, in 1914, the mortality was only 4·17 per 1,000. The admission rate for malaria was 112·8, and for venereal diseases 15·6. If the same standard of admission is employed for Indian and British troops, the low rate of venereal diseases among the former is very striking.

AN AYURVEDIC EXHIBITION.

Vaidyaratna Pundit D. Gopala Charlu, of Madras, opened at Poona the Ayurvedic, Exhibition organised in connection with the eighth session of the Ayurvedic Conference, when there were present about 300 Indian physicians and hakims from different parts of the country. His Holiness Sri Sankarachariya, of Virupaksha Mutt, who is himself a distinguished physician practising the Indian system of medicine, also attended. Pundit Gopala Charlu dwelt at length on the uses of Exhibitions, which, he said, were very useful in bringing the Indian system in touch with the Western. He suggested that there should be permanent medical *muswars* in different parts of the country, and concluded his address by appealing to Indian Princes and Chiefs to support the indigenous system of medicine.

AYURVEDIC CONFERENCE.

The eight session of the All-India Ayurvedic Conference assembled in the Kirloskar Theatre, on the 25th February, at Poona. About 350 Vaidyas and Hakims, representing several provinces of India, attended. Vaidyaratna Kaviraj Jogendranath Sen, Calcutta, an ex-President, and some other leading workers in the cause were unavoidably absent. Several distinguished guests attended, prominent among them being Sir Ramakrishna Bhandarkar, the Hon'ble Messrs. Godbole and Kamat, and Messrs. Tilak and Kelkar. His Holiness the Sankaracharya, of Virupaksha Mutt, was also present.

Dr. M. G. Deshmukh, M.D., (Bombay), in his welcome address, urged the Ayurvedic Maha Mandal to protect the existing rights of the Vaidyas and to agitate for securing further rights for them.

H. H. the Rajah of Cochin, having been formally elected President of the Conference, read his opening address, which was in Sanskrit. After dealing with the deplorable condition in which the ancient science of medicine was at present, he suggested the following remedies for its revival :— (1) Works bearing on medical science, written either in the vernaculars or Sanskrit, should be collected in one place. (2) Statements that may appear to be conflicting with one another in such works should be reconciled by learned Vaidyas. (3) Encouragement should be given to the comparative study of both the systems of medicine, Indian and Western. (4) A central school teaching Ayurveda should be established at a convenient place with a medical library attached to it.

A number of resolutions were passed at the Conference. It was resolved to send a deputation, consisting of the President, Pandit Gopala Charlu, Kaviraj Gananath Sen and a few others to the Viceroy, to place before him the views of the Conference with regard to the Indian system of medicine. Another resolution protested against the action of the Ashte Municipality, in abolishing the Ayurvedic dispensary at the place which was largely used by local people. A committee, consisting of Sir Rama Varma, Sir P. Pattani, Sir R. Bhandarkar, Sir Subrahmanya Iyer, the Gaikwad of Baroda, Maharajas of Rewa, Alwar and Dongarpur, and a number of others, was appointed to collect funds and frame rules for the Ayurveda Mahavidyalaya. Provincial Committees to work in their respective provinces, according to the resolutions passed, were also formed.

Science.

THE LATE COUNT ZEPPELIN.

Count Ferdinand Von Zeppelin whose death was reported on March 8, was born at Constance on the 8th July 1838. He received his early education at the Polytechnik, Stuttgart, and subsequently at the Tubingen University. Later he went to America, where he took part in the Civil War of 1861-65. His adventures during the Franco-Prussian War won him immediate recognition. (*See* "All About The War—The Indian Review War Book," page 152: G. A. Natesan & Co., Madras.)

But the name of Count Zeppelin will always be associated with what is now known as the conquest of the air. A pioneer in this enterprise, he won the Kaiser's appreciation and induced the German Government to construct a fleet of airships. The rest of the story is pretty familiar to the world, and the cruel slaughter of women and children, with no conceivable bearing on the exigencies of the war, is not a desirable commentary on the prowess of this precious son of the Fatherland. Nevertheless from the German point of view, his achievements in this war have enhanced his popularity, and the Kaiser's message of condolence to the bereaved Countess is an interesting document.

"I feel the death of this excellent man," wrote the Kaiser, "most painfully. The whole of Germany unites with me in mourning one of the greatest sons of the Fatherland. His successes in the air have rendered his name immortal far beyond Germany. His memory will always remain sublime and dear to me. Wilhelm."

DR. BOSE'S LABORATORY.

His Excellency the Viceroy, while recently at Calcutta, accompanied by the Governor of Bengal, visited Dr. Bose's private laboratory in Upper Circular Road to see the demonstrations of some of his most striking discoveries. They went over the Bose's Research Institute, which the distinguished Indian scientist is going to found for the perpetuation of India's contribution for the world's advance in science. In the Bose Institute, it is intended that a limited number of post-graduate scholars would receive special training to devote their whole life and undivided energies in the cause of science. The Viceroy expressed his high appreciation of the work already done and of the object of the Institute. One important practical outcome of Dr. Bose's recent research specially interested His Excellency; this was the transplanting into the grounds of the Institute two large Banyan trees—a task that would have been regarded as impossible; but by rendering the trees unconscious by the action of suitable narcotics, they were protected from the great shock consequent on uprooting, and the trees are now showing vigorous growth. Another recent invention of Dr. Bose, which interested His Excellency, was the high magnification crescograph, which magnifies and records growth in a period as short as one second. The high magnification attained varies from ten thousand to a million times.

DR. P. C. ROY'S RETIREMENT.

On the eve of Dr. P. C. Roy's retirement, the students of the Presidency College, Calcutta, presented him with an address, in the course of which they said:—"Your place in the College, Sir, we are afraid, can never be filled. Men will come and men will go, but where else can we possibly expect to find again that sweetness of disposition, that vigour of simplicity, that unwearied spirit of service, that broad-based culture, that wisdom in deliberation and debate which, for the space of thirty years or more, endeared you so much to pupils?"

STATE SUBSIDIES FOR SCIENCE WORK.

An important declaration was made by Lord Crewe recently in reply to a deputation from the Joint Board of Scientific Societies, with regard to further financial assistance from the Government in aid of scientific research work as applied to industry. He stated that the Government had been impressed by the needs of the hour, and had considered what could be done to assist the great stable industries of the country in developing systematic research on a large scale. It was clear that in the case of large, wealthy industries, where individual firms or limited companies might look for profits on a large scale as the direct result of research, it was not reasonable to suppose that the taxpayers of the country would willingly pay the whole amount to be devoted to such researches. A plan, therefore, for systematic co-operation between the leaders of those great industries and the Advisory Council for scientific and industrial research had to be devised.

The Chancellor of the Exchequer was prepared to devote a large sum for the needs of this co-operation, which during the next five years would enable four or five times as much to be spent on this work of co-operation for research between the Government and the industries as had been already spent.

Personal.

SIR RABINDRANATH TAGORE IN AMERICA.

Sir Rabindranath Tagore recently visited New Haven (Conn), where he was presented with the Yale Bicentennial Medal. In making the presentation, the President of the University said :—

Apart from its share in the debt which the West owes to the East, Yale acknowledges special obligation to India which it can never repay. To your country our scholars are indebted for a large source of their inspiration. For three-quarters of a century, the classics of India have been taught in these halls, and the Sanskrit studies of W. D. Whitney are one of the brightest ornaments in Yale's scholastic crown. To your country we owe our local habitation and our name. Two centuries ago the collegiate school of the colony of Connecticut was firmly established in New Haven by the gifts of Governor Yale, of Fort St. George ; and the fortune which enabled him to make these gifts was acquired in the Indian Peninsula. In recognition of these obligations and many others, I have the honour to present you, as a memorial of your visit, with the Yale Bicentennial Medal. We welcome you as one of the great brotherhood of seekers after light and truth ; we honour you as one to whom it has been given to help thousands—yea, millions—in that search.

SIR P. S. SIVASWAMI AIYAR.

A *Fort St. George Gazette Extraordinary*, published on the 27th February last, says :—" H. E. the Governor in Council desires to place on record his warm appreciation of the valuable services which the Hon'ble Sir P. S. Sivaswamy Iyer has rendered to the State during the term of his office. Sir P. S. Sivaswamy Iyer's intimate knowledge of the needs and aspirations of the people of India and his distinguished legal attainments have been of the greatest assistance to His Excellency in Council, while his high sense of duty and genial disposition have secured for him the respect and affection of all."

A party was subsequently given in honour of Sir P. S. Sivaswamy Iyer, at the Government House, by H. E. Lord Pentland ; it was largely attended by the leading citizens of Madras, both official and non-official. A public entertainment was also got up by the non-official members of the Madras Council, at the Moore pavilion, on the 16th instant. Both the functions were very largely attended and highly successful.

TWO NEW APPOINTMENTS.

His Majesty the King-Emperor has approved of the appointment of the Hon. Sir Harcourt Butler, K.C.S.I., C.I.E., Lieutenant-Governor of Burma, to be the Lieutenant-Governor of the United Provinces of Agra and Oudh in succession to the Hon. Sir James Meston, K.C.S.I., whose period of office has been extended to November 1917.

His Majesty has also approved of the appointment of the Hon. Sir Reginald Craddock, K.C.S.I., Member of the Viceroy's Executive Council, to be Lieutenant-Governor of Burma in succession to Sir Harcourt Butler, K.C.S.I., C.I.E.

M. SAZONOFF.

M. Sazonoff, the well-known Russian Minister for Foreign affairs, has succeeded the late Count Benckendorff as Ambassador in London. He retired from the foreign office towards the end of 1916. M. Sazonoff, observes the *Times of India*, although he did not begin his political career as a great admirer of the Anglo-Russian *Entente*, became converted subsequently to the views of his predecessor M. Isvolsky, and after a visit to H. M. the King-Emperor, at Balmoral in 1912, took his stand as a staunch supporter of the *Entente*. In this rôle he was greatly disliked by the reactionary pro-German cliques, and his averseness from all extremes and political fanaticism often drew upon him the attacks of certain of the Russian papers, to which caution and reflection in diplomacy are anathema The news of his appointment to the Russian Embassy has been received with much satisfaction in Britain.

GENERAL EGERTON.

General Sir Charles Comyn Egerton, G.C.B., D.S.O., who has just retired from the India Council, joined the Bengal Staff Corps in 1871, and, after serving in the Afghan War, was Assistant Adjutant-General with the Punjab Frontier Force from 1886 to 1893. He was with the Hazara, Miranzai and Waziristan expeditions ; commanded the Indian contingent at Suakim, a brigade of the Tochi force, the Somaliland field force, and, finally, the Secunderabad Division. He was appointed A. D. C. to Queen Victoria in 1896, and joined the Council of the Secretary of State in 1907.

Political.

INDIA AFTER THE WAR.

Mr. D. W. Miller, of Marsden Point, Arrekland, N. Z., writes to *Everyman* :—

I submit that no future Council of Empire will be complete without the presence of India's stalwart and efficient sons. During a time of difficulty their proffered help of men and money has proved their unbounded loyalty. Thus the resolution of last January, when the very representative and influential National Congress demanded self-government, cannot fairly or wisely be set aside.

The wise act of statesmanship that gave South Africa self-government has been fully justified. May it be but the precursor of an even greater act of magnanimity in recognising India to a more honoured seat in the grand federation of peoples under our illustrious Sovereign, who is also known as the Emperor of India.

NEW TURKISH MINISTRY.

The Grand Vizier, Said Halim Pasha, handed his resignation to the Sultan on the 7th ultimo on the ground of ill-health. The Sultan accepted and requested Talaat Bey, the Minister of the Interior, to constitute the new Ministry which has been formed as follows: Grand Vizier, Talaat Bey; Sheikh-ul-Islam, Mussa Kiazun Effendi; Foreign Affairs, Nazim Bey; Justice, Halil Bey; War, Enver Pasha; Marine, Djemal Pasha; Public Instruction, Posts and Telegraphs: Shukri Bey; Governor of Lebanon, Ali Munif Bey. The Grand Vizier has taken temporary charge of the portfolios of the Interior and Finance.

The new Cabinet is favourably received by all parties and will adopt a programme based on that of the previous Ministry.

THE FRENCH CABINET.

The French Cabinet has been formed as follows:—

Premier and Minister for Foreign Affairs—M. Ribot.
Minister of War—M. Painleve.
Minister of Marine—M. Lacaze.
Minister of Munitions—M. Thomas.
Minister of Finance—M. Thierry.
Minister for the Interior—M. Malvy.
Minister of Commerce—M. Clementel.
Food Controller—M. Violette.
Minister of Labour.—M. Bourgeois.
Minister of Justice—Ex-Premier Viviani.

NEW NATIONAL CABINET IN RUSSIA.

The revolution in Russia is one of the most momentous and far-reaching events in temporary history. It began on the 10th March with a ruffle between the hungry mob and the reactionary police in the streets of Petrograd, and the resultant conflagaration brought about the abdication of the Czar in three days. This is, of course, the immediate cause, but by no means the only or chief cause. It appears that this effort of the Russians, is to thwart the attempts of pro-German ministers and to prosecute the war with more whole-hearted devotion. It is announced the Grand Duke Michael Alexandravitch has been appointed regent. All old ministers suspected of pro-Germanism have been arrested.

The following is a list of the new National Cabinet :—

Premier and Minister of the Interior—Prince Lvoff, who is also President of the Alliance of Zemstvos.
Minister for Foreign Affairs—Miliukoff.
Minister of Justice—Kirenski.
Minister of Communications—Nekrashoff.
Minister of Commerce—Konovaloff.
Minister of Education—M. Manuiloff, who was a Moscow Professor.
Minister of War and Marine—Dutchkoff, who was a member of the Council of Empire.
Minister of Agriculture—Shingareff.
Minister of Finance—Tirestchenko.
Comptroller of State—Godneff.

MADRAS PROVINCIAL CONGRESS COMMITTEE.

In accordance with the terms of the resolution passed at the last Congress and under the direction of the All-India Congress Committee, the Madras Provincial Congress Committee has appointed a working committee, which has now resolved to prepare a brief exposition of the scheme of reforms adopted by the Congress and the League, with a view to translate the same into Tamil, Telugu, Hindustani, Canarese, and Malayalam and spread it broadcast among the people; (2) to send copies of the Congres scheme to all non-official members of the Legislative Council, the members of the All-India Congress Committee and leading citizens in the moffussil, requesting them to popularise the scheme by means of lectures in English and Vernacular. Arrangements are also being made to depute the members of the working committee to visit various places in the moffussil to carry out propagandist work,

General.

THE VICTORIA CROSS FOR INDIANS.

The announcement made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross gave satisfaction, which was increased during the War by the award of that decoration to a number of Indian heroes. The following account of Indians who have won the Victoria Cross is taken from the *Indian Year Book for 1917* :—

SEPOY KHUDADAD, 12TH BALUCHIS.

On 31st October 1914, at Hollebeke, Belgium, the British officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

NAIK DARWAN SING NEGI, 1-39TH GARHWAL RIFLES.

For great gallantry on the night of the 23rd-24th November 1914, near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

JAMADAR MIR DAST, 55TH COKE'S RIFLES.

For most conspicuous bravery and great ability at Ypres, on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian officers into safety, whilst exposed to very heavy fire.

RIFLEMAN KULBIR THAPA, 2-3RD GURKHA RIFLES.

For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

LANCE-NAICK LALA, 41ST DOGRAS.

Finding a British officer of another regiment lying close to the enemy, he dragged him into a temporary shelter, which he himself had made, and in which he had already bandagad four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark, when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher, carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

SEPOY CHATTA SINGH, 9TH BHOPAL INFANTRY.

For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer, who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained besides the wounded officer, shielding him with his own body on the exposed side. He then, under cover of darkness, went back for assistance, and brought the officer into safety.

NAICK SHAHAMAD KHAN, PUNJABIS.

For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties.

For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire, he and his two belt-fillers held their ground with rifles till ordered to withdraw.

With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels.

But for his great gallantry and determination, our line must have been penetrated by the enemy.

THE FALL OF BAGDAD.

The *London Times*, referring to the fall of Bagdad, says in an editorial, dated March 12, 1917 :—

It should always be remembered that a very large proportion of the forces which General Maude has guided to victory are Indian regiments. The cavalry which hung on the flanks and demoralised the Turkish army and chased it to the confines of Bagdad must have been almost exclusively Indian cavalry. The Infantry which bore months of privation and proved in the end the masters of the Turks included Indian units which had already fought heroically in France, Gallipoli and Egypt. Whatever mistakes the Indian military administration may have made in the earlier stages of the Mesopotamian campaign, the valour of the Indian troops, who have contributed so largely to the successes on the Tigris, has never been questioned. In the last few days, there have been discussions which seemed to imply that India's help in the war chiefly consisted of the belated offer of financial aid. She has done far more; for, in common with ourselves, she has given the blood of her best and bravest and nowhere more than on the deserts of Mesopotamia.

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.
PUBLISHED ABOUT THE THIRD WEEK OF EVERY MONTH.
EDITED BY G. A. NATESAN.

Vol. XVII. APRIL, 1916. No. 4.

WAR-TIME ECONOMY IN BRITAIN.

BY MR. SAINT NIHAL SINGH.

"WE must economise" is one of Britain's slogans now-a-days. The need for saving forms the refrain of private conversation. It is echoed from the press and the platform. Cabinet Ministers and divines preach it. The admonition to economise stares at one from large placards pasted on boardings. Retrenchment of expenditure is urged upon the Government and upon the householder.

The great reason assigned for the necessity of effecting economies is, that money must be made available for the prosecution of the war. The Prime Minister has told the public more than once that the nation is spending something like £5,000,000 (Rs. 75,000,000) a day. This huge sum has to be provided for out of taxation and loans. The people must save in order to pay the increased taxes and to buy war-loan and Exchequer and Treasury Bonds.

SILVER BULLETS.

His Majesty's Treasury and other agencies have designed ingenious advertising in order to urge Britons to subscribe to the war chest. The most effective advertisement that has come to my notice is a poster which shows crowns (five-shilling pieces) being contributed by civilians and converted into bullets to be used with deadly effect against the enemy. Another forceful placard shows a German soldier crushed under the weight of a five-shilling coin. In the advertisements that are now appearing in many newspapers to attract persons to invest in Exchequer Bonds, the following sentence used sometime ago by the Rt. Hon. Reginald McKenna, Chancellor of the Exchequer, is prominently displayed :—

The man, be he rich or poor, is little to be envied who at this supreme moment fails to bring forward his savings for the security of his country.

POOR MAN'S MONEY.

Special inducements are being offered to persuade the comparatively poor people to save money and to invest it in Exchequer Bonds. A committee was appointed to suggest measures, and many of their recommendations have been adopted. At present the Post Office is selling Bonds as low as £5 (Rs. 75), and a provision has been made whereby any one can deposit small amounts at a time towards buying the bond. Another attractive proposition made to the small investor is, that anyone who deposits 15*s.* 6*d.* will be given £1 at the end of five years, a handsome return, especially in view of the security of the investment. Facilities are offered by the Post Office for the safe custody of Bonds. Any person who does not possess Exchequer Bonds and War Loan stock above £200 is relieved of the obligation of paying income tax which, in view of the certainty of its being raised even higher than it is at present, is an item not to be lightly considered.

I understand from a financial authority that the Exchequer Bonds have proved a great success. A large number of men and women of limited means have invested in them. The wage-workers appear to be following this lead, attracted by the special inducements offered by the Treasury for their benefit.

Many financial authorities consider that the Exchequer should not float another loan, but should rely upon the sale of the Exchequer Bonds to supplement the revenue. Some of them suggest that some scheme of compulsion may be enforced, if the investments in such bonds do not meet the demands. Such opinion notwithstanding, there is a rumour afloat predicting an issue of a fresh loan.

THE BALANCE OF TRADE.

The curtailment of imports of foreign goods appears to be the one point on which all sorts and conditions of men are agreed. Liberals and Conservatives are citing figures to show that the balance of trade is very much against Britain, the imports greatly exceeding exports, and declare that the consumption of all articles of luxury imported from abroad must be stopped, and that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the necessaries of life imported from other lands should be reduced to the minimum, in order to relieve the pressure.

What is the net effect of the exhortations of Cabinet Ministers and economists to reduce the consumption of imported articles?

This is a question that I have asked myself many times, and to answer which I have made serious and painstaking inquiries, for there is ever present in India the problem of curtailing imports from abroad and supplying the demand for luxuries and necessities by home products. What do I find?

There is talk everywhere of the necessity of being economical, and there is much evidence that economy is actually being practiced. For instance, many persons are not using loaf or cube sugar at all, but are getting along with granulated or powdered sugar. I was very much impressed with this fact last week when I was taking tea with an Earl's daughter, and found that she was using granulated sugar—something unthinkable before the war, and demonstrating her fervent patriotism. I know of several families whose members do not use sugar in tea, and many others of my acquaintance get along with much less than they used in *ante-bellum* days. Such instances, which I cite from my personal knowledge, could be multiplied were I to draw upon the experience of other persons.

LUXURIES MUST GO.

The leaders of the nation, however, are far from satisfied with the amount of economies that are being exercised, and are urging every one to do without luxuries, and to economize on necessaries. Statistics show that further economies can be effected.

CONSUMPTION OF SUGAR.

Take the case of sugar for example. The statement recently made by the Royal Commission on the Sugar Supply, appointed at the outset of the war to insure the supply of sugar and to regulate its distribution and price, shows that the British have not exercised the requisite economy in using it. We read:

> In spite of the fact that since the beginning of the war the price of sugar has been never less than 50 per cent. above the normal, and is now practically double, there has been no considerable or general reduction in the amount consumed. It is, therefore, evident that further economies in its use can be effected, and the Commission desires to impress upon the public the urgency of the obligation to use every effort to effect such economies. It accordingly requests all classes to reduce their consumption not only of sugar as such, but also of jams, biscuits, sweetmeats, chocolate, and other goods of which sugar is an important constituent.

The Royal Commission on the Sugar Supply has intimated that:

> * * * the supplies that will be available for the current year will probably fall short of those imported in the year 1915 by 20 per cent. to 25 per cent.
>
> An equivalent reduction in consumption will therefore be necessary, and it is the hope of the Commission that all consumers alike will aim at restricting their use of sugar in that proportion.

MEAT-EATING.

I have asked a number of butchers, who mostly deal in imported meat, if the people are buying less of it because the prices are higher, and because everyone is preaching economy. The reply, in every case, has been in the negative. Some of the butchers have told me that never before have they sold so much meat. The reason they assign for this is that the workers, who alone use imported meat (the rich people consume native meat as far as possible) are receiving higher wages, especially those employed in munition factories. One or two of these butchers have been patriotic enough to deplore the fact that the working people were not saving their money against a rainy day.

On my mentioning the matter to a labour leader, I was told that it is only natural for the workers to eat well while they can, for, before the war, they did not earn enough to enable them to live decently.

HINTS FOR ECONOMY.

In spite of the efforts that the middle and upper classes have been making, their scale of living is still very high. That newspapers read by the rich should print, week after week, articles giving hints for economy, tells its own tale. Many of the suggestions seem to me to be impracticable, and some are actually ridiculous. My general feeling after reading such articles is that floundering attempts are being made to economize by opersons who have never before given much thought to such a thing and who do not see their way to give up their toy-dogs and other fashionable but expensive follies.

A walk through the streets which are lined on either side by drapery shops, where articles of feminine apparel are sold, and a tour of observation through some of these establishments make one wonder if the people are really economizing on dress, or if the shopkeepers do not have sense enough to take down expensive articles from their display windows, which nobody is buying.

FUR IN FASHION.

I never saw so much fur shown in the shops as during this winter. There are any amount of fur coats to be had, and the women are having them, too. They say that fur is cheap, but I tell them that fur is never cheap, and my contention cannot be disproved. Women are not only wearing fur coats, but their dresses are profusely trimmed with fur—and the fur used for this purpose is high-priced. The curious coincidence is that, so far, we have had practically no winter. The days and nights have been spring-like, almost throughout the cold season.

A Member of Parliament said in a statement he made in the House of Commons some time ago that expensive lace handkerchiefs are hanging in the shop-windows in Regent Street. So they are, even to-day, and besides, many other high-priced articles that I could name had I the space to do so.

The shop-keepers grumble, and so do the dress-makers. Gold-smiths and silver-smiths also complain. In spite of it all, however, their business has not suffered the loss that a real national campaign for economy would have entailed.

What I have said must not be taken to indicate that no economies in respect of dress have been effected. Much evidence to the contrary is available. Dress-making and millinery are far from flourishing, and the business of drapers and clothiers has suffered some depression. Gold-smiths, silver-smiths, watch-makers, and the like, also, are not doing the business that they transacted before the war. Theatres, too, are affected.

PICTURE PALACES.

The cinematographs, or picture palaces, as they are called, are, however, prospering. They are thronged, especially in the afternoon and early evening. One of the most commodious, luxurious, cleanest, and most enterprising cinematographs in London is in my neighbourhood. It is known as "The Tower Cinema." I go to it occasionally, and always find it full to overflowing.

An agitation has been started to prohibit the importation of cinematograph films from America, or, at any rate, to subject them to an almost prohibitive tariff. Such an economy, which aims at taking away a cheap and, on the whole, a healthy form of amusement, does not appear to me to be a wise move. If enforced, it is likely to occasion a great hardship upon comparatively poor persons, who are unable to patronize the more expensive places of amusement.

GOVERNMENT ECONOMIES.

Turning from the subject of private to that of public economy, I may say that the Government has begun to move in the matter and is setting the example. The various departments are cutting down expenditure wherever they can. A Minister who presides over one of the smaller departments told me the other day that he had been able to reduce expenses by over £200,000.

The Government has closed museums and picture galleries with a few exceptions, and thereby has been able to save £50,000 a year. Many eminent persons protested against the closing of the museums and galleries. Newspapers and journals were full of letters urging upon the Government the advisability of desisting from taking such a step. A Deputation consisting of many well-known men waited upon the Prime Minister and begged him to reconsider the decision arrived at by the Cabinet. The delegates who spoke pointed out that only a small amount of money would be saved, at the expense of the public, to whom museums were "places of rest and reflection." Mr. Asquith was, however, firm, and justified himself by saying, in part:

> **Every pound that could be saved without serious detriment to the permanent interests of the country was a contribution which it was the duty of the Government not to neglect.**

MUNICIPAL ECONOMIES.

What I have said of the National Government is equally true of local bodies. Municipal Governments throughout the United Kingdom are curtailing expenditure and enforcing economy wherever they can. Unfortunately, such retrenchment means the stinting of money upon public improvements, and even on education. There appears to be no help for it, however. The war is occasioning an enormous expenditure, and it must be met, no matter what other public activities are starved.

The British give me the impression of being very much in earnest about economizing in every direction. Their earnestness and sincerity in this matter eloquently bespeaks the fact that they have the sagacity to take a correct measure of the situation, and the resourcefulness to devise measures to meet the exigencies of the times.

I wish we Indians could take a leaf out of the British book.

The Hindu University at Benares : A Dialogue

BY "AN INDIAN I. C. S."

Pandit.—At last, there's the Hindu University at Benares set on its legs. If we cannot exactly sing *Nunc Dimittids*, at least a good beginning has been made, and they say a good beginning is half the battle won. We can congratulate ourselves on the work already done.

Vipra.—I have no intention of damping your feeling of thankfulness, but you know the famous saying attributed to Cæsar by Lucan: "Nothing can be said to have been done so long as anything remains to be done." Meanwhile if you have no objection I should like you to tell me what is the special feature in the Hindu University which makes you so keen about it.

P.—Why, you must be trying to make fun of me. I thought everybody knew that the Hindu University constitutes a new departure in education in India, or as some would put it, a return to the old conditions, and will open a new epoch in the history of our country, because it will put an end to the divorce between education and religion which has been allowed to continue for a long time.

V.—Please be more particular; generalities generally go wrong. No doubt, it is grand to put an end to the divorce between education and religion, but you can do it only by putting an end to the divorce between life and religion. What I want to know and what I am sure you can tell me is, how you mean to go about in making this new departure in education.

P.—Well, the details are not all settled, but our aim is to impart religious education so that our young men may no longer be indifferent to religion, and their character may receive the same training and discipline as their intellect.

V.—That is a grand thing indeed if it can be realised in practice.

P.—But why should you doubt it? Don't you know that we Hindus are the most spiritual people in the world, and can boast with justice of deeper and more continuous spiritual culture than any other nation in the world? You cannot surely be ignorant of the great spiritual achievements of our ancestors, and why should we, their descendants, who have kept unsullied the purity of their blood, be unable to walk in their footsteps?

V.—I yield to none in the admiration of our forefathers, but don't you think we build our hopes too much on their achievements? The wisdom of our ancestors, deep and broad as it was, is no substitute for present-day ignorance. I for one do not entertain much hope of any people who rest content with warming themselves at the ashes of ancient fires and shining by the borrowed lustre of the achievements of their ancestors. The difference between our wise forefathers and our foolish selves is so great that I sometimes doubt whether we are justified in basing any hopes of our future on their greatness. But we are wandering from the point, and you have not answered my question.

P.—What other answer do you want? Didn't I tell you that our aim was to impart religious education and so forth?

V.—Yes, but how are you going to do it? That's what I want to know.

P.—I have not got any syllabus with me, but we all know how education is imparted. We shall have the most eminent professors of divinity to teach religion and morality, and they will give our young men a correct notion of our religion, our Sanatana Dharma, so that they will no longer be ignorant of their religion.

V.—So, you think you can teach religion and morality just like science and mathematics, and that it is all a question of professors and lecture-rooms, in short a mere matter of money.

P.—Why not?

V.—I am surprised to hear that question. May I remind you of the Meno of Plato? In that dialogue Socrates made it very clear why virtue cannot be taught so easily as imagined; and religion which is virtue *plus* something, and at any rate cannot be less than virtue, will not prove less easy to teach than virtue. But probably you mean by religion religious doctrine and by morality moral maxims. These no doubt can be taught in the ordinary way.

P.—And are not these sufficient?

V.—Surely you do not mean to say that it is on account of want of knowledge of religious doctrine and moral maxims that our young men go wrong, and that you have only to tell them what is right and proper and they will do it. Let me tell you, mere erudition of any sort is merely a load of learned lumber and worse than useless, and mere theological erudition is worst of all.

P.—No doubt it is so, but do you know of any other method of imparting religious education?

It is easy to criticise but how else can religion be taught? We cannot command success but can only do what lies in our power. We must therefore rest content with teaching religious doctrine and hope for the best.

V.—You ask me whether I know of any other method. I tell you there is one and only one method of imparting religious education. Religion must be lived before it can be taught; and we grown up people must make our life reflect the light of religion if we want our young men to seek for that light and to walk in it.

P.—Here are generalities with a vengeance, and those from the lips of one who does not like them. Please drop metaphor and confine yourself to the level ground. How are we to make our life reflect the light of religion?

V.—Before I answer your question I should like to know whether we mean the same thing when we speak of religion. What is your notion of religion?

P.—I have not got any cut-and-dried definition of religion. Let me know what is your idea of it.

V.—Stripped of all its excrescences, religion is in my opinion nothing but submission and obedience to what we believe to be the will of God; and a man can know the true doctrine only if he do His will. Do you agree?

P.—Oh yes, that will do as a working definition.

V.—Well then, if to fear God and do His commandments is the pith of religion, you must agree with me that, in whatever else we may disagree, there is no doubt that it is God's will that we should feed the hungry, clothe the naked, and shelter the wretched. There is no metaphor in this, nothing abstract, nothing beyond the meanest comprehension.

P.—I do not dispute it.

V.—Are we then fulfilling these primary commandments in our life? Do we not, on the other hand, make of gold and silver our God as Dante says, and strive to perform not the will of God but the will of Mammon? Is not our whole life a race unto that life which is death?

P.—I cannot deny it but you must make allowance for the weakness of human nature. The spirit is willing though the flesh is weak.

V.—Is the spirit really willing? I doubt it very much. I go further and ask you—whatever our own professions and practice may be—whether we really want our children to do God's will to feed the hungry, to clothe the naked and all the rest of it? Do we really wish our boys and girls to be taught to do this, drilled and disciplined to do this, to be examined with reference to this, declared to have passed or failed on this basis? Surely this would be an examination worth having, and of such examinations alone it cannot be said with justice that *perverse studere qui examinibus studeant.* But we look upon such an ideal as impracticable if not as actually foolish. We do not want our boys to give what they have to the poor and look only to the treasure in heaven—to "take stars for money." No, we want them to get on in the world, to get money—honestly if they can—but in any case to get it, to be well-established in the world, and to shun poverty as something worse than the deadliest of sins. Our exhortations to our sons are in the same sense though not in the same words as those employed by Boileau in his seventh satire: *Endurcis-toi le cœur; sois arabe, corsaire . . . Ne va point sottement faire le généreux; Engrasse-toi, mon fils, du suc des malheureux.*

P.—What do these words mean? I do not understand French very well.

V.—This is what they mean "Harden your heart; be an Arab, a pirate; never be so foolish as to do a generous action; fatten yourself, my son, at the expense of the unfortunate." We do not speak in this plain-spoken manner to our children but the sum and effect of what we say is the same. Don't you see that we incline not only our own hearts to covetousness but even the hearts of our children by our professions no less than by our practice? How then can you say that the spirit is willing?

P.—No doubt almost all of us grown-up people do work for wrong ends, but there are some who desire that their children should walk in the right way and should be taught to do so. Why should you object to it?

V.—I do not object to it, but I say it is a vain desire, and that it is the height of folly to expect that while we follow false images of good-*imagini di ben seguendo false*—our children would nevertheless take the narrow path that leads to heaven. The influence of example is nowhere more marked than in this—that, as George Herbert says, "in vice the copy still exceeds the pattern."

P.—There is a good deal in what you say, but you seem to ignore the potential virtue in man and the influence of careful and well-considered training on the character of young people. We are all fond of life and limb, and prefer comfort to discomfort, and yet how is it that millions of young men willingly and cheerfully enlist in the army and expose themselves to every risk for their country's sake, how even the soldiers of conscript armies after undergoing a short period

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of training acquire that soldierly spirit which subordinates self to the interest of all?

V.—You are now throwing new light on the subject, and I shall be glad if you develop your point of view.

P.—I cannot do better than read to you the following extract from the Infantry Training Manual issued by the British General Staff:—"The objects in view in developing a soldierly spirit are to help the soldier to bear fatigue, privation and danger cheerfully; to imbue him with a sense of honour; to give him confidence in his superiors and comrades; to increase his powers of initiative, of self-confidence and of self-restraint; to train him to obey orders, or to act in the absence of orders for the advantage of his regiment under all conditions; to produce such a high degree of courage and disregard of self that in the stress of battle he will use his brains and his weapons coolly and to the best advantage; to impress upon him that so long as he is physically capable of fighting, surrender to the enemy is a disgraceful act; and finally to teach him to act in combination with his comrades in order to defeat the enemy." Now this is a high enough ideal; in fact it is sufficient not merely for battles of the ordinary kind but also for the battle of life. And can it be denied that this high ideal is appreciably realised in actual practice? If then you can teach the true soldierly spirit to your soldiers, why can you not teach the same self-sacrificing spirit to your young men? If we take the same pains we shall achieve a similar success, and, please God, we shall try our best to take at least equal pains.

V.—Now you are talking to some purpose. The necessity of self-subjection for the sake of serving others, of supplanting the carnal root of selfishness by the spiritual seed of selflessness, of creating a longing for things that are pure and honest in order to kill the appetite for things that are evil and forbidden, and of teaching, on the one hand, the futility of thrift and the foolishness of accumulation, and on the other, the duty of spending and the economy of wise expenditure, has never yet been clearly recognized by those persons, whose duty it is to educate children in the home or in the school. Yet the need for these lessons is not less than the need for others; nor is the work of building up character laid on a sure foundation unless the spirit of gain is replaced by the spirit of service and the range of our education includes not only the task of enabling our young people to keep themselves unspotted from the world, but the duty of washing off the spots of the world also. And let me assure you, this is not to be done by lectures however eloquent or by professors however learned, but only by setting an example ourselves in our daily lives, or if that is not possible, at least by showing honour to the true and the good instead of the wealthy and the powerful.

P.—I cannot but agree with you, and let us hope, my friend, that the authorities of the Hindu University are not ignorant of these things. Meanwhile it is the duty of all of us to help them to the limit of our power in realising the bright expectations of all who are interested in the cause of true education. This talk of ours will not have been in vain if it has strengthened our purpose to do our very best in this noble cause.

JAPANESE WOMEN.

(Letters of a Japanese Scholar to an English Friend.)

BY MR. V. B. METTA.

MY DEAR WILSON,

Most Western men and women are taught to believe from their very childhood that the East is and has always been treating its women shamefully. Now, there can be no more ridiculous idea than this! Learn something more of the Orient before passing such a judgment on it.

The East has rightly felt through its imaginative instinct that woman must above everything else be the eternal guardian of human morality; and, therefore, the one and the only place where she can exercise her noblest influence is her home. 'Make your home happy,' thinks the Eastern woman, 'in order to make your nation good and great.'

You should not think, however, that this ideal has prevented our women from achieving greatness in other walks of life. Far from it. We have had a greater number of able queens on our

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

throne than probably any other country in the world. In the Kamakura period, there were many Amazons in Japan, who used to fight against the strongest of our knights. Our Empress Jingo herself led a great army for the first conquest of Korea in pre-Buddhistic times. There have been many Japanese women, who have attained great distinction in the world of letters also. In fact, during one period of our history, the whole of our native literature was in the hands of women, whilst our men were devoting their time and energy to the study of the Chinese Classics. It was during that period that two of our greatest novels, called 'Genji Monogatari' and 'Makura-No-Zoshi' were written.

As the Western ideals of womanhood have been penetrating into Japan since the last fifty years, every Japanese, who loves his country and its old ideals, is justified in frankly expressing what he thinks of the atmosphere in which Western women are brought up.

Your ideas of chivalry are different from ours, —in that you admire mostly youth and physical beauty in women, while we respect women as women, whether they be young or old, beautiful or otherwise. These sensuous ideas of yours have been the cause of endless troubles to you in your domestic life. You talk with neurotic enthusiasm of your 'beloved' before marriage. But as soon as you are married, the poetry of your senses evaporates and indifference towards your wife follows. This 'indifference' leads highly-strung people like you Westerners to—polygamy. Yes—polygamy!—not open and legalised, as it is practised in many Eastern countries, but hidden from the eyes of the world and therefore very degrading!

All your modern art is meant to promote this immoral polygamy, by thrilling your nerves, exciting your senses, and making you feel sensually hungry and thirsty. What are your nude and half-nude pictures and statues meant for—if not to make you long for undesirable bodily pleasures? Most of your present-day music is not soothing and elevating as it ought to be. It is mentally and morally troubled. Your poets have done very little on the whole beyond apotheosizing the ephemeral sensations and feelings of lovers before marriage, unlike Eastern poets—who prefer to sing of the calm and ever-lastingly noble virtues of married men and women. And your prose-writers!—what are they doing at present? Are not some of them trying to justify prostitution from an artistic point of view?

Marriage is becoming less and less sacred in your eyes. You cut the nuptial bond, whenever you find it convenient to do so. The ideal of motherhood, the noblest ideal that a woman can cherish in this life, is naturally despised by women in societies such as yours; for, are they not educated for short-lived flirtations and courtships rather than for life-long duties of motherhood? O, how degraded must a woman be, who thinks lightly of the divine rights and duties of wifehood and motherhood!

To add to the fun of the comedy of your social life, the suffragette has now appeared amongst you. She wants to upset not only society, but Nature itself! She laughs at 'mere' man, who prepared the way for her advent. She calls him 'selfish,' 'brutal', and by a dozen other equally polite epithets. She declares her mission to be to introduce order in Western society. I do hope she will succeed for your sake; for, is not order badly wanted in your society? In one respect at least your suffragette is quite logical and clear-sighted. You people have been talking ceaselessly about the 'equality' (that vaguest of words!) of the sexes, and so she naturally comes forward now and says: 'Well, if we are your equals, let us also take part in every kind of work which you men are doing—be it social, moral, athletic, or political.'

To be quite frank, I, for one, do not want any Western influence in our domestic life. For what is the aim of life, the goal towards which every individual aspires? It is happiness. Now, have you succeeded to any appreciable extent in making yourselves happy?—No! On the contrary you have done everything to drive away enduring happiness from your midst. Your dramatic literature mirrors the wreck that you have made of your life. Compared with you, we Japanese are really happy. The East is conservative, because she knows herself, and the meaning of human life. After much thought and experience she has adopted and has been firmly keeping up her faith in those ideals, which tend to make the majority of human beings happy. The West is childish and mistakes 'change' for 'real progress. She destroys her ideals very soon after creating them. She cannot believe in anything altogether, and so she suffers without getting either happier or stronger through her sufferings.

Yours Sincerely,

J. OKAKURA.

Robert Louis Stevenson: As Man and Author.*

BY K. S. RAMASWAMI SASTRI, B.A., B.L.

Romance bears to novel the same relation that poetry bears to prose. It satisfies the desire for something above and beyond the little world wherein we are cribbed, cabined, and confined, and lends to life an added grace and charm, and reveals the eternal meaning, purpose, and value of things. As Professor Saintsbury says: Romance is eternal while novel is transitory. Again, Mr. Raleigh points out: "Time and again, in the world's history, where East meets West, the spirit of romance has been born." Just as in the 16th and 17th centuries the drama overshadowed the novel as a literary form in English literature, in modern times the novel overshadows the drama. Even in the realm of the novel we see an evolution due to the busy life of modern times and the tyranny of journalism. The long novel has given place to the short story, and sensation-hunting, which is the life breath of journalism, has invaded the sacred sphere of art. The democratisation of literature and the influence of free circulating libraries have further influenced the evolution of the novel. In such an age it is refreshing to come across a real writer of romance who is at the same time a great literary genius.

Miss Amy Cruse has very well brought out in her work the great qualities of Stevenson as a man and as a writer. One observation by her is worth pondering over. She says at the very beginning of her work: "The history of English Literature on its biographical side serves to show how few of our great writers have come of a literary stock. In one instance after another the same story is repeated; a strong and virile race, following some active occupation, produces at a certain stage a man or woman who provides it with means of expression; and, though this is probably mere coincidence, the branch of the family thus distinguished has a way of soon afterwards dwindling and dying out." R. L. Stevenson had a sensitive and emotional nature. He says: "I seem to have been born with a sentiment of something moving in things of an infinite attraction and horror coupled." He had this "vivid, strenuous quality" all through his life. To him "facts mattered less always than feelings." Mr. Gosse says of him: "A child-like mirth leaped and danced in him; he seemed to skip upon the hills of life." His life itself was a romance. It is of interest to us to learn the following fact about one of his masterpieces:—"He saw in his sleep, he tells us, two of the most important scenes in history, and when he woke, although he was still very weak from a recent attack of hæmorrhage, he sat down and wrote, from the suggestion thus given, the story of Dr. Jekyll and Mr. Hyde." He took also a keen interest in public affairs. He died in 1894. His *Requiem* is a wonderful poem, summing up his life—nay, all life, all worthy life—admirably.

> Under the wide and starry sky
> Dig the grave and let me lie
> Glad did I live and gladly die,
> And I laid me down with a will.
> This be the verse you grave for me;
> Here he lies where he longed to be;
> Home is the sailor, home from the sea,
> And the hunter home from the hill.

His range and versatility are wonderful. I do not propose to discuss his works in any detail here. "He wrote essays, plays, novels, short stories, lyrics and blank verses, fables, lay sermons, and prayers." His greatest charm as a writer is his "distinctive and finished style." He has defined literature as "words used to the best purpose, with no waste, but going tight round a subject." Conciseness, daintiness, exquisiteness of epithet, humour, and pathos distinguish his wonderful style. But even more than the charm of his style is the charm of his personality as revealed in his works. I shall conclude this all-too-brief sketch with the following precious words of Stevenson's in his *Memories and Portraits*:—"True romantic art, again, makes a romance of all things. It reaches into the highest abstraction of the ideal; it does not refuse the most pedestrian realism . . . Fiction is to the grown man what play is to the child; it is there that he changes the atmosphere and tenor of his life; and when the game so chimes with his fancy that he can join in it with all his heart, when it pleases him with every turn, when he loves to recall it and dwells upon its recollection with entire delight, fiction is called romance."

SCIENCE AND INDUSTRIES.*

BY DR. M. SRINIVASA RAU, M.A., M.D., ETC.

(Director of Public Health Institute and Sanitary Commissioner, Mysore State, Bangalore.)

INDIA is and has been an agricultural country. Whatever industries there might have been in the past, they have now become moribund if not extinct, through causes which are well known to every one and which consequently need not be enumerated. Great Britain has the reputation of being chiefly an industrial country. Agriculture is very much in the background. The land does not produce enough to feed even a portion of the population. Much of the food-stuffs including meat, eggs, butter and milk has to be imported. In times of peace, industrial occupations took the foremost place, and the people and the Government felt confident that whatever food materials they required they could purchase from other countries. But the captains of industry used to fight shy of anything which savoured of science, especially pure science and research work. The highly educated Government officials and capitalists were more or less ignorant of science. It was for many of them an unknown and mysterious region into which they preferred not to penetrate. The satirist of the future will point out that it required a European war of unparalleled magnitude to bring about the official recognition of the bearing of science upon industry.

What do we find in Germany? There the Government and the people are fully alive to the value of developing both agriculture and industries on scientific lines. During the last 16 months of the war, the Germans have been able to feed themselves and their army though no foodstuffs reach them from outside. They have proved the world that they are capable of manufacturing all the munitions they want for the carrying on of this stupendous struggle. German industries have prospered and the manufacture of many important commercial substances has become the monopoly of the Germans. This is pre-eminently so in the case of chemical industries. The reason is that the Germans appreciate the value of research more than the English. In Germany research work is absolutely indispensable for the ordinary degree of any University. Every aspirant for a science degree is trained in general methods of research. In later life he is able to tackle the many problems that may present themselves for solutions with confidence of success.

The British manufacturer develops his particular industry on so-called "practical" lines. He is satisfied with manufacturing articles which depend upon a market already existing. The Germans realised the folly of the view and their methods superseded those of the British. Scientific supervision and investigation are in the forefront of the German system. Industries were built up which could never have been started under the English regime. Many industrially useful articles were, in the scientific sense, created and then introduced to the public. The older methods of improving existing manufactures by imperial methods gave place to the new system. Thus the British manufacturer was confronted with the German scientific industrialist, who was working for a new era where profits would be large and developments world-wide. To give a single instance:—The manufacture of large quantities of ammonium nitrate, and nitric acid from synthetic ammonia prepared from the nitrogen of the air, has made Germany not only independent of outside supplies of nitrates but has enabled it to command the world markets.

The English now realise the lagging behind in scientific development may mean a possible loss of supremacy in time of war and of dislocation of home industries in consequence of the lack of materials produced only in countries with which England is now engaged in war. The discovery of aniline dyes was the result of the researches of an English chemist. The scientists as well as the industrialists of Great Britain failed to realise the immense possibilities of the development of a discovery by one of themselves. The scientist in England has come to believe that the application of any scientific discovery to anything of commercial value is beneath the dignity of science. He is apparently content with work having only an "academic value." The stolid English capitalist and manufacturer did not perceive that there was any money in the business which was moreover new to them. But the shrewd Germans at once took advantage of the idea and with lavish State aid built up an industry which has been able to supply the whole world with aniline dyes and which defied any competition. In consequence, England and other countries find themselves helpless and many industries are in danger of closing their works. One and a half million of workmen are more or less dependent in England

* A paper submitted to the Indian Industrial Conference.

Digitized by Arya Samaj Foundation Chennai and eGangotri

alone upon the continuance of the dyeing industry. The British Government have at last opened their eyes to the seriousness of the situation and realised, too late, the consequences of their apathy towards pure scientific research work. The Government, in addition to a loan of one million pounds towards the capital of a company formed for the manufacture of dyestuffs, has undertaken to make a grant to the company for a period of ten years of £100,000 for the specific purpose of experimental and laboratory work. Chemical research has thus been officially recognised and endowed as an essential factor in solving national industrial problems. The colour industry in England has been crippled during the last thirty years. This is due to the fact that the manufacturers did not realise the true value of employing research chemists in their works. The Farbwerke of Meister, Lucius and Brunung was organised in Germany in 1862 by 2 chemists and 2 merchants with a staff of 5 workmen, one clerk, one chemist, and an engine of 3 horse-power. In 1912, the same firm employed 7,680 workmen, 374 foremen, 307 chemists and 74 higher technical scientists. 13·8 million marcks were paid out as salaries, bonuses and wages. 11,000 different substances were manufactured, and the steam-engine had 30,000 horse-power. To take away the German dye-business built on such a colossal foundation must necessarily be an extremely difficult task. In 1912, the capital of dyeing industries came to £8,000,000 paying a dividend of 22 per cent. The German works have long ago written off the cost of their plant.

Some time ago the English newspapers were full of the glowing opportunities which were said to be at the very doors of British industrialists and manufacturers. These were given the gratuitous advice to take over the numerous industries in which Germany and Austria had a prominent part or a monopoly. To judge from the newspaper correspondence, not a few of the English public seem to think that all that will be required is to subscribe the capital, erect the necessary plant and go full steam ahead forthwith. Such people will have to learn that if they want new industries, they must get into touch with pure science; that if a nation says in effect: "What is the good of research," it will be answered in a most distasteful manner by some other nation which is more enlightened.

Even with the British Government at its back, the newly formed company cannot produce in England the innumerable aniline dyes at a moment's notice. The German company had the foresight to employ research chemists of eminence, paid them handsome salaries, did not ask them to work with the sole aim of producing any particular substance and did not constantly worry them with demands for tangible and paying results. The chemists were thus practically given a free hand to engage in any research that pleased them and that suited their talents. The consequence was that one substance after another was produced from the laboratories. When the directors were satisfied that any particular dye could be put on the market in paying quantities, they added it to their commercial products leaving the chemists free to engage in further research. This policy of trusting to science and its devotees has been amply justified by its results. Merck's chemicals have a word-wide reputation. Grubler's dyes have attained to a similar position. Kahlbaum's chemical reagents have been adopted as standards by all analytical chemists. Witte's peptone drove all others from the market and English bacteriologists are now trying to find a substitute for the same or profess to dispense with it altogether.

Chemically pure sulphuric acid has to come from Germany. All finer kinds of glass for preparation of lenses for microscopes, telescopes and other scientific apparatus were to be had only in Germany. How can England, notwithstanding all its wealth, scientific knowledge and enterprise, hope to produce at a moment's notice all these substances for which it was content to depend upon Germany till now? Germany has had a long start of over 50 years in the scientific race, and it is almost impossible for the other nations to overtake her in the immediate future. Only slow and painstaking research work carried out constantly and without any idea of immediate gain can enable England to come up to her rival in course of time. In spite of the immense economic loss which Germany is sustaining during the continuance of the war if peace were declared to-morrow, the German industrialist will immediately set about his work of production and flood the world's markets with all the substances, in the supply of which he practically holds a monopoly. How can England and the Allies hope to prevent this from happening? The cry now in England is, that the capital is fighting shy of enlarging the industrial works. Within the last 30 years, the British are said to have used their surplus capital in promoting various industries abroad. The idea is prevalent that the British cannot produce goods so cheaply, or sell them so profitably, as their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

German rivals. This is believed to be due to the fact of the German having the combined advantages of protection and free trade; comparatively light taxes *plus* protection against foreign competition in his own country and a free market in Britain, while the British has had to submit to excessive taxation without protection in Great Britain, and his goods have had to carry the handicapping weight of foreign tariff. Without enlarging further on this possibly controversial question, the fact remains that the British industrialist has had to contend against the disadvantage of not having enlisted science in his aid. He is satisfied with what is spoken of as "practical experience," and has little or no love for science.

To improve this lamentable state of affairs, the British Science Guild was formed a few years ago and has since its inception been pointing out that the Germans have brought all the products of science into the commercial contest they have waged against England. It has also been urging that similar methods should be adopted in British manufactures. The object of the Guild is not so much the acquisition of new knowledge as the appreciation of its value and the necessity of employing scientific methods in all departments of the national executive. Lord Haldane, the first President of the British Science Guild, said in 1905:—

"I believe that things will not be right until we have a scientific corps under a permanent commitee, just as the defence committee is under the Prime Minister to-day. I mean a body that will not consist mainly of officials of the ordinary kind but of the most eminent men of science who will be put upon the footing on which they deserve to be placed and are recognised as a body of men who will be at the elbow of the Department and can organise the scientific work of the State. I hope that if we get to this position, the example of a Government adopting science will be followed by the Municipalities, as I believe it is going to be followed by our manufacturers." The pleadings of the British Science Guild apparently fell on deaf ears and a European war nine years later was necessary to galvanise into activity the auditory nerve of the British Nation. The British Government have come to recognise that the promotion of research is one of the duties of the State and have now established a permanent organisation for the promotion of industrial and scientific research There are plenty of scientific workers in England but their work has to be co-ordinated and applied to practical needs. Even the carrying of war to a successful issue depends upon scientific workers. Germany has put all the resources and inventions of her scientific men into the war irrespective of right or wrong. In England, the scientific man who had anything to do with war inventions was snubbed and discouraged. Even the merits of his discoveries for peaceful purpose were deprecated. As Sir Ronald Ross says: "Had we as a nation done more to organise research we should probably have already been in a position to utilise this kind of genius to its utmost. But stupidity always punishes itself."

The British Government have appointed an Advisory Council as scientific advisers to all Government departments concerned with or interested in scientific research, the Advisory Council, with the co-operation of various scientific societies, will consider the applications of science to industry and will seek to enlist the interest of the manufacturers. The Council will also advise the Board of Education as to the steps to be taken for increasing the supply of workers competent to undertake scientific research. When obliged to seek scientfic advice the British manufacturer turns rather to those who have technical experience than to men of pure science engaged in research work. This is proposed to be obviated by the Advisory Council linking up the scientist with some specific industry as is the case in Germany.

Seeing that our chief industry is agriculture, the Government of India is doing the right thing in organising the Agricultural Department on scientific lines. Promotion of research has been recognised as one of the duties of the State. If anything more is to be said at all, it is that the number of workers is short of the real need of the country. We want more agricultural chemists, mycologists, entomologists, and more research institutes and experimental farms in various parts of India. The Imperial and Provincial Departments of Agriculture have done much and are doing more every year for the improvement of agriculture. But the people are so conservative that the effect is hardly perceptible as yet.

When we turn to industries proper, we find the outlook neither bright nor hopeful. A wave of industrialism is passing over India and there is much loose talk about starting new industries. Occasional whispers are heard about "capturing" German trade, whatever that may mean. When a new industry is proposed to be started, the discussion centres round political or economic questions. The vital principle of scientific control has been subordinated or even left out of consideration altogether. The general idea seems to be that all that is necessary, is to subscribe a certain amount of capital, secure Government aid and appoint a board of business directors. The industry is expected to spring into existence at once and to be ready to cope with all emergencies. When the expected dividends do not come, a feeling of disappointment arises, all interest in the industry flags

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the whole business collapses. Many concerns do not even pass beyond the stage of the publication of the prospectus. All this is because the promoters of an industry are persons without any business or scientific training. No real experts are consulted, no scientific opinion is obtained and things are left to drift and settle themselves as best as they can. Can it be any wonder then that most of the companies floated for this or that industry fail, as they are bound to fail?

The weaving industry in India is suffering much for want of adequate amount of dyes which used to come from Germany. The declaration of war has put a stop to the supply, and the weavers are turning to the dyes which their forefathers were employing. India is rich in a number of vegetable dyes, which may be utilised during the period of the war. But with the fate of the indigo industry before our eyes, who can advise the Indian to go in for improving the manufacture of vegetable dyes? The moment the war is over, the German aniline dyes will drive all the competitors out of the arena. Even England has not been able to stand independent of German dyes, much less supply the needs of India. The question of improving vegetable dyes may therefore be laid aside as impracticable. Much was heard some time ago about the manufacture of oil from the large amount of cotton seed available in this country. Most of it is exported to other lands where the oil is extracted and the by-products are made use of in various ways. Would it not be well before promoting a local company to experiment on the following point? How many varieties of cotton seed are available? What percentage of oil does each variety yield? Whether any relation exists between the amount of oil and cotton fibre, and if so, what that relation is? What is the composition of the cake produced from pressing the various kinds of cotton seed? Whether it would be more advantageous to use the cake as food for cattle or as manure for land? In what proportions is the latter to be used? These and numerous other points require to be worked out before any company manufacturing oil from cotton seed can hope to pay dividends. It is not the principal product only of any industry that will pay, but the utilisation without waste of all bye-products that will help to swell the profits. During the distillation of coal for the manufacture of illuminating gas, coal-tar is formed as one of the bye-products. From this single substance are produced on fractional distillation the following:— Benzol, toluol, carbolic acid, cresols, naphthalein, and anthracene. All these are valuable commercial substances, and numerous other chemicals can be prepared from them. For instance, benzol readily yields aniline from which many beautiful dyes can be manufactured.

There are numerous plants in India which have great reputation for possessing medicinal properties. The Ayurvedic practitioners speak of a good number of medicinal plants, the pharmaceutical preparations from which are said to have specific curative powers in particular diseases. Many such plants cannot now be identified. The descriptions found in ancient Sanskrit works are so obscure that we cannot be certain to what particular plant they refer. Indian addendum to the British Pharmacopœia contains a few Indian drugs but many more are awaiting identification and investigation. This offers a wide field for co-operation between science and industry. A company formed to exploit the Indian drugs must have the scientific co-operation of a chemist, a physiologist, a bacteriologist, and a physician The chemist would isolate the active principles of plants, studying their physical and chemical properties. The physiologist would conduct experiments on animals studying the action of drugs on the various organs and tissues of the animal body. The bacteriologist would test their action on various bacteria. When the mass of facts collected by the chemist, the bacteriologist, and the physiologist is sufficient to justify the administration of any drug to man, the physician comes in and administers the drug and its preparations in suitable cases. When all these conditions are satisfied, the drug will naturally secure a recognised position in the Pharmacopœia, and those that manage the business side of the company will place the substance on the market to the best advantage. Large wholesale firms of chemists and druggists in Germany, and to a smaller extent in England, have their own chemical, physiological, bacteriological and pharmacological laboratories attached to their own works and employ whole-time scientists to carry on investigations. To the "practical man," who has an eye on whether research is returning value for money spent upon it, all this will appear to be quite unnecessary. Unfortunately also, official criticism always likes to take its cue from the "practical man." Yet in the very nature of things, research work must remain not merely unappreciated by, but unintelligible to, the "practical man."

Another promising industry is the manufacture

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of glass. It requires the co-operation of science just as much as the pharmaceutical industry. The raw materials required are quartz, sand, sodium carbonate, lime, red lead and oxides of manganese, nickel, cobalt, zinc, arsenic, etc. Investigation is necessary as to the composition of various sands available to determine which of them are most suitable. Any company formed for the manufacture of glass must be able to prepare all the sodium carbonate it requires. This again means scientific help. The other raw materials need as much scientific investigation as those above mentioned. Research chemists should be employed to determine the composition of the glass manufactured and to suggest any desirable modifications for the preparation of glass suited for various purposes. It will be within the recollection of many of us that a glass manufacturing company formed in Madras came to grief within a very short time of its commencing work. Whatever other causes there may have been for the failure of this enterprise, the neglect of the promoters to call in the aid of Science must have been one of them. Last Christmas there was an exhibition of some glass-ware in Madras by an Indian company, which was expected to supply all that Austria was doing before the war broke out. We hear very little of the activities of this company which may, for all we know, be in a state of suspended animation. Sending a few Indians to Japan to learn the process of glass manufacture will not bring a new industry into existence nor will it materially help any companies that may be already struggling in the field. Manufacture in small quantities of inferior glass from materials, the composition of which is unknown, will never be a paying concern. Unless the highest scientific talent is brought to bear on all aspects of the subject, the manufacture of glass will not advance beyond the amateurish stage.

All that has been said above with regard to glass will apply with equal force to the manufacture of soaps The raw materials are here in plenty but unless the industry is carried on with the aid of scientific workers, prospects of success will be remote.

If industries are to flourish in India, it can only be by affording to them a firm foundation based on scientific investigation. There is hardly any industry worth the name, into which science does not enter and which cannot be improved by the adoption of scientific methods. The example of what Germany has been able to achieve by trusting to scientific research work, ought to be a sufficient stimulus to the Government of India, and to the Governments of Feudatory States, to induce them to deal with established and nascent Indian industries in a similar spirit.

A LITTLE KNOWN PART OF INDIA.

BY MR. FRANK NOYCE, I.C.S.

COLONEL Shakespear has done a useful piece of work in compiling this history* of a little known part of India, with which a long connexion with the Assam Military Police has given him an intimate acquaintance. It is a great pity that he is not the possessor of a more attractive style.

As Mr. Burn remarked in an article published in the *Hindustan Review* some years ago, the history of Assam possesses a special interest for several reasons, one of the chief of which is that there is probably no part of India in which the gradual spread of Hinduism and the decay or transformation of primitive tribal beliefs can be traced so completely as here. Assam has perhaps a greater wealth of historical records of real value than any other part of India. These are the "buranjis" of the Ahoms, the latest comers and the most powerful of the peoples of Assam. The word "buranji," as Mr. Burn explains, means "a store that teaches the ignorant." The "buranjis" commence from the early part of the thirteenth century and are written in the Pali character on oblong strips in book form. They have been kept up to date by the priests and leading families.

The history of Assam down to the advent of British rule is mainly the history of the struggle for domination of the three great tribes, the Kacharis, Kocches and the Ahoms, varied in its later stages by the incursions of the Muhammadans. The Kacharis reached the height of their power in 1230, the Kocches in 1560, and the Ahoms in 1700. The Kacharis and the Kocches (whose

*History of Upper Assam, Upper Burmah and North Eastern Frontier, by L. W. Shakespear, Colonel, 2nd Gurkhas: London, Macmillan and Co.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

name survives in Cooch Behar which represents all that is left of the once powerful Kocch kingdom) were the aboriginal inhabitants of Assam, whilst the Ahoms were non-Buddhist Shans who moved west from Upper Burma in the early part of the thirteenth century and rapidly extended their power at the expense of the Kacharis. The Ahoms first came into conflict with the Muhammadans in 1401, but neither this nor the Muhammadan invasion of 1527 which, according to Mr. Burn, is the first Muhammadan invasion recorded in the "buranjis," could have been Moghul incursions, as stated by Colonel Shakespear, for it was not until 1538 that Humayun conquered Bengal only to lose it again almost immediately. The dynasty of Iliyas Shan was on the throne of Bengal in 1401, whilst that of Husain Shah, an Arab Saiyid, occupied it at the beginning of the sixteenth century. It was during the invasion of 1527, that the Ahoms used firearms for the first time. By 1662, when the most formidable of the Muhammadan invasions, that under Mir Jumla, occurred, they had become proficient in the art of forging iron for cannon and of making powder and had attained some skill in the use of firearms. Mir Jumla's invasion opened brilliantly, only to end in disaster the following year when he retired defeated rather by weather and disease than by the Ahom forces. He died just before reaching Dacca. Ahom territory was finally freed from the Muhammadans by Gadadhar Sing, who reigned from 1681 to 1696 and succeeded in obtaining a treaty which fixed the Manas river as the western boundary of Assam. Gadadhar Sing was succeeded by the greatest of all the Ahom monarchs, Rudra Sing, who, during a reign of eighteen years, annexed the territories of the Jaintias and Kacharis, subdued the neighbouring hill-tribes, improved communications, established an extensive trade with Tibet and started schools for Brahmans. The seeds of decay of the Ahom dominion had, however, already been sown. Although the Ahom dynasty had become Hindu nearly a century earlier, Pratap Sing having been converted about 1613, it was not until the reign of Rudra Sing that Hinduism became the religion of the country. The result was a steady deterioration in the physique of the people, for under the new regime the use of meat and strong drinks was forbidden and, in a climate like that of Assam, the break with old habits could hardly fail to have a disastrous effect. Decay was hastened by sectarian troubles. The prolonged persecution of the Moamarias, a Vaishnavite sect, culminated in 1769 in a rebellion in which the royalist forces were defeated and the king and the greater part of his nobility put to death. The first appearance of the English in Assam was in 1792, when the British lent the Raja, Gaurinath Sing, troops under Captain Welch to assist him in dealing with the Moamarias. Welch was entirely successful in his immediate purpose but Sir John Shore, who had succeeded Lord Cornwallis, faithful to the policy of non-intervention which then held the field, recalled him to Bengal. He left very reluctantly and his anticipations that his departure would be followed by chaos in Assam were speedily fulfilled. The next king, Chandrakant, having no hope of help from the British turned to the Burmese. His allies became his masters and once in his territory he could not get them out of it. They ravaged Assam from end to end. An invasion of British territory was threatened. The British had no option but to oppose the invaders and, in 1826, they were driven over the Assam border. The work of restoring order and of consolidation had then to be undertaken. The history of Assam proper after its completion is one of peaceful development, the most striking feature of which was the wonderful progress of the tea industry, to which Colonel Shakespear might perhaps have devoted more space.

From the history of Assam proper, Colonel Shakespear passes to the history of the frontier tribes, both of the Assamese and Burmese borderland. Recent punitive expeditions and exploration parties have made the names of these, especially of the Abors, Mishmis, and Hkamptis familiar outside Assam. Here there are no "buranjis," and such history as the tribes have, is mainly the history of punitive expeditions which, in Colonel Skakespear's opinion, have not at any rate until quite recent times been particularly successful in achieving their purpose. His views on the policy, which should have been followed, are somewhat obscure but he apparently thinks that the objects of the military expeditions could have been better secured by a battalion of military police with backing of a company or two of Gurkha regulars.

Intermingled with the history of the frontier tribes there is much information concerning their manners and customs, gleaned by Colonel Shakespear during his service on the frontier. This part of the book has the personal touch and is therefore of the greatest interest and value. Illustrated as it is by excellent photographs of the different types of the tribes met with in the borderland and of their buildings, it should be specially welcome to all students of anthropology.

The Educative Influence of Sanskrit*

BY MAHAMAHOPADHYAYA DR. HARA PRASAD SHASTRI.

A VERY distinguished Indian gentleman, during the middle of the last century, gave pithily the effect of English and Sanskrit education: 'Sanskrit education closes the eyes and English education opens them.' As the gentleman who uttered this is revered all over India as an educationist, as a scholar, as a philanthropist and as a reformer, my first object would be to examine his dictum with care to see how far he was correct.

I believe that in the middle of the nineteenth century he had a justification in making such a remark. The extent, the variety, the depth, and the influence of Sanskrit literature was little known at his time. He saw Pandits studying Sanskrit grammar for years, memorising *Kosas* and bestowing years and years of hard labour on a few treatises either of philosophy or law; while students of English colleges were mastering not only the idioms of a difficult foreign language, but studying the mysteries of Nature in science and mathematics, and of man in the past, in the present and in the future, in a few years. One may suppose that what the English scholars gain in extension, the Sanskrit scholars gain in depth. But life being short, it is a poor consolation to acquire depth at so much sacrifice of time and trouble.

But a change has come over the spirit of education in sixty years. In 1876, while distributing prizes to the successful students of the Sanskrit College of Calcutta, Sir Richard Temple, the then Lieutenant-Governor of Bengal, said :—

'The education of a Hindu gentleman can never be said to be complete without a thorough mastery of Sanskrit language and literature.' He said so at a time when the operations in the search of Sanskrit manuscripts had but just begun. These operations all over India for the last fifty years have revealed the whole literature on a great variety of subjects, both secular and religious. Sanskrit is no longer regarded as a religious and priestly literature alone. The secular branches of this literature are drawing the admiration of the savants of Europe and America; and new discoveries are constantly being made. After conducting the operations in search of Sanskrit manuscripts in various parts of India for thirty years, I can confidently affirm that the Sanskrit literature reflects life in ancient India in all its aspects; and it records the achievements of a great nation in all its departments of life.

I will dilate on these departments of life later on, but in passing I should remark that Sir Richard Temple, had he been alive now, would have dropped the word 'Hindu' from his remarks made in 1876, and would have said that the education of no gentleman would be complete without a thorough mastery of the Sanskrit language and literature; and my revered old friend would have retracted his caustic remark, seeing that Sanskrit education also can open the eyes as fully as English education.

WONDERFUL CONTINUITY.

M. Taine, the French *savant*, in giving reasons for undertaking to write a history of English literature, says that he was attracted to it by its wonderful continuity; other literatures of Europe have their breaks, gaps and chasms; but English literature has none, from Chaucer down to the present day, that is, for five hundred years. If Taine considers a continuity for five hundred years a wonderful continuity, what would he have said if he knew that the Sanskrit literature had no break at least from 1500 B.C. to the present day? He would have certainly said, it is seven times at least more wonderful. Max Muller indeed said that Sanskrit went to sleep for seven centuries from the rise of Buddhism in the IVth century B.C. to the rise of the Gupta Empire in the IVth century A.D. He seems to have been misled by the official language used in inscriptions, which in B.C. and in early A.D. was wholly in Sanskritic Prakrita, and became Sanskrit from the IVth century downwards. His theory has not taken root amongst scholars, as scores of the finest of fine Sanskrit works are products of the period when he thought 'Sanskrit went to sleep.' Can there be any doubt that Patanjali wrote his Mahabhasya in the reign of Pushyamitra, for whom he officiated in the horse sacrifice in the beginning of the second century B.C.? Is there any doubt that, Kautilya, who wrote his great work on Economics, was the minister of Chandragupta, and therefore, a contemporary of Alexander the Great? Can there be a doubt that the illustrious dramatist, Bhasa, who is spoken of so appreciably by no less a personage than Kalidasa, is quoted by Kautilya, and, therefore, belongs to a period anterior to him? Can there be any doubt that Kohala, Sandilya, Dhurtita and

* Paper read at the Central Hindu College, Benares, recently under the chairmanship of His Highness the Maharaja of Alwar.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Vatsya, the voluminous compilers of the great work on Dramaturgy, in which Bharata appears as one of the interlocutors, flourished in the second century B.C.? Did not Asvaghosa, the *Guru* of the great Emperor Kaniska; Nagarjuna, the illustrious founder of the Mahayana School of Buddhism, and his still more illustrious pupils, Aryadeva and Maitreya Natha, cast lustre on the first, second and third centuries after Christ? This long continuity of Sanskrit literature appears to be still more wonderful, when you take into consideration the revolutions, political and religious, social and economic, racial and educational, that have swept over the face of India during these long centuries. When retarded in one province, Sanskrit literature flourished in the rest of the provinces; when the north felt the pressure of foreign invasion, the Sanskrit literature flourished in the south and in the east. Thus the continuity of the literature was never broken, though Indian life was distracted in various parts in various times. Take the 13th century of the Christian era, when all the kingdoms of Northern India were swept away by the invasion of the sturdy mountaineers of Afghanistan, and the entire Hindu society there was convulsed by a revolution the like of which the world has never seen. Even at such a time Sanskrit literature flourished exuberantly amongst the followers of the Jaina religion in Guzarat and Malwa, amongst the immediate followers of Madhavacharya in Western India, amongst the immediate disciples of Ramanuja in Southern India, and amongst the Srottriya Brahmanas in Mithila. The next century saw the over-running of the whole of India by the Moghuls and Pathans, but it saw at the same time the rise of men like Madhavacharya in Karnata, Vedantadesika in Dravida, Candesvara in Mithila, and a host of great writers in Orissa.

THE EDUCATIVE EFFECT.

Does not this wonderful continuity have a wonderful effect? It strengthens imagination, it produces a sense of pride and nobility, and it gives an idea of permanence, the value of which can scarcely be over-rated. Its philological value is immense. It begins with the first simple utterances of a wondering humanity and ends with the complex and extremely complicated expressions of the modern Naiyayikas. Its linguistic value is equally great. It shows how the colloquial languages of the different parts of India have changed century by century, while the classical language remains the same—immune from all changes, like a mighty mountain in the midst of flowing streams and changeful forests. It also gives a history of development of thought from the element worship of the early Aryans to the boldest speculations about the origin of the world and the final destiny of humanity.

THE MAGNIFICENT VOLUME.

The volume of the Sanskrit literature alone, if you do not take into consideration the various literatures of the Sanskrit language, namely, the mixed Sanskrit, the Pali, Daksinatya, the Maharastra, the Sauraseni, the Magadhi, the Jaina, Prakrta, the Apabhransa languages and the various stages of the modern vernaculars, is extensive and magnificent. The volume of Sanskrit works exceeds the volume of Latin and Greek literatures put together cent per cent. In 1891, Theodore Aufrecht published his first monumental work—the first volume of his *Catalogus Catalogorum* and it enumerates over 30,000 of individual works. He published two more volumes before his death and added the names of 10,000 more works to our knowledge. But the number is not yet exhausted. Every corner of India is giving us the names of unknown old works in Sanskrit by scores, nay, we are getting such names even from the remotest corners of Asia. The sands on Taklamakan and Gobi deserts have recently opened out an immense amount of buried treasure of Sanskrit literature. China, Japan, Korea, Tibet, and Mongolia are also contributing their share in adding to our knowledge of this voluminous literature. Yet one of our great savants, Pundarika, whom the Buddhists of India considered to have been an incarnation of Avalokitesvara, says in one of his works that Rome, the Nile Provinces, Persia, Cina, Mahacina, had their share of Sanskrit literature and Sanskrit culture. If again we look from another point of view, we are struck with astonishment to find how the hundreds of languages and thousands of dialects from Madagascar to Formosa, nay even beyond these limits, have been materially influenced by loans from Sanskrit language and literature.

The above will give my hearers some idea of the magnificent extent of Sanskrit literature, but it is not still exhausted and it shows no signs of exhaustion. Vast tracts of countries and numberless private collections still remain to be surveyed before one can pronounce that Sanskrit literature goes so far and no further. If we dive again into this literature itself, we find that we are only getting the latest results of activity in a particular branch of science or art—all previous works on the subject having passed into complete

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

oblivion—as instances in point—Panini speaks of fifteen different schools of grammar that preceded him—Kautilya in his Arthasastra speaks of ten different schools of Economics that preceded him —Kohala in his Natyasastra also speaks of various schools of dramaturgy, each having Sutras, Bhasyas, Vartikas, Niruktas, Samgrahas and Karikas of its own—even Vatsayana in his Kamasuttra speaks not only of his predecessors in the entire Sastra, but also of his predecessors in each of the seven *adhikaranas* into which it is divided. Take any Sanskrit work in the Suttra form either Srauta or Grhya, either Darsana or Alamkara; either Vyakarana or Chandah; and you will be confronted with a large number of authors and works which it quotes either in support of its own ideas or for the purpose of refutation.

INFINITE VARIETY.

I have spoken of the wonderful continuity and the magnificent volume of Sanskrit literature, *i.e.*, its extension in time and space. I will now examine its contents and show its astonishing variety. There is a baseless misconception—current both in Europe and in India—that Sanskrit contains only the religious literature of the Hindus. As I have said before, the state of Sanskrit education in the 18th and 19th centuries to a very great extent gave colour to this misconception in India; and the first awakening in Sanskrit in the beginning of the 19th century, and a very limited number of Sanskrit works known there, can easily account for the misconception in Europe. But the gradual unfolding of the vast extent of Sanskrit literature during the 19th and the early part of this century has done much to dispel this cloud of misconception. It is now well known that Sanskrit literature contains not only the religious literature of the Brahmanas but also of the Buddhists and the Jainas—not to speak of other religions which have perished after doing their mission of good in India. That the religious life of India, nay, of the whole of Southern and Eastern Asia, has been profoundly influenced by Sanskrit and will continue to be so influenced for centuries and millenniums to come —goes without saying; and therefore the educative value of Sanskrit in moulding the life and character of millions is simply incalculable.

But we are not here to speak only of religious influence, because that is very well known and need not be expatiated upon. Therefore, I will confine myself to the beneficial secular influence, which Sanskrit may exert on its votaries; and for that purpose I shall have to enumerate the vast number of branches into which that secular literature divides itself.

A. ECONOMICS.

I take up the science of Economics, first, because it is generally believed that our ancestors never cultivated this branch of study, and because also it is believed that it was the European who first discovered the science and developed it in a wonderful way in the course of the last two centuries. It is a well known fact that sciences in India are broadly divided into four parts: (1) Dharma, (2) Artha, (3) Kama and (4) Moksha. The first three being secular and the last religious. Of the first three again, the second, Arthasastra, is secular *par excellence*. But a great writer of antiquity, while expatiating on all these three and their literature, distinctly said that the literature of Arthasastra is very poor owing to the unwillingness of all successful men in the world to give out the secrets of their success in life. Yet centuries before him, at least, one extensive work was written and it has been recently discovered. A perusal of Kautilya's Arthasastra reveals the facts, that it was the last encyclopædic compilation of the entire Sastra; that it contains the quintessence of ideas developed by ten different schools of thought that preceded the author who flourished at the end of the 4th century B.C. From this fact, we may infer that in such remote antiquity men were not unwilling to impart the knowledge of the secret of their success to others and that Indians were then an imperial and progressive people. Kautilya's Arthasastra deals comprehensively with political economy, political philosophy, politics, the art of war, military organization, the art of government, administration of justice and of finance, commerce, industries, trade, mining and so on—in short, all human concerns controlled by the State. No big work in domestic economy has yet come to our hands, but the fourth book of Vatsayana's Kamasutra, entitled "Bharyyadhikarana," gives a charming picture of the domestic arrangements in ancient India. It defines the duties of the Bharyya or housewife. It tells us how stores are to be kept, how the establishment is to be governed, how the kitchen is to be regulated, how the kitchen-garden is to be planted, how the seeds are to be kept, and in what relation the housewife is to stand to the other members of the household. Agriculture and horticulture are represented in Sanskrit literature by short treatises and chapters in such encyclopædic work as the Vrihat Samhita of Varamihira. In our law works, we often get hints that these

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

branches have more extensive literatures than have come down to us. No work on Cattle-breeding has come down, but the fact that breeding of horses and elephants is reflected in big works raises the presumption that cattle-breeding was not neglected by the Sanskrit authors. The names of Pala-Kapya, as the author of Hasti-sastra and of Salihottra, as the author of Asva-sastra, are well known and a perusal of their works shows with what care and intense interest ancient Indian sages studied the habits, the temper, the feeding, the breeding, the peculiarities, the maladies (and their cures) of these animals. Cookery—both vegetarian and otherwise—is represented by a number of works in which the nutritive properties of fruits, roots, barks, leaves, stalks, flowers, seeds, eatable herbs, have been carefully recorded as well as the properties of meats of various animals and fish.

B. SCIENCE.

Our knowledge of exact Science proceeds from either observation or experiment; and it was long held that though the Indians did something by observation, experiments were absolutely unknown to them. Mathematics is a science proceeding from observation, and of the civilized races of antiquity Indians were the best in Mathematics. In Arithmetic, they invented the decimal system after giving trial to various other systems, as is evidenced by their arithmetical tables and by the system of letter-numerals, so often found in ancient manuscripts and ancient inscriptions. In Algebra, the Hindu method of solving quadratic equations has been adopted by Europeans with certain modifications. They were acquainted with many of the properties of angles and thus they made a fair progress in Trigonometry. In Egypt, the floods of the Nile necessitated the keeping of a record of the measurement of fields, a fact which gave rise to the sciences of Geometry and Mensuration. The same science developed in India from a novel source. The Indians were very fond of sacrifices; and the construction of altars, generally of burnt-bricks, gave them occasion to treat of geometrical figures and their measurement from which arose geometry and mensuration of India. Astronomy in its elementary form was required in India for determining the time of sacrifices. Their intercourse with the Greeks and other foreign nations in the early centuries of Christianity gave them an impetus to astronomical studies; and in course of time they discovered the diurnal motion of the earth, the fact that earth remains self-poised in space, that it is a globe, and that it attracts smaller bodies to it,—thus foreshadowing the great discoveries of modern Europe. They even constructed astronomical instruments of great accuracy and precision.

The notion that Indians had no experimental knowledge is set at nought by the great progress they made in the science of Medicine. Such progress cannot be the result of observation only; but of observation under circumstances regulated by forethought. They examined the medicinal properties of numerous wild herbs all over India, some of them growing only in the inaccessible parts of the Himalayas. They neutralised the evil effect of one herb by the infusion of another, and thus they invented the art of mixing scores of medicinal objects into pills, oils, and ghee. Could all this be done without experiment, by simple observation? There is one instance at least on record, in which they resorted even to vivisection. So early as the period when their Brahmanas were written, *i.e.*, about 1000 B.C., the Indians knew the number, shape and position of all the bones in the human body, and they knew the nerves and organs of animals which they used in sacrifice. This shows that they were experts in Osteology and Anatomy even at such an early time. Their cleverness in surgery is evidenced by the numerous instruments they used in operating on human bodies. There are works to show that they treated of the diseases of children, the diseases of old men, the diseases of women, especially when they were under expectation—as special branches of Medical Science. Latterly they learnt even the art of using metals and minerals in the prepartion of their medicines. This means a knowledge of Chemistry, and my friend, Dr. P. C. Ray, has shown in two elaborate Volumes what progress they made in Experimental Chemistry—especially in the various perparations they made from mercury. Whoever studies the Vaisesika System of Philosophy and even the mnemonic verses as the Karkiavali or Bhasa-parichheda is really struck to find that it contains so little of metaphysics and so much of physical science. Elaborating on this striking feature of the Vaisesika System and of its Atomic Theory, Dr. Sil has shown that the Indians were not behindhand in theories of Physics, Optics and Acoustics and other branches of material science in which modern Europe has done so much.

The wonderful improvement in machinery in ancient India is exemplified in two stories given in the commentary by Chandrakirtti on Aryadwas Chatuhsatika. Aryadeva belonged to the third, and Chandrakirtti to the sixth, century

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A.D. The stories are :—

(I) There was a Parasara or machine manufacturer, who requested a Bhikshu to live with him during the rainy season when the Bhikshus cannot go out begging. The Bhikshu remained on the first floor of a house well looked after by the Parasara. At the end of the period of Vassa, when the Bhikshu went to bid him adieu, the Parasara wanted to give him a large sum of money as his wages. The Bhikshu said : " Hallo ! I have done nothing to justify accepting wages." The man said, you were on the first floor, the ground-floor contained machinery which was worked by the pressure exerted by your body in whichever position you kept it either sitting, reclining, standing or walking. The working of the machinery has within the time you were there produced an immense number of *phalas*, and you are justified in accepting wages for exerting pressure.

The second story runs thus :—

A Bhikshu went to Kamboja and lived under the protection of a Parasara. In the morning the Bhikshu wanted to go a-begging. The Parasara said the beggars are considered as very low in Kamboja, so you go in the usual way without uttering a word. He went through the principal thoroughfare of the city without saying anything. The Parasara had many rivals, and they thought that he had sent a new machinery to outrival them. So they immediately prepared another machine in the shape of a man. It could walk, stretch out hands and even wink and move the eyelids. They sent this new machine-man towards the same Parasara's office. He at once knew what they meant and came out and praised them for their skill ; but he said, "my machine can speak, yours cannot," and he bid the Bhikshu speak and he uttered the usual Ashish of a Bhikshu and then he nonplused his rivals.

These stories will show what improvements they made in science in ancient India.

C. FINE ARTS.

The Fine Arts are said to be sixty-four. But sixty-four is a traditional number. I have seen several lists of sixty-four Fine Arts. One list is called the list of Pancaliki, but we are not concerned with it here. The other is called the Mulakala divided into Vastukala, Dyutakala, Sayanakala, etc. There is another list of sixty-four Kalas called the Aupayikikala ; but the commentator says that the real number of Kalas is five hundred and eighteen. Unfortunately, however, he does not enumerate them. I presume that all the sixty-four Aupayikikalas had their literature, as a large number of them have many works devoted to them—and these are well known. For instance, music has an extensive literature. Bhubanananda Kavikanthabharana of Bengal, a contemporary of Sher Shah, in his encyclopædic work of all the eighteen sciences of the Hindus, devotes a book on Music and enumerates all the authors from the remotest antiquity to his own times ; and these count by scores. Dancing is treated of by Kohala in his comprehensive work on the Natyasastra in several chapters. He explains Karanas, Angaharas and Nrtya, *i.e.*, simple motions, complex motions, and dancing. Dasarupaka, too, distinguishes *Nrtya and Nrittya*. According to the notions of Kohala, acting preceded dance, and his work on Natyasastra, which, I believe, was compiled in the 2nd century B.C., treats of the whole of the histrionic art in all its details. He says that before him there were schools of Dramatic Art, each school having their Suttras, Bhasyas, Varttikas, Niruktas, Samgrahas and Karikas. Our idea was that Bharata was the only writer on the subject, but Kohala introduces him only as an interlocutor and puts the whole Sastra in his mouth. In this work Kohala and his collaborators give us an elaborate treatise on dancing, erection of the three forms of the stage, the divine, the imperial and the private—the paraboloid, rectangular and the triangular—measuring 108, 64, and 32 cubits in length, the history of the Dramatic Art, the feelings displayed in dramas, the construction of the plot, its division into different parts, selection of actors, the effect of success, music, the metres to be used in drama, the languages employed by the actors representing different strata of society and so on. There are two dicta in this work to which I wish to draw special attention—one is that the feelings displayed in dramas have an infinite variety, and that whatever is useful in life is useful in drama.

No work on Painting is yet known, but paintings as old as the 2nd century B.C. have come down to us. This is of course under an exceptional circumstance—in a cave in an inaccessible part of the country. But we have excellent paintings of the 6th, 7th, 8th, 9th and 10th centuries—some in cave temples, some on walls, and some on palm-leaf MSS. Indian sculpture is an admiration of the whole world, some of them go back to the time of Buddha himself. Though in the western part of India, Indian sculpture was in a great measure influenced by the Hellenic art, competent critics have pronounced that India developed its own schools. In architecture too

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

though developing their own schools, the Indians were not slow in adopting foreign models. There were minor arts, such as painting of the teeth and the limbs, shampooing, temple-decorations with rice and flours, flower-beds, dyeing of cloths, sewing, toy-making, ornamental work on gold, silver and jewellery.

D. HISTORY AND KINDRED SUBJECTS.

The reproach that Sanskrit literature has no history is not so well deserved as it is generally supposed to be. Many of the Mahapuranas have chapters on the successive dynasties of the Kings reigning in India. But they are written almost in the same words in all of them, the only difference being that, at the end, some go a little longer than others. From this it has been supposed that originally there was one Purana, and that like the Saxon chronicle of England, it underwent modifications in different royal and monastic libraries at different times, the chronology portion of a Purana stopping at the period when the Purana was copied. If it is so, it gives a clue not only to the dynastic history of India, but also to the time when the Puranas were composed. How the epigraphic records are helping in the construction of ancient Indian history is well known. But we are not to depend on these meagre sources for the history of India during the entire period. From the beginning of the 7th century, we often have regular histories written by contemporary authors. The earliest of these is the history of Harsavardhan, the last known Emperor of the whole of Northern India. Since then, other works have been written in various forms, sometimes in the form of poems as the Navasahasankacharita and Navavikramankacharita, sometimes in the form of works in double *entendre* verses such as the Dvyasrayakosa and Ramacharita, sometimes in the form of panegyrics as the Gaudavaha, sometimes in the form of regular history as Prithvirajacharita and the Rajatarangini. It is hoped and expected that a more vigorous search may bring to light many more works of this nature.

It may not be out of place to mention here of a regular gazetteer of India, prepared three hundred years ago, at Patna, under the patronage of a Chowhan jagirdar of the Emperors of Delhi, by Pandit Jagamohan. What is curious is that the author quotes a number of his predecessors in the same line of work. One of these has come down to us, namely, the Brahmakhanda of the Bhavisyapurana. A good deal of historical and geographical information may be gleaned from these works. So the reproach that we have no regular history in Sanskrit is, as I have said before, not so well deserved as it is generally supposed to be.

E. PHILOSOPHY.

The traditional number of Indian systems of Philosophy is six. But the earliest author of the history of Sanskrit Philosophy, who flourished in the 5th century A.D., says that there are two claimants for a place among the six. The next author, who is supposed to be Sankaracharya himself, enumerates two or three more. I have found many different enumerations of the six among the Buddhists, Jaina and Brahmanical writers, and the whole thing has been set at rest by Madhvacharya in the 14th century by counting the number as sixteen, though as a southerner he omits the two Saiva schools of Kashmir and puts the schools of Buddhist philosophy into one. With the Indians the systems of Philosophy were not merely an intellectual feat, an effort to penetrate into the mysteries of the world and its creation—but a living, supernatural or rather a divine influence, guiding the whole course of life and action in this world and the next. That is the reason why they cultivated it with such fervent enthusiasm and tried to realize it in their life. It was with them a psychological experiment, and they all wanted to have an exact science of life. These systems are not all metaphysical though each aimed at some metaphysical end, for instance, the Vaisesika is mainly composed of theories of Physical Science, the Nyaya of Logic, the Mimamsa of the interpretation of sacred texts, and the Yoga of the Occult Science. The highest metaphysical speculations are reached in the monism of Sankar and the Nihilism of the Mahayanists. The Mahayanists may also be credited with the highest ideas of ethical philosophy.

POETRY AND DRAMA.

No race of men living in society can be without poetry of some sort to enliven the toils and miseries to which human nature is cursed. But different races in the world cultivated poetry in different ways. The Mahomedan world, for instance, is averse to dramas. Some are intellectually so poor or otherwise so deeply engaged that they cannot enjoy the exquisite delight of epics, some are poor in music, some are averse to metre and would rather read large volumes of novels than twenty pages of poetry. But ancient India was gifted with the faculty of enjoying poetry in the comprehensive sense of the term: poetry in verse, poetry in prose, poetry in art,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and poetry in everything. Thus they have given the world an exquisite popular epic like the Ramayana, an exquisite traditional epic like Mahabharata, an exquisite artistic epic like Raghuvamsa, some of the most exquisite dramas in the world, some of the finest lyrics, some fine epigrams and an immense amount of one-verse poems, bundled into groups of eight, ten, hundred, seven hundred and so on. While leaving the subject of Poetry I cannot help giving a tribute to the genius which conceived an epic like the Raghuvamsa. It is unique in the world. Epic always means one or two or, say, a few leading figures from the start to finish. But in this poem, the leading figures are always vanishing and yet there is a unity of purpose, a unity of action, and moral unity, the like of which is not to be found anywhere else. The action rises gradually step by step to pyramidic height and again descends by slow gradation. Kalidasa was perfectly aware that he was bringing down the highest of the high personality of Vishnu to the world, and for him and to him he assigns the central cantos of the poem. The vanishing personalities in the beginning and at the end represent the perfection of one or two of the highest moral qualities, while the central personality represents the climax of perfection of infinite goodness, *i.e.*, the combination of all moral excellences put together. No one approached his subject with greater trembling and greater awe, and no one achieved greater success, than our immortal Kalidasa.

MISCELLANEOUS.

A literature, to be effective and complete, must reflect the entire life and action of a race. If there is any truth in this maxim, that truth has been completely realized in Sanskrit literature. Never in ancient world and even in mediæval world before the manufacture of paper, and the invention of printing, was a literature so thoroughly representative of the race as the Sanskrit literature in India. Even the art of thieving has a literature. It has two different traditions or successions of teachers, one given by Bhasa in his Avimaraka and another, though different but more lengthy, by Sudraka in his Mrchhakatika. When we read them, we thought that it was a mere fancy. Would anyone care to put the art of stealing into writing? We were, however, agreeably surprised when an actual work on Chaurasastra was discovered. It was a thief's pocket-book on palm leaf, six inches long and about an inch and a half broad—giving many secret chemical preparations, many incantations and many hints to avoid difficulties. Another curiosity is a work on the art of hawking, which gives the life-history of the various kinds of hawks, the method of taming them and using them in sport. There are works on the Game of Chess and many other Indoor and Outdoor Games, but I will not take up the time of the audience by an enumeration of these curiosities in literature—they are not fit for occasions like this.

Now comes the question of the educative effect of this varied literature. Anything that strikes the imagination, and keeps it spell-bound, imperceptibly softens the mind and moulds it to a better purpose. If so, then this literature with its wonderful continuity, immense volume, and its infinite variety, has a strong claim to mould the characters of its admirers. The literature is accessible through Sanskrit which is acquired with some difficulty. Therefore, it is quite possible to keep aside the works which are likely to affect the mind unfavourably—a thing impossible in the literatures of living languages. In fact, what remains of this ancient literature is pure gold, the dross and alloy having disappeared during the revolutions of long centuries. As a means of intellectual training its value is very great; if less, less only than the scientific training of modern times. As an instrument of moral training it has a unique importance—as we see only the highest precepts in all their purity and away from the imperfect teachers of these precepts. In the department of æsthetics, its position is unrivalled, for the models to study are as perfect as is possible with the imperfection of humanity. We have up till now greatly underrated the beneficial influence of Sanskrit literature owing to our ignorance of its extent, variety and worth—but with our advancing knowledge, our admiration for it has not only increased but is gradually becoming unqualified, and it is admiration which trains, which moulds, which purifies life and imparts a grace and a charm to it, the value of which cannot be over-rated.

MODERN BENGALI PAINTERS

BY MR. K. V. RAMASAWMI, B.A.

SOUTH INDIA has never had any indigenous school of painting except perhaps a very feeble one that flourished at Tanjore in the 18th and 19th centuries. Many a splendid craft, combining use and beauty, have flourished within the walls of its cities. It has attained unapproachable heights of excellence and grandeur in sculpture. Innumerable cathedrals and shrines testify to its supreme genius for architecture. But the art of painting has had little or no development. The reasons for this, we believe, are to be found in the peculiar character and circumstances of the Tamil race. The Tamil race, with its dire religious earnestness and piety, with its prodigious instincts for labour, has found its expression in high-built cathedral and well-wrought image. Its monuments have been temples reared with the labour of years, and bronzes and statues wrought and moulded with incessant labour and industry.

Devoid though we are of any great traditions of painting, we have been watching with great interest and admiration the rise of the new school of painters in the sister province of Bengal, some of whose works were recently exhibited in Madras. The rise and achievements of this school are now matter of history. It was in the closing years of the last century when Mr. E. B. Havell was making a collection of old Indian paintings for the Calcutta Art Gallery, that Sj. Abanindra Nath Tagore, then fresh from the study of Sanskrit and Persian literature and moved by strange artistic impulses, set himself to study those paintings of the old masters. Encouraged by Mr. Havell, he began to revive in paintings of his own the old traditions and methods. He soon became the head and inspiration of a great school of young and enthusiastic artists. More than twenty years have elapsed and great and striking work has been done by this school. Exhibitions of their work have been held in Paris and in London, and have evoked considerable appreciation from the art-critics of the West. This is the first time, however, that Madras has had the good fortune of seeing the paintings of this new school.

The great value of this new school lies in its perfectly national character, in its adoption of national methods and subjects. These artists have one and all of them set themselves to interpreting Indian life and Indian ideals. Their technique and methods too are mainly based on the older schools of our country. Though one may see here and there some traces of European and Japanese influence, the small band of Bengali artists have succeeded remarkably in getting back not only the technique but also the spirit of our ancient painters. In the present Exhibition were brought together a large number of the paintings of these artists; and a close study of some of the more prominent among them will throw considerable light on the school and its work.

A most important group of paintings in the collection are those of Sj. Nanda Lal Bose. The fame of Sj. Nanda Lal Bose is already well-established as one of the greatest painters of the new school alike for depth and artistic skill and for quantity of production. His *Sati*, with its passionate burden of devotion, his *Dance of Siva*, with its strange rhythm and mystic force, his *Yudhishtira's Ascent to Heaven*, with its solitary and awful grandeur, have long been recognised as supreme works of genius. In the present Exhibition are to be found a number of other paintings of this artist which are on a level with his past productions.

The first is *The Brother of Rama*. The episode itself is a remarkable one in the story of the ancient epic. Bharatha, hearing of Rama's exile, follows him into the forest and there, falling at his feet, implores him long and passionately to come and rule in his just and holy right. At last finding Rama firm and unshakable in his resolve, Bharatha begs of him his sandals and takes them proposing to rule in their name. "Henceforth," says the Ramayana, "wearing bark and matted locks and dressed in the guise of an ascetic, the heroic Bharatha dwelt in Nandigrama with his forces; and having consigned all rule unto the sandals, Bharatha himself held the umbrella and the *chowri* over them." The figure of Bharatha is drawn in large and majestic proportions. He sits in an attitude of reverent worship, holding the umbrella over the sandals, which are placed up above on the throne. His whole frame is instinct with a deep and mystic sorrow, which has passed into and tinged his very eyelids and hands. The picture however is no mere translation of an old story: it is a true painter's vision. The sorrow of Bharatha that sits here worshipping the feet of the "true king and noble brother" is not a mere brother's or patriot's; one sees in that saintly face traces also of a profound grief at an unrighteous world,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

where "all grows to seed and things rank and gross possess it." The colour of the painting is a soft dark blue which is wonderfully in unison with its spirit of sorrow.

Two other paintings by the same hand are also worthy of study. The one is a painting of *Sujata*. Sujata, childless daughter of the village-headman, rose early in the morning, milked the best cows belonging to her father and with this milk went to worship the tree-god of the village. Now on that very morning Buddha had completed his long fast and was resting under the tree. Sujata saw his glorious form and offered him the milk prepared for the gods. Buddha accepted it gratefully and granted her the boon of motherhood. Another is that of *Uma* who, finding her beauty of no avail, undergoes severe penance in order to win the love of the Divine Anchorite. The burden of both the paintings is the same. Both Sujata and Uma are full of a deep longing and prayer, the one seeking for the boon of motherhood, the other for love which is woman's fulfilment. In both the paintings is revealed a power wrought of austerity, and prayer and penance. Nanda Lal Bose's work, always tinged with a certain sadness, has however in the representation of these two austere, martyr-like souls of the ancient world, invested them with a more than usual degree of spiritual woe and severity.

Another artist, whose subjects are drawn from the same source of religion and mythology, and who has attained an equal depth and power in the treatment of them, is Sj Sailendra Nath Dey. There are three such paintings in the present collection, one dealing with the story of *Sindhu*, another *Shiva's Wedding*, and the third, a remarkable outline picture of Rama's farewell to Kaucalya. The first painting is full of beauty and deep pathos. The story is well known, how Sindhu, the only son of old infirm parents, was, while filling his pitcher one evening in the Sarayu, suddenly killed by Dasaratha and the latter thereby incurred the curse that deprived him of his Rama. In the foreground is to be seen Sindhu, a fine, stalwart, well-built youth, carrying on his shoulder a *dholi* bearing his two blind old parents. The figures of the two aged parents are drawn with exquisite skill and feeling. They are full of an expressible pathos and sorrow, vividly recalling to our minds the touching simile of the ancient poet "like unto birds with their wings severed." Beyond flows the Sarayu and a little higher is seen the rising moon. The pale twilight and the hushed stream seem already to hint of the coming tragedy.

Shiva's Wedding is equally characteristic. The whole figure of Siva moves with a serenity and mystic grace for a parellel to which one should go to the paintings of Ajanta or the sculptures of Borobudur.

The most remarkable work of this painter is however *The Departure of Rama*. If nothing else had come to us of this school but this single drawing, it would be enough to establish the greatness of this school. It is full of beauty of line and remarkable composition. Its exquisite perfection and grace recall the fine curves and chiselled beauty of some of our own bronzes. We have here a supreme moment in the epic story. Kaucalya, profoundly perturbed at the news of Rama's departure to the forest, begs him long and with tears, to desist from his exile and to stay and console her: but finding him determined upon obeying his father's behests, at last "that best of women, Kaucalya, with broad eyes, subduing her sorrow, propitiated the gods with flowers and hymns and began to offer oblations unto the fire with the help of Brahmins for the welfare of Rama." This is the scene represented. Kaucalya is seated before the holy fire; but her grief is rendered in a way more poignant than words could do. Before her stands Rama with his head bent and palms joined. Already over his bent head there seems to breathe the mother's benediction. "May all the gods protect thee when thou shalt repair unto the woods. May the mountains, oceans, heaven, earth, air and all things, moveable and immoveable, planets and stars, day and night and evening, protect thee."

Among the remaining groups of paintings, those of Sj. Samarendra Nath Gupta form one of the most charming and beautiful. His paintings are all excellent examples of fine colour-schemes, harmonious and most decorative in arrangement of colour. They can be best seen in *The Holi Festival* and *The Spring*. Apart from colour, these pictures are full of delicacy and feeling. Two other paintings, *The Moths* and *The Broken String*, are brilliant studies in artificial light effect. *The Moths* especially is a striking one. It contains an inset, a patch of blue sky with stars. It is poetic, though perhaps conscious, symbolism, that, while contemplating the little world of moths, thus suddenly reveals the great world of stars above.

The paintings of Sj. Charu Chandra Roy are as beautifully coloured as those of Sj. S. Gupta. Their content however is of greater interest,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Their motifs are drawn from contemporary Bengali life and as such afford wonderful glimpses into some of its most tender aspects. *The Guest* is full of a bashful surprise and solicitude. A more remarkable study is *The Mother*. In the mild glow of the household lamp, sits a woman gently holding her child to her breast, her face full of an earnest abstraction and tenderness. The whole figure is gathered up into one supreme act of motherly love and solicitude Such paintings as these are sealed with absolute insight and sympathy.

We may here note two paintings by Sj. S. N. Dey, some of whose other paintings have been studied in an earlier part of this paper. *The Return from the Fair* and *The Milkmaids* represent homely scenes of Bengali life; but those scenes are seen here transfigured by love into things of supreme beauty and interest. The children in the first painting are drawn with remarkable sincerity and truth. The women in both the paintings are full of a naive charm and delicacy. The colouring of these pictures is done in the frank brilliant manner of the ancient painters. Pure simple colours are used depending for their effect on mass and juxtaposition.

The interesting series of sketches by Sj. Gogonendra Nath Tagore dealing with the life of the great Bengali reformer, Shri Chaitanya, deserve some study. The crowded events of the reformer's life are here vividly told with a good deal of breadth and technical skill. Some of these pictures however lack in suggestiveness, one or two being even indefinite and vague. *At Vishnupada Gaya* is however full of feeling and artistically good. *The End*, based upon a well-known legend, is a clever piece of art.

We have reserved to the end the most remarkable group of animal and cloud studies by Sj. Abanindra Nath Tagore, which have evoked great admiration among those who saw them. They are all highly original and full of a rare harmony of colour and of feeling. The exquisite charm and suggestiveness of these sketches can hardly be described in words. Old Indian art contains few bird or cloud studies. Sj. Abanindra Nath Tagore, the revered leader of the movement, has in these studies made a most beautiful and important beginning in this new branch of painting.

Before concluding, we would draw attention to one or two features of this new school of painters. The early work of this school, especially of Sj. Abanindra Nath Tagore and Nanda Lal Bose, has lain chiefly in religious and mythological subjects. This is perhaps partly due to the special influences that were brought to bear on the two painters. The one, fresh from the study of the courtly paintings of the Moghuls, and the other, imbued with the spirit and mysticism of the Ajanta paintings, naturally sought their inspiration in the great episodes of our religion and history. Even apart from these special influences, one may realise how these painters should be attracted by those old ideals and themes, which are such an integral part of our culture and traditions. Every age will interpret these old national ideals anew and find in the old stories of devotion, of self-sacrifice and martyrdom, new food for reflection or for solace. Considered in that light, these mythological and religious paintings of the Bengali artists are a valuable contribution to the art of our country. They have not merely rendered these old subjects with technical skill and accuracy. They have invested them with a new inwardness and life.

Leaving the work of these painters, we see however in the work of the younger artists the beginnings of a new and interesting folk-art. In *The worship of the Little Girl as Goddess*, *The Holi Festival*, *The Mother*, *The Return from the Fair*, *The Spring*, *The Milkmaids*, we have some of the most beautiful scenes and aspects of Bengali life rendered with great delicacy and truth and feeling. They wonderfully reveal to us that inner world of Bengali life with its piety, its tenderness, its lyrical joy and charm. Herein may be seen the beginnings of a true national art deriving its motifs from the life and religion of the people around it. Such folk-art has a great future. Born of folk-life and folk-thought, it may in its turn shed its influence back on that life and that thought and give them a newer depth and perfection.

LORD HARDINGE'S VICEROYALTY.

SPEAKING from his place in the Imperial Legislative Council on the 29th March 1909, the late Mr. Gokhale said of the late Lord Minto :—

My Lord, among the many great men who have held office as Governor-General in this country, there are three names which the people cherish above all others—the names of Bentinck, Canning, and Ripon. I venture to predict, both as a student of Indian history and as one who has taken some part, however humble in the public life of the country for the last twenty years, that it is in the company of these Viceroys, that your Lordship's name will go down to posterity in India.

Had Mr. Gokhale lived to-day, one need have no doubt as to the place he would have assigned to Lord Hardinge, in the illustrious rôle of the Viceroys whom he mentioned. But, it must be added that, thanks to the rapid rate of progress in this country during the last decade or two, the problems which Lord Hardinge has had to face were almost unprecedented. And it is a great tribute to Lord Hardinge's largeness of heart, breadth of outlook, and whole-hearted sympathy with the aspiration of the people of this country, that he has solved these problems to the great satisfaction of the Indian community. After all, it is not the particular act of a Viceroy so much as the guiding spirit of his policy which counts in the evolution of Indian polity ; judged from that stand-point, Lord Hardinge's Viceroyalty will mark the first great step of India in the path of self-government.

After the announcement of his appointment as Viceroy of India, a banquet was given on the night of the 20th October 1910, at the Savoy Hotel, London, by the County of Kent to Lord Hardinge. In replying to the toast of his health, he said :—

There are certain obvious principles which it must be the duty of every responsible administrator to follow. Mr. Montagu, the Under-Secretary of State for India, in his very able speech on the Indian Budget, wound up by quoting an extract of a letter from the great Sir R. Peel to my grandfather on his appointment to the post of Governor-General of India, and in his concluding remarks proffered advice to me in the same sense. You will, I am sure, pardon me if I repeat this short and interesting quotation : "If," wrote Sir R. Peel, "you can keep peace, reduce expenses, extend commerce, and strengthen our hold on India by confidence in our justice and kindness and wisdom, you will be received here on your return with acclamations a thousand times louder and a welcome infinitely more cordial than if you had a dozen victories to boast of." (*Cheers.*) These were wise words and as true and applicable now as they were when written more than sixty years ago. I have laid them to heart, but had Sir Robert lived now during this period of transition in India when some of the old landmarks are being removed to give a wider scope to the intelligence and intellectual ability of our Indian fellow-subjects, he would, I think, have given some additional advice, possibly on the following lines : "That the new Viceroy should watch over with the utmost care and vigilance and do his utmost to consolidate the beneficent and far-reaching scheme of Reforms introduced by Lord Morley and Lord Minto—(*cheers*)—for associating the people of India more closely with the management of their own affairs." He might also have added that the Viceroy should strain every nerve to conciliate all races, classes and creeds. My Lords and Gentlemen, it will be my humble duty honestly to endeavour to follow the precepts so clearly laid down by Sir R. Peel and those that I have had the temerity to suggest as likely additions had that eminent statesman lived in our day, and in pursuing this course I shall be fortified by the profound sympathy and regard that I entertain and have always entertained for our Indian fellow-subjects and by my earnest desire to contribute at least something to their material welfare and development. (*Cheers.*)

Speaking of Lord Minto's administration, he said that it would always become memorable as a landmark in the era of Reform, and that Lord Minto would bequeath to him a new regime already in force, though still young in development. He said that it would be his task to foster this young plant with tender care, and at the same time to see that the word, 'Government' was synonymous with peace, order, and security.

As usual, on arrival in India, His Excellency had to receive and to reply to numerous addresses and deputations. And all the replies are characterised by a warmth of affection for India and an earnest desire to promote the well-being of the people. Take this reply to the Bombay Municipal Address :—

Times have changed since then, when the appointment of an Indian servant to be a Deputy Magistrate was regarded as a remarkable concession and innovation ; but the present and future are rife with problems of a more complex nature and more difficult character than those of the past. It shall be my aim to face this with courage and sympathy and to maintain the policy initiated by Lord Minto.

In reply to another Address, he said :—

If India will extend to me the same kindly feelings which I have for her, I shall go forward on my way in hope and confidence.

Almost at the beginning of his Viceroyalty, Lord Hardinge was pleased to receive a deputation from the Indian National Congress, in happy contrast to the action of one of his predecessors. His Lordship referred to the growing demand for political power :—

To any student of the history of this country during the past 100 years it must be clearly evident that it has been the aim of England to promote the material welfare

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and happiness of the Indian people; and the prosperity and progress that are visible on all sides are indisputable proofs that that policy has been attended by a considerable measure of success. To the material advancement of the Indian people has now been added a large measure of political concession in the expansion of the Legislative Councils on a wider representative basis, and in the appointment of Indians to the Executive Councils of the Viceroy and of Local Governments as also of the Council of the Secretary of State, thus giving them a larger share in the management of public affairs. These reforms are still in their infancy and require careful consolidation. It will be my constant endeavour to maintain a jealous watch over them and to see that the object for which they were instituted is attained.

The greater part of the year 1911, His Excellency was very busy planning and superintending the arrangements for Their Majesties' reception. But, far more important, His Excellency was trying his best to undo the evil effects of Lord Curzon's partition of Bengal. The despatch in which the Government of India recommended the momentous changes, which were announced at Delhi by His Majesty the King-Emperor, is an important constitutional document and marks a definite advance in the progress of India towards a higher political status. Perhaps the most important passage in the despatch is what follows :—

It is certain that in the course of time, the just demands of Indians for a larger share in the government of the country will have to be satisfied, and the question will be how this devolution of power can be conceded without impairing the supreme authority of the Governor-General in Council. The only possible solution of the difficulty would appear to be gradually to give the provinces a larger measure of self-government until at last India would consist of a number of administrations autonomous in all provincial affairs, with the Government of India above them all, and possessing power to interfere in case of misgovernment, ordinarily restricting their functions to matters of Imperial concern. In order that this consummation may be attained, it is essential that the Supreme Government should not be associated with any particular provincial government. The removal of the Government of India from Calcutta is, therefore, a measure which will, in our opinion, materially facilitate the growth of local self-government on sound and safe lines.

None can dispute that this document marks a definite advance so far as it goes. The document is also valuable because it recognises the potency of popular agitation against the Partition of Bengal.

No doubt sentiment has played a considerable part in the opposition offered by the Bengalis, and, in saying this, we by no means wish to under-rate the importance which should be attached to sentiment even if it be exaggerated. It is, however, no longer a matter of mere sentiment, but, rather, since the enlargement of the Legislative Councils, one of undeniable reality. In pre-reform-scheme days the non-official element in these Councils was small. The representation of the people has now been carried a long step forward, and in the Legislative Councils of both the Provinces of Bengal and Eastern Bengal, the Bengalis find themselves in a minority, being outnumbered in the one by Beharis and Ooriyas, and in the other by the Mahomedans of Eastern Bengal and the inhabitants of Assam. As matters now stand, the Bengalis can never exercise in either province that influence to which they consider themselves entitled by reason of their numbers, wealth and culture. This is a substantial grievance which will be all the more keenly felt in the course of time, as the representative character of the Legislative Councils increases and with it the influence which these assemblies exercise upon the conduct of public affairs. There is therefore only too much reason to fear that, instead of dying down, the bitterness of feeling will become more and more acute.

Lord Crewe, the then Secretary of State for India, rose to the occasion and sent a reply approving of the proposed administrative changes :—

Regarding it as a whole, and appreciating the balance sought to be maintained between the different races, classes and interests likely to be affected, I cannot recall in history nor can I picture in any portion of the civilised world, as it now exists, a series of administrative changes of so wide a scope, culminating in the transfer of the main seat of Government carried out, as I believe the future will prove, with so little detriment to any class of the community, while satisfying the historical sense of millions, aiding the general work of Government and removing the deeply felt grievance of many.

The King Emperor and the Queen Empress arrived at Bombay on the 2nd December 1911. From there they proceeded to Delhi, where in the most magnificent Durbar ever held in India, the Coronation was proclaimed, and various boons including an annual grant of 50 lakhs of rupees for popular education were announced. At the same ceremony, His Majesty announced the transfer of the Capital of India from Calcutta to Delhi; the re-union of the two Bengals under a Governor-in Council; the formation of a new Lieutenant-Governorship for Behar, Chota-Nagpur and Orissa, and the restoration of Assam to the charge of a Chief Commissioner. On December 14, a review of 60,000 British and Indian troops was held, and on the 15th Their Majesties each laid a foundation-stone of the new capital. From Delhi the King went to Nepal, and the Queen to Agra and Rajputana, afterwards meeting at Bankipore and going to Calcutta. Thence they returned to Bombay and sailed for England on the 10th January 1912.

On the eve of his departure from India, His Majesty sent the following message to Mr. Asquith on the success of his Indian tour :—

From all sources, private and public, I gather that my highest hopes have been realised and that the success of our visit has exceeded all expectations. . . . . All

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

classes, races, and creeds have united in receiving us with unmistakable signs of enthusiasm and affection.

In March 1912, a committee of experts was appointed to advise the Government of India as to the site of the New Capital. Temporary buildings were erected to accommodate the Government, and on December 23, the State entry into Delhi was made by the Viceroy. This ceremony was marred by an attempt on His Excellency's life as he passed down the Chandni Chowk. The bomb thrown from a house killed an attendant behind the howdah in which the Viceroy was sitting, seriously wounded Lord Hardinge, but left Lady Hardinge unscathed. The courage displayed by Their Excellencies was unsurpassed and elicited the admiration of all; but in spite of the offer of large rewards, the assassin was not caught.

On the following day Sir Guy Fleetwood Wilson read a reply on His Excellency's behalf to an address presented by the non-official members of the Supreme Legislative Council, in the course of which he observed :—

You have alluded to the King-Emperor's message of hope. May I add one of faith. I have faith in India. I have faith in her future and I have faith in her people. It is the solemn duty of Government to promote the best interests of India and her people, and under divine guidance we shall not falter in this course.

His Excellency the Viceroy inaugurated the opening of the second term of the Reformed Council before a large and brilliant gathering on the 27th January 1913. The spacious Council Chamber in the temporary Secretariat was packed to the full with Civil and Military officials and their wives and the leading citizens of Delhi. The Members also attended in large numbers.

Punctually at 11, the proceedings began with the swearing in of the Members, Sir G. F. Wilson presiding. This hardly over, the Viceroy, who had his right arm in a sling and looked aged and pale, entered the Council Chamber at 11-30 and received a most splendid and enthusiastic ovation from the members of the Council, in which visitors in the galleries participated, and took his seat amidst loud and prolonged cheers. He spoke clearly, and every word of his opening address, which was long and eloquent, was clearly heard throughout the crowded house, a deep impression being made on all present :—

In my desire for kindly intercourse with the people and accessibility to them, I have always discouraged excessive precautions, and I trusted myself and Lady Hardinge more to the care of the people than to that of the Police. If it was an error, it is an error that I am proud of, and I believe it may yet prove not to have been an entirely mistaken confidence, for out of evil good may come. Is it too much to hope that the storm of public indignation evoked at the outrage may give Indian terrorists cause for sensible and humane reflection and repentance? It is difficult to believe that these individuals are a class apart, and that they do not belong to the communities and mix with their fellow-beings. Are they really susceptible to no influence and no advice? Have they no contact with moderate and wiser men? Still, whatever I may feel on the subject of the crime itself, I only wish to assure you and the whole of India that this incident will in no sense influence my attitude. I will pursue without faltering the same policy in the future as during the past two years, and I will not waver a hair's breadth from that course.

Educational schemes claimed a large place in public attention during 1912 and 1913. In fact, one of the most beneficent results of H. E. Lord Hardinge's Viceroyalty will be the impetus given to the spread of education in the land. Lord Hardinge's enthusiasm for education, especially for higher education, is unbounded. We have seen already that one of the Royal boons announced at Delhi was a recurring grant of Rs. 50 lakhs for education. Replying to a Deputation about the Dacca University, His Excellency said :—

I share the view of those thoughtful Indian gentlemen who see in *the action of the new Universities the greatest of boons which the Government can give India, namely, the diffusion of higher education.*

He concluded this striking address with an appeal, which is as much needed to-day as it was when it was uttered :—

I am hopeful that the large issues of educational policy, on which the future of India so greatly depends, will be viewed with a wide outlook, *and apart from personal or political interests* and in asking for your help and co-operation in the great task, I feel sure that my appeal will not be in vain.

On the 16th March 1912, His Excellency delivered the Convocation Address of the Calcutta University and began it thus :—

. . . We are not blind to the good work which the existing Universities have done in their day. We are justly proud of their achievements. But we cannot be insensible to the change that has come throughout the atmosphere. Distance has been reduced by improved communications; centres of population have grown up pulsating and throbbing with new aspirations. The old dividing barriers are breaking down, and we feel the need for greater union and closer co-operation. We want to develop an identity and a character of our own. The modern Universities of Europe have well been described as the nurseries and workshops of intellectual life. We want all that this description implies in India.

His Excellency the Viceroy opened the Hamidia Library, at Bhopal, on the 5th December 1912, and in the course of his speech, he said :—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

. . . . . Among the manifold cares which occupy my attention there is none that is nearer my heart than the desire that, during my tenure of office, the basis of Primary Education may be so widened *that the elementary knowledge may gradually become the birthright of the poorest of the land.*

In the course of his enthusiastic speech at the laying of the foundation-stone of the Hindu University at Benares, in February 1916, Lord Hardinge observed :—

The charge is frequently brought against the Government that they are too eager for quality, and too ready to ignore the demand for quantity, and comparisons are made *that do not lack force* between the number of Universities in England, America and other countries and the number available to the 300 millions of India. Nevertheless, it is the declared policy of the Government of India to do all within their power and within their means to multiply the number of Universities throughout India, realising, as we do, that the greatest boon the Government can give to India is the diffusion of higher education through the creation of new Universities. Many, many more are needed, but the new Universities to be established at Dacca, Benares and Bankipore, soon to be followed, I hope, by Universities in Burma and Central Provinces, may be regarded as steps taken in the right direction.

And it was in these glowing terms that His Excellency referred to the ideal which the Hindu University has set before itself :

You hope in the not far distant future to see preserved and fostered all that is best in Hindu ideas of life and thought, all that is noblest of Hindu religion and tradition, culture and civilisation, and grafted upon that tree, healthy and strong in its own natural soil, you hope to see growing in it and of it all that is good and great of Western science, industry and art, so that your young men may go forth not only inspired with pure and noble ideals, but also equipped for the development of their mother-country along the more material lines of progress and prosperity.

In the year 1912, a Royal Commission, under the Presidency of Lord Islington, was appointed to inquire into the public services of India. Though Indians generally have given up any hopes they may have had as to the benefits likely to result to India as the outcome of the labours of the Commission, still the volume of evidence collected by the Commission will always be valuable if it be published. In 1912, again, a Committee was appointed, under the Chairmanship of Field-Marshal Lord Nicholson, to inquire into military policy and expenditure in India. In 1913, a Royal Commission was appointed under the Chairmanship of Mr. Austen Chamberlain to investigate and report on certain questions relating to Indian finance and currency, which had for some years been much discussed, particularly in India.

In the North-East of India, an expedition, under General Bomer, was despatched against the Abors for the punishment of the murder of Mr. Noel Williamson.

In August 1913, the demolition of a lavatory attached to a mosque in Cawnpore gave rise to considerable feeling among Indian Mussulmans, and a riot in Cawnpore led to heavy loss of life. Of those present at the riot, 106 were put on trial, but subsequently released by the Viceroy before the case reached the Sessions, and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mussulmans :

The Cawnpore mosque incident will not easily be forgotten. An unfortunate collision had taken place between the people and the local authorities. Several lives had been lost. The feelings of a whole community had been wounded. It needed great strength and courage, and greater sympathy to apply the balm to the wounds which had unfortunately been inflicted. Lord Hardinge did apply the balm. The result was that widespread feelings of grief and resentment gave way to gratitude.

In October 1913, it was announced that General Sir Beauchamp Duff had been appointed to succeed Sir O'Moore Creagh as Commander-in Chief. There were special reasons for the nomination of Sir Beauchamp Duff, who, as Adjutant-General in India and Chief of Staff during Lord Kitchener's term, gave proof of his thorough knowledge of Indian conditions and his exceptional powers as a Military administrator.

The position of Indians in South Africa had for some time been causing deep concern in India. This is not the place to go into that question. Their position has been somewhat mended. But much more remains to be done before they can be said to possess the rights of British citizenship. But the whole question of the unrestricted right of immigration of Indians into South Africa, as into other parts of the Empire, still remains to be settled. But the little that has been achieved is not a little due to the efforts of the large-hearted and sympathetic statesman, whom India was privileged to have as her Viceroy at a time when the struggle took a very keen form. In the latter part of 1913, considerable feeling was aroused in India by the ill-treatment of Indian passive resisters in South Africa.

About this time, His Excellency was on a visit to Madras and made a memorable speech vindicating the position of the passive resisters in South Africa, which has earned for him the undying

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gratitude of Indians all over the country. The Viceroy said :—

Recently your compatriots in South Africa have taken matters into their own hands by organising what is called passive resistance to laws which they consider invidious and unjust, an opinion which we who watch their struggles from afar cannot but share. They have violated, as they intended to violate, those laws, with full knowledge of the penalties involved, and ready with all courage and patience to endure those penalties. In all this they have the sympathy of India—deep and burning—and not only of India, but of all those who, like myself, without being Indians themselves, have feelings of sympathy for the people of this country. But the most recent developments have taken a very serious turn, and we have seen the widest publicity given to allegations that this movement of passive resistance has been dealt with by measures which would not for a moment be tolerated in any country that claims to call itself civilised. These allegations have been met by a categorical denial from the responsible Government of South Africa, though even their denial contains admissions which do not seem to me to indicate that the Union Government have exercised a very wise discretion in some of the steps which they have adopted.

Presiding over a meeting at Madras, the Lord Bishop of Madras said :—

The Viceroy's speech has been condemned as undiplomatic. But there is a time for all things. For many years, the Government of India have tried patiently to secure justice for the Indians in South Africa by diplomatic methods, and they have failed. And now that matters have been brought to a dangerous crisis and all India is ablaze with a firy indignation, the time has come to put aside the soft phrases of diplomacy, to call a spade a spade, and to tell the politicians of South Africa plainly how their action in this matter is regarded in India. We are deeply grateful to His Excellency that he has done this and has come forward at a critical time *as the spokesman and representative of the Indian people.*

Rioting by Indians in Natal was followed by the appointment by the Union Government of a Committee of Inquiry, at which the Government of India was represented by Sir Benjamin Robertson. The Report of the Commission afforded the basis of a settlement, commonly regarded as equitable so far as it goes.

On the 8th September 1914, the Viceroy referred to the passing of the Indian Relief Bill in South Africa in the following terms :—

If the new law does not satisfy every Indian aspiration, it certainly removes the principal sufferings from which Indians for many years have been suffering.

At the same meeting His Excellency referred to a far more comprehensive question—the right of immigration of Indians into British Colonies in general—on a basis of mutual reciprocity.

In July 1914, the death of Lady Hardinge, wife of the Viceroy, took place in London after an operation. The courage she had displayed at Delhi, when the Viceroy was wounded by a bomb, and the sympathetic and active interest she had displayed in the women and children of India, had endeared her to all classes. Her death was widely mourned in India, and her memory is perpetuated by The Lady Hardinge Women's Medical College. In reply to the countless messages of sympathy which His Excellency received, he said :—

In her, I have lost a truly devoted wife and a most noble helpmate, and the people of India have lost a very loving friend. She loved India, and the people of India, the women and children, the suffering and the poor. None can realise how much. Though gone to her eternal home, her love for India will, I know, remain and bring its blessing from above.

The declaration of War in August 1914, was followed in India by an unprecedented declaration of loyalty on all sides, and the numerous offers of personal help or service made by the chiefs and peoples aroused in England a feeling of intense gratitude. A military force numbering some 200,000 was sent from India to Europe and East Africa within a short time of the outbreak of hostilities.

One of the most gratifying features of this war, so far as India is concerned, is the despatch of Indian troops to fight in Europe against the Germans. The exact part which Lord Hardinge played in bringing about this will probably never be known. But it is an open secret that His Excellency was largely instrumental in getting the Indian troops despatched. At the meeting of the Imperial Legislative Council on the 8th September 1914, the Viceroy referred in these terms to the despatch of Indian troops :—

The fact that the Government of India are in a position to help the Mother-Country by the despatch of such a large portion of our armed forces is a supreme mark of my absolute confidence in the fidelity of our troops and in the loyalty of the Indian people. I trust that this may be fully recognised in England and abroad. . . . . If it was with confidence and pride that I was able to offer to His Majesty the finest and largest military force of British and Indian troops for service in Europe that has ever left the shores of India, I am confident that the honour of this land and of the British Empire may be safely entrusted to our brave soldiers, and that they will acquit themselves nobly and ever maintain their high traditions of military chivalry and courage. . . . . There is, I believe, nothing like comradeship in arms before the enemy and joint participation in the dangers and hardships of war, to level all distinctions, to inspire mutual respect, and to foster friendships. This I regard as the bright side of the despatch of our troops to Europe and of the heavy material sacrifices that are being made by India for the sake of the Empire.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I cannot help feeling that, as a consequence, better relations will be promoted amongst the component parts of the British Empire, many misunderstandings will be removed, and outstanding grievances will be settled in an amicable and generous manner. In this sense, out of evil good may come to India, and this is the desire of all.

About the middle of the year 1914, leading Indians initiated a movement for requesting the authorities to grant an extension of the term of Lord Hardinge's Viceroyalty. Influential meetings were held in different parts of the country praying for the extension, and the leading Indian newspapers gave their cordial approval to the proposal. In June 1915, His Excellency the Viceroy issued the following statement :—

The Secretary of State has asked me to give publicity to the following announcement made by the Prime Minister in the House of Commons :—

"Under normal circumstances, Lord Hardinge of Penshurst's term of office as Viceroy and Governor-General of India would have terminated in November next, but His Majesty's Government, recognising the great services which Lord Hardinge has rendered to India, and desiring to retain the advantage of his experience during the coming winter, have requested him to remain until the end of March next. Lord Hardinge has readily consented to comply with our wishes, and the King has been pleased to approve the arrangement. I am glad of the opportunity to express my sense of the public spirit which, in spite of the great strain of his labours and in face of heavy private sorrows, has led Lord Hardinge to place his service unreservedly at our disposal."

While fulfilling the wishes of the Secretary of State in making public this announcement, I desire to say that while in the critical times through which the Empire is passing, I feel that it is my bounden duty to fall in with the wishes of His Majesty's Government, whatever they may be, it is with no light heart that I have agreed to this prolongation of the onerous responsibilities that fall to a Viceroy's lot, but I do not forget that many of the Ruling Chiefs of India and many Bodies, representatives of communities and interests, have given expression to a wish that the tenure of my office should be extended, and the feeling that I have of the friendly confidence of so many gives me courage to continue to fulfil my duties to the best of my ability and for the welfare of India and her people.

In spite of the war, the year 1915 was one of comparative peace and order in India. A continuous effort was maintained in all parts of India to keep the troops at the front and the wounded on their return well supplied with 'comforts,' and the princes and people of India contributed very handsomely to the various war and relief funds. The monsoon was of a favourable character, and, though at one time famine appeared to be inevitable in Guzarat and Kathiawar, late rains saved the situation. A bill was passed in the Imperial Legislative Council, which gave power to the Governor-General in Council to issue regulations to insure the safety of the country and was modelled, with notable exceptions, on the Defence of the Realm Act. In connection with the war, the Viceroy made a journey up the Persian Gulf visiting the oil works at Abadan, Basra, Shaiha, and Kurna. On his return, he visited Muscat, where there had been fighting.

There were several fights on the North-West frontier during the year, but the tribesmen never succeeded in penetrating far into British territory. In September 1914, the return of a number of Sikh emigrants from British Columbia was the occasion of a riot at Budge-Budge. The Lahore Conspiracy Case was the sequel, and in that case a Special Commission sentenced 24 persons to death, 27 to transportation for life, and 6 to terms of imprisonment. Of the death sentences, 16 were subsequently committed to transportation for life. One may see in this, the hand of Lord Hardinge and, although as usual he was blamed for having lowered British prestige, the result showed that the prestige had increased instead of suffering any diminution.

In the early part of 1915, the House of Lords adopted a Resolution advising the King to withhold his Royal assent during the continuance of war from the Draft Proclamation creating an Executive Council for the United Provinces. This elicited wide-spread criticism in India, the Viceroy being the most important of those who condemned the House of Lords for their act. Lord Hardinge said at a meeting of the Imperial Legislative Council :—

It may seem to you, as it does to me, a matter of serious concern that it should be within the power of a small body of Peers, who perhaps hardly realise the rate of progress made in this country during the past few years to throw out a proposition put by the Government of India and His Majesty's Government before Parliament with the full approbation of Indian public opinion. It seems clear to me under the circumstances that modification of the law, by which such procedure is possible, is absolutely essential and I trust this will be recognised by His Majesty's Government.

It will be interesting to note that nearly every Province of India has cause to be thankful to Lord Hardinge for the advance made by it in the direction of popular Government. During his time the Central Provinces and Assam have been given Legislative Councils, and in addition to its Executive Council, Behar has had a Legislative Council with an elective majority and a High Court, and is soon to have a University. And if the just demand of the Punjab for a chartered High Court has not been satisfied, we know

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

where to locate the responsibility for the disappointment. The Province is all the same grateful to Lord Hardinge to whom it owed the wise recommendation in that behalf.

An important political event during the year 1915, was the acceptance by the Viceroy of a resolution of the Imperial Legislative Council, asking that India should be represented at the Imperial Conference. This has been received favourably in the Colonies. Indians are grateful to His Excellency for having helped India in some measure to occupy her place in the Empire, *viz.*, as an equal partner and not as a mere trusted dependant.

The Viceroy opened the new Patna High Court on the 3rd February 1916. And in declaring the Court open, he said :—

> It is, therefore, my peculiar privilege to stand alone among those who have represented the Crown in the Indian Empire presiding at the opening ceremony of a building which is to house a new chartered High Court. This is particularly gratifying to me as it permits me to witness the final steps. I may say "the placing of the coping stone of a great administrative reform which I am happy to say has been brought to its fruition before the close of my term of office and which I believe to be full of hope and promise for the future and tending towards the steady and progressive development of India in accordance with the legitimate aspirations of her people. . . . . .
>
> The noble edifice of our great Empire is founded on justice and cemented with mercy and I am proud to think that during my Vicëroyalty this fresh contribution to its stability has been completed and to feel that I am here to-day to bear witness to it. With my most earnest wishes that the labours of this Court may be inspired with wisdom, justice and mercy, I will now proceed to open the building.

In consonance with his high ideals of Government, His Excellency has followed a policy of trust and co-operation in his relations with the Feudatory States and Ruling Chiefs of India. The result has been more than justified in the magnificent rally of the Princes of India to the Empire's flag during this war. On the 26th February 1916, His Excellency performed the ceremony of investing the Maharaja of Jodhpur with ruling powers. In the course of a speech on that occasion, he said :—

> In the critical times through which we have passed since this terrible war began, the moral and national support given by the princes and chiefs of India have been of incalculable value. They took the lead in asserting their enthusiastic loyalty to the King-Emperor both by word and deed. Many of them, including the gallant veteran warrior who to-day will resign his post as Regent of Jodhpur and the young prince who will relieve him of his charge, have served with His Majesty's armies in the field and all with one accord have offered their personal services and lavished their resources in support of the noble cause which Great Britain has espoused. The services rendered by the ruling princes of India have received the warm appreciation of the King Emperor, and their devotion and loyalty to the Crown and the person of His Majesty. are landmarks in the history of India that can never be effaced.

And, in reply to the toast of his health at the United Service Club Dinner, at Simla, the Viceroy uttered these memorable words :—

> Let it be realised that great as has been England's mission in the past, she has a far more glorious task to fulfil in the future in encouraging and guiding the political self-development of the people. The goal to which India may attain is still distant and there may be many vicissitudes in her path, but I look forward with confidence to a time when, strengthened by character and self-respect and bound by ties of affection and gratitude, India may be regarded as a true friend of the Empire and not merely as a trusty dependent. The day for the complete fulfilment of this ideal is not yet; but it is to this distant vista that the British official should turn his eyes; and he must grasp the fact that it is by his future success in this direction that British prestige and efficiency will be judged.

How hard His Excellency has tried to act up to this great ideal is a matter of current history. But almost the last act of his benificent Viceroyalty has endeared him all the more to the people of India. The problem of indentured labour has for some time past elicited his most anxious care, and his courageous utterances and solicitous actions on behalf of the Indian emigrants abroad are well known to the readers of these foregoing pages. But no half measures on this obnoxious question would satisfy the Indian public. Accordingly, to the infinite rejoicing of the country, when at a meeting of the Imperial Legislative Council on March 20, the Hon. Pandit Madan Mohan Malaviya moved a Resolution for the abolition of the system of indentured labour, His Excellency on behalf of the Government of India and with the sanction of the Secretary of State announced his decision to accept the motion which, to quote his own words, would pave the way for the "eventual abolition" of the indentured system. This crowning act of his is not the least of his title to the gratitude of India.

Lord Hardinge throughout his Viceroyalty has been actuated by a sincere desire to understand the aims and aspirations of the people of India as voiced forth from time to time by their representatives in the press, on the platform, and in the debates and discussions in the Imperial Legislative Council. It has been a matter for sincere congratulation that the relations between the Viceroy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the representatives of the people were most cordial. The All-India Address presented to him at Delhi, on the 25th March, assigned to him his rightful place in the roll of the illustrious Viceroys of India :—

We salute you as the greatest Viceroy since the days of Lord Ripon. We recall with grief the terrible ordeals you have passed through in the performance of your arduous duties. The quick and deep sympathy of a nation followed Your Excellency in those troubles and tribulations. While we feel assured that you will continue to take an abiding interest in the people of this ancient land whom you have loved and served so well, we deeply regret that you are leaving us and that Your Excellency's official connection with India, which will form such a bright chapter in her history, will soon cease. May your days be long and prosperous, and may the Giver of All Good shower upon you and yours His choicest blessings.

After receiving the All-India Address, at Delhi, Lord Hardinge proceeded to Bombay and, on the 4th of April, laid down his high office and embarked for home. The reception in Bombay was magnificent. It recalls the tremendous demonstrations of enthusiasm that accompanied the parting of another great Viceroy, the late Lord Ripon, two and thirty years ago. Princes and peoples alike gathered together in Bombay to offer a fitting farewell to the retiring Viceroy. The University of Bombay conferred upon Lord Hardinge the Honorary Degree of LL.D. in recognition of his great services for the cause of Education in India. A special Convocation was held for the purpose, and H. E. Lord Willingdon, the Chancellor of the Bombay University, and Dr. Mackichan, the Vice-Chancellor, delivered eulogistic addresses. Lord Hardinge in reply spoke characteristically with a last message to the student community, for whom he has done so much in his Viceroyalty Dr. Mackichan's eloquent reference to a similar Degree conferred on the late Marquis of Ripon was received with great ovation. Lord Hardinge was visibly touched by these demonstrations of affection and solicitude. It is yet too early to measure the beneficence of his great Viceroyalty, but the future historian can judge the value of his work in the light of the spirit in which he served India. At the Garden Party, Lord Hardinge said :—

If his verdict is at all favourable to me, and if he should cast about for some explanation of any small success I may have had as Viceroy, I will give him this hint : "I have trusted India, I have believed in India, I have hoped with India, I have feared with India, I have wept with India, I have rejoiced with India, and in a word I have identified myself with India." India's response has been a wonderful revelation to me, and sometimes I feel as if she had in return confided her very heart to my keeping.

With such kind memories Lord Hardinge may still be expected to take interest in Indian affairs and help the cause of progress in India in the Councils of the Empire. His Lordship's interest on behalf of the Indian people, we are glad to be assured, will still continue. For as he said :—

I often feel that when I return to England one of my chief endeavours should be to make the British public appreciate the pace at which India is developing both socially and politically, and that it is vain and useless to regard India from the standpoint of what India was ten years ago. When I look back upon the past 5½ years, I am struck by the fact how much bigger India looms in the world than before, how she has grown in stature and in wisdom, and how her political progress and social regeneration have advanced and are already bearing fruit with the prospects of an abundant harvest. The Morley-Minto reforms, in conceding to Indian politicians a larger share in the control of their own affairs, have opened a door to political progress that can never be closed so long as the advance is made on sure and safe lines. That the situation has immensely improved through the closer co-operation of the Government and the people is undeniable, and nowhere is this more appreciable than in Bombay, and there is no reason why, with moderation and responsive sympathy, this improvement should not be maintained. But it must be recognised that India cannot and will not remain stationary, and that it is the task of the Imperial Government to guide her development and to help her to attain her just and legitimate aspirations.

H. E. LORD HARDINGE

A SKETCH OF

His Life and His Viceroyalty.

This is a timely addition to the well-known "Friends of India" Series published by Messrs. G. A. Natesan & Co., of Madras. The sketch is an up-to-date account of Lord Hardinge's life and career with special reference to his distinguished tenure of Viceroyalty in India. It opens with a brief *resume* of his august ancestry and his thirty years' diplomatic achievements. Then begins chronologically a detailed review of his five and a half years of Indian Viceroyalty, interspersed with choice selections culled from his own utterances both in the Council Chamber and outside. The sketch is thus not only the biography of one of the foremost of English statesmen who ever came to rule India, but is an epitome of the political history of India in what may be called the most stirring times in the history of the British Empire. Almost every aspect of Indian or Imperial politics is passed under review. The change of capital, provincial autonomy, university education, indentured labour, reciprocity with the colonies, and all the inevitable results of the War—and the new angle of vision relating to India and the Empire—these and other important aspects of current history are treated with some measure of completeness as indispensable adjuncts of Lord Hardinge's career in India.

THE POETRY OF MR. JOSEPH SALDANHA

BY MR. A. L. PINTO, B.A.

THE West Coast with its mythology, peculiar customs and manners and with its wild scenery of mountain, river and forest has been the birth-place of many a poet who has enriched vernacular literature and been the delight of generations of Indian readers. It was therefore peculiarly appropriate that one of the few poets in India who have as yet sung in English should belong to that coast.

Mr. Saldanha was born some forty three years ago at Honovar, North Canara District, where his father was a Sub-Judge. Carefully educated, he became proficient in three languages—English, Canarese, and Mahratti,—and it is said that he could write both poetry and prose in all these languages with facility. Although he studied Canarese up to the F. A., he took up Sanskrit for the B.A , and got through that examination without difficulty. He passed the Matriculation as well as these examinations from the St. Aloysius College, Mangalore, which is justly proud of such a distinguished alumnus.

Mr. Saldanha's knowledge of the literature of the vernaculars and of the classical Sanskrit must have infused his poetry with that undefinable element which stamped it with genius and gave him a niche in the Indian poetical firmament.

His first appearance in a Madras journal was, I believe, in the *Young Men's Miscellany* (now defunct) in which he published the poem called "Krishna Kumari." This was in June 1893. I extract a few stanzas :—

A chieftain claimed her hand, and endeavoured to enforce his demands by threats, but her father rather than yield her to him preferred her to die.

Fair as a lotus when it falls
Upon the lake's blue water,
She shone within the palace walls,
Oodeypore's Chief's own daughter.
A maiden of such tender grace
As blest the eyes that saw her,
Nature alone that form could trace,
No human hand could draw her.
The frantic father heard her sighs
To him he could not yield her ;
In death the only remedy lies,
He said "I cannot shield her.
Dear as the apple of mine eye
I've loved my only daughter,
And I would rather see her die
Than give her him thus sought her."
And lo ! a deadly draught he sent
To blast his fairest blossom,
Ah, how the cruel action rent
That father's kindly bosom.
Yet must the price of love be paid,
And must his words not alter,
Of death she should not be afraid,
Disgrace shall not assault her.
And like a Rajput bold and true,
She drank the fatal chalice,
And stanched with death the feud that grew
From out her claimant's malice.
And all the maids of Rajastan
With tears enshrined her ashes,
Love reigns supreme in every man,
And down all passions crashes.

It would be seen that in spite of some immaturity of style and defect of phrase, Mr. Saldanha had already fairly mastered the difficult art of versifying and showed distinct promise. He was then studying in the College Department of the St. Aloysius College, Mangalore. The passing of examinations was a great trial to him and his free spirit chafed under the restrictions imposed by the rigid examination system that then prevailed. His feelings found vent in a parody of Hamlet, which I quote at some length ; for although it does not claim any poetical merit, it strikes a chord which will find a sympathetic echo in the heart of many a genuine schoolboy :—

To appear or not to appear—that is the question
Whether it is better in the end to suffer
The berthless fate of youth unqualified
Or to break one's head over hard atrocious text-books
And by long cramming get through—to pass,
To get a post—no more, and by a post to—end
The headache and the thousand natural pains
That students are heir to—'tis a compensation
Eagerly to be asked. To pass—to get a post
To get a post—perchance there's the rub
For while we wait what vacancies may come
When we have once put in our "humble petitions"
Must give us work—there is the respect
That makes calamity of so long study ;
For who would bear the hardness of the times
The head clerk's wrong, the officer's remarks
The pangs of slow promotion, the peon's delay
The insolence of "old hands" and the abuse
That patient merit of the unpassed takes
When he himself might his quietus have
By sitting at home.

He first made his mark as a poet with his welcome verses to Their Excellencies Lord and Lady Wenlock when they visited the St. Aloysius College, Mangalore. His deep patriotism and intense religious fervour combined to render these verses memorable among those of his community and college, who were present on the occasion of the gubernatorial visit :—

Who be ye strangers sitting midst us here
When gentle nature bids her children rest ?
Why is this hour with song and music blest,
Why dost this scene so gaily deckt appear ?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Yes, well we know you guests of rarest note
And worth in you our littleness can grace
As does your presence now this humble place
Where love has led your steps from realms remote,
And we are sons of sires that bled of old
For fatherland when Freedom's cause arose,
United by the cause that holds us close,
The bond of one belief in one true fold.
Wherein our fathers first by Francis taught,
The holy Francis of eternal fame,
On Goa's shores that still with hallowed claim
Safeguard his long and wondrous sleep were brought;
And with us come to hail you here to-night
The rising race with Learning's flag in hand
And guided by a God-devoted band
That teach them how to win life's double fight.
Then welcome whilst without the torches gleam,
And ancient faith within burns brighter still,
The light your presence sheds amongst us will
Through coming years within our mem'ries beam.

This effort was so successful that ever afterwards he was the unquestioned "Poet Laureate" of the College and never failed to satisfy the demand for "occasional verses," which the many College gatherings and festivities required of him; and when in the fulness of time the Mangalore Magazine was founded as the organ of his *alma mater*, he became a faithful and valued contributor to it. He once competed for a prize offered by Mr. Quinn, who was then the Editor of the *Indian Journal of Education*, for the best paraphrase of *Tennyson's Crossing the Bar*. Mr. Saldanha did not win the prize, but his effort which was in poetry was considered the next best (*proxima accessit*). His paraphrase was a poem in itself, and the writer had the privilege of reciting it at a social gathering at the Presidency College in 1894, arranged by the Editor of this esteemed *Review*, then Secretary of the Presidency College Literary Society. The late Dr. Satthianadhan, Professor of Philosophy, who was present at the recitation, was so struck with the deep poetic and religious spirit running through the paraphrase that, with Mr. Saldanha's permission, he had it printed in the *Christian Patriot*. I may be permitted to quote a few lines from this paraphrase which, I am sure, will give the reader an idea of its pure poetical inspiration:

When the sun of life is setting, and the star of hope shines bright,
In the dim and transient twilight heralding the approach of night,
May I hear the timely warning of my Pilot bid me sail
O'er death's dark and dreadful river to the far off silent vale,
And as draw I near the ocean beating on the distant shore,
May no wave there dash against me, not a single billow roar.

* * * *

Fainter, fainter grows the twilight giving place to night's dark fall,
But before it shall I hear my Pilot's clear and timely call,
Bidding me to quit the shores of life with all my heart holds dear,
For the unknown land of silence where no human joys appear,
May no anxious pangs assail my soul at that departing hour,
Willing let me cross the ocean trusting in my Pilot's power.

One great attribute of his genius was his skill in versification. He has tried many forms of metre, and he achieved astonishing success in them all. His sonnet on Tennyson is worth quoting:

Receive on yon Elysian shores, great Bard,
This late, yet loving tribute of the East,
Whose mind still on the cherished thought shall feast,
That thou didst have for her a kind regard.
Thou silent, yet solicitous, didst guard
Her interests, and lovedst to hear her sons
Had learnt to grasp the hallowed truth that runs
Through thy sweet songs with gentle flow unmarred.
O deathless singer, wherefore should we mourn,
Since death is life of greater bliss to thee;
Thou bad'st us grieve not, when thou shoudst be borne
In perfect calm o'er life's most troubled sea;
But still to comfort us, thus far forlorn,
Thou speak'st through tongues of immortality.

There is a haunting melody in the acrostic in blank verse on the late Bishop Nicholas Maria Pagani, of Mangalore, a few lines of which are quoted below:

Night sad and sudden has with cruel calm
In the yet unborn twilight of life's day
Closed o'er thee to fill with grief and gloom
Hearts that did love and homes that e'er did bless
One who was all love and blessing unto them.
Like a fond mother that with partial mind
Admires the imperfect virtues of her child,
Seeking to find no faults therein that else
Might mar her joy, thou to thy dear flock wert
A shepherd the most mild that wielded staff.

His general outlook on life was sad, but the merit of his poetry did not suffer by this, for it need hardly be explained that the "sweetest songs are those that tell of saddest thought":

They gave him gold and made him sing, sing for their delight,
And he sang loud and he sang low,
And many a note on his pipe did blow
Till they laughed for joy at the melody's flow,
But the joy with the song took flight.
Then they followed him in lonely ways, where he sate and mused, apart
Alone on the side of a desolate mound,
Where wood notes wove their magic of sound,
And he sang of the grief that his soul had found,
But the song—it still sings in their heart.

Again :—

I looked on her—the touch of grief
Had made her half divine,
She sought from earthly things relief,
Her heart had grown a shrine,
Where heavenly thoughts like pilgrims pure
Their constant vigils kept;
Whilst like a saint in death serene,
Her passions slept.
But as the bow that hangs on high,
When rain and sunshine meet,
A brief bright wonder in the sky,
For loving gaze too sweet,
So in her heart where sorrow dwelt,
With bliss of dreams divine,
At times the earthly thrill she felt,
As pure as fine.

His lines on the death of a dear sister are exquisitely sweet:

Not e' en thy last adieu, alas, my dear,
Could distance let me hear,
Not e' en a kiss upon thy sweet cold brow
Could I bestow
But on thy death-bed stretched didst thou appear
In dream so sadly clear
That in my sleep I wept the bitter woe
I did not know.
Perhaps ' twas but mine angel that gave sign
That the last thoughts of thine
Dwelt on thy distant brother as they turn'd
With love that burn'd
To husband, children, her that e'er shall pine,
Dear mother thine and mine,
Who vainly for thy last embraces yearn'd
When far she learn'd
The doom that dealt despairing pangs of grief,
That is without relief,
Ah me! a maddening voidness holds my soul
In depth of dole,
But thou, O dearest one whose days were brief
As those of flower and leaf,
Has sailed the sea where sorrow's waters roll,
And reached thy goal.
The earth will ring again with voice of bird,
All nature will be stirred,
But oh! for thy sweet innocents and me,
And friends that be,
And mother dear and husband fond be heard
From thee no cheering word,
Till in God's Heaven, from sin and sorrow free,
We come to thee.

He has also his lighter mood when his verses have a quick movement which is in keeping with the subject dealt with, *vide* his song of the journals, from which I extract the following opening stanzas:

North and South and East and West,
Speed we over land and sea,
Nurslings curst and nurslings blest,
Thought and Type's prompt progeny.
Man alive! Read and thrive,
Clear the chaff and store the grain,
While through time, in prose and rhyme,
Sounds the world its marching strain.

Dead behind us lies the Past.
Still his secrets we declare,
Oft the horoscope we cast,
Of the Future dark or fair,
Wisdom's cheer and Folly's sneer,
Poet's fit and Patriot's rage,
Statesman's right and soldier's might,
All are printed in our page.

He has laid the Roman Catholic community of Mangalore under a deep debt of gratitude by editing the "Christian Puran," a poetic history of the Bible in archaic Konkani, by the Revd. Father Stephens, an English Jesuit, who flourished in India at the time of Shakespeare. His elaborate preface to that work is a monument of deep erudition and ripe scholarship, for which he is entitled to undying fame among his countrymen. Dr. Casartelli, the Orientalist, contributed a highly eulogistic critique of it to the *Manchester Guardian*. Major Kirtikar, I.M.S., also an Orientialist, wrote very appreciatively of his work. Mr. Saldanha also translated into English verse portions of the Puran. An extract is appended, as it may interest the general reader :—

BIRTH OF CHRIST.

(Part II, Chapter, 7)

'Twas near the middle of the night,
Lost in her thoughts as deep as bright,
Seemed she that soon must prove her right,
As mother of her God

Forespent the wild clouds' showering mood
All clear again the heavens stood
And myriad stars rained down a flood
Of light that shone abroad.

To tend the hour that must behold
Whom did the Virgin's womb enfold,
The moon bedecked with purest gold
Yearned wistful with her host
* * *

And angel bands on high amazed
To think that he the Lord they praised
Would come to earth, expectant gazed
To see how He would shew.
* * *

Hymning the grand and hallow'd night,
They kept their watch of love and light,
Nor till the Saviour bless'd their sight
Was hushed their song of praise.

Hail glorious night! whose splendours gleam
Brighter than any sun could dream,
The Lord of Day in vain would beam
His rays at such an hour.

To-day the Son of God doth shed
The light of righteousness; and fled
Is all the darkness sin hath spread
Before His heavenly power.

A good Sanskrit scholar, he is an ardent admirer of Kalidas, whom he compares to Shakespeare in a couple of sonnets. He may be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pardoned if, like a true son of India, he gives the pride of place to the Indian poet:

KALIDAS.

Shakespeare of Ind they call thee, they who sway
Our land but their own bard they do not name
So after thee, regardless of thy claim
To that proud honour, for as the sun's ray
Lights first the east and on its upward way,
Becoming broader, sets the west aflame,
Even so, great genius to the east first came,
And sought the west but at a later day.
Should we, great maker, urge thy injured right,
And bid our rulers soon repair the wrong,
"No," answers he, "fools may for titles fight,
To wisdom's train no titles e'er belong;
Shakespeare and Kalidas both used their might
To please the world, not for the fame of song."

SHAKESPEARE.

And can we love thee less, or less admire
Thy magic world, O Britains' Bard Supreme!
Or ingrate-like, through country' pride, esteem
Thy pleasure-planned life conquest less entire?
No, no, thy spell-bound beings all conspire
To bring their god the praise none else can dream,
On life's vast ocean falls thy fancy's gleam
Nor from its light can time or space retire.
We love thee still and midst the stars that shine
In Ind's poetic firmament we place
Thy honoured self; that centre thou canst grace
And that as guest for ever shall be thine;
In thee the rulers and the ruled shall trace
A common joy wherein they all combine.

The *Irish Monthly*, a literary journal of Dublin, published some of Mr. Saldanha's poems. The *Thrush*, a periodical devoted entirely to the publication of "new poetry," printed a few of his translations in verse of Sanskrit poems. One of them was found worthy of a musical setting by a well-known composer in London and of being sung in the Æolian Hall, London. The late Sir Alfred Austin in a letter to Mr. Saldanha spoke of the pleasure given him by a perusal of his "graceful verses".

Extremely sensitive to public criticism, Mr. Saldanha has never yet made up his mind to bring out a volume of his verses although urged to do so by many of his friends. Some time back he retired from the Professorship of English at the St. Aloysius College, Mangalore, the duties of which he had carried out with remarkable distinction, and he now lives the life of a recluse in a house on the slope of College Hill commanding the beautiful scenery of Mangalore, the "world forgetting" it is true, but I am sure, not "by the world forgot".

THE INDUSTRIAL COMMISSION.

BETTER late than never. The Government of India have at last awakened to the necessity of an enquiry into the industrial possibilities of this country. At a meeting of the Imperial Legislative Council held at Delhi, on March 21st, the Hon'ble Sir Ibrahim Rahimtullah moved "that this Council recommends to the Governor-General in Council to appoint a committee of officials and non-officials to consider and report what measures should be adopted for the growth and development of industries in India." In the course of his speech the Hon'ble Sir Ibrahim suggested that the following may suitably form the principal subjects to be referred for the consideration of the proposed Committee:—

(1) Whether representation should be made to the Home authorities through the Secretary of State for securing to the Government of India full fiscal autonomy specially in reference to Import, Export and Excise duties.

(2) Whether (*a*) Protection (*b*) Granting of Bounties and Subsidies (*c*) Guaranteeing certain rates of interest on capital invested in approved industries, should be availed of in such cases and for such time as may be deemed necessary.

(3) Whether a special expert staff should be maintained to carry on research work and institute detailed enquiries into the possibility of successfully initiating, and establishing, new industries in India and to supply expert advice for the development of existing industries.

(4) What means should be employed for securing a sufficient supply of skilled labour.

(5) What special railway facilities in the matter of fares and otherwise are needed.

(6) Whether any special measures are necessary to attract capital and secure banking facilities.

Sir Ibrahim, in suggesting these points for inquiry and report, made a very exhaustive speech detailing the various means by which other Governments have developed the resources of their respective States. Sir Ibrahim rightly urged that the first step in the direction of industrial reform was "fiscal freedom for India." He said:

It appears to me, however, that unless the hands of the Imperial Government are free in fiscal matters the results will not be adequate. If the Government of India were free to adopt measures solely in the interests of the people of this country without any restrictions or limitations in fiscal matters, our industrial development would be in a fair way of successful accomplishment. India wants fiscal autonomy as the first step towards her

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

industrial regeneration and if Indian public opinion is to have any weight in the determination of this question we ought to get it at once.

The Hon'ble member only pleaded for what other civilised Governments have done. The Indian Government should take a direct hand in co-operating with and helping the development of, the industries in India.

If Japan and Germany have succeeded within a short period of about 40 years to reach a foremost position as a manufacturing country amongst the nations of the world, by the joint co-operation of Government and people, there appears to be no reason why India with all its natural advantages should not reach an equal, if not a higher standard. For many of their manufacturing industries both Japan and Germany are obliged to depend upon imported raw materials. If, in spite of this drawback, they have successfully accomplished their aim there appears no reason why India should not be able, with the cordial and whole-hearted support of her Government, to achieve success with all the necessary raw materials available on the spot.

Then followed a lively debate in which all the non-official members took part and warmly supported Sir Ibrahim's resolution. Sir G. M. Chitnavis asked for an urgent and definite move forward. The Hon. Mr. Dadabhai pointed out that the conservation of present industries is more important than the creation of new ones; the Hon. Mr. Bannerjee gave eloquent testimony to the dominant note that Government should no more retain a position of isolation but should participate freely and actively in the industrial development of the country. Pandit M. Malaviya complained that there had been no subject in which less had been done, though much had been said than in the question of Indian industries. The Hon. Mr. C. E. Low combated the despondent view of some of the previous speakers and preached a robuster, and more cheerful, faith of confidence and hope.

Sir William Clark, on behalf of the Government, announced that upon the recommendation of the Government of India, His Majesty's Government had approved of the appointment not of a mere Committee but of a more important body—a Commission, whose duty it will be to consider and report upon the possibility of the further industrial development of this country. The Commission is to be presided over by Sir Thomas Holland, the late Director of the Geological Survey of India, who will be assisted by seven or eight members of whom three are Indians. So far, we understand that Sir Fazulbhoy Currimbhoy, Sir Rajendranath Mukherji and Sir Dorab Tata, representing the three great communities of India, will be Members of the body. We are surprised that Madras has no representative on the Commission. The Hon. Mr. Low, now Secretary in the Commerce and Industry Department of the Government of India, will join the Commission early. We are glad that such well-known men as Sir Horace Plunkett and Mr. Hopkinson will serve on the Commission The terms of reference to the Commission are as follows :—

They will be instructed to examine and report upon possibilities of further industrial development in India and to submit their recommendations with special reference to the following questions (a) whether new openings for the profitable employment of Indian capital in commerce and industry can be indicated and (b) whether, and, if so, in what manner Government can usefully give direct encouragement to industrial development (1) by rendering technical advice more freely available, (2) by the demonstration of the practical possibility on a commercial scale of particular industries, (3) by affording directly, or indirectly, financial assistance to industrial enterprises, or (4) by way of other means with the existing fiscal policy of the Government of India

It will be noticed that in framing the terms of reference no mention is made of the fiscal policy of the Government of India. The Commission will not enquire into the most important items of the question of Tariffs and the authority of the Government of India in regard to the regulation of foreign commerce. This is deplorable indeed. As has been so pertinently pointed out, it is acting the play of Hamlet without the Prince of Denmark. But the Hon. Mr. Clark, in justifying the course adopted by the Imperial Government, put in the usual plea that at a time like this it was not politic to raise the question of fiscal freedom for India. The war in Europe is brought in to serve every insupportable plea. He warned the Council against regarding protection or indeed any other measure as in itself a panacea for all industrial ills. He explained that the fiscal relations between Great Britain and the Empire including India would have to be revised, and that fiscal questions could not be taken up with propriety during the war. It would also be difficult, he said, to find a committee capable of going into local industrial matters and of revising the entire fiscal relations between England and India. As a practical measure it was better, in his opinion, in the interests of the industrial development of India, that the enquiry should be confined to what could be dealt with effectively. He looked forward to the day of adjustment with evident enthusiasm and called on the country to await the end of the war :—

The Prime Minister has categorically stated in the House of Commons that if any action affecting economic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

relations after the war is contemplated as a result of that Conference (at Paris) the Government of India and the Governments of the Dominions would all be consulted before definite action is taken. That does not look as if it was proposed to neglect India after the war. It is clear that the same pronouncement must affect the question of protection, which has also formed a large part of the speeches to which we have listened to-day, since the question of any important modification in our fiscal system is manifestly inseparable from the question of the fiscal relationships of the parts of the Empire and of the rest of the world. We can all, I think, appreciate the objections to raising in war time a question which affects India's relations, not only with the United Kingdom, but also, with foreign countries. In a sense, protection is a very live issue in India, since it is an issue in which all classes take a vigorous interest and on which most educated Indians hold strong opinions, but in view of this pronouncement by the British Government it is not an issue which can be taken up at the moment, nor, as Sir Guy Fleetwood Wilson said when we discussed the same subject three years ago, is it a question on which the Government of India are in a position to declare a policy of their own. Their policy is, and must be, the policy of His Majesty's Government.

This is just what makes the condition of Indian industries so deplorable. The perversity of the notion that the economic policy of this country should be so adjusted as to serve the interests of the manufacturers of Lancashire is at the bottom of all our economic woes. The Hon. Mr. Clark justly pointed out that it is of "immense importance, alike to India herself and to the Empire, that Indians should take a large share in the industrial development of their country." This is by no means possible if the fiscal policy of this country is made to serve the interest of foreign merchants. Very rightly therefore are the non-official members and those interested in the development of Indian industries, vexed at this limitation in the scope of the Commission's enquiry. It is to be hoped, however, that this unnecessary restriction will be removed, so that the work of the Commission's enquiry may not be hampered in any way and that fruitful results may follow the findings of such an important body.

INDIAN WOMEN'S UNIVERSITY.

BY MR. G. K. GADGIL, BAR.-AT-LAW.

(*Secretary, "Indian Women's University."*)

THE Indian Women's University movement is making satisfactory progress. Several workers, who were moving about in different parts of India to enlist sympathy and support for the movement, have now returned.

It is necessary to refer in this progress report to one or two objections that are raised against certain points in the scheme. They were urged by people who had shown the fullest sympathy for the scheme, accepted its fundamental principles and become members of the Indian Women's University by giving it pecuniary support. It is but fair to these good friends of the cause that their doubts should be removed and their misunderstanding properly cleared up.

It is said that the Hindu Widows' Home Association has obtained an unduly large representation in the constitution of the University. Out of the sixty Fellows who would constitute the Senate of the University, thirty or fully one-half are to be elected by that Association, and this is believed to be unjust to the two other electorates. It is, however, necessary to remember that the idea of the Indian Women's University was first taken up by the Hindu Widows' Home Association. At that time it was difficult to know what amount of support it would receive from the outside public. The H. W. H. Association had a membership of about 400 strong, while it was expected that the promoters of the idea would be able to secure about 250 members of the (*b*) class. The response which has been received is altogether beyond the fondest hopes of the promoters, and they are quite ready and willing to plead guilty to the charge of having underestimated the amount of support likely to be received by the movement. But at present nothing can be done.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The first Senate of the University is being constituted, and in less than two months from to-day it will enter upon its duties. One of the questions, which the Senate will have to take up for consideration, will be the proportion of members to be elected by the different electorates in view of the very large number of those that have enrolled their names as members of the (*b*) electorate. It may as well be stated here that the Provisional Committee is already thinking of formulating definite suitable alterations in the present constitution of the Senate, so as to make a more equitable distribution of representation among the different classes of voters.

Another point that it will be the duty of the Provisional Committee to urge upon their attention is the necessity of giving some kind of special representation to persons who have made substantial contributions to the funds of the University. Under present conditions such people will have to be enrolled as electors only of the (c) class and thus although their sympathy with the cause might be great, and although they might show it by large donations, they would have only the smallest representation on the University. It would, therefore, be advisable to institute a fourth electorate of such persons who may be called *patrons*. What their qualifying contributions should be, and what representation should be given to them, are points which can now be settled only by the Senate when it is constituted.

A good deal of opposition exists in certain quarters to the Women's University being named 'Indian' instead of 'Maharashtra.' As to the aims of the promoters it must be stated that they actually started with the name 'Maharashtra Women's University.' Later on when a deputation headed by Prof. Karve visited Benares at the time of the inauguration of the Hindu University, some friends from other parts of India, who would be numbered among the leaders of thought in their provinces, represented to them that the cause would be served better if the name were changed and made of wider significance. It would take very long indeed before each province had its own University. Till then the work done at Poona would be useful elsewhere, and the Women's University at Poona would serve as a central organization to which new or existing institutions might simply affiliate themselves. The courses of study would be the same, the standard of merit uniform and the method of examination identical. The different vernaculars of the different provinces would not present an insuperable difficulty. Text-books might be written on the same lines and the same examination papers would be set at different centres. There were the views of men who had given serious thought to the problem, and at their pressing invitation the Deputation accepted the suggestion and persuaded the Hindu Widows' Home Association to adopt it. It will thus be seen that in taking the name "Indian," the promoters are not trying to gratify an unlegitimate ambition but are merely helping the cause of the higher education of women in other provinces. It is intended to sketch an outline of a suitable plan of female education for the whole of India, of which the 'Maharashtra' section only will be worked out in detail at Poona, while the other provinces will do their parts in due course.

The Provisional Committee feels that the time for criticism is now gone by. The idea of the University has taken definite shape, has evoked large sympathy, and has secured enthusiastic support. The Committee is engaged in framing a course of studies for the consideration of the Senate. The draft curriculum would be sent round to the members of the Senate and other sympathisers of the movement in a short time, and all helpful criticism and suggestions would be placed before the Senate for consideration. In the meanwhile, the question of funds is as urgent as ever. The burden of a heavy responsibility weighs down upon the minds of the promoters. Although it has been lightened by the cordial reception given to the idea, they will consider themselves free from the responsibility only when the Maharashtra Women's College at Hingne Budruk—the first institution to be affiliated to the University—begins its work in right earnest and attains a position in no way inferior to that of the colleges of older foundation. This, too, will come in time—how soon it would depend upon the enthusiasm of the supporters of the movement and the sacrifices they are prepared to make for its success.

THE MYSORE UNIVERSITY.

WE congratulate His Highness the Maharaja of Mysore, and his active and progressive Dewan, on the establishment of an independent University for the State. In fact one of the leading features of recent times is the impetus given to educational problems. The Government of Lord Hardinge, it is generally known, "declared in favour of the formation of smaller Universities and, especially, of new local teaching and residential Universities within each of the Provinces, in harmony with the best modern opinion as to the right road to educational efficiency." In pursuance of this policy the Universities of Dacca, Patna, and Benares have already come into being. Others are on the anvil: a provincial University for Behar and similar institutions at Nagpur and Rangoon and Aligarh. Now the scheme for a Women's University is forging ahead. It is therefore fitting that such an advanced State as Mysore, with her exceptional advantages, should have the benefit of a separate University.

The provisional scheme for the proposed University of Mysore is now published for general information, and suggestions calculated to enhance the usefulness of the scheme are invited from the public interested in the State University. The official draft explains that, during the last few years, "the desire for a separate University for Mysore has been growing in intensity, and the Mysore Representative Assembly has given expression to the wishes of the people in this respect with no uncertain voice. It is felt that the full advantages of University education can only be realised by a local University which takes into account the special circumstances and wants of the State and which embodies at the same time some of the special features of the more modern institutions of this class." The rapid progress which the State has attained in recent years justifies its aspiration for a separate University. The Mysore State, with an area of 30,000 square miles and a population of 6 millions, "has a distinctive homogeneous character" with a single language as its almost exclusive vernacular. It has already a "good and orderly system of instruction" in the various departments of knowledge, and has even gone beyond British India in the introduction of what may be called, in the words of the Hon. Mr. Sharp, "a modified system of compulsion." It possesses besides, an independent organisation in almost all departments of education except that of collegiate instruction, and a local University, it can hardly be denied, will raise the general level of culture and serve the interests of the State even more efficiently.

Nor are immediate facilities wanting in the State to begin the work of this great experiment. A sum of Rs. 7,75,000 has been sanctioned, which will be distributed over the different needs of buildings, staff and hostel. Besides, Mysore and Bangalore are no mean centres of learning already. There are 14 high schools with about 2,705 students, and the two first grade colleges of the State have close on 800 students on their rolls with perfect equipment alike for literature and science. These colleges will hereafter play an important part under the new scheme. Thus the Mysore University will be a federation of two colleges under a common Government with headquarters at Mysore, the capital of the State. Here will be located the faculties of arts, languages, history and economics, philosophy, and teaching. The Central College, Bangalore, will be identified, as at present, with mathematics and the sciences. English and the Vernaculars will be common to both the institutions. Both colleges will be under the executive control of the Vice-Chancellor and the Council. The boards of studies for English and the Vernaculars will be common to both centres, the other boards being associated with the colleges where the respective subjects are taught.

But the special features of the new University call for some comments, and we are glad that the proposals are alike modest and practical. For one thing, the cry that the vernaculars have been neglected under the present curriculum has gone a great way in shaping the policy of the Mysore University. Kanarese and Hindustani, the vernaculars, are here made compulsory throughout the three years' course. The special encouragement given to Persian and Sanskrit will be highly valued in these days when enthusiasm for research and revival forms a characteristic note in modern Indian thought.

Another important change is in the direction of a rational study of a simplified English course. It seems that philological and antiquarian knowledge will not be much insisted on, nor a minute study of all the known and unknown authors of English literature. In our opinion this is the chief merit of the Mysore scheme.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A third feature of the new University is what Lord Hardinge has so often pleaded for in all his educational pronouncements. The essential need of a University life, as understood in England and so fruitfully realised at Oxford and Cambridge in particular, is the development of social and corporate life, and it is gratifying to note that the Mysore University Scheme provides facilities for the growth of such a life. It is found impossible at present to fulfil the ideal of a Unitary University for the whole State but the two centres, one at Mysore, and the other at Bangalore, will each be made as complete as possible regarding the equipments that are so necessary for a University life.

Another important innovation is the recognition of the need of technical and scientific education, and the M A. and the M. Sc. courses with their research scholarships will be a distinct and valuable feature of the University. We are glad that an efficient Teachers' College within the University area, is proposed to be established. It is encouraging to learn that the Mysore University is making an adequate beginning in the direction of specialisation in the various branches of knowledge. It is good that only a limited number of Faculties are established to begin with; and we hope, as time and progress go hand in hand, that measures will be taken to equip the University with the Faculties of Law, Medicine, Engineering, Commerce and Agriculture, thus keeping pace with the march of the times.

But the equipment of a modern University on up-to-date models is a very costly thing. Recognising this the Government of Mysore have made adequate provision for large outlays. From the tables and schedules attached to the draft, we understand that the cost of already existing buildings, the fresh advances, and the various grants altogether, make a capitalised total value of Rs. 100 lakhs. With the progress that Mysore has made in recent times in the general level of culture and well-being among the citizens, and with the large resources at the service of this advanced State, there is no doubt that the University will be a marked success. We learn that the administration of the affairs of the University will be vested in the Council and Senate, and we are happy that the enlightened Maharaja of Mysore, the first Chancellor, will be the highest authority in the University. Under the wise and beneficent direction of His Highness, we wish a prosperous and useful career for this, the latest born of Indian Universities.

H. E. LORD CHELMSFORD.

WE offer a most cordial welcome to H. E. Lord Chelmsford, the new Viceroy and Governor-General of India. For over six months India has been anxious that Lord Hardinge's successor should be a nobleman of equal gifts of sympathy and statesmanship and many names were rumoured as possible recipients of the Viceroyalty of India—the greatest office in the gift of the British Crown. In many respects Lord Chelmsford's appointment is unique. His Excellency is the first Australian Governor to come out as Viceroy of India and the only Viceroy who has served in India previous to his appointment. Lord Chelmsford's antecedents are by no means negligible. He has been Governor of two Self-governing Colonies and has displayed sound judgment and sympathy at a constitutional crisis in the Commonwealth. He has served faithfully at the London County Council, a body distinguished for capacity and knowledge in the direction of administrative efficiency. Thus Lord Chelmsford's acquaintance with the Self-governing Colonies of Australia, combined with his interest in Municipal and Educational problems, will, it is hoped, be of considerable value in the new India that is being forged under our eyes amidst all the clash of arms in four continents. His Excellency will have ample opportunities for the exercise of those gifts of imagination and sympathy, which have made his illustrious predecessor such a popular Viceroy of India.

Frederic John Napier Thesiger, third Baron Chelmsford was born on the 12th August 1868, and is thus only forty-seven years of age. His grandfather, the first Baron, was Lord High Chancellor in 1858-59, and his father Frederick Augustus, who came to the title in 1878, had early distinguished himself as a soldier, serving as a General with the Army in the Crimea, in India and elsewhere. The present Lord Chelmsford was educated at Winchester College, and then at Magdalen College, Oxford, where he took his B. A. and M. A. degrees succesively. From 1892 to 1899, he was a Fellow of All Saints College, Oxford.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The English papers generally speak highly of his interest in sport. In the field of athletics he excelled in cricket and played in the 'Varsity Cricket Eleven from 1888 to 1890. He was in his College career President of the Junior Common Room—the highest social honour among the collegians. In 1894, he married the Hon. Frances Charlotte Guest, the daughter of the late Lord Wimborne. (Lord and Lady Chelmsford have six children: four daughters, the eldest of whom is now serving as a Red Cross Nurse in France, and two sons, the elder of whom, the Hon. Frederic Ivor Thesiger, is now twenty years of age and is a subaltern in a cavalry regiment). In 1900, Lord Chelmsford became a member of the London School Board, and in 1904 a member of the London County Council. The next year he was appointed Governor of Queensland, a post he relinquished in 1909, to take up the Governorship of New South Wales. In January 1910, Lord Chelmsford acted as Governor-General of Australia during the absence of Lord Dudley. He then returned Home in 1913, took up once more his London County Council work and was made an Alderman. While in Queensland he was created a K. C. M. G. and in New South Wales a G. C. M. G. He is now Chancellor of the Order and a Knight of Grace of the Order of St. John of Jerusalem.

Lord Chemsford has always taken a keen interest in volunteering and held a commission in the 4th Battalion of the Dorset Regiment. In 1902, he was promoted to a captaincy and with that rank he came out to India with his regiment soon after the outbreak of the war. During the last Christmas week he was in Calcutta as the guest of Lord Carmichael, who was Governor of Victoria when Lord Chelmsford was in New South Wales. Later, before the departure of Lord Hardinge, Lord Chelmsford stayed at the Viceregal Lodge and embarked for London before the Royal warrant appointing him to the Viceregal throne was published. Lord Chelmsford came back to Bombay and took charge of the Viceroyalty of India on the 4th of April.

One of the first things His Excellency did on the assumption of his high office was to visit Calcutta, the old capital, where a warm welcome awaited him. The Calcutta Corporation for the first time had to welcome the Viceroy as a mere visitor and not as a resident, and their regret at such a necessity was too much to be concealed. His Excellency made a frank speech with a judicious reference to the theory of the settled fact in regard to the change of capital and also impressed on his hearers, that though Calcutta was by far the most important city in the Empire on account of its political antecedents and commercial enterprise, still the Viceroy's interest was too wide to permit of the engagement to stay in the City of Palaces for any definite period in the year. "India is a vast place and my responsibilities extend to the whole of it," said His Excellency, "and it is my ambition to travel widely and frequently." Indeed, Lord Chelmsford has taken charge from one of the most brilliant and successful Viceroys of recent times, and the responsibilities of his high office demand merits of head and heart of no mean order.

Moreover His Excellency has witnessed all the demonstrations of affection and regard for the outgoing Viceroy, and we are happy to note that the new Viceroy will continue the beneficent policy of Lord Hardinge in the administration of this great Empire. His Excellency Lord Chelmsford said in reply to an Address of Welcome in Bombay:—

> I was privileged to watch the work and win the friendship of His Excellency Lord Hardinge who lays down his office to-day. Lord Hardinge has won to an unprecedented degree the confidence, the respect, nay, I would say the affection of the peoples of India, and he has set a hard task before his successor. Continuity is, however, in my opinion a cardinal principle of policy when one man succeeds another, and so far as possible I shall deem it my duty and privilege to carry on Lord Hardinge's work where he has left it.

May His Excellency walk in the steps of his illustrious predecessor is the prayer of all India

---

SHAKESPEARE'S TERCENTENARY.

In connection with the tercentenary of Shakespeare which falls this month, the following sonnet from the pen of J. B. O'Hara in the columns of the Chambers' Journal may be read with interest:—

While evermore the pride of Shakespeare's name
Is one with England's, so shall, living, shine
The rose-red radiance of the light divine
That quickened with the day of Shelley's fame,
Third of the sons the island races claim
As England's glory, while she sets for sign
Of deathless lineage on Song's starry shrine
The lights that no far dawn of time shall shame.
All winged visions of the lightning brain,
Splendours of thought, fed on life's burning tears,
And exaltation of Song's meteor flight,
All unimaginable dreams of pain
And passion in the paradise love years
Were thine, imperishable Son of Light.

THE LATE MR. G. SUBRAHMANIA IYER.

NOT only in the Presidency of Madras but throughout India will the news of the passing away of Mr. G. Subrahmania Iyer, the well-known Editor of the *Hindu* and the veteran publicist, be received with deepest feelings of regret. His sudden death on Tuesday the 18th came as a surprise to the public. Indeed, Mr. Iyer had been incapacitated from taking an active part in the public life of his country during the last half a dozen years and more, but from time to time his beneficent influence was felt through the Press, championing the cause of freedom and justice with the same fervour and zeal that characterised his earlier days. Mr. Iyer was almost the father of public life in this part of India, and as has been said more than once, to him South India owes what little of political activity it has. His death so soon after that of Mr. Gokhale, and Sir P. M. Mehta, removes from our midst one of the veteran leaders of this country.

Only a little over two years ago, Mr. Iyer celebrated his sixtieth birth day when he was the recipient of many a message of congratulations. And scarcely fifteen months have passed by since a grateful friend presented a life size oil painting of the leader to be hung up on the walls of the Madras Mahajana Sabha. The Hon. Mr. Surendranath Bannerjee who unveiled the portrait paid a glowing tribute of admiration to the meritorious services of Mr. Subrahmania Iyer and his forty years' public work on behalf of his countrymen. Mr. Subrahmania Iyer first rose to eminence as a distinguished educationist in Madras. In 1878, he drifted into journalism and became the Editor of the *Hindu*, which he started with the aid of two of his well-known compeers. One of the founders of the National Congress, he moved the first Resolution in the first Congress at Bombay in 1885. He gave evidence before the Public Service Commission of 1888. The founder of the Madras Mahajana Sabha, he was unanimously chosen to give evidence before the Welby Commission in 1897. During the Diamond Jubilee of Empress Victoria, he was in England with Messrs. Bannerjea, Gokhale, and Wacha, lecturing on behalf of the British Congress committee. Recognizing the need of economic study, he began the *Uniited India* in 1902, and conducted that journal wi h brilliant success. He was besides one of the founders of the Madras Social Reform Association and was a fearless champion of progressive ideas in social matters. His interest in the industrial and scientific advancement of India was evident from his intimate connection with the National Fund, which he was managing with conspicuous ability. Above all, his insistence on Vernacular Education, and his interest in the masses, embodied themselves in the *Swadeshamitran* since 1882. Mr. Iyer knew that national life to be complete must be many-sided, and he continued to render his services in various ways. Latterly his health began to fail. His motives were misunderstood by the Government. At the time of his arrest in 1908, the *Indian Review* put in a word of warning against such ill-advised measures of the Government. We wrote: "There is great danger in not distinguishing between rebels and honest, though perhaps strong critics of the measures of Government. It has to be remembered that not all critics are unfriendly and that in politics as in private life the sycophant is in the long run a greater enemy to the party he is seeking to befriend than the outspoken and caustic critic who criticises but to secure the best interest of the party who chafes under adverse criticisim." Mr. Iyer, it need hardly be said, belonged to the latter type of critics; and with reference to the proceedings against him, we pointed out that the "tendency to strong language in a naturally vigorous writer was more temperamental than an index of his animus towards society or Government." But his outspoken utterances were mistaken for libels, and he was compelled to choose a quieter life. Such a quiet life was made inevitable also by a peculiarly chronic and gruesome disease, of which he was a victim in the latter years of his life. But whatever the mistakes of the Government regarding his character and his services, the people held him in high esteem as the hero of a hundred battles, and no name is more honoured in Madras than that of Mr. G. Subrahmania Iyer, publicist, journalist, orator and social reformer. For well-nigh a quarter of a century he was the leader of public life in this part of India, and it is no wonder that his loss is so keenly felt by his countrymen in remembrance of all his achievements and his services in the palmy days of his public career.

SOCIAL LIFE IN SOUTH INDIA.

BY MR. K. R. SITARAMAN, B.A.

THE works of Mr. Madhaviah are well known, and have been read with mixed feelings by his countrymen. Some of his smaller skits on certain aspects of Indian social life have commanded ready appreciation on all hands. In the work* before us, the author has made an ambitious attempt to break new ground by weaving a story round the life of a Brahmin lady, who is said to have flourished in the latter half of the 18th century in the Tanjore district. We are familiar with the manner in which the author delights to depict some of the venial excrescences of modern life, without making any allowance in the least for the bright spots in the systems dissected by him. We may be pardoned for suggesting that a similar search-light directed against communities of people elsewhere, and knots of individuals other than the much-maligned Brahmin community of Southern India—to which the author himself, strange defiler of his own nest, belongs—will bring to light an equal, if not greater, number of ills and weaknesses to which human flesh is heir in all times and climes. The picture of a Brahmin girl, forced into matrimony with an elderly widower against her will, and then escaping narrowly from being burnt alive as a *Sati*, from which fate she is rescued by a sturdy Englishman, who subsequently lures her to become his mistress, going through a fraudulent form of marriage, having already a wife in England at the time; the final scene of this strange eventful history culminating in a second widowhood, in which she embraces Christianity "with much emotion," does not seem calculated to arouse any genuine sympathy for the author's "heroine." One is unfortunately left with the impression that the 'heroine' belongs more or less to that class of individuals who are neither a loss to one fold nor a gain to the other. We do not know that we are particularly narrow-minded or subject to hide-bound prejudices, but our feeling is one of distinct repulsion against most of the incidents, comments, characterisations, portraitures, and opinions, presented in the book before us. It is difficult to discuss or even to refer to these at any length, but we may perhaps instance a few of them, such as the undesirable descriptions of the criminal passion entertained by a step-son to his stepmother, the gross and inhuman cruelties to which the heroine is made the victim, and last, though not least, the wholly inexcusable dissertation on the philosophy of the revealed religion and the suggested supposed defects of Hinduism. We do not intend to suggest that the above are not proper subjects for ventilation, but our objection is against the wholly unjustifiable manner in which these matters have been treated, and the absolute want of necessity for introducing the same into the story from any point of view. We are the more pained to make these observations, as we are fully aware that the author is capable of doing good work, if he essays to do it, without riding some of his inartistic and distasteful hobbies—the chief of which is an obsession to present his countrymen in the worst and most ignoble light, quite without justification. Reviling the present generation is bad enough, but in this book, the author lets his imagination run riot on the supposed sins and weaknesses of the people of two centuries ago in a manner which sets one's teeth on edge. Knowing the author and his talents as we do, we can only express our genuine surprise and sorrow that he should have been at such pains to produce a book, whose merit, as a work of art, is an unsuccessful attempt to produce a very inferior and commonplace imitation of Colonel Meadows Taylor's "Seetha," without the redeeming features of that author's brilliant style and plot, and without even his occasional sympathy with Indian thought and character. Altogether, in our opinion, the book is as mischievous in its conception as it is distinctly amateurish in its execution. It is hoped that the author will avoid further productions of this kind, and turn his attention, as he well can, to the sympathetic portraiture of the larger issues of life

for which there is great need at the present day.

The Kusika stories, of which the second series* is before us, can hardly be said to maintain the high level reached by the first series, which were mostly unexceptionable in thought and language. The later developments of the author's cynicism, and his passion for the lurid painting of obsolete beliefs and practices, have landed him in many a painful dissertation, which can only produce a wholly distorted conception of our domestic life in the minds of Western readers. The generation, to which the author belongs, was one peculiarly subject to intellectual vicissitudes. Signs are not wanting at the present day to show that most of the vascillations and difficulties of even ten years ago are fast vanishing, and no useful purpose seems to be gained by the needless pillorying of the amiable defects and weaknesses of the weakest and worst members of one's society. We can imagine the quarters, where the mischievous pen-pictures before us will be seized with avidity as faithful representations "from within" of Indian life, but though we have long been inured to the malicious caricatures of Indian life, which missionaries and globe-trotters, with their own axes to grind, have inflicted on their unsuspecting brethren, it is rather a nerve-shattering experience to find these Herods out-heroded by one of our own geniuses. We do not hold a brief for the Brahmin community, which is well able to take care of itself, having survived the vicissitudes and onslaughts of ages, nor do we wish to see the perpetuation of acknowledged evils in our social usages, but surely no conceivable good purpose is served by dilating in disproportionate and inflamed language on the dark side of the picture alone without a ray of illumination on the brighter aspects of our thoughts and activities. One is tempted to refer in this connection to the works of Mrs. Sarojini Naidu, Mrs. Ghosal, Sister Nivedita and Rabindranath Tagore, which furnish such a brilliant contrast to the petty and pitiful sketches of Mr. Madhaviah, who can find nothing noble or elevating in Indian life or aspirations. We are inclined to think that wife-beating Santamurthis, men who religiously take a cup of 'bovril' specially on 'Shradda-days,' people who resort to "atrocious tactics" to secure votes at elections, *et hoc genus omne*, have their counterparts in every community under the sun. Humanity after all is the same everywhere, and character does not depend on the colour of the skin. It is tarred everywhere with the same brush for good and evil alike. We do not know that in these days when the whole civilized world is drawn together against a common danger to the peaceful evolution and progress of mankind, anyone can seriously assert that East is East and is ever accursed, and the essence of divinity is to be sought for only in the West. The painful spectacle of the utter break-down of Western ideals of life and standards of "Kultur" ought to be an eye-opener to those who would fain pin their faith whole-heartedly to Western ideals of individual or communal life. And after all, is it not still a vexed question whether these same standards of life and social practices have turned out devout consummations for good? The highest thought even in the West is hardly unanimous on the point.

All that we plead for is only for a little charity even in judging our own kith and kin, and for a broader vision of the deeper realities and responsiblities, and the subtler issues of life, sincerely believing as we do that national development along right and sane lines ultimately rests on the conscious efforts of individuals to hold fast wholeheartedly to the verities of existence, undeterred by the weaknesses and peccadillos of undeveloped entities. One of the greatest of the world's living philosophers, Mr. H. G. Wells, has well summed up in characteristic style the work of a "pure rebel" in the following words :—

A rebel is a nuisance. He is always a bit of a lout. Any fool can do rebel's work, and smash and spoil. When one has to rebel, when there is no more decent or human method, then rebel and have done with it. But to flourish about it, as though it was something gaudy and glorious, is to show an imbecile's outlook on life. Life is to be, and do, and make and cherish: not to spoil, insult, defy and embitter. If you must rebel, be clean and direct about it. Decide upon the things you won't stand, and don't stand them. If things there are that hamper your life, get rid of them. But as quietly and decently as you can. Don't spoil life for other people. Don't regard your insurmountable objection to this or that oppression as the heroic justification for any malicious mischief that the ancestral monkey still lingering in our composition puts into your head. Everybody has an occasional craving for spiteful destruction. It is Atavism. It is not the last divine birth of the human spirit.

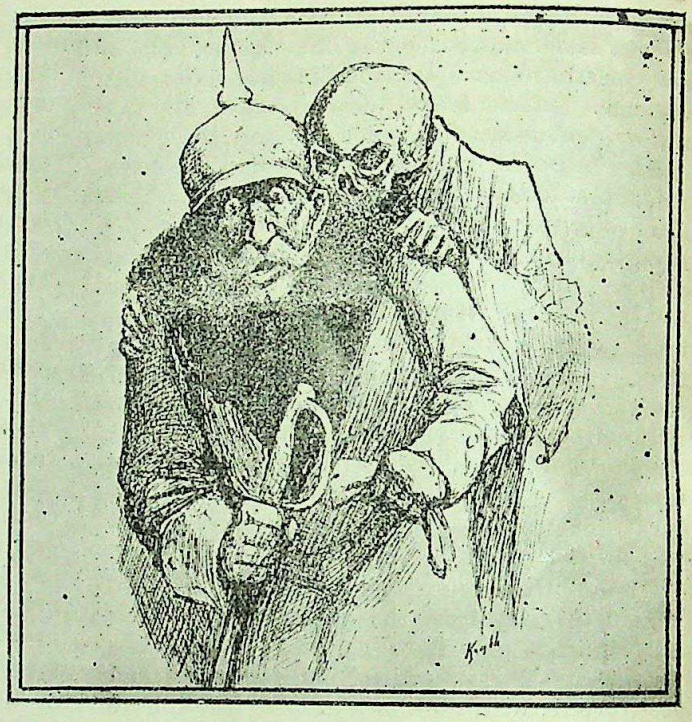
CURRENT EVENTS.

BY RAJDUARI.

IN the Western theatre of war nothing specially noteworthy has occurred save the new familiar artillery duels and bombardments along the whole front in which, despite desperate struggles for piercing a line or occupying a strategic base of little or no importance, the enemy has only swelled the death roll and other casualties. There has been as usual a culpable sacrifice of thousands of lives which might have been well spared. So far the events of the month on this side may be pronounced to be unimportant. The real issue, which was fought out, was the series of sanguinary engagements from day to day near Verdun. But the issue has hitherto been in favour of the gallant French Army which has more than maintained its strategical position, its military prowess, and its great *elan* born of conscious hope of victory in the end. That strong frontier fortress has not yet fallen and it is most unlikely that it will fall, however desperate the renewed attempts which the enemy might make to bring about their cherished consummation. The French Generalissimo declared some time ago *urbi et orbi* with a confidence prompted by the stern and unbending feats of the mortal combat that has been waged for weeks together in that historic locality, that if even Verdun fell, it would have no military value about it as the German fondly believes. The disposition of the French forces is such that the fall of Verdun will not bring the invaders any way nearer Paris than when they started on their great military enterprise twenty months ago with a firm conviction of invincibility. That invincibility has been demonstrated to be wholly delusive, and as month succeeds month it is being proved to be a pure Teutonic boast. Summer is approaching when, no doubt, there will be witnessed more than one gigantic effort to retrieve the defeat after defeat that the enemy has sustained without ever breaking the stone-wall of human beings that has opposed them from Ypres to Verdun. The time is nearing when the Allies must take the long-resolved-upon offensive. On the one side will be found



DEATH—"Let's call it off, old man. You're overmatched, and I'm overworked." —Kemble in *Collier's Weekly*.

phalanx after phalanx of fresh reinforcements full equipped for the coming fray, undaunted, courageous, and confident. On the other hand there will be arrayed forces of a kind, mostly of raw recruits with a mixture of the battered troops who have borne the brunt and heat of the day, who are wearied and worried of being dragged to and fro from the West to the East and *vice versa*. All hopes of the enemy ever winning a single decisive victory are now daily receding in the background. Confidence has given way to fears of an unpleasant character. These dejected troops feel they are mere pawns on the chess-board to be moved to the front and be killed.

THE BALKANS.

Coming to the Eastern theatre of the war, the noteworthy event of the month may be said to be the slow but sure advance of the Muscovite into Galicia. The Russian troops have held the enemy in their grip. But the real zone of activity in the immediate future lies about the region of Riga, where immense preparations have been going forward for weeks past on both sides. We have heard of the Herculean efforts which the German forces, by land and sea, are making in order to give decisive battle to their enemy, crush him there, and triumphantly march to Petrograd. The project is a servile imitation of Napoleon's dashing advance to Moscow but, without that great General's strategy and genius. On the other hand the Russians are fully prepared to meet them in mortal combat. They are in the same favourable position as the French and British troops in the Western theatre. Millions of men are ready, well prepared, and in the fullest spirit of enthusiasm, to wage the war to the finish. Their confidence too in ultimate victory is as firm as that of the other allied troops. Meanwhile Greece is fumbling. She has failed in her appeal to raise a six million sterling loan in America. Want of this sinews of war has necessarily obliged her to demobilise the troops. There are internal dissensions. The Cabinet is a divided body with no firmness to pursue a really national policy. Even King Constantine is between two stools. On the one hand he cannot wholly disentangle himself from the meshes of his imperious relative at Berlin. On the other hand he cannot afford to seek an outright quarrel with those who were most instrumental in liberating Greece from the iron domination of the Turk some thirty years ago and more. He cannot ask the French and the English to withdraw from Salonika or from Corfu and other islands, where they have established bases for military purposes. Salonika itself is now a great fortified place of arms, and the time is now approaching when will emerge therefrom the joint forces not only of the French and the English but of the new resuscitated Serbian army, which for the last four months has been under preparation to meet their hereditary foe. Bulgaria seems to be in a quandary of her own, unable to strike at Greece or wound the Turk lest it should be crushed under the iron heel of its great patron. On the other hand Roumania is still sitting astride on the fence, though to all intents and purposes it is more or less in concert with the *Entente* Powers. In the capital of the Ottoman, the Teutonic element is absolutely in conflict with the populace which, though helpless, does not hesitate to declare its inborn hate for those who have for the time usurped in reality the national government and become their masters. Anarchy reigns supreme in Constantinople. Moreover, that city remains in constant fear owing to the bombardment by the Russian Fleet in the Black Sea, which has been successful in cutting off communications between it and the opposite side of the coast.

MESOPOTAMIA AND ARMENIA.

In Mesopotamia and Armenia, Russia has been most dominant and triumphant. The fall of Erzerum has been followed by that of Trebizond. With these two important places in their hands, the way has been made clear for a joint action which should eventually result in the relief of General Townshend and his troops at Kut-el-Amara. According to the papers there is every chance of that being an accomplished fact soon. If only the weather and the winds continue favourable, it is quite on the cards that an advance in the direction of Bagdad will be made.

ON THE BRINK OF RUPTURE.

As we write, the air is thick with the news of a probable rupture of the relations between the United States and Germany. President Wilson has at last been roused to action, thanks chiefly to the prevarications and subterfuges of Berlin in respect of his Note touching the *Sussex* disaster. That was the last straw that seems to have broken the back of the Wilson Camel. A Note, in the nature of an ultimatum, has been sent peremptorily demanding the withdrawal of the inhuman policy of German submarine campaign and due respect for international law regarding neutral trade in the high seas, which has been so wantonly and murderously disturbed. The world of civilization awaits with bated breath, as we write, the denouement of this latest diplomatic correspondence,

DIARY OF THE MONTH.

March 25. A farewell Garden Party to H. E. Lord Hardinge was given by the non-official members of the Imperial Legislative Council at Metcalfe House, Delhi.

March 26. Delhi Municipal Address to Lord Hardinge and His Excellency's reply.

March 27. Mr. Asquith and other British Delegates to the War Conference have arrived at Paris.

March 28. Japan and Portugal are represented in the historic session of the Allied Conference. Twenty-one Delegates are meeting at Paris.

March 29. Activity of French aeroplanes. Germany's renewed offensive. British artillery work.

March 30. Public meeting at Salonika to protest against the German air raid. Crown Prince of Servia in London.

March 31. H. E. Lord Hardinge's departure from Delhi. Meeting of the British Indian Association, Calcutta, and the Maharaja of Burdwan's speech.

April 1. Smyrna Fort destroyed. German intrigue in America. Russian advance near Baghdad.

April 2. Mr. Asquith in Rome. Holland's war-like preparations. Progress of the Italians. Teachery of a German Stowaway.

April 3. Lord Hardinge's farewell speeches in Bombay. His Excellency's acceptance of the Degree of L.L. D. at the Bombay University.

April 4. Great demonstrations in Bombay. Arrival of Lord Chelmsford and departure of Lord Hardinge.

April 5. Popular enthusiasm in Portuguese India. Continuation of the struggle for Verdun.

April 6. German outrages at sea. Sinking of a German submarine. Intrigues in Bulgaria. Asquith's message to Italy.

April 7. Funeral of Sir Alexander Pinhey at Secunderabad. Muslim University Meeting at Madras.

April 8. The first of a series of political lectures, arranged by the Indian Association, Calcutta, was delivered by Babu P. C. Ray on "Self-Government," with Hon. Mr. S. N. Bannerjea in the chair.

April 9. Great mass meeting in Bombay with reference to the Anglo-Indian recruiting.

April 10. It is announced that Sir Horace Plunkett and Dr. Hopkinson are appointed members of the Industrial Commission.

April 11. H. E. The Viceroy arrived at Calcutta this morning. The Corporation presented an address, to which His Excellency replied in suitable terms.

April 12. The Dutch steamer "Columbia" has been mined in the channel. A Russian sailing vessel has been sunk. The Swedish steamer "Marjek" has been sunk.

April 13. A German Note to the United States justifying the submarine activity and admitting the torpedoeing of all vessels in question.

April 14. Meeting in connection with the Sanatan Dharma College, Lahore, presided over by H. H. The Maharaja of Kashmir.

April 15. German failure at Verdun. French achievement at Donaumont. The compulsion crisis in England. German steamer mined.

April 16. A public meeting at Allahabad to adopt a Memorial to H. E. The Viceroy *re*: the United Provinces Municipal Bill.

April 17. A largely attended meeting of Parsi ladies was held at Bombay this afternoon to express approval of the conduct of Sir Jamsetjee Jeejeebhoy *re*: the public meeting in the Town Hall.

April 18. Mr. G. Subrahmania Aiyar, of Madras, died at his residence this evening.

April 19. Messrs. K. B. Ramanathan and G. A. Natesan filed applications on the original side of the Madras High Court, requesting the issue of a *mandamus* directing the Syndicate of the Madras University to forward the protests to Government against the resolution of the Senate *re*: the functions of University Professors.

April 20. Fall of Trebizond. United States' last Note to Germany on the latter's submarine policy, and President Wilson's significant speech at the Congress.

April 21. General Joffre has decorated Sir Ian Hamilton with the Cross of the Legion of Honour.

April 22. The American Note is published in Berlin. Much excitement in the United States.

April 23. The All-India Congress Committee met at Allahabad and formulated subjects for discussion.

April 24. Sir James Meston presided over the All-India Shiah College Meeting at Lucknow.

TOPICS FROM PERIODICALS.

THE DATE OF SANKARACHARYA.

Mr. S. V. Venkateswara Iyer, writing in the January number of the *Journal of the Royal Asiatic Society of Great Britain and Ireland*, considers the evidence external and internal for determining the date of Sankaracharya. It is clear from the *Brahma Sutra Bashya* and from the testimony of his direct disciple Padmapada, that Sankara attacked the Mahayana form of Buddhism which was developed in the early centuries of the Christian era. The quotations from the *Vishnu Purana* show that he had probably some acquaintance with the *Markandeya Purana* and is regarded by tradition as a close student of the *Suta Samhita*, a well known part of the *Skanda Purana*; and the Puranas in their present form belong to the period from the 4th to the 7th century A. D. Sankara is accepted as the younger contemporary of Kumarila Bhatta who criticises Kalidasa in one or two places and was therefore posterior to him; and Kalidasa cannot be referred to a period earlier than the 5th century A. D. Justice Telang's date—6th century—is based on two points: (1) The destruction of Pataliputa by a flood in the 7th century, and (2) the coronation of a certain Purna Varman, who is identified with the contemporary of Yuan Chwang. According to him a later writer would not have referred to Pataliputra as existing as he does; but we now know that the Kalimpur grant of Dharmapala represents the king as establishing himself at Pataliputra towards the end of the 9th century. Yamunacharya, the Vaishnavite Acharya, refers to Sankara as later than Bhartrihari who belongs to the 7th century. And Sankara himself refers to Gnana Sambanda and Siruttonda Nayanar, the latter being contemporary with the Pallava king, Narasimha Varman of the 7th century. And so Mr. Justice Telang's conclusion is shown to be built on inaccurate and insufficient premises.

Professor Pathak and Dr. Bhandarkar place the age of Sankara between 788 and 825 A.D.—the former's appearing to be based on one school of Malabar tradition which considers the Kollam era of 825 A.D., as commemorating the introduction of the Acharya's reforms in Malabar—and Bhandarkar identifying Sankara with the time of the Chalukyam king, Vimaladitya. This view of the Kollam era is now entirely given up and the Chola king Aditya I. (880-907 A.D.) is regarded as the more probable king mentioned by Sarvajnatman, the disciple of Sankara. Hence this date also might be rejected.

The astronomical details given in the *Jataka* of Sankaracharya accord only with 805 A.D. as the date of his birth; and the data given for the date of his demise at 32 will agree with a date 60 years later. It is impossible to believe that a man who passed away in the prime of life at 32 could have acquired such a mastery of knowledge as Sankara had. Hence we may hold that he lived up to 92 years, *i.e.*, between 805 and 897 A.D. This date agrees well with the inferences drawn from the writings of the Vaishnavite and Saivite saints and sages; and Nathamuni, who attacks or refers to Sankara and his Vedantic doctrine, is assigned to the 10th century. Nathamuni mentions Viranarayanapuram, a town founded by the Chola king, Parantaka I. (acc. 967 A. D.) Hence there is no difficulty in assigning Sankaracharya to the 9th century between the Vaishnavite Alwars and Saiva Nayanars on the one hand and the Vaishnavite Acharyas on the other.

STUDY OF ECONOMICS.

The *Wealth of India* publishes the more important part of a speech delivered by Prof. C. J. Hamilton, M.A., F.S.S., at the recent inaugural meeting of the Bengal Economic Association at Calcutta. Professor Hamilton argues that "sound economic knowledge is a condition of well directed activity on the part of the State and of a healthy and hopeful exercise of public opinion." The Bengal Economic Association, he adds can advance such knowledge by the following means:—

In the first place, it can promote local research. It is my intention to enlist the help of University students, of junior civilians, and others who are resident in the mofusil, for the purpose of undertaking careful statistical surveys of different districts.

Another task that lies before the Association is to get those with the requisite expert and practical knowledge to make a study of the morphology of Indian industry and commerce.

I would emphasize the good that, in this connection, can be done by the Association in bringing together the theoretical economist and the practical business man. The latter knows the facts. He is also probably the best judge of the practical value of ideas. But he can obtain from the theorist suggestions as to what things within his knowledge are of most importance in relation to other things that are not within his knowledge.

MOSLEM UNIVERSITY AND EDUCATION.

Mr. Mirza Ikram Baig, writing to the April number of *East and West*, argues that the establishment of a Moslem University, even if it can be had after the Moslems' heart, will confine its blessings to the province in which it will be situated, and will take a number of decades to make its influence felt in other territories, that local celebrities would compose its *personnel* and that they would arrogate a greater share in its administration than would fall to the lot of other representatives from the different provinces. The past history of the M. A. O. College, Aligarh, which is to form the nucleus of the proposed University, furnishes instances to bear out the above argument. The Aga Khan, who set up the University movement, has not always found favour for his ideas with the great bulk of his community, and has displeased many by his attempts to adjust the popular perspective to his own standpoint. Moreover the Indian Mussulmans are a heterogeneous community, widely distributed and at different stages of progress; and they do not possess that integrity of judgment which could prevent their sentiment prevailing over their reason. The time chosen for the movement was also inopportune; and the proposed University is still in the air, its funds are lying idle, and the final settlement with Government is not yet within sight. If account be taken of the conflicting opinions, all expressed since the rapid development of the Moslem press, and the incessant controversies raging in connection with ordinary events between the different schools of thought, it is very clear that a united basis of thought, action and procedure, necessary for the formulation of the University scheme, is not easy to arrive at. Moreover, the promoters of the scheme will do very well to bear in mind, that if they do not aim at imparting professional knowledge at a reasonably cheap rate, it would be hardly worth the trouble and expense to have a University of their own, when full benefit can be taken of the same sort of education in the existing Universities maintained by Government. The Hindu and the Moslem Universities are supposed to mark the commencement of a new era; and it is to be seen how the former fares and whether the latter will ever be. The general feeling among Hindus and Mussulmans that their having a University will raise them in the estimation of other nations, is the outcome of a true regard for self-respect; but the material benefits of these Universities can only be gauged by their success in redeeming the millions sunk in ignorance, sloth and poverty.

AGRICULTURAL EDUCATION IN INDIA.

Mr. Yusuf Ali, I.C.S. (Retired) writing in the *Mysore Economic Journal*, suggests the general bases on which a sound system of agricultural education in India ought to be built up. Mr. Yusuf Ali requires work at the subject from below upwards, so as to carry the people step by step to a greater general economic efficiency. A usual assumption that Indian methods of tillage are inefficient—an assumption countenanced even by representatives of the Provincial Agricultural Departments has to be discarded. Agricultural education should be directed not so much at improving the tilth of the land, as at giving the cultivator a wider outlook and enabling him to improve his own position by getting access to more capital, better implements, better stock and better organised markets. In the matter of tilth and good husbandry the practical Indian cultivator knows more than the average graduate of an agricultural college; but his outlook is narrow and his means are very limited. Our agriculturists are at present in blind alleys. The aim of agricultural education should be to clear a passage for them, so that the tenant can become a peasant proprietor, and the peasant proprietor a large holder of land. These promotions take place on a small scale now, but they are not accompanied by a progressive improvement in economic efficiency and that is what we want. We must link up agricultural education with general primary education in the first stages, and general secondary education in the intermediate stages. This is specially important in rural areas; because practically every pupil is potentially an agriculturist. It is because his agricultural nature is not fed, that he is lost to agriculture and takes to the town type whether he becomes a teacher or a clerk or follows some other profession. There ought to be specialised secondary schools in which agricultural training forms the most important part of the work. This specialised agricultural training of a standard, higher than anything which can be attempted in primary schools, must be combined with general training in the kind of knowledge which forms the pabulum of secondary schools. And it would be very unsatisfactory to link secondary agricultural education with only the general knowledge attained in primary schools. In these secondary schools, those branches of science which minister to agriculture, *e.g.* economic history, the chemistry of manures, agricultural entomology, rural organisation etc., should be taught; and the pupil enabled to obtain a better grasp of his subject.

BUDDHISM AND WORLD ETHICS.

Mr. Fredrick Breech Jones, writing to the current number of the *Buddhist Review*, explains that Buddhist morality is the most progressive, the most artless, the most optimistic and the most scientific in structure and that modern thought is drifting more and more to the philosophy underlying it. The Buddhistic system of instruction, in its bearing on the softer things of social life—women, children, flowers and the like—with its contribution in these channels to the evolution of the race, is especially important. Though superficial history has for long regarded as a truism, the assumption that to the Christian faith is due the Western veneration of womanhood and childhood, and though it is undoubtedly true that in the crust of social evolution in the first Christian centuries, we come upon a stratum which might be termed the stratum of *Artlessness and Naivete*, still it is to Buddhism primarily, not to Christianity that the world must trace its reverence for a sublimated childhood and womanhood, and its perception of the ethic of soul-beauty.

The curious similarity between the stories of the Buddha and of Christ, the existence of philosophies in the Roman Empire contemporary with Jesus bearing close affinity to the Buddhist doctrine, the likeness between many of the Buddha's sayings and Christ's, are all curious. It cannot be logically argued that such similarities are due to the fact that Buddhism copied from Christianity; and when we consider the late date of many of the most important of the Christian writings, as shown by recent Bibilical criticism, it is seen how slender is the assumption that Buddhism could have borrowed. The teachings of the Essenes can suggest no other alternative than that of Buddhist doctrine Hebraized; and the vastness of Buddhist missionary enterprise in the centuries preceding Christianity is without a parallel. And there may even exist some connection between the Buddha's conception of "the influence exercised upon one life by a desire felt in the previous life," with Plato's similar idea enunciated in the *Phædo*.

In all Buddhistic literature, there is 'a splendid unaffectedness, a delightful Artlessness that springs from a closeness with Nature like a bubbling stream from a green hill side. . . . The same is true of every form of Buddhistic social life. Poverty is non-existent; tolerance is universal, the shrines are fragrant with flowers. . . .; woman has an economic independence equal with man. . . . A feeling of oneness with all being; a reverence for the gentle and the sorrowful; a veneration for each form of human aspiration characterises the whole of this great teaching.'

DISCOVERIES IN INDIAN HISTORY.

Nimrod, writing in the April number of the *Modern Review*, argues that the excavations, at Pataliputra, have failed to produce any important result like those of Saranath or of Taxila, and form too insufficient a basis for the building up of the Zoroastrian Period Theory. The excavations that began in 1913, resulted in the finding of numerous fragments of sandstone with curved and polished surface and Dr. Spooner immediately assumed that from the multiplicity, varied texture, and small diameter of our pillar fragments, they could not have emanated from an edict column and that 'some Mauryan building must have been situated here.' He then goes on to say that it is at all events certain the Mauryan building was buried with 8 feet of earth over its floor before the fire occurred which finally destroyed it. And it seems quite clear from the doctor's statements that his theory about the pillared hall rests more on some circular wells filed with ashes and less on the number of fragments with curved sides. His idea is that the tubular funnels of ash which we now find descending vertically from the ash stratum are nothing more than the holes left by the pillars which originally stood at these points.

Dr. Spooner's theory is that the fragments found could not have emanated from an edict column, in total disregard of the fact that such columns have been mentioned by the Chinese travellers; besides Dr. Spooner has discovered only half or a third of one of these entire columns. He thinks that the alluvial soil was the remain of a *kachcha* brick-work with which the hollow space enclosed by the high plinth or stylobate was filled. Even if we should take up this second assumption it does not at all become clear whether the pillars were originally set up by being inserted partially into this mass of *kachcha* brick-work. The polished surface of the pillars was certainly not intended to be left underground; and the evidence of the other Asokan monoliths is against this. Under these and other circumstances, the circular horizontal shafts could have no connection with the position of the columns of the hall, even if there had been a high stylobate filled with *kachcha* bricks and the columns stood above it.

And it would not be at all safe to determine the position of the columns from the position of the neatly stacked pile of polished fragments, which, Dr. Spooner says, are found above each of these shafts. When a pillar of stone is split by fire or by the action of intense heat, the fragments would be scattered in great force and far and wide . . . . and no one would dare to admit that the action of fire led these fragments to pile themselves so neatly for the benefit of a twentieth century excavator,

THE SOUL OF RUSSIA.

Dr. Sarolea, the great Belgian *Savant*, writing in the March issue of the *Review of Reviews*, eulogises the Russian nation and declares that in Russia alone he found an 'unadulterated democracy, an absence of class divisions and snobbery, a sense of fellowship and brotherhood, a passionate love of justice, a sense of universal kindness, extended to the down-trodden and even to the criminal which made pity synonymous with pity and which made all human suffering into a religion.' The Russians are the most Christian nation in the world, a nation holding on to the Gospel with the intensity and the simplicity of mediæval belief, a country where religion was still the supreme power in collective life, where faith still had its confessors and martyrs, and where even Nihilists were ready to die for their convictions.

Whereas in Russia you found the undisciplined power of the spirit which bloweth where it listeth, in Germany you found an individualism without an individuality, you found organisation, discipline, education, order and the precision, not only of a clock but of a chronometer, a marvellous efficient machine without a soul.

It is probably easier to discover and define the *Russian Soul* than that of any other European nation. The Soul of Russia is one; and civilisation there is homogeneous; notwithstanding its 48 races there is no heterogenity. All the representative Russian writers are Slav and Christian; and though there may be poles apart in their intellectual systems, they are all imbued with one spirit and remain Christian at heart, even when they are atheists; and they all express the same elemental Christianity, the same broad humanity, the same pacific and contemplative and resigned attitude to life, the same mystical idealism, and the same belief in the same religion of suffering and pity.

The Russian religion has remained in spiritual and intellectual isolation; and the Russian priesthood, instead of becoming a great educational agency, has remained sunk in slothful ignorance and under the yoke of an ecclesiastical and military despotism. In Russia the vitality of religion has not been a political, but a spiritual and democratic miracle. Whereas in Western Catholicism, it is the Church which has preserved the religion of the people, in Russia it is the religion of the people which has preserved the Church. In Russia alone, owing to the spiritual vitality of the race, Christianity has remained the regenerative influence of Russian life.

KALIDASA—HIS HOME.

Young India publishes the following adapted article from the orginal in the *Behar and Orissa Research Society Journal*:—

Mahamahopadhyaya Haraprasad Sastri, M.A., C.I.E., essays the task of ascertaining the birth-place of Kalidasa. The only certain facts discoverable are that he lived some time before 634 A. D., and that he is mentioned by Bana, the court-poet of Harshavardhana, before the middle of his reign, *i. e.*, about 620 A. D. Mr. Haraprasad Sastri makes a careful examination of Kalidasa's writings with a view to discover his birth-place. Mr. Sastri takes us through his work thoroughly, through the places described by him, identifying the fruits and flowers mentioned in his works and going round wherever he has travelled. Now, Kalidasa had apparently travelled most extensively. He knows Bengal, Orissa, Kalinga, the Southern districts of the Kingdom of the Pandya, the pearl fishery of the southern sea, cardamum plantations of the West Coast. He is no less familiar with the vineyards of the Punjab, the pine trees of the Himalayas, the agalochan of Assam. Kalidasa's knowledge is encyclopædic and he appears to know the fauna and the flora of every portion of India as if he had lived all his life in the places he describes with such minute fidelity. He does exhibit great partiality for the Himalayas, and some of the most splendid of his descriptive writings refer to the forests, cities, inhabitants and rivers of the Himalayas. But his partiality for Malwa or the highlands of the Vindhyas is even more pronounced. Malwa was certainly his favourite. Mr. Sastri adduces evidence of an exhaustive character in this part of his thesis, and his conclusion is irresistible that Kalidasa was born and brought up in Malwa. Nay, he goes further, and infers from internal evidence furnished by the *Meghaduta* that not only was Malwa Kalidasa's native country, but that his actual birth place was Desapura or some place near it. Incidentally, Mr. Sastri refers to Kalidasa's description of the traditional six seasons, which are seen only in Malwa. In Bengal, there are only four seasons; in the hills only three; in Hindustan only four; in the Punjab only three, and so on. It is only in the region between the Aravali Hills and the Chambal all the six seasons are equally perceptible from summer to spring. Mr. Sastri enumerates all the natural objects described in the *Ritusamhara* and draws the inference that although some of them are pan-Indian others are only found exclusively in Malwa.

BLACK MAGIC IN EGYPT.

Writing in the April number of the *Occult Review*, Irene E. Toye-Warner gives some account of magic among the Egyptians. Ancient Egypt had most of the black magic known in other countries of the world, and certain religious ideas held by heathen and Christian sects may be traced directly to this fascinating country. The Hebrews greatly feared the magic of the Egyptians, and according to the Old Testament, Moses, the great law-giver, was a thorough master of this dreaded art. The one great distinction between the magic of Moses and that of Egyptians was that he wrought these marvels by the command of the God of the Hebrews, whereas the latter was done by the power of the gods of Egypt at the command of the magicians. The whole object of Egyptian magic was to endow its votary with the power to compel both hostile and friendly gods and spirits to do what he wished whether they were willing or not, the votary could work ruin on his enemies by means of the 'words of power' which he had learnt from the spirit-world; and he knew the past and the future and neither time nor distance could limit his power.

The use of wax-figures seems to have been one of the most common methods of causing the removal or death of a victim of the black art. One of the earliest instances of this is recorded in the *Westcar Papyrus* detailing an event which took place in the reign of Nebka about B.C. 3830. About the year 1200 B.C. we find that wax-figures were used by Hui, a high official at the Court of Rameses III. to work harm to that monarch. Nectanbeus, the last native king of Egypt about 358 B.C. was a skilled magician; and when at last he failed in his work, he fled to Macedonia where he practised as an Egyptian soothsayer and physician. It was the duty of certain priests in the Egyptian temples to recite formulæ and perform a service to free the sun-god Ra from the attacks of a monster called Apep, probably the dark storm-clouds of the tempest, or the evil principle represented under the form of a serpent.

Abu Shaker, an Arab of the thirteenth century and another Arab writer Ma'sudi narrate traditions of Egyptian magic. The Arabs have regarded the wonderful stone sculptures and inscriptions of Egypt as of magical import, and possibly the idea that images were connected with magic had much to do with the Prophet Mahomet's stern prohibition of all forms of images and sculptures. In the earliest days in Egypt, it was thought that the heart-soul of a person could be bewitched out of him, after which the human heart itself would die, together of course with the body. Magic flourished even after Egypt had become influenced by Greek thought, and in the 8th century, A.D. it sank very low indeed. And even when it became a dependency of Turkey, magic both black and white still flourished. Satanic or low magic is supposed to depend on the agency of the devil and other evil genii and to be used for bad purposes by evil men and women. A branch of it is called the *Es-sher* meaning wicked enchantment. The remarkable continuity and similarity of methods in the working of the black art from the dawn of history to the present time is very striking in Egypt.

THE SOLDIER'S LIFE.

Rev. Frank Fairfax, C. F., writing in the columns of the *United Methodist Magazine*, analyses the deeper life of the Soldier in the following words:—

Some young officers conceal their true self behind a show of cynicism. One of these astonished me recently in a conversation which began over a novel he was reading. We were talking about Russia. I mentioned Tolstoy. He remarked: "Tolstoy is rather heavy. If you want a real insight into Russian character, you should read Turgency and Dostoievsky." . . . This cynicism so rife among officers is, I am positive, only a mask. Beneath it is a faith in human solidarity and the need for human redemption, which tries to break its earth-bound confines and find the hope that is born of Heaven. A certain colonel I know would laugh at this, were he to read it—which is not likely. He connives at any joke calculated to discredit religion. And yet I have seen him unmistakably moved by the hymn: "Fight the good fight." And when I spoke to him recently of our approaching move for the Front, he replied in his usual drawl, but with honesty and feeling: "The boys will be all right. They'll do their bit. Yes, though it's hell—don't you make any mistake, it's hell—they'll play their part."

INDIAN ECONOMICS.

We have received the first number of the *Indian Journal of Economics*, a Quarterly Review, issued by the University of Allahabad from the Department of Economics and edited by Prof. H. Stanley, Jevons, M.A., F.S.S. The Journal indeed supplies a long-felt need of an authoritative organ of such an important and growing science as Indian Economics.

LORD HARDINGE'S VICEROYALTY.

Mr. A. Yusuf Ali, I.C.S., contributing to the March number of the *Nineteenth Century and After*, pays an eloquent tribute to the work of Lord Hardinge in India. The programme which we may conceive him to have sketched out to himself when he came to his office in India, would be (1) to shape India's external policy in the direction of peace and economy, (2) to forward the unity of the Empire, (3) to develop in India the Reform Scheme in the direction of greater Indian co-operation in the work of government, (4) to conciliate all jarring races, classes and creeds, and (5) to give whole-hearted support to a forward educational policy, as the most potent instrument for the carrying out of the ideals of Great Britain, of the Empire and of India. As to the ideals of peace and economy in India's external policy, though the Viceroy's calculations have been upset by the outbreak of the great war, the staunch loyalty of the Amir of Afghanistan has lessened the anxiety on the North-Western Frontier, and has enabled the prompt localisation of all sporadic trouble. The resulting sense of security has made it possible to send a large proportion of Indian troops outside the Indian frontiers to fight the battles of the Empire.

During the War not only has India paid the expenses of the troops within her own borders, but she has of her own motion asked Parliament to suspend the Statutory provision under which she was not allowed to pay for the troops outside her borders. The gradual adjustment of Indian finance to her altruistic loss of the opium revenue from China, the restriction in the internal consumption of opium, the more stringent excise policy adopted, the attempt to make a careful inquiry into the army expenditure, the careful stemming over the crisis in the Swadeshi Banks in 1913—these mark Lord Hardinge's achievements in the field of finance.

No Viceroy has done more than Lord Hardinge to bring India within the circle of ideas which we may conveniently sum up under the term Imperial Unity in a world-wide Empire.

The double process of evolution involved in this task, *viz.*, the realising by India of her position in the partnership of the Empire and the converse task of cultivating an Indian understanding and a pro-Indian sentiment among the dominions and colonies, is both difficult and laborious; and the task has been made harder by the tendency among the self-governing units of the Empire to regard India as a stumbling block in the way of an organic unity of the Empire. Lord Hardinge's sympathetic Madras speech of 1913, the appointment of an Indian Grievances Commission by South Africa, have been followed by an attempt at the solution of the question of Canadian emigration on the basis of a reciprocal arrangement and by the appointment of a Committee to investigate the conditions of Indian labour in the Crown Colonies. Lord Hardinge's acceptance of the Hon. M. M. Shafi's resolution in his Council, asking for India's representation at the next Imperial Conference, the fighting of Indian troops side by side with the other troops of the Empire, and the opening of the Victoria Cross 'for valour' to Indian soldiers also point in the same direction.

The grant of a purely elective majority in the Legislative Council of Bihar and Orissa, the solution of the Cawnpore Mosque difficulty, the grant of an Executive Council to the 'baby province' of Bihar and Orissa, his attempt to create a similar Executive Council for the United Provinces, are measures that are truly in keeping with his policy. His wise statesmanship sought not so much to satisfy Mussulmans as Mussulmans, or Hindus as Hindus as to win the hearty co-operation of all moderate, loyal and reasonable opinion. His Government acknowledged 'the predominant claims of educational advancement on Indian resources' and set themselves to making 'education in India as wide and accessible as possible.' The multiplication of universities is now part of 'the declared policy of' the Government of India,' while residential universities, hostels, research and practical work are largely encouraged.

Each year of Lord Hardinge's Viceroyalty has been an *Annus Mirabilis* by itself of history, but each year as it recedes in the ever-changing march will show a calm and resolute figure at the helm, yet aglow with the warmth of human sympathy and affection.

THE IDEAL OF ENGLAND

Laura Spencer, writing in a recent number of the *Girl's Own Paper and Woman's magazine*, points out the dominating ideal of England:—

Liberty of the individual, yet conformity of that liberty to the good of all, this has been the ideal of England always. It gives the English their arrogance, but it gives them, too, their stability; it gives them stubbornness, but it gives them a splendid sense of justice and moral right. He who carries out the difficult rule of loving his neighbour as himself will doubtless love that neighbour better for loving himself so well.

RURAL EDUCATION.

"An Experiment in Rural Education" is the subject of an interesting contribution in a recent issue of the *School World*, an English educational monthly. The writer is happy that a more rational system of elementary popular education is developing in England in the place of the old, dull, mechanical regime. He hopes that in due time a sensible educational system, based on the "bedrock of reading, writing, spelling and elementary mathematics taught by mind awakening methods," will be the rule of the land. The scheme includes the education of boys and girls of course:

The boys do practical drawing and mensuration, and have practical instruction in nature-study in the school garden in addition to handicraft; and the girls do housework which can be spread over the whole day.

The girls learn laundry work in the first three months of the first year they attend the centre, cookery during the next three months, and a mixed course completes the year's instruction.

The specialised knowledge gained in the first year's attendance at the centre is applied in the household management course of the second year, where the special processes of cooking, washing, and ironing are performed in their right place, along with other housework, as part of the general routine of the home.

The course includes instruction in the best, quickest, and most hygienic methods of cleaning a house and keeping it clean, and the organisation of this work by the day and week and on special occasions. The instruction aims at bringing about order, freshness, and sweetness in the home. The girls are also taught how to choose and keep in good condition furniture, floor coverings, bedding, and everything used in a house. Simple upholstery, which will help them to mend their own furniture and keep the covers in order, is included in the syllabus. They are all also taught how to make the best use of remnants, how to renovate old clothes, how to keep household accounts, and how to spend money to the best advantage. Instruction is further given in the care of a baby, and in the preparation of its food.

The curriculum for the boys is of a very useful rural character. Measurements, drawings, and calculations are made from objects of all kinds both indoors and outside, leading up to the estimation of the volumes of such objects as haystacks, timber, milk-churns, etc., and the surveying of fields.

The nature-study is largely taken out of doors and is principally concerned with forestry, gardening, and bee-keeping, all of which have a very definite bearing upon the occupations of the neighbourhood. The boys also learn how to graft and bud, and to propagate the common garden plants and fruit trees.

The handicraft is chiefly done in wood and metal. The work includes repairing cupboards and bookcases, fixing curtain rails, etc., and repairing objects brought from home, such as leaky funnels and oil-cans.

If the scheme is so good for England, how much more need there is for a similar system in India where rural education of any shape is such a want.

THE BUDDHA RELICS.

An interesting account of the Buddha relics, preserved in the Arakan Pagoda Temple, Mandalay, is given by Mr. C. Jinarajadasa in the February number of the *Herald of the Star*.

We all went to the Arakan Pagoda, and in the shrine room of the temple there stood in a corner an iron safe, with a huge iron chain round it. In the presence of the military sentinel, who is on guard night and day, the safe was unlocked, and the gold casket taken out and taken to a preaching hall near the shrine. There the casket was opened and the rock crystal shown; the relics can be seen through the crystal as three tiny pieces of bone. As I am a Buddhist, I was allowed with the consent of the trustees to hold the casket in my hand, while we were all photographed by one of our party in remembrance of our gathering on such a unique occasion.

The Government presented this "gold casket" about the time of the formal gift of the relics to the Burmese people in March 1910. The relics are not destined to find a permanent resting place in the Arakan Pagoda Temple.

A splendid shrine for them is being constructed by the Buddhists on Mandalay Hill, not quite on the top of the hill, but about three-fourths of the way to the top. A winding road of several thousand steps, all under cover, leads from the plain to the shrine. All this has been constructed by public contributions, and, when complete, with the relics in their final resting place, will form a most strikingly beautiful place of pilgrimage for Buddhists, and a unique place worthy of the visit of all tourists who come to Burma.

INDIAN STUDENTS.

Sir Rabindranath Tagore writes a very interesting article on "Indian Students and Western Teachers" in the *Modern Review*. The following extracts show his study of the question which has arrested more than common interest in recent years.

The European professor does not look upon his vocation simply as that of a teacher. He feels himself also to be a king of the country. He is a European and a Professor of an Imperial Service to boot—a fragment of royalty. Often, also, he suffers from the conviction that he has come out to "do us good." In such circumstances, he may not always feel the necessity of controlling his tongue, or his temper. Therefore it may be the case, that we should not ask how he ought to behave towards the students, but rather how the students, by the agency of a strict scheme of discipline, should train themselves to put up with his want of good taste.

If we allow Englishmen to go on despising us and treating us with contempt, then we shall never win their hearts. We must claim respect from them. And at such a time as this, we shall not turn the other cheek when struck by the Principal of a Mission College.

Dr. Sir Rabindranath concludes the article thus:

If the relation between teacher and student be founded on fear and hate and punishment, then the poison of the disease will be driven from the blood into the very vitals. Distrust of all Englishmen will be transformed into an instinct from one generation to another.

AN IMPERIAL PARLIAMENT.

The war has brought out in clear relief one important aspect of imperial governance which has often been neglected by those in brief authority. It is that a great Empire is not forged by mere force but knit together by bonds of affection and mutual respect. The new ideas of war and organisation now evolving in the British Empire have an imperishable lesson for all ages. Mr. Sidney Low, in the *Fortnightly Review* for March, brings out this idea clearly in the course of an article on "The War and the Problem of the British Empire."

With nearly a quarter of the human race under one Government, with our ports and harbours upon the coasts of every sea and ocean in the world, we can become, if necessary, if the pressure of events compel us, not only, as we are and must be, the greatest of naval Powers, but also a military Power which can hold its own even if, by some ill-fortune, we should be deprived of our present allies, against any combination of enemies whatsoever. But the lesson of this war is that these latent resources, however magnificent, are of little value unless they are brought together and organised for the specific purpose for which they may be required under a single control and direction. If the British Empire had been so organised when the blow fell in August, 1914, I think it is safe to say that the present war would not have occurred.

But these latent powers if well organised will resist the world-in-arms. Events, he says, are irresistibly tending towards an imperial executive which shall be responsible to a true imperial parliament, a Central Federal Congress of the Empire :—

Such an attempt cannot be long postponed. The close of the war will bring us face to face with the task of converting our loose and ill-jointed Empire constitution into a genuine Federal Union, like other greater composite State-systems which have been built out of separate local or national units, and like—on a lesser scale—our own federated Dominions. We have before us the example and the experience of the United States of America, distinct in their origin and each claiming the attributes of sovereignty, combining to form a Federal Republic with a single executive and central legislature; of the provinces of Canada uniting as the Dominion of Canada; of the Australian States compacted into a Commonwealth; of the colonies of South Africa associated to become members of the South African Union; and, farther back in our history, of the Scottish Parliament and the Irish Parliament abandoning their separate powers and amalgamated with that of England and Wales into the Parliament of the United Kingdom of Great Britain and Ireland. What the Empire has done in part it can do as a whole. The "Imperial' Parliament can justify its title and render itself in fact, as well as in name, Imperial by receiving representatives from all the self-governing States, and by delegating its control of purely British and insular affairs to a purely British and insular legislature and ministry.

THE NEED FOR VISION.

In the course of an article in the March number of the *Review of Reviews*, Mr. Alfred Stead writing on the need for vision in England points out :—

For eighteen months we have been fighting without inspiration, without conception of victory: we have neither the religion of Russia, the violated hearths of France, nor the slaughtered families of Belgium or Serbia to crystallise our action. Thus much of our power is lost, and must continue to be lost. In the Fleet there is a definite purpose; elsewhere not. But the Fleet can only act; it is not allowed to dream dreams, and thus it was found easier to decide to close museums than to close the seas to contraband. There was none of that clearness of vision which created a supreme British Navy, which has as foundation-stone the belief that "the frontiers of England are the coasts of the enemy" That is a bold conception of a bold visionary. It has succeeded in the Navy; why should it not succeed in other departments? It may be said that the visionary is unsafe: but have we not had too much safety play? Safety play never won a great victory, and never will. It never made a great nation; it never made the British Empire. Those little bands of visionaries of the past, who dared see visions and conceive victories, what would they say of us to-day? We are proud of those who made the Empire; can we not also be worthy of them? To think boldly is to gain the power to act boldly—not to conceive clearly, not to see visions is gradually to atrophy the power of action. The national mine is ready; it only needs the divine spark to fire it, and by the explosion find victory and find ourselves.

THE WORLD OF BOOKS.

[SHORT NOTICES ONLY APPEAR IN THIS SECTION.]

THE SHINING GATEWAY. By James Allen.
ONE LIFE, ONE LAW, ONE LOVE. By Lily L Allen.
IN THE GARDEN OF SILENCE. By Lily L. Allen.
L. N. Fowler & Co., London.

Mr. and Mrs. Allens' books have been well known to all lovers of the good, the true and the beautiful, and they contain precious wisdom in a narrow compass. They recall to our minds the quintessence of moral and didactic wisdom contained in many a Sanskrit work dealing with life and conduct. They enter "with tender reverence into every detail of human experience." *The Shining Gateway* teaches us how passion and affliction should be spiritually transmuted; that the five stages in regeneration are reflection, introspection, self-analysis, meditation, and pure perception; and that thoughts and deeds long persisted in (*abhyasa*) become at last spontaneous impulses. *The Garden of Silence* teaches us by means of short stories and phantasies the truth and beauty of things. *One Life, One Law, One Love* is equally noble and beautiful. It teaches: "Let a man look within for deliverance." Mrs. Allen tells us about "the great urge of the divine towards the Divine," and says that we must lose our sense of separateness and realise unversal unity. At the heart of Life is Law, and at the heart of Law is Love.

DHONDO KESHAO KARVE: A SKETCH. By R. P. Paranjpye, Principal, Fergusson College, Poona.

Professor Karve's name is now familiar throughout India as the founder of the Widow's Home and also in connection with the movement for Women's University. Mr. Paranjpye shows, in his study of Prof. Karve, the two requisites of a good biographer—sympathy and knowledge. There is in the volume before us an abundance of both.

INDIAN POLITICAL LITERATURE: The Bombay Presidency Association has republished in a book form the more important political addresses of December last, viz., the speeches of the Hon. Mr. D. E. Wacha as Chairman of the Reception Committee to the National Congress and the Commercial Congress, as also the Presidential Address of Sir S. P. Sinha to the Bombay Congress. The Appendices include the correspondence between the Bombay Government and the organisers of the Congress regarding the attendance of Government officials at its sittings.

HOW INDIA WROUGHT FOR FREEDOM. By Annie Besant. (Theosophical Publishing House, Adyar, Madras. Price Rs. 3 Available of Messrs. G. A. Natesan & Co., Madras.)

Among the bulky volumes on our political genesis and progress that have in recent years seen the light of day, this book of over 700 pages occupies a prominent position. While Babu Amvika Charan Mazmudar's volume on "Indian National Evolution," (G. A. Natesan & Co.,) gives an excellent narrative of our slow but steady political evolution, Mrs. Besant's volume touches only that part of our story which pertains to the Indian National Congress. Thereby the volume loses in one respect while it gains in another. Readers of Mrs. Besant's volume are not made familiar with the political birth-throes which brought into being the National Congress. Her historical Introduction does not deal with pre-Congress days, the work of A. O. Hume, the tours of Surrendranath Bannerji and others to England. Young Indians who are in search of truths relating to our political advancement will fail to get an adequate idea of what took place in years prior to the formation of the Congress. But once Mrs. Besant begins with her story of the Congress she does it well. She takes her readers through one sitting after another of the Congress, and her descriptions are so graphic and her narrative so telling that the whole scene of one session of the Congress after another passes before the reader's eye. Speaker after speaker is named, their speeches are referred to, some masterly summaries are made, some apt extracts are culled, and a faithful account is rendered.

As a historical record of Congress sayings and doings, the book is very valuable. All the resolutions passed at each Congress are fully reported, and speeches delivered are given in a way which could hardly be improved upon. But the value of the book is enhanced when we look upon it as a book of reference. A most excellent Index of some 100 pages is given; all resolutions are thoroughly indexed with names of movers, seconders and supporters, while the General Index throws light on speeches and happenings, and a copious Index to Names is a psychological study in itself. Then there is an admirable table giving the main dates and other particulars which shows at a glance everything that is to be known about the 30 Congresses from 1885 to 1914. Thus as a book of reference it will be useless for all students, journalists, politicians, and publicists.

THE TWO ROADS. By H. E. Hyde. P. S. King & Son, Ld., London.

THE BORDER OF BLADES: AN ANGLO-INDIAN Romance. By Captain Bedford Foran. Hodder & Stoughton, London.

WAR THOUGHTS AND TITBITS: EYE *vs.* EAR. By W. Dorasawmi Iyer. 53, Trunk Road, Walajanagar.

QUESTIONS OF IMPORTANCE.

LORD HARDINGE ON EDUCATION.

In the course of his reply to the Bombay University in accepting the Honorary Degree of LL. D. on April 3, Lord Hardinge spoke as follows on Higher Education in India:—

I do not wish to enter into any detailed review of the recent educational policy of the Government of India, though I may mention that during the past quinquennium the annual expenditure on Education has risen from about four and a half to seven and a half million pounds, and the number of pupils by over a million and a half, while so far as University education is concerned, the number of students in Arts and Professional Colleges has increased from under 30,000 to over 50,000, and the expenditure from 60¼ lakhs to over 91 lakhs. But this is not nearly enough. More Universities are urgently needed and more qualified professors and teachers are required for colleges and schools, and if real progress is desired, these must be adequately remunerated. It seems to me that the educational issue in this country is entirely dependent upon finding the necessary funds to cope with the demand for learning, both literary and technical, and this financial problem will require to be grappled with as soon as our present pre-occupations are removed, and I believe that any additional burden required for the successful dissemination of learning will be gladly borne by the people of India, whose thirst for education is one of the happiest auguries of the future. The ceremony I so recently performed of laying the foundation-stone of the Benares Hindu University gave me an opportunity of declaring the faith that is in me regarding higher education. No one can deny the necessity for greater and more extended facilities; no one can dispute the importance of greater elasticity or doubt the wisdom of experimenting in new directions, and I think everyone will give us credit for realising the urgency of improving the environments in which the students prosecute their studies. Here in Bombay you have been in the vanguard of the advance, and I can congratulate you most warmly upon the completion of your scheme for the establishment of a Royal Institute of Science in this city, and the opening of a College of Commerce, while the sums that have been spent upon the bacteriological laboratory, at Parel, will enable it to do the function also of a Post-Graduate School of Tropical Medicine and Hygiene. I shall

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

not attempt to go into further detail, but I will only add that it was for me a piece of real good fortune, which brought to birth a new department of education at the moment of my arrival and the happy choice that placed at its head so versatile and able a member as Sir Harcourt Butler. The charge of that Department is now committed to the trust of my friend, Sir Sankaran Nair, the ablest Indian I could find for the purpose, and whatever temporary slowing down of the pace may be necessitated by the exigencies of finance owing to this devastating war, I feel confident that in his hands and under the guidance of your new Viceroy, who has earned such a well-deserved reputation in educational circles at Home, the interests of education are in the safest possible keeping for the next five years. During that period much progress will, I trust, be achieved in education as well as in the political development of this land.

LORD CHELMSFORD ON INDUSTRIES.

Lord Chelmsford in reply to an address presented by the Bombay Chamber of Commerce, on April 4, made the following observations :—

Lord Hardinge has taken the first step towards inaugurating an inquiry into the industries of India and the methods required for fostering and developing them. Without being so presumptuous as to indicate a line of policy within a few minutes of my arrival, I think I may assure you that any well-thought-out scheme of developing India's industries will have my whole-hearted support, not only because I regard it as incumbent upon every part of the Empire to do its best to repair the ravages of this terrible War, but because I look forward to the day when India will not only produce its raw material, but will be in a position to convert that raw material into finished articles for its own and the world's consumption.

And again in reply to the Indian Merchants' Chamber and Bureau, His Lordship said :—

I agree with you that this is the moment when we should institute inquiries into schemes of development during the years to come, when peace once more reigns upon the earth. The Government of Bombay is already considering through a strong Committee the question of the development of indigenous industries. The Government of India have also taken the first step towards inaugurating a wider and more general inquiry. I can assure you that any well thought-out scheme for the development of Indian industries will at all times command my whole-hearted support.

MR. MONTAGU'S FISCAL POLICY.

In the course of a speech on the change of attitude on the fiscal question, Mr. Montagu said :—

In the House of Commons last year, Liberal Free Traders and Conservative Tariff Reformers, leaders of both parties, expressed their opinion that the old economic condition of the relationship between the different parts of the globe would be altered after the war, and without saying to-day what the answer will be to those problems, I may say that it is not a part of Liberalism not to recognise altered conditions and circumstances, and to revise, or perhaps strengthen, ourselves in respect to the new conditions which may arise. We in the past conducted trade as a peaceful pursuit. We in the past treated all nations as nearly as we could equally. But look back at the history of this war and see the use Germany made of her trade, and just ask ourselves the question whether we can ever afford or dare to let that happen again ?

* * * * *

There are certain large enterprises which the Government have had to take over during this war. I do not know what lessons are to be learnt from that. One sees the old competition between railway and railway under the control of a committee of their own set up under a Government Department. It is not possible now to form a judgment on the question, but it is certain that we know more about State control and ownership than we did in the past, and we must reconsider our opinion when we get the leisure to do so.

IRELAND'S PART IN THE WAR.

Since the commencement of the war, declared Mr. Redmond in a recent speech, Ireland had put a huge army in the field. Up to January 8th last, Ireland had sent 86,277 men into the Army, and into the Navy 3,466, making a total of 89,743. In that magnificent record Ulster led the van naturally and properly, because that province held one-third of the whole population of Ireland. That record of Ulster was the record of all creeds and classes. There had been slackness in the agricultural districts, and in regard to that he had no hesitation in saying to his fellow-countrymen who were on the soil, and who after forty years of sacrifice and suffering were made its owners, that they had an interest in winning this battle over Germany greater even than any agriculturists in Scotland, Wales, or England. They had to-day 145,869 men from Ireland with the colours, and if they added to that the Irishmen who enlisted in Great Britain only, they had at least 300,000 Irishmen with the colours.

UTTERANCES OF THE DAY.

LORD WILLINGDON ON LORD HARDINGE.

H. E. Lord Willingdon, Chancellor of the Bombay University, in conferring the Honorary Degree of LL. D. on Lord Hardinge, addressed His Lordship in the following terms :—

Though storms of war are raging with undiminished fury in distant lands, you leave behind you an India enjoying almost all the benefits of peace, more united than ever, after more than a year and a half of war, in loyalty to the Throne of the King-Emperor, united also in paying to you on your departure from her shores a homage of heartfelt gratitude and affection. * * *

I welcome you, my Lord, to the franchises and privileges of a University which, if it cannot claim antiquity, has yet a tradition—a tradition which will not permit it to yield to any other, however renowned and ancient a foundation, in recognition of courage, magnanimity, and wisdom devoted to the service of the Empire and of humanity.

LORD HARDINGE AND STUDENTS.

In accepting the Honorary Degree of LL.D. from the Bombay University, Lord Hardinge gave the following advice to students as his parting message to them :—

In a few hours time I shall have left you, my work in India being over, but I shall carry away with me memories and interests which will endure throughout my life. Above all, I shall carry away with me high hopes for the future of India, of which the fulfilment rests largely with you students, who will soon be the manhood of your country. I have to bid you good-bye and Godspeed in solemn times, which are putting to a supreme test not merely the military organisation and material resources but above all the character of nations, their capacity for self-discipline and self-sacrifice. Herein lies the lesson of the war which I would commend to all the young students of India. It is character, it is the capacity for self-discipline, for self-sacrifice that build up and preserve a nation. Cultivate those qualities steadfastly, patiently, unobtrusively while you are pursuing your various studies, and you will be able to acquit yourselves as men in after life and to do each of you your share in building up a nation worthy of India's past traditions and future greatness. You will often be in my thoughts, and I trust you will also remember me as one of your sincere well-wishers. "God bless you all and help you through life."

LORD BRYCE ON THE GERMANS.

It was more than anything else the German theory of the State and the omnipotence of the State, of its right to absorb and overrule the individual, to override morality—one might almost say to deny the existence of morality so far as the State was concerned—it was that deadly theory which was at the bottom of the German aggression that we were trying to resist. We stood in this war for justice, right, and humanity. From that position we must not depart. He did not believe for a moment that we should gain anything by departing from it. If it came to cruelty against cruelty, the enemy would always win. He saw no reason to think that our recourse to any of the inhuman practices, shocking to philosophy and morality which the enemy had adopted, would have the slightest effect upon him, or would in any way promote our military success. We should not gain, we should certainly lose, because there was nothing which had won for us more the approval and sympathy of all that was best in neutral nations than the fact that we had championed the cause of justice and humanity.

LORD HARDINGE ON SIR G. F. WILSON.

In unveiling the bust of Sir Guy Fleetwood Wilson, His Excellency Lord Hardinge said :—

Sir Guy guarded our money with a keen sense of duty and brought to the solution of the knottyproblems, with which the Finance Memberis so constantly beset, an acute and versatile intellect. In the public eye a Finance Member must be largely judged by his budgets, and the budgets of Sir Guy Fleetwood Wilson were a series of personal triumphs. Finally, let me not forget to mention that during the two months when I was incapacitated by illness, a far greater portion of anxiety and responsibility fell to the lot of my Council; as Senior Member of my Council and Vice-President of my Legislative Council, Sir Guy Fleetwood Wilson's share of the burden was not only the heaviest but came at a time when the preparation of the budget is a sufficient task to engross the energies of any ordinary man. But he rose to the occasion, and with the loyal cooperation and assistance of his colleagues, he faced the additional labour with a courage and endurance beyond praise. It will bring a glow of pleasure to the heart of Sir Guy to know that his friends out here have taken these means to keep his memory green, and equally will it be a source of happiness to his friends out here to be able to refresh old memories by gazing at his friendly and familiar lineaments.

INDIANS OUTSIDE INDIA.

INDENTURED LABOUR.

Referring to the criticisms on his speeches on Indentured Labour and the treatment of Indians in South Africa and other British Colonies, Lord Hardinge in the course of his reply to the Indian Merchants' Chamber and Bureau of Bombay, on April 3, said :—

You have referred in approving terms to the part that I played in the remedy of Indian grievances in South Africa, and though I was criticised in some quarters for the warmth with which I spoke at Madras on this topic, I can say honestly that I never had any serious twinges of conscience on that account. It was a moment for plain speaking and I spoke what I felt, and if I did not measure my words with absolute nicety, the strength of my feelings and the excellence of my cause must plead my excuse. Closely connected with this is the general question of indentured emigration. This is one of the many problems I should like to have seen absolutely solved before I left your shores, but from the recent debates in the Imperial Legislative Council you will have learned that my Government have not been idle in this matter, but have succeeded in persuading the Secretary of State and His Majesty's Government that the system at present in force is bad, and have obtained a definite promise from them that, within such reasonable period of time as will allow of alternative arrangements being introduced, it must be abandoned, thus closing for ever a page that has spelt individual suffering and general demoralisation of those involved and has implied a stigma upon India as a whole.

INDIAN LABOUR IN FIJI.

The following tentative proposals for future reconstruction of Indian labour in Fiji are urged in the report recently issued by Messrs. Andrews and Pearson :—

Immigrants to come from India in future by families rather than as individuals. Prostitute immigrants to be excluded.

A regular Steamer Service to run between Suva and Calcutta, bringing immigrants in smaller numbers, and at more frequent intervals.

Only the passage from India to be paid in future. Free return passage no longer needed in the case of Fiji. The Fiji authorities to deal liberally with any hard cases.

Only a free civil contract to be allowed. No penal clauses, no fines, no compulsory labour. Any civil contract entered into for a longer period than two years to be made illegal.

Married women not to be called upon for field work except of their own accord. An allowance to be made to the husband, where the wife, for family reasons, is unable to work.

Separate dwellings, combined with a small piece of ground, to be given to each family.

As far as may be, only married overseers and married sardars to be employed on plantations.

The full civil sanction to be given to Hindu and Muhammadan religious marriages throughout the Colony. Leave to be granted for religious rites on the estates especially in connection with marriage. More religious holidays to be allowed.

Education and medical aid to be provided for all Indians in the Islands, with help from India in the matter of teachers and doctors, and possibly a grant-in-aid.

PROTECTION OF COOLIES IN CEYLON.

We are glad to note, observes the *Times of Ceylon*, that the Ceylon Labour Commission is interesting itself in the prevention of the victimising of coolies on the railway which, it is to be feared, takes place to a considerable extent. Porters, station policemen, and, we are sorry to say, even booking-clerks on occasions, both on the Ceylon and on the Indian side, seem to regard the Tamil cooly as a fair object of plunder, and are never tired of exercising their wits in discovering new means of depleting his slender stock of rupees. Though they find the experienced traveller, who has made many journeys between village and estate, too hard a nut to crack, they frequently succeed in getting money out of the unsophisticated *puth'al*. One of the simplest ways of swindling the ignorant cooly is to lie as to the railway fare, and to prevent this, the Labour Commission is issuing forms to Estate Superintendents on which the fares can be shown. The Superintendent fills in the fare to Talaimannar, and the form shows the real fare.

FRENCH INDIANS FOR WAR.

About 200 recruits of classes 1911-12-13, among them being 50 from Karikal, assembled at Pondicherry recently when a party was given in the house of M. J. La Porte, of the *comite des renoncants* in honour of recruits. M. Gaebele, Mayor, presided and over 500 guests, including the recruits, attended. It was announced that European and Anglo-Indian conscripts would slowly be called out, and that no distiction of caste or race would be observed.

FEUDATORY INDIA.

MYSORE SILK IN AMERICA.

Mr. W. H. Smith, Editor of the *American Silk Journal*, in the course of an article on "Mysore Silk" for the American market contributed to the January number of the *Mysore Economic Journal*, says :—

If a country like India, producing as it does cocoons equal in quality to the Japanese silks, would study the Japanese methods, such as prevail in the better class filatures, there would result an Indian raw silk prepared for the market in a manner equal to that of the Japanese silk. The India filature could well profit by engaging experienced Japanese to work with their own help, teaching the latter the Japanese methods, which would be readily acquired. India silks from the Mysore district have been sold on the American market and have brought prices equal to those commanded by Japanese silks which they resemble so closely that it would be difficult for even the expert to tell that there was any difference. However, no matter how good the quality of India silks or how cheap the price, if the skeins are not run on Grant reels, uniform in size and yardage, carefully reeled, put up in uniform books and in bales of standard size, they would never find a ready market here. The American silk machinery is built only for skeins of standard sizes and cannot operate with skeins not uniform. We have it on the authority of the most expert silk man in the American market that India raw silks, if brought up to such standards as have been attained by the Japanese in the respective items referred to above, would find a very ready market in America at prices equal to Japan silks. And it is so easy to imitate the Japanese in this regard that it is held to be rather remarkable that greater progress has not been made in sericulture in India than is indicated by its present products. However, India's experience in sericulture can hardly be expected to advance so long as it is kept in a primitive and experimental stage.

BANGALORE PUMPING INSTALLATION.

The Mysore Government have sanctioned the installation of a pumping outfit, to be worked by electricity in the valley of the Arkavaty stream on the Sivasamudram-Bangalore cable route, for lifting water for irrigation purposes.

BARODA MUSIC CONFERENCE.

The first All-India Music Conference closed at Baroda after five days' sessions. Various subjects came up for discussion and resolutions were passed with a view (1) to securing scientific system of Ragas in Hindustani music; (2) to settle a uniform and easily workable system of notation for the whole of India; (3) to compose a properly graded series of Text books on the subject of Music for introduction in educational institutions, and (4) to start an academy of Indian music as the highest authority in all musical matters and for bringing out Magazines on music and conferring of degrees or certificates on musical talents. Twenty-four interesting papers were submitted before the Conference. The technical papers dealt with questions of Shrutis and the general ones expatiated on the value of music in education, its position in fine arts and in human culture.

THE LATE EX-DEWAN OF BHAVANAGAR.

The late Mr. Vithaldas Samaldas, ex-Dewan of Bhavanagar, was the son of the former Dewan, Mr. Samaldas, and represented the fourth generation of his family to hold the office. The tradition inherited by Mr. Vithaldas, observes the *Times of India*, in administering the State was not only far-sighted and highly resourceful, but it secured him by dint of unflinching devotion to the State a very high place in the ranks of the Indian administrators, to whom it is chiefly due that the Native State enjoys to-day an honourable position in the Imperial system.

AGRICULTURE IN COCHIN.

H. H. The Raja of Cochin, in the course of a recent speech, observed as follows on the improvement of Agriculture in Cochin :—

It must be recognised that under modern conditions the improvement of agriculture and industry has become a necessity, regulating the future progress of the State. The census figures of population and periodical vital statistics afford instructive reading and give cause for thought. There is a steady upward tendency in the figures of population. Food production must keep pace with growing requirements, and either the area of cultivation must increase or cultivation must become more intensive, or both these alternatives must co-exist. It is obvious that the bringing of fresh lands under cultivation is not always possible, and that the extent to which it can be done is so limited as to make it at best only a temporary palliative, but by far the more important remedy is to increase the yielding capacity of the soil.

Industrial & Commercial Section.

THE INDIAN SUGAR INDUSTRY.

One of the important questions that engaged the attention of the Agricultural Conference held at Pusa in the second week of February, observes the *Wealth of India*, of Madras, dealt with the development of the sugar industry in India. In the course of the discussion, Mr. W. Hulme, sugar engineer and expert to the Government of India, pointed out that good progress had been made in the United Provinces in experimental work and that the time had come for them to work up the industry on a larger scale. The Conference passed three resolutions to the effect that the work should be continued on a large scale, that a sugar-cane station should be established in North Bihar and that an agricultural officer with sugar experience should be attached to the farm.

THE INDIAN MERCANTILE FLEET.

It is my earnest hope, said the Hon. Mr. Wacha in a recent speech, that Indians of enterprise will devote specific attention to the incalculable advantages of possessing a mercantile fleet of their own. As you all know, the vast sea-borne trade of the country is carried on in foreign bottoms and thus a part of the annual wealth by way of freight inward and outward is carried away by foreign ship-owners. Ship-building is an art not unknown to India, and it is an historical fact that along with a large number of warships for the British Navy, during the latter part of the eighteenth and almost the whole of the nineteeth century, built in the Bombay Dockyard by those great Parsee master-builders the Wadias, merchant vessels were also built of a most durable type. It is much to be wished that this art of ship-building was again revived on a sure and solid foundation.

LORD CARMICHAEL AND CO-OPERATION.

The Registrar of Co-operative Societies, Bengal, writes in his latest report :—

In May last His Excellency Lord Carmichael visited the Kalimpong Central Bank. During the year His Excellency also paid a visit to the rural societies in the vicinity of Dacca. And in the lowly dwelling houses of the rustic Chairman and Secretaries did His Excellency spend over two hours, inspecting the books and giving the people sound advice. No society is too small for His Excellency to visit, and no co-operator too humble for His Excellency to offer a word of encouragement to.

PAPER PULP IN INDIA.

Mr. William Raitt, F.C.S., cellulose expert to the Government of India, Forest Department, writing to the *Times* on the subject of paper pulp says : "For some years past an extremely fruitful investigation, economic and scientific, of the resources of the Indian Empire in raw materials for cellulose and paper pulp has been in progress at the Research Institute of the Indian Forest Department. The materials tested and approved of include bamboo, Savannah grasses, and Himalayan spruce and fir. It has been proved that they are the cheapest raw stocks in the world and are in most districts associated with extremely favourable manufacturing facililties. The quantities are enormous ; in Burma alone it is estimated that bamboo areas within economic range of river transport could produce 12 million tons of pulp per annum."

WAR EFFECTS ON INDIAN COMMERCE.

Interesting particulars concerning the import trade of India during the first year of the war—August, 1914, to July 1915—as compared with the corresponding periods of 1912-13 and 1913-14, are found in a report recently issued by the Director of Statistics. The memorandum brings into prominence the fact that the foreign merchandise imported in 1914-15, amounted to Rs. 123½ crores, or Rs. 58½ crores, 32 per cent. less than a year earlier. The imports of piece-goods aggregated to 2,307,000,000 yards, valued at Rs. 39 crores against 2,991,000,000 yards, valued at Rs. 54¼ crores. Cotton hosiery declined by Rs. 51 lakhs to Rs. 67 lakhs, and handkerchiefs and shawls in the piece by Rs. 48 lakhs to Rs. 36 lakhs. The quantity of cotton twist and yarn imported declined from 47,000,000lb. to 39,000,000lb. Imports of metals (excluding ores) fell from 1,093,000 tons, valued at Rs. 22 crores, to 450,000 tons, valued at Rs. 10⅓ crores. Imports of iron and steel declined by 606,000 tons and Rs. 784 lakhs to 425,000 tons, valued at Rs. 780 lakhs ; those of iron or steel beams, pillars and girders from 85,000 tons to 38,000 tons; sheets and plates from 433,500 tons to 191,500 tons ; and steel bars and channel from 215,300 tons to 32,000 tons. Imports of copper declined from Rs. 4·63 lakhs to Rs. 1·57 lakhs. Machinery of every description, including belting, fell off by Rs. 2·80 lakhs, textile machinery accounting for a decline of Rs. 1·20 lakhs, prime movers for Rs. 39 lakhs, and electrical machinery for Rs. 23 lakhs. The imports of railway plant and rolling stock show similar fall,

AGRICULTURAL SECTION.

AGRICULTURAL RESEARCHES.

We acknowledge with thanks two important bulletins just issued by the Pusa Institute. "The Detection of Added Water in Milk in India, by J. Walter Leather, V. D., F. I. C., will be particularly welcome at this time when the problem of pure milk has been arresting considerable attention in Municipal cities. The pamphlet on "Green Manuring in India," by A. C. Dobbs offers welcome suggestions to those interested in the technique of agriculture.

A RECORD RICE CROP.

So far as the rice-eating population of India is concerned, the prospect of abundant supplies is now assured. Both in acreage and yield the crop of 1915-16 is a record one. It is estimated that 32,877,000 tons will be available, an increase of no less than 21 per cent. over the yield of the preceding year. In Bengal, where the acreage under rice is more than a quarter of that in all India, the increase over that of 1914-15, is 35 per cent., and in Bihar and Orissa it is 58 per cent. The remarkable point is that the increase in acreage in Bengal is only 2 per cent. and in the adjoined province less than 1 per cent. These figures prove how favourable the season has been. In the United Provinces, Madras, Burma and the Central Provinces, rice has also flourished well, but in Assam there is a decrease in outturn of about 5 per cent.

COIMBATORE AGRICULTURAL COLLEGE.

A preliminary examination of candidates for admission to the Agricultural College, Coimbatore, is usually held at Coimbatore in the first week of June. This entails a long journey on candidates from the north of the Presidency. In order to meet their convenience, we understand that an examination for the selection of students will be held this year, at Anakapalle, on the 22nd May and following days. Candidates who propose to appear then should first apply in writing to the Principal, Agricultural College, Coimbatore, in the usual way before the 12th May, 1916. The usual preliminary examination will be held at Coimbatore in the beginning of June, and students are at liberty to appear at this as heretofore. But it will be unnecessary for any, who attend the examination at Anakapalli, to appear also for the one at Coimbatore.

COTTON CROPS IN INDIA.

The final memorandum on the cotton crop of the Bombay Presidency, including Sind and Native States for the season 1915-16, gives the total area under the early as well as the late varieties of cotton to be 4,958,400 acres. This is higher than that given in December last by 193,200 acres, owing to the receipt of fuller information from Karnatak, Ahmedabad and Baroda. The total revised estimated outturn stands at 1,056,600 bales. The second or final outturn report of the cotton crop of the Madras Presidency, 1915-16, gives an outturn of 354,546 bales of 400 lbs. each.

OIL CONTENT OF SEEDS.

The oil content of seeds as affected by the nutrition of the plant is dealt with in a paper in the *Journal of Agricultural Research*, Vol. III, No. 3. It is concluded that climate is a more potent factor than soil type in controlling the size of the seed and its oil content, probably because climatic conditions largely regulate those of the soil.

PUNJAB AGRICULTURE.

The *Punjab Agricultural Notes* for March show that the wheat harvest has begun already in the south-east of the province. In it, as a whole, the unirrigated crop is very poor, though of course it is not equally bad in all parts, while the recent rain must have benefitted the crop in the neighbourhood of Rawal Pindi considerably. Nor are the irrigated crops in the province, as a whole, up to the average. This is only to be expected owing to the entire absence of the winter rain.

A UNIQUE DAIRY SYSTEM.

The adulteration of milk is always a serious problem, but Naples seems to have found a solution. The *Royal Magazine* tells us that the goats and cows are brought to the very door-step of the customer and milked there. There are no milk carts in Naples.

Each milkman owns a flock of goats or a drove of cows, and these accompany him on his rounds each day. Of course the method is hardly a speedy one, but it at least ensures fresh milk for every purchaser. Sometimes the animals are owned by partners, who go round together, one milking the goats while the other man keeps a watchful eye on the flock. Probably goats are more difficult to handle than milk-cans, and they certainly take up a great deal more room in the streets so that the idea is hardly likely to commend itself to London milkmen.

Literary.

THE HARDINGE LIBRARY.

The opening of the Hardinge Library (New Buildings) at Queen's Gardens, Delhi, took place on the 13th of March amidst a gathering of distinguished ladies and gentlemen. The Hon. Sir Sankaran Nair in declaring the Library open paid a warm tribute to the successful Viceroyalty of Lord Hardinge and pointed out the necessity for such a Library in Delhi:—

"In a place like this, where we have no University, no High Court, no Press, and where English knowledge is not diffused, it seems to be necessary that the library should be free in order to attract the public to its rooms. Here anybody may come to read newspapers and magazines, and I trust that soon the people here will acquire a taste for reading. It will serve also as a meeting place for intelligent discussion. The library will also be useful to visitors to Delhi."

Libraries are generally patronised, says the Education Member, for the study of fiction. But are there not different kinds of fiction? What a world of difference between the penny-dreadfuls and Walter Scott!

But while it is true that many novels only entertain for the moment, there are others that remain in your memory. How many have not derived their knowledge of the past more from the Waverly novels, or better still from other novels like "The Cloister and the Hearth" than from any books of history? But in these days a library is not only required for light reading alone. How very few there are who read the reviews and choose their own books. There are no doubt publishers whose name itself is a guarantee for the worth of the books, but they are now produced in such bewildering numbers that we have to rely upon libraries not only for reading but for selecting the books for our shelf. The publishers know this. They accordingly produce their books generally for the libraries, and I have little doubt that the Committee will take care to make a very careful selection of books to provide with good contemporary literature. They have got higher ambitions. The Secretary wants this library to grow into an institution for post graduate education. I heartily wish the Committee successes in their endeavour. "Reading maketh a full man," and the reading of good books is required in this country now more than ever. The old ideas are now disappearing, and dissatisfaction with their life is being created in the minds of many; contentment has given place to intellectual unrest; the conditions of life imposed by a foreign Government and foreign civilisation have compelled them to break loose from the ancient restraints. For healthy progress serious study of the great social and political problems is indispensable, and it is our hope and belief that, in future, students will resort to this library for study and reasearch.

ANOTHER COLLEGE JOURNAL.

We congratulate the promoters of the "Journal of the Kumbakonam College Literary Society" on their excellent venture. Institutions younger and less historic are having the benefit of a journal of their own, and it is only in the fitness of things that the primier College in Southern India should have a periodical as the one on our table to record its multiform activities. Kumbakonam has for long enjoyed the sobriquet of the Cambridge of South India, and since the days of Principal Porter has earned a reputation for intellectual brilliancy of which any college might be proud. We understand that under the fostering care of Principal Statham, a network of societies has since sprung up in the college, a record of whose works is found in the pages of the Journal. The journal modestly aims at recording the various activities of the college life and is primarily meant for students. Besides a few well-merited articles, the first number opens with an inspiring message from H. E. Lord Pentland: "That this magazine may long serve to illustrate for successive generations of students of the Kumbakonam College their common heritage of high traditions and to foster among them loyalty and gratitude to their *Alma mater*."

RUPERT BROOKE.

Whatever the ultimate verdict of posterity as to Rupert Brooke's achievement, there can be no doubt of the extraordinary promise which was cut short by his death in the Dardanelles on April 23rd, 1915, at the tragically early age of 27. Two slim volumes of *Poems* (1911 and 1914) and *Other Poems* (1914), and his contributions to *New Numbers* are all his poetic legacy, yet much of that is "pure gold." For example, his sonnet on "Safety," from which we quote a few lines:

"We have found safety with all things undying,
The winds, and morning, tears of men and mirth,
The deep night, and birds singing and clouds flying,
And sleep, and freedom, and the autumnal earth.
We have built a house that is not for Time's throwing.
We have gained a peace unshaken by pain for ever.
War knows no power. Safe shall be my going,
Securely armed against all death's endeavour;
Safe though all safety's lost; safe where men fall;
And if these poor limbs die, safest of all."

Educational.

DR. J. C. BOSE ON TEACHERS' IDEALS.

In reply to the address by Principal James at the Presidency College, Calcutta, to Dr. J. C. Bose on his new appointment to carry out research, Dr. Bose made an interesting speech explaining his own ideals as a teacher. One striking feature in the life of a teacher in India, he pointed out was the great devotion that he evoked in the students almost amounting to worship. At the present day of hurry and machine models, instances of affection between teachers and students were not very common. But Professor Bose said that both in England and India, this ideal was highly valued. In India, said he, the teacher was like the head of a family, revered by his pupils so deeply as to show itself by touching the feet of the master. This was not a servile act, but one of respect and regard, and the teacher often reciprocated the sentiment in loving his students, and by being generous to their faults. Professor Bose said he had the good fortune never to have had any trouble with his students during his 31 years' work in the College. The real secret of success was in trying at times to see things from the students' point of view and to cultivate a sense of humour. This is no doubt an excellent ideal, remarks the *Collegian*, and a teacher or professor who followed it would never give room for students' strikes, which have become an established fact in the case of certain unbending men who would always rule with an iron rod.

MUHAMMADAN EDUCATION IN BEHAR.

The *Beharee* gives particulars of a notable educational gift in Behar. An endowment of Rs. 50,000 has been made by Moulvi Abdul Karim, late Inspector of Schools, in aid of Muhammadan educational and religious work. Half the income is to be devoted to the award of a number of scholarships to Muhammadan students who, after receiving sufficient Arabic education and after passing the Matriculation examination, are desirous of continuing education in the College course. The other half of the income is to be spent in the promotion of Islamic work for training religious teachers and preachers, for the composition and translation of religious books and tracts, for aiding religious schools and, generally, for Muhammadan missionary work.

EDUCATION IN BENGAL.

Mr. Hornell explained in the Bengal Legislative Council during the Budget discussions, that a net decrease of seventeen lakhs on education had been sanctioned and a grant of five lakhs for Dacca University had been withheld. Among new items was the provision of a grant of Rs. 60,000 to Dr. Bose for scientific research. On his retirement from the service of Government, Dr. Bose had been appointed Emeritus Professor of the Presidency College, and this provision represented his pay and research grants and the pay of his assistants.

INTER-UNIVERSITY FELLOWSHIP SCHEME.

Haji Mahamud Ismail Khan, Nawab of Dalaoli and a Fellow of the Allahabad University, sends us the following communication with reference to his interesting scheme of inter-University Fellowship. He writes :—

The Universities in India are quite detached from each other, and there is, as a matter of fact, no connecting link between them. Any scheme which may have the effect of bringing them into closer touch with one another, and which may enable one University to understand more closely the schemes of the others, will, I believe, inevitably conduce to better results. For these reasons I humbly beg to draw the kind attention of the Chancellors, Vice-Chancellors, and Fellows of all the Indian Universities to these few lines, and I shall esteem it a favour if they will very kindly communicate to me their approval or disapproval of the suggestion.

With the above object in view I beg to make the following two proposals for favour of your kind consideration :—

1. That every University be authorized to send two of its Fellows as its representatives to the annual meetings of each of the other Universities and that the latter accept them as such.

2. That these representative Fellows be given the same privileges of proposing, seconding, opposing, and discussing any resolution as are given to its own Fellows.

I believe that if these two resolutions are accepted by all the Indian Universities, they will certainly have an opportunity of making themselves more useful, and a new education era may begin in this country.

THE EDUCATION OF THE MAHRATTAS.

The Maharaja Scindia of Gwalior has paid Rs. 10,00,000 towards promoting education among the Mahratta community in the Bombay Presidency.

Legal.

LAW EXPENDITURE IN BENGAL.

The Hon'ble Nawab Shams-ul-Huda, in introducing the Courts of Law head in the Bengal Council during the recent Budget, said that the total Budget estimate for the year 1915-16, which was Rs. 1,01,24,000, had been raised to Rs. 1,05,40,000 in the revised estimate. This increase was chiefly due to large payments of lawyers' fees in connection with political cases, to extra expenditure caused by the appointment of additional District and Sessions Judges, and to charges under the Defence of India Act in connection with political cases. The total estimate for the year 1916-17 had been fixed at Rs. 1,00,20,000. The decrease was due to provision having been made for 13 instead of 10 Judges of the High Court, and some reduction in establishment and contingent charges of the appellate side of that Court, owing to the creation of a separate High Court at Patna. Additional provision had been made in the Budget for the grant of a contract allowance of Rs. 1,000 a month for the supply of typewriter transcripts of evidence of witnesses in Calcutta High Court, for an additional Legal Remembrancer, and four new posts of District Judges. The post of additional Legal Remembrancer had been created for a period of one year. His main duty would be to work out in consultation with the Legal Remembrancer a detailed scheme for the organization of the Department of Public Prosecutions in Bengal.

PREVENTION OF ADULTERATION.

Mr. R. Braunfeld, Barrister and Commissioner of the Calcutta Corporation, has prepared a Bill for the prevention of the adulteration of food and drugs. The Bill will be applicable to all municipalities and districts in Bengal. A draft of the Bill is now being revised by the Health Officer of Calcutta, and will soon be placed before the Local Government for consideration. Provision has been made in the Bill to prevent the adulteration of articles of food used by all classes, and also the sale of drugs or patent medicines that have lost their virtue or potency through length of time.

AN INDIAN LADY LAWYER.

The first application of its kind in India has been made before Mr. A. H. Cuming, District Judge of Alipur, by Miss Regina Guha, M.A., B.L., a lady graduate of the Calcutta University, to be enrolled as a pleader. The petition will be forwarded to the High Court for final orders.

MYMENSINGH TREASURY DEFALCATION.

The trial of the Mymensingh treasury defalcation case was recently ended at Dacca. The Jury returned a unanimous verdict of guilty under Section 409 I. P. Code against the accused, Rebaty Kanta Talukdar, the late treasurer of the Mymensingh Collectorate. When the Judge pronounced that he agreed with the verdict, the accused shrieked out and fainted in the dock. After the accused had recovered, the Judge pronounced a sentence of one year's rigorous imprisonment upon the accused. Messrs J. N. Roy and B. C. Chatterjee with some pleaders of Dacca and Mymensingh appeared for the accused. The prosecution was conducted by the Government Pleader of Mymensingh.

RIGHTS OF A MUNICIPAL COUNCILLOR.

Mr. Justice Macleod delivered judgment on March 30, on the notice issued by the High Court at the instance of Dr. Sukhia, a member of the Bombay Municipal Corporation, calling upon Mr. Phiroze Sethna, President of the Municipality, to show cause why he should not be called upon to perform his duty as President by allowing him (Dr. Sukhia) to put and discuss a certain proposition. His Lordship, in delivering judgment, said that, granted that all conditions were fulfilled which entitled the Court to make the order asked for, still the section gave the Court discretion. An order under the Section would take the place of the old "Writ of Mandamus," and no precedent had been cited for a Court interfering by such an exercise of its authority. Although he could not say that such a case might not arise as a rule in the matter of procedure, the assembly itself should be the sole judge. His Lordship, taking all circumstances into consideration, said that he did not propose making any order on the rule.

CHANGES IN THE JUDICIARY.

The Hon. Sir John Wallis, Chief Justice, Madras, avails himself of leave for three months and fifteen days in continuation of the long vacation of the Madras High Court. The Hon. Mr Justice Abdur Rahim acts as Chief Justice during Sir John Wallis' absence.

Among judicial officers who intend taking leave this summer are: Sir John Woodroffe, Calcutta High Court; Mr. Justice Chapman, Patna High Court; Mr. Justice Rattigan, Punjab Chief Court; and Mr. Batten, First Additional Judicial Commissioner, Central Provinces.

Medical.

LORD HARDINGE ON INDIGENOUS MEDICINES.

On March 29, His Excellency Lord Hardinge laid the foundation-stone of the new Ayurvedic and Unani Tibbi College, at Delhi, in the presence of a distinguished gathering of Indians and Europeans. In his speech on the occasion he pointed out how theories of Western Medical Science are constantly changing, and he mentioned as striking examples the remarkable transformations in quite recent times that alopathic ideas of the causes and cures of cholera, malaria and plague have undergone. "I may add," he continued, "that it has borrowed some of the best known drugs from the East where the study of medicine was kept alive through the dark ages. If then our own system is to some extent empirical it certainly does not become a mere layman like myself to pass any sweeping condemnation upon the empiricism of its eastern counterpart, and when I remembered how many millions in India are beyond the reach of the medical aid provided by the Government and how many of those have means of access to our best doctors still prefer to be treated in accordance with the indigenous system, I came to the conclusion that I should be wrong to throw discouragement upon the scheme, which Haziq-ul-Mulk has so much at heart and which aims at the improvement and development of this branch of medicine on safe and sound lines."

His Excellency then urged that provision should be made for the teaching of surgery and anatomy on Western principles and that the ancient system should be modernised as much as possible to meet the present-day requirements.

EASTERN SYSTEMS OF MEDICINE.

It is very lucky that the Madras Medical Council has reversed its judgment *re* : the case of covering against Dr. Krishnaswami Aiyar. While the Madras Council looks with contempt on all native medicines, Sir Pardey Lukis has another lesson for all alopathic doctors. Look at this picture and that! In supporting the Hon. Mir Asad Ali Khan's resolution in the Imperial LegislativeCouncil, "that the Government of India, in consultation with Local Governments, should investigate the possibility of placing ancient and indigenous systems of medicine on a scientific basis and increasing their usefulness," Sir Pardey Lukis said that he did not recognise any fixed line of demarcation between the Eastern and Western systems of medicine. The main difference between the two was that one had advanced and the other had remained stationary and that was why he was an advocate of placing ancient and indigenous systems of medicine upon a scientific basis, thus increasing their usefulness. Continuing, Sir Pardey Lukis said : "Modern medicine, as we know it to-day, is very different from the rough methods of treatment of the 'barbour surgeon,' and we are ourselves only just emerging from the slough of empiricism. I well remember that in the early seventies, at which time diseases causing bacteria were unknown, I was almost howled down when I tried to deliver an address on the germ theory of disease before a students' debating society. Honourable members will recollect also that until a few years ago we believed malaria to be due to foulness as its name implies. Why then should the allopath arrogate to himself the right to appropriate for his individual benefit all new discoveries, denying these privileges to the practitioners of other systems of medicine? This appears to be especially unfair when it is borne in mind that 90 per cent. of the Indian population lives in rural areas where the *vaidyas* and *hakims* are, and will be for many years to come, the chief attendants of those dumb millions alluded to in recent speeches in this Council. It was in view of this and in the hope that something might be done to raise the status and improve the education of *vaidyas* and *hakims* that I insisted on a definite standard of education for the new type of vernacularly trained village practitioners which it is proposed to create, for I am strongly of opinion that in the interests of the masses the education of those who profess the indigenous systems of medicine is as important as the invention of a lower grade of allopathic practitioner. Personally, if I were ill, I say frankly that I would prefer to be treated by a good *vaidya* or *hakim* rather than by a bad doctor. I resent strongly that spirit of medical trades unionism which leads many modern doctors to stigmatise all *vaidyas* and *hakims* as quacks and charlatans, and I am authorised to accept the resolution on behalf of the Government of India."

WOMEN AND CHILDREN'S HOSPITAL.

The new Women and Children's Hospital, Trivandrum, constructed at a cost of about rupees 2½ lakhs and adequately equipped, a unique one of its kind in Southern India, was formally opened on the 1st April. It is a great boon to the public.

Science.

THE ORIGIN OF MOUNTAINS.

Sir Sidney Burrard, in his Presidential Address to the Indian Science Congress, gave the results of his enquiries on the formation of mountains :

His conclusions may be summarized as follows :—

(1) The fundamental cause of both elevation and subsidence is the occurrence of a crack in the sub-crust.

(2) Mountains are compensated by underlying deficiencies of matter.

(3) Mountains have risen out of the crust from a great depth, possibly 60 miles.

(4) Mountains owe their elevation mainly to the vertical expansion of subjacent rock.

AN INDIAN MATHEMATICIAN.

The results of nearly two years' research work, at Cambridge, by Mr. Srinivasa Ramanujam have come to light by the official announcement that certain papers, which he has submitted to the Degree Committee of the Special Board of Mathematics, have been pronounced as of merit as a record of original research. Mr. Ramanujum, who is a native of the Madras Presidency, only received the ordinary Indian school education, and when discovered, was a clerk in the employment of the Port Trust of Madras. When he went to Cambridge he was described by a prominent mathematician as a man of extraordinary powers, but very imperfect training. He had very little knowledge of modern mathematics, the work of the last fifty years. Yet, in the experts' opinion, Mr. Ramanujam was an infinitely finer mathematician than many men who had become Senior Wranglers.

A TELEGRAPH CABLE.

A telegraph cable, 2,300 yards in length, 2,000 of which lies on the river-bed, has been successfully laid at Yandoon with the object of linking up Rangoon by a shorter route with Danubyu, Zlun and Henzada on the west bank of the Lower Irrawaddy, and also to serve as an alternative route to Bassein in the event of interruptions *en route* to that important town. The work has been carried out by Mr. J. M. Francis (Personal Assistant to the Postmaster-General and Director of Telegraph Engineering, Burma) assisted by Mr. E. S. Weightman, Deputy Superintendent, Telegraph Engineering, Bassein.

NEW BRITISH STEEL HELMET.

The new British steel helmet is beginning to make its appearance, says Reuter's correspondent, at British Headquarters in France :—"I understand that experiments have demonstrated its effectiveness as a protection against shrapnel and bomb splinters. But there has been no sort of effort to combine utility with symmetry. The pattern worn by the French soldiers has at least got some semblance to the picturesqueness of the musqueteer's helmet, but such specimens of the British article as I have so far seen are an excellent imitation of an inverted zinc jelly-mould with a broad flange soldered on. I understand, however, that they have the real merit of being —as my informant very lucidly expressed it— "blooming light for their weight."

MACHINERY IN INDUSTRY.

Some idea of the value of machinery in building up industries may be gathered from the examples given in a recent issue of the *Mysore Economic Journal* :—

1. Arkwright's spinning-jenny enabled one operative in 1815 to produce as much yarn as 200 could a few years before.

2. The crane of Cologne Cathedral in 1870, with two men, did the same work in one hour, in lifting stone, as required 60 men to work 12 hours in the middle ages, that is, one man now is equal to 180 of the old time.

3. The American boot-making machine enables one man to turn out 290 pairs of boots daily ; one factory near Boston makes as many boots as 32,000 boot-makers in Paris. In 1880, there were 3,100 of these machines at work, producing as many as 150 million pairs of boots annually.

4. Alfmann's American reaper cuts and binds grain at 45 minutes per acre. D. Glynn, of California, cuts, threshes, winnows and bags with each of his machines 60 acres of grains daily.

5. The United States in 1888 produced 600,000 sewing-machines, which could do the work of 7,200,000 women.

6. In the Western States of America one man can raise as much wheat as will feed 1,000 persons for 12 months ; a second can thresh, winnow and bag it, and a third convey it to the market.

7. A girl of 12 years of age in a Lancashire mill can turn out 35 yards of printed calico daily, her work in one year sufficing to clothe yearly 1,200 persons in India.

Personal.

THE LATE MR. V. KRISHNASWAMI AIYAR, C.S.I.

A very interesting function took place in the precincts of the Senate House at Madras, on the 27th of March, the occasion being the unveiling of the statue of the late Mr. V. Krishnaswami Aiyar by H. E. Lord Pentland. Mr. G. A. Natesan, who read the report of the Memorial Committee as one of its Secretaries, pointed out how in pursuance of a resolution passed at a meeting in the Banqueting Hall, under the presidency of H. E. Lord Carmichael, it was resolved to perpetuate the memory of the great Indian leader by the erection of a statute in Madras. It is very appropriate that the statue of one of the most distinguished *alumni* of the University should be erected in the precincts of the Senate House, "which was the scene of his untiring labours on the cause of education and where he delivered to hundreds of graduates what was destined to be his last public utterance—the brilliant Convocation Address in 1911." "The Committee are happy," he continued, "that the statue will be not only a monument to the great and memorable services which he was able to render to his Sovereign and his country, but also a stimulus to thousands of young men who pass through the University, to live the noble, strenuous and unselfish life he lived." After the reading of the Report, the Hon. Mr. S. Srinivasa Aiyangar, the Advocate-General, in requesting His Excellency to unveil the statue gave an eloquent and generous tribute to the memory of the great Indian, who was prematurely cut off from the world. He spoke at some length on the manifold activities of Mr. Krishnaswami Aiyar and showed how deserved were all the tributes to his memory. He recalled in particular "his boundless energy, his exuberant and magnetic personality, the splendour of his virile and versatile intellect, his austere ideals and character, his fearless and outspoken sincerity and the fertilising stream of his generosity." It need hardly be said that this generous appreciation was warmly echoed by all who knew him. His Excellency before unveiling the statue pointed out how "public and private testimony alike agree that by his death this Presidency lost a great and good man, who worked strenuously and in no narrow spirit for all that could tend to the moral, intellectual, and material advancement of its people." Lord Pentland concluded with the hope "that this statue will long remain to commemorate the affection and devotion he inspired, the work he accomplished, and the ideals he proclaimed. Associated as it is with the University, for which he earnestly laboured, it will, I hope, serve as an incentive and an inspiration to many generations of students whose best interests he had so much at heart."

Another testimony to the many-sided activities of Mr. Krishnaswami Aiyar was the erection of a bust in the Indian Banks Buildings, which was unveiled by the Hon. Sir Harold Stuart on the 8th of April. The bust "will recall to future citizens of Madras the lineaments of one who laboured unceasingly for the public good and gave without stint not money only (and of that he was most generous) but the best of his intellect and his energy."

THE NEW VICEROY'S STAFF.

H E. Lord Chelmsford, the Viceroy, has appointed the following officers to be members of his personal staff in India :—

Private Secretary.—Mr. J. L. Maffey, I. C. S.

Assistant Private Secretary.—Mr. H. A. F. Metcalfe, I.C.S.

Military Secretary.—Major R. Verney, Rifle Brigade.

Comptroller.—Major John Mackenzie, Indian Army.

Surgeon.—Major L. Cotterill, R.A.M.C.

A. D. C.—Capt. Viscount Errington, Grenadier Gds.; Capt. W. A. Brown, Wilts Regt.; Capt. C. Sykes, Grenadier Gds.; Capt. W. Holland-Hibbert, Herts Yeomanry.

Lord Errington and Captain Brown have served as A. D. C's to the retiring Viceroy.

A SOUTH AFRICAN GENERAL.

"General Smuts is unrivalled in South Africa after General Botha, whose most loyal and devoted lieutenant he has always been," says the *Chronicle*. "His University record, his intellectual gifts and his political achievements, outside military affairs, are such as probably no other General engaged in the Great War can match; and at the same time he has undergone a remarkably thorough schooling in African warfare—first as a daring guerilla against us; then for many years as South African War Minister, and lastly, in connection with General Botha's conquest of German South-West Africa.

"He will find plenty of scope for his talents in East Africa. The filling of this rôle by a Boer General will strike the imagination of the British Empire almost more even than the conquest of South-West Africa."

Political.

THE WAR AND THE INDIAN ARMY.

Sir William Meyer observed as follows in his Budget statement :—

"The Indian Army still continues to play a conspicuous part, side by side with representatives of every portion of the Empire, in the great war which the King-Emperor and his Allies are waging for the cause of liberty and right. Nor, as I indicated in my speech in the closing budget debate last March is this the only respect in which India has borne her share of the Empire's burdens. She has rendered invaluable aid by recruiting and training large numbers of soldiers : by furnishing supplies of all sorts—foodstuffs, clothing, ordnance, equipment and munitions : by training and despatching horses : by lending to the Admiralty a great part of her Royal Indian Marine fleet : and by fitting out transports. The total value of the supplies and services of all sorts which she has thus undertaken on behalf of the War Office amounted, including some similar expenditure brought to account at home, to about £10 million in 1914-15, and is estimated at about £18 million in 1915-16, and £20¾ million in 1916-17. These figures include also the outlay in civil departments on the manufacture of munitions which is now in full progress. They do not however include the services, representing a recoverable outlay of £850,000 in 1915-16, and about £1 million in 1916-17, which we are able to render to the Australian Government."

BANGALIS AND MILITARY SERVICE.

Presiding at the annual meeting of the British Indian Association on the 31st of March, the Maharaja of Burdwan said :—

"The Government of Bengal have begun to take a keen interest in the development of industries. It yet remains for the Government of India to give a real start in the matter. Unless industries are started in this country with State aid and State guarantees, progress will be slow and unsatisfactory."

In urging the admission of able-bodied Bengalis into the Indian Army, the Maharaja said :—

"Doubts may be expressed in some quarters as to the advisability of arming Bengali youths when, unfortunately, some among them have been led astray by totally misguided ideas of patriotism to commit cold-blooded murders and other crimes, and have thereby brought a stigma and humiliation on their fellow countrymen. But I ask, should a whole race suffer and be judged by the misdeeds of a few? With the excellent work of the Bengal Ambulance Corps before us, I think our association would be amply justified in getting up a deputation, in which I am sure other associations would join wholeheartedly, to wait upon Lord Chelmsford after his assumption of the Viceroyalty, praying for the formation of a Bengali regiment, or, if that be not possible, at least for starting at an early date a volunteer corps for Bengalis under the direct supervision of British officers. Even this would satisfy us, for I want to see a beginning made. I want to see Bengal participate with other parts of India in the defence of the great Empire to which we feel proud to belong."

THE PUNJAB COUNCIL.

The *Punjabee* learns that the Government of India, with the approval of the Secretary of State, has decided to increase the strength of the Punjab Legislative Council from 25 to 20 members, and of the non-official members from 14 to 18. This will give one member to the District Board of each revenue division, *viz.*, five in place of three, one additional member to municipal groups and one more member to be filled by nomination. The grouping of municipalities does not, however, follow the revenue divisions.

INDIAN VILLAGERS AND THE WAR.

From an article which Bishop Frank Warne, of Lucknow, has recently contributed to the *New York Times*, it would appear that, in the Bishop's view, the India of the fields and villages came to life politically when the war began, and the first thought of awakened India was one of loyalty and gratitude to the British Crown Just before leaving India, Bishop Warne talked with a representative Indian villager who said : "Ever since my eyes have looked upon this earth, I have beheld the British as my rulers. My father had them before me and I want my children and my children's children to have them. This rule has meant peace, prosperity and safety to our villages, to our farms, to our women and our children and our cattle." The Bishop's comment upon this speech is that, "this man, in my opinion, represents, over 300,000,000 of India's people." He was a hill man, it is true, and expressed himself with much of the frankness associated with hill people, but the American missionary is probably not wrong in assuming that he also spoke for many millions of cultivators in the plain,

General.

THE CALCUTTA CONVOCATION.

The Convocation of the Calcutta University was held on the 11th March at the Senate House, H. E. Lord Carmichael, the Rector, presiding. Dr. Devaprasad Sarbadhicary, the Vice-Chancellor, began his Convocation Address with a reference to the unique ceremonial of the laying of the foundation-stone of the Hindu University by H. E. the Viceroy, and characterised it as a matter of high significance. He said it was his privilege to press the student housing question on the attention of the Government, who had been good enough to adopt a scheme of separate central infirmary, apart from the ordinary sick-rooms provided in hostels. Continuing, he said that they had 761 recognised schools and 51 affiliated colleges as against 50 schools and 13 colleges in 1857.

Referring to the recent Presidency College incident, he appealed to the students to co-operate together to help in the cause of order, good government and seemliness. He sought their co-operation, because stern public opinion amongst the students themselves would be far more effective than any repressive measures the authorities could devise.

In conclusion, he paid a high tribute to the wonderful service of the Bengal young men, many of them graduates of the Calcutta University, who were serving in Mesopotamia for the name of their King and country.

H. E. the rector wound up the proceedings with a speech mainly relating to the Presidency College affairs. He held up the ancient Hindu ideal of Guru and Sishya for the adoption of the modern student.

LONGEVITY: HINDUS AND MOHAMEDANS.

We learn from a Moslem contemporary that in Bengal, the Hindu males have a longer life than the Mussulman male, the difference however is slight. On the other hand, the Mussulman males in Behar have a longer span of life than their co-religionists in Bengal, or the Hindus of either province. In Behar and Orissa, as a whole, the Mussulmans have greater vitality or greater ability to withstand disease than the Hindus, but the reverse is the case in Bengal, where the Mussulmans have decidedly a higher average death-rate than the Hindus. It is probably not generally known that both in Bengal and Behar the proportion of females among the Mussulmans is higher than among the Hindus.

CALCUTTA UNIVERSITY ACTIVITIES.

Dr. Devaprasad Sarbadhicary, in the course of his Convocation Address to the Calcutta University, gave the following summary of the University activities since the days of Lord Minto. It is a fair record of progress of which the University has reason to be proud. Dr. Sarbadhicary said:—

During Lord Minto's Chancellorship Rs. 10,35,048 were paid by the Government of India to the University on account of capital and recurring expenditure. During Lord Curzon's regime no grants had been made. During Lord Hardinge's Chancellorship however the recurring expenditure alone amounted to Rs. 13,02,283, and the capital grants for University purposes amounted to Rs. 32,35,000, including grant for hostels, for private colleges in the Mofussil and at Calcutta. This made a record total, in five years, of Rs. 45,37,283.

The grant to private colleges during the period rose from Rs. 80,000 in 1910-11 to Rs. 1,23,000 in 1914-15. Unfortunately owing to the War the expected grant of Rs. 1,29,000 towards the same purpose this year has been unavoidably withheld. We have every hope that as soon as there is a favourable opportunity, this year's omission will be rectified.

Last year the number affected by our work was phenomenal and unprecedented. We had 12,617 candidates for the Matriculation Examination as against the modest 244 with which we began in 1857. The number of candidates for the Intermediate Examination rose from 163 in 1861 to 6,905 in 1915. Our would-be Bachelors were 13 in 1858, and 3,499 last year; and against the single aspirant for Mastership of Arts in 1861, the number of candidates for Masterships in 1915 stood at 718. Candidates for the newly instituted Licentiateship in Teaching rose from 12 in 1909 to 40 in 1915, and those for the degree of Bachelor of Teaching rose from 16 in 1909 to 60 last year. The number of candidates for Bachelor in Law in 1858 was 19, and the number in 1915 was 590—by no means the largest on our records; for we had 993 candidates in 1911, 704 candidates in 1902, 705 in 1912. The number of candidates for Bachelor of Medicine was 2 in 1867, and 137 in 1915. The number of candidates for Bachelor of Engineering was 1 in 1866, and was 26 in 1915. The number of candidates for Master in Law in 1908 was 4, in 1913 was 14, and in 1915, 11.

We have 761 recognised schools and 51 affiliated colleges as against 50 schools and 13 colleges in 1857.

THE INDIAN REVIEW
A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.
EDITED BY G. A. NATESAN.

Vol. XVIII. APRIL, 1917. No. 4.

SELF-GOVERNMENT FOR INDIA.

A Plea for a Declaration of Policy.

BY MR. G. A. NATESAN.

The Memorandum of the Nineteen Non-official Elected Members of the Viceroy's Legislative Council justly states that India "has a right to expect that the want of confidence on the part of Government, to which she not unnaturally ascribes her present state, should now be a thing of the past and that she should no longer occupy a position of subordination but one of comradeship." It therefore rightly points out that the time has come when an assurance should be given to the people of India "that England is ready and willing to help them to attain Self-Government under the ægis of the British Crown and thus discharge the noble mission which she has undertaken and to which she has so often given voluntary expression through her rulers and statesmen." The terms of the resolution passed on this important question, at the 32nd session of the Indian National Congress, held at Lucknow, in December 1916, and adopted at the Moslem League held about the same time and in the same city, are as follows :—

(*a*) That having regard to the fact that the great communities of India are the inheritors of ancient civilisations and have shown great capacity for government and administration, and to the progress in education and public spirit made by them during a century of British Rule, and further having regard to the fact that the present system of Government does not satisfy the legitimate aspirations of the people and has become unsuited to the existing conditions and requirements, the Congress is of opinion that the time has come when His Majesty the King-Emperor should issue a Proclamation announcing that it is the aim and intention of the British policy to confer Self-Government on India at an early date.

(*b*) That this Congress demands that a definite step should be taken towards Self-Government by granting the reforms contained in the scheme prepared by the All-India Congress Committee in concert with the Reform Committee appointed by the All-India Muslim League.

(*c*) That, in the construction of the Empire, India shall be lifted from the position of a Dependency to that of an equal partner in the Empire with the Self-Governing Dominions.

That Self-Government is to be India's ideal and the goal which Indians should aspire to has been affirmed over and over again and quite voluntarily by various Royal Proclamations, the utterances of British statesmen and famous Anglo-Indian administrators. A century ago, the Marquis of Hastings wrote in his *Private Journal* (May, 17th, 1818):—

> A time not very remote will arrive when England will, on sound principles of policy, wish to relinquish the domination which she has gradually and unintentionally assumed over this country, and from which she cannot at present recede. In that hour it would be the proudest boast and most delightful reflection that she had used her sovereignty towards enlightening her temporary subjects, so as to enable the native communities to walk alone in the paths of justice, and to maintain with probity towards their benefactors that commercial intercourse in which we should then find a solid interest. (P. 361-362, Panini Office Edition). *Quoted in "Towards Home Rule."*

Then again as pointed out by the venerable Indian publicist, Dadabhai Naoroji :

> At a time when the Indians were in their educational and political infancy, when they did not and could not understand what their political condition then was or was to be in the future, when they had not uttered any complaints, nor demanded any rights or any definite policy towards themselves, the British nation, of their own accord and pleasure, merely from their own sense of their duty towards the millions of India and to the world, deliberately declared before the world what their policy should be towards the people of India. Nor did the British people do this in any ignorance or want of forethought or without the consideration of all possible consequences of their action. Never was there a debate in both Houses of Parliament more complete and clear, more exhaustive, more deliberately looked at from all points of view, and more calculated for the development

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of statesmanlike policy and practical good sense. The most crucial point of view—that of political danger or of even the possible loss of India to Britain—was faced with true English manliness; and the British nation, through their Parliament, then settled, adopted, and proclaimed to the world what their policy was to be—viz., the policy of justice and of the advancement of humanity.

The historic debate referred to is that which took place in the House of Commons and in the Lords in discussing the Charter Act of 1833. Sir Robert Peel said :—

Sure I am at least that we must approach the consideration of it with a deep feeling, with a strong sense of the responsibility we shall incur, with a strong sense of the moral obligation which imposes it upon us as a duty to promote the improvement of the country and the welfare and well-being of its inhabitants, so far as we can consistently with the safety and security of our dominion and the obligations by which we may be bound. . . . . .

He declared further that it was England's duty

to endeavour while we still keep them under British rule, to atone to them for the sufferings they endured, and the wrongs to which they were exposed in being reduced to that rule, and to afford them such advantages and confer on them such benefits as may, in some degree, console them for the loss of their independence. These, sir, are considerations which, whatever may be the anxiety to extend British conquest, and to maintain the rights of British subjects, must indisputably be entertained in a British Parliament.

Mr. Wynn thus stated his conviction :—

He had been convinced, ever since he was first connected with the affairs of India, that the only principle on which that Empire could justly or wisely or advantageously be administered was that of admitting the Natives to a participation in the government, and allowing them to hold every office the duties of which they were competent to discharge.

Mr. Charles Grant rejoiced over the main principle of the Bill and observed :—

If one circumstance more than another could give him satisfaction it was that the main principle of this Bill had received the approbation of the House, and that the House was now legislating for India and the people of India on the great and just principle that in doing so the interests of the people of India should be principally consulted, and that all other interests of wealth, of commerce, and of revenue, should be as nothing compared with the paramount obligation imposed upon the legislature of promoting the welfare and prosperity of that great Empire which Providence had placed in our hands.

The Marquis of Lansdowne, speaking on the same subject in the House of Lords, said :

He was sure that their Lordships would feel, as he indeed felt, that their only justification before God and Providence for the great and unprecedented dominion which they exercised in India was in the happiness which they communicated to the subjects under their rule, and in proving to the world at large, and to the inhabitants of Hindustan, that the inheritance of Akbar (the wisest and most beneficent of Mahomedan princes) had not fallen into unworthy or degenerate hands. . . .

His Lordship, after announcing the policy intended to be adopted, concluded : He was confident that the strength of the Government would be increased by the happiness of the people over whom it presided, and by the attachment of those nations to it.

No educated Indian can ever forget the famous pronouncement made by Lord Macaulay in the House of Commons on this occasion and his magnificent peroration containing his great prophecy about the future of India :

Are we to keep the people of India ignorant in order that we may keep them submissive? Or do we think that we can give them knowledge without awakening ambition? Or do we mean to awaken ambition and to provide it with no legitimate vent? Who will answer any of these questions in the affirmative? Yet one of them must be answered in the affirmative, by every person who maintains that we ought permanently to exclude the natives from high office. I have no fears. The path of duty is plain before us: and it is also the path of wisdom, of national prosperity, of national honour.

The destinies of our Indian Empire are covered with thick darkness. It is difficult to form any conjecture as to the fate reserved for a State which resembles no other in history, and which forms by itself a separate class of political phenomena. The laws which regulate its growth and its decay are still unknown to us. It may be that the public mind of India may expand under our system till it has outgrown that system; that by good government we may educate our subjects into a capacity for better government; that having become instructed in European knowledge, they may, in some future age, demand European institutions. Whether such a day will ever come I know not. But never will I attempt to avert or to retard it. Whenever it comes, it will be the proudest day in English history. To have found a great people sunk in the lowest depths of slavery and superstition, to have so ruled them as to have made them desirous and capable of all the privileges of citizens, would indeed be a title to glory all our own. The sceptre may pass away from us. Unforeseen accidents may derange our most profound schemes of policy. Victory may be inconstant to our arms. But there are triumphs which are followed by no reverse. There is an empire exempt from all natural causes of decay. Those triumphs are the pacific triumphs of reason over barbarism; that empire is the imperishable empire of our arts and our morals, our literature and our laws.

This eloquent plea of Macaulay was in favour of "that wise, that benevolent, and that noble clause" 87, of the Charter Act of 1833, which declared "that *no native of the said territories nor any natural born subject of His Majesty resident therein, shall, by reason only of his religion, place of birth, descent, colour or any of them, be disabled from holding any place, office, or employment under the Company.*"

The Court of Directors in forwarding the Act of 1833, to the East India Company, accompanied

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the same with a remarkable despatch in which they observed regarding clause 87 :

It is provided that no person by reason of his birth, creed, or colour, shall be disqualified from holding any office in our service. . . . . .

It is fitting that this important enactment should be understood in order that its full spirit and intention may be transfused through our whole system of administration.

But the meaning of the enactment we take to be that there shall be no governing caste in British India ; that whatever other tests of qualification may be adopted, distinctions of race or religion shall not be of the number. That no subject of the King, whether of Indian or British or mixed descent, shall be excluded either from the posts usually conferred on our uncovenated servants in India, or from the covenanted service itself, provided he be otherwise eligible consistently with the rules and agreeably to the conditions observed and exacted in the one case and in the other.

It will thus be seen that the question of India's future was discussed thoroughly in all its bearings, "political, imperial, and social" and clause 87 enacted by the British Parliament—a clause "worthy of the righteousness, justice, and noble instincts of the British people in the true British spirit." When in 1853, once again, the revision of the Company's Charter came up in the Commons in discussing its provisions, many members bewailed that the important provision of the Act of 1833 had not been given effect to. The opportunity, therefore, was fully availed of to "emphatically insist" that the British people and the British Parliament should be no party to the "unfaithfulness" of reducing a Parliamentary enactment to remain a "dead letter," a "sham and delusion."

Listen to the outburst of Mr. John Bright. Speaking on June 3rd, 1853, he said :—

Another subject requiring close attention on the part of Parliament was the employment of the Natives of India in the service of the Government. The right hon. member of Edinburgh (Mr. Macaulay), in proposing the India Bill of 1833 had dwelt on one of its clauses, which provided that neither colour nor caste nor religion nor place of birth should be a bar to the employment of persons by the Government; whereas, as a matter of fact, from that time to this no person in India had been so employed who might not have been equally employed before that clause was enacted ; and from the statement of the right hon. gentleman the President of the Board of Control, that it was proposed to keep up the Covenanted Service system, it was clear that this most objectionable and most offensive state of things was to continue. Mr. Cameron, a gentleman thoroughly versed in the subject, as fourth Member of Council in India, President of the Indian Law Commission, and of the Council of Education for Bengal—what did he say on this point ? He said : 'The statute of 1833 made the Natives of India eligible to all offices under the Company. But during the twenty years that have since elapsed not one of the Natives has been appointed to any offices except such as they were eligible to before the statute.'

Macaulay, emphatically stated :—

In my opinion we shall not secure or prolong our dominion in India by attempting to exclude the Natives of that country from a share in its Government. (*Contemporary Review*, June, 1883, p. 803.)

Mr. J. G. Phillimore sounded a note of warning which is worth recalling :—

He also feared that the Bill would prove delusive, and that although it professed to do justice to the Natives the "spirit of monopoly would still blight the hopes and break the spirits of the Indian people. While such a state of things continued, India would be attached to this country by no bond of affection," but would be retained by the power of the Army and the terror of the sword. He implored of the Committee "not to allow such an Empire to be governed in the miserable spirit of monopoly and exclusion."

Five years later, in moving for leave to bring in the (first) Bill for the better Government of India, Viscount Palmerston asked the House to remember:

It is indeed remarkable that those regions, in which science and art may be said to have first dawned upon mankind, should now be subject to the rule of a people inhabiting islands which at a time, when these eastern regions enjoyed as high a civilization and as great prosperity as that age could offer, were in a state of utter barbarism

and he wound up his great speech with the following significant warning :

I trust that Parliament will feel that great power is not given to nations without corresponding duties to be performed. We have, by an almost miraculous train of events, been entrusted with the care of the destinies of 150 or 160 millions of men—with the government, directly or indirectly, of a vast empire larger in extent than the whole face of Europe, putting the Russian empire out of the question. That is a task which involves great responsibility. Do not imagine that it is the intention of Providence that England should possess that vast empire, and that we should have in our hand the destinies of that vast multitude of men, simply that we may send out to India the sons of gentlemen or of the middling classes to make a decent fortune to live on. That power has been entrusted to us for other and better purposes; and, without pointing to anything particular, I think it is the duty of this nation to use it in such a manner as to promote, as far as they can, the instruction, the enlightenment, and the civilization of those great populations which are now subject to our rule.

Such is the brief history of the noble efforts made in the British Parliament from time to time to ensure that under the administration of the East India Company, the interests of the people were properly safeguarded and nothing done to check the growth of their legitimate ambition and their future political advancement. When at the end of the great Mutiny

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the rule (many call it the misrule) of the Company was put an end to, and the Government of India transferred directly to the Crown, and the Proclamation of 1858 issued to the Princes and Peoples of India, the joy of the people knew no bounds for the event marked the turning point in the history of British rule in India and the famous Proclamation of Queen Victoria gave further solemnity to the sacred character of the promise contained in the Charter Act of 1833. "*We hold ourselves*," proclaimed the noble Queen, "*bound to the natives of our Indian territories by the same obligations of duty which bind us to all our other subjects, and these obligations by the blessing of Almighty God we shall faithfully and conscientiously fulfil*;" and it is interesting at this distance of time to recall to our memory how the good Queen directed her Minister to issue the great Proclamation, bearing in mind "that it is a female Sovereign who speaks to more than a hundred millions of her eastern people on assuming the direct government over them and, after a bloody war *giving them pledges which her future reign is to redeem.*" And in explaining the principles of her Government Her Majesty was justly anxious that the document should, besides "breathing a feeling of generosity, benevolence and religious toleration," must also "point out *the privileges which the Indians will receive in being placed on an equality with the subjects of the British Crown.*"

On the 1st of January 1877, at the great Delhi Assemblage held to proclaim the assumption of the title of Empress of India, by Queen Victoria, Lord Lytton, the then Viceroy, said :—

> But you, the natives of India, whatever your race and whatever your creed, have a recognised claim to share largely with your English-fellow-subjects, according to your capacity for the task, in the administration of the country you inhabit. This claim is founded on the highest justice. It has been repeatedly affirmed by British and Indian statesmen and by the legislation of the Imperial Parliament. It is recognised by the Government of India as binding on its honour and consistent with all the aims of its policy.

Three months later the same Viceroy, in his rôle as Chancellor of the Calcutta University, observed that "the Proclamation of the Queen contained solemn pledges spontaneously given, and founded upon the highest justice."

In 1887, in reply to an address of congratulation voted by the Municipal Corporation of the City of Bombay on the occasion of the Jubilee, the Queen Empress said: "It has always been and will be continued to be my earnest desire that the principles of that Proclamation should be unswervingly maintained."

Attention may also be usefully drawn to two other notable royal pronouncements. On the occasion of the fiftieth anniversary of the transfer of the Government of India to the Crown, King Edward VII in his Proclamation to the Princes and Peoples of India, which was read by H. E. the Viceroy (the late Earl Minto) in Durbar, at Jodhpur, on the 2nd November, 1908, said :—

> Steps are being continuously taken towards obliterating distinctions of race as the test for access to posts of public authority and power. In this path I confidently expect and intend the progress henceforward to be steadfast and sure, as education spreads, experience ripens and the lessons of responsibility are well learned by the keen intelligence and apt capabilities of India.
>
> From the first, the principle of representative institutions began to be gradually introduced, and the time has come when, in the judgment of my Viceroy and Governor-General and others of my counsellors, that principle may be prudently extended. Important classes among you, representing ideas that have been fostered and encouraged by British rule, claim equality af citizenship, and a greater share in legislation and government. The politic satisfaction of such a claim will strengthen, not impair, existing authority and power.

Almost the first act of H. M. King George V., on ascending the Throne, was to send the following message to His Indian subjects :—

> Queen Victoria, of revered memory, addressed her Indian subjects and the heads of Feudatory States when she assumed the direct government in 1858, and her august son, my father, of honoured and beloved name, commemorated the same most notable event in his Address to you some fifty years later. These are the Charters of the noble and benignant spirit of Imperial rule, and by that spirit in all my time to come I will faithfully abide.

To use His Majesty's own words, it was his wish not only "to strengthen the old ties but to create new ones, and so, please God, secure a better understanding and a closer union between the Mother-country and her Indian Empire, to break down prejudice, to dispel misapprehension, and to foster sympathy and brotherhood." His Imperial Majesty's visit to India and the solemn ceremony of His Coronation, at Delhi, were, to use the words of the official historian, "really an emphatic announcement, *an announcement that India is an equal and integral part of the British Empire.*"

> The event was one of tremendous importance in the history of the Empire. Political aspirations were lifted to a higher plane, patriotism was broadened and intensified, a new pride arose in the heritage of the Empire, and with it a stronger feeling of mutual respect and better social relationship between the natives of India and the natives of England, to all of whom the King was common, irrespective of religion, race or colour.
>
> India is now assured, without a shadow of doubt, of its part in the great Imperial Commonwealth and of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

inherent sympathy and high intentions of the rule which Their Majesties personify. It knows without doubt that it is no longer a mere subordinate and conquered land, but that it is bound by ties of the closest affection and heartfelt allegiance to a monarch who, amid all the multifarious interests and absorbing activities of his great position, has ever watched its welfare with the deepest interest and sought to give it an equal place in the dominions of the Empire; a Sovereign, too, who lives for unity, in the certain knowledge that the brotherhood of his world-wide dominion can only be for the benefit of its members and for the blessing and advantage of untold millions of the human race.—(*The Historical Record of the Imperial Visit to India*, p. 17, 19-20.)

It will thus be seen that while Queen Victoria was justly anxious that the Proclamation issued in her own name to the Princes and Peoples of India should "point out the privileges which the Indians will receive in being placed on an equality with the subjects of the British Crown," her successors, her son and her grandson solemnly confirmed the ideal set by her to the people of India. The noble policy laid down by the British Parliament and sanctified by the Proclamation of Queen Victoria, pledged to be followed by her successors, has been from time to time affirmed by a succession of great British statesmen and Anglo-Indian administrators who have left behind them an imperishable name.

Sir Thomas Munro whose name is still a household word all over India and whose passionate love for its people is still being commemorated in some parts of the Madras Presidency in songs and ballads, was one of the earliest to give definite expression to the measures which England should promote for the welfare of the people of India.

In a minute, dated December 31, 1824, he wrote :—

It is not enough that we confer on the natives the benefits of just laws and of moderate taxation, unless we endeavour to raise their character ; but under a foreign Government there are so many causes which tend to depress it, that it is not easy to prevent it from sinking. It is an old observation that he who loses his liberty loses half his virtue. This is true of nations as well as of individuals. To have no property scarcely degrades more in one case than in the other to have property at the disposal of a foreign Government in which we have no share. The enslaved nation loses the privileges of a nation, as the slave does those of a free man ; it loses the privilege of taxing itself, of making its own laws, of having any share in their administration or in the general government of the country. . . . . It is not the arbitrary power of a national sovereign, but subjection to a foreign one, that destroys national character and extinguishes national spirit. When a people cease to have a national character to maintain, they lose the mainspring of whatever is laudable both in public and in private life, and the private sinks with the public character.—(*Indian Spectator*, February 19th, 1899).

But the noble Englishman was so keen about the great future for the Indian people that he insisted that everything should be done to promote their welfare even if it were to result in the loss of England's control over India. In a solemn strain which anticipated the famous pronouncement of Macaulay, Sir Thomas Munro declared :—

It would be more desirable that we should be expelled from the country altogether than that the result of our system of government should be such an abasement of a whole people.

Who does not remember the pronouncement of that great and noble Englishman, the Rt. Hon. Mount Stuart Elphinstone, who toiled for the people of India for thirty long years in various capacities ? In his evidence before the Committee of the House of Commons in 1833 he urged among other things that the first object of the rulers must be "to raise the natives by education and public trust to a level with their present rulers." Seventeen years later he wrote :—

I conceive that the administration of all the departments of a great country by a small number of foreign visitors, in a state of isolation produced by a difference in religion, ideas, and manners, which cuts them off from all intimate communion with the people, can never be contemplated as a permanent state of things. I conceive also that the progress of education among the natives renders such a scheme impracticable, even if it were otherwise free from objection. It might, perhaps, have once been possible to have retained the natives in a subordinate condition (at the expense of national justice and honour) by studiously repressing their spirit and discouraging their progress in knowledge; but we are now doing our best to raise them in all mental qualities to a level with ourselves, and to instil into them the liberal opinions in government and policy which have long prevailed in this country, and it is vain to endeavour to rule them on principles only suited to a slavish and ignorant population.

Sir Stafford Northcote (Lord Iddesleigh) speaking in the House of Commons in 1867 as Secretary of State for India, said :

The English Government must necessarily labour under great disadvantages, *and we should endeavour as far as possible to develop the system of Native Government to bring out Native talent and statesmanship, and to enlist in the cause of Government all that was great and good in them.* Nothing could be more wonderful than our Empire in India ; but we ought to consider on what conditions we hold it and how our predecessors held it. The greatness of the Mogul Empire depended on the liberal policy that was pursued by men like the great Emperor Akbar and his successors availing themselves of Hindu talent and assistance, and identifying themselves as far as possible with the people of the country. They ought to take a lesson from such circumstances. *If they were to do their duty towards India they could only discharge that duty by obtaining assistance and counsel of all who are great and*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

good in that country. It would be absurd in them to say that there was not a large fund of statesmanship and ability in the Indian character. They really must not be too proud. They were always ready to speak of the English Government as so infinitely superior to anything in the way of Indian Government. But if the Natives of India were disposed to be equally critical, it would be possible for them to find out weak places in the harness of the English administration.

Sir John Malcolm, another famous Anglo-Indian, respected and revered like Mount Stuart Elphinstone, sounded the note of warning when he said :

We are not warranted by the History of India, nor indeed by that of any other nation in the world, in reckoning upon the possibility of preserving an Empire of such a magnitude by a system which excludes, as ours does, the natives from every station of high rank and honourable ambition. . . . If we do not use the knowledge which we impart, it will be employed against us. . . . If these plans are not associated with the creation of duties that will employ the minds which we enlighten, we shall only prepare elements that will hasten the destruction of our Empire. The moral evil to us does not thus stand alone. It carries with it its Nemesis, the seeds of the destruction of the Empire itself.

Sir John Lawrence, as long ago as 1864, said :

The people of India are quite capable of administering their own affairs, and the municipal feeling is deeply rooted in them. The village communities, each of which is a little republic, are the most abiding of Indian institutions. Holding the position we do in India, every view of duty and policy should induce us to leave as much as possible of the business of the country to be done by the people.

And Mr. Gladstone, "who loved Liberty in his old age even more fully than he loved her in his youth," declared :

I hold that the capital agent in determining finally the question whether our power in India is or is not to continue, will be the will of the two hundred and forty millions of people who inhabit India. The question who shall have Supreme Rule in India is, by the laws of right, an Indian question ; and those laws of right are from day to day growing into laws of fact. Our title to be there depends on a first condition, that our being there is profitable to the Indian nations ; and on a second condition, that we can make them see and understand it to be profitable.

Sir William Wilson Hunter pointed out :

I do not believe that a people numbering one-sixth of the whole inhabitants of the globe, and whose aspirations have been nourished from their earliest youth on the strong food of English liberty, can be permanently denied a voice in the government of the country.

Lord Salisbury has said :

But it would be a great evil if the result of our dominion was that the Natives of India who were capable of government should be absolutely and hopelessly excluded from such a career.

Witness the pronouncement of Lord Hartington made in 1883 :

It is not wise to educate the people of India, to introduce among them your civilisation and your progress and your literature, and at the same time to tell them that they shall never have any chance of taking any part or share in the administration of the affairs of their country, except by getting rid, in the first instance, of their European rulers. Surely it would not be wise to tell a patriotic native of India of that.

Sir Richard Temple, an Anglo-Indian never regarded as a friend of India, expressed his opinion :—

For all that it must be remembered that the elective principle is essential to that political training which every stable government (like that of the British in India) must desire to see possessed by its subjects. . . . Public spirit cannot be created without entrusting the people with a part of their own public business, a part limited at first, but increasing as their fitness shall grow. Even if political risks should accrue, they must be borne in performing the duty which the British Government owes to the people of India. In that country, a trustful policy will be found a wise one, and that which is sound morally will prove to be the safest politically.

The only true and noble position which Great Britain ought to adopt towards India was clearly perceived and frankly acknowledged by one of the greatest of Indian Viceroys—Lord Ripon—who, in addressing the University of Bombay, in 1894, expressed himself as follows :—

I am very strongly impressed with the conviction that the spread of education, and especially of Western culture, carried on as it is under the auspices of this and the other Indian universities, imposes new and special difficulties upon the Government of this country. It seems to me, I must confess, that it is little short of folly that we should throw open to increasing numbers the rich stores of Western learning; that we should inspire them with European ideas, and bring them into the closest contact with English thought; and then that we should, as it were, pay no heed to the growth of those aspirations which we have ourselves called forth. To my mind one of the most important, if it be also one of the most difficult, prob'ems of the Indian Government in these days is, how to afford such satisfaction to those aspirations and to those ambitions as may render the men who are animated by them the hearty advocates and the loyal supporters of the British Government.

A few years later, Lord Cromer, who was Lord Ripon's Finance Minister and one of the most successful of Britain's Pro-Consuls, placed on record the following opinion :—

It is only what ought to be expected by every thoughtful man, that, after fifty years of free press and thirty years of expanding education, with European ideas flowing into the country on every side, and old indigenous customs, habits, and prejudices breaking down, changes should be taking place in the thoughts, the desires, and the aims of the, intelligent and educated men of the country, which no wise and cautious Government can afford to disregard, and to which they must

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gradually adapt their system of administration if they do not wish to see it shattered by forces which they have themselves called into being, but which they have failed to guide and control.

More notable still was the pronouncement made to the Elphinstonians of Bombay by Sir William Lee Warner :—

It is no narrow principle of a paternal Government or a rule for the benefit of the ruler which sent forth the Roman with this poet's sailing orders.

'*Tu regere imperio populos Romane memento*,' or which fostered differences as aiding the central authority, *Divide et impera*. Its aim is less to govern than to call forth the progressive capacity and to teach self-government. It desires to lift up the lower ranks of society and the subject to the pedestal of the ruler. 'Humanity,' and 'Heaven's light our guide,' are its watch words, and they are embodied in your *Magna Charta*, the Queen's Proclamation, issued by the ruler whose authority had just been defied and restored by the sword . . . . . There are three supreme ideas of mankind, the family, the nation and humanity. The Hindu and the Greek ruler thought of the first, the Roman Empire of the second ; but the British nation accepts the last and highest as its ruling idea. . . . . I venture to point out to you that from God's nature the British nation has learnt the grand idea of humanity, and that the legislation and administration of India under the Queen bears testimony to Her Majesty's desire to recognize a progressive future as before all those committed to her care. The protection of the weak, equality in the eye of the law, justice, and a common participation in the benefits and when the time comes, in the task of good government are at least the aims which the British Government sets before it.

And if further evidence were needed to show how truly noble was the ideal of the older generation of Anglo-Indian administrators, we have only to recall to our memory the famous letter addressed to the late Mr. Gokhale, in 1905, by Mr. Hodgson Pratt :—

"Fifty years ago," writes Mr. Pratt, who in those days was a member of the Bengal Civil Service, "while India was still under the Government of the East India Company, it was considered both just and wise to introduce measures for national education on a liberal scale, with adequate provision of schools, colleges, and universities. This event was hailed with lively satisfaction by the native population as heralding a new era of social progress, and as satisfying the active intelligence of the Hindus. Now it must be observed that the character of the teaching thus inaugurated by Englishmen would necessarily reflect the ideals which have for centuries prevailed among them. In other words, Indian youths would be brought up to admire our doctrines of political liberty, popular rights, and national independence ; nor could it ever have been supposed that these lessons would fall upon deaf ears and cold hearts. On the contrary, the inevitable result of such teaching was clearly perceived by the Government of those days, and was regarded in a generous spirit. In support of this assertion I may mention that at the time of the inauguration of these measures I accompanied the then Lieutenant-Governor of Bengal (Sir Frederick Halliday) on one of his winter tours through the province. Naturally, he called the attention of those who attended the public meetings held by him to the new education policy, and he always took occasion to declare that the schools would promote one of the leading purposes of British rule, *which was to prepare the people for self-government*. It certainly was not supposed that at any subsequent time a policy would be adopted, which would disappoint the legitimate hopes thus created."

With such a lofty ideal of the political destiny of India placed before them, fed up on the writings of Milton and Burke and Mill, with their minds fully stored with the great history of the struggles for constitutional freedom and liberty in England and other Western countries, and above all ever inspired by the higher ideals of English life and character, is it a matter for wonder, or in any way unnatural, that India has been steadily gazing at the goal of Self-Government? The leaven had begun to work; the national consciousness of the people began first to manifest itself when systematic attempts were made to defeat, to nullify, to render into a farce and a sham Clause 87 of the Charter Act of 1833. Requests and remonstrances for the fulfilment of the pledge contained therein proved in vain and a regular howl was raised not only in Bengal but throughout the country when a deliberate attempt was made to frame a law that candidates for the Indian Civil Service should not be more than 19 to 21 years of age at the time of examination, a period specially chosen to make it impossible for young Indians to go over to England and successfully compete there. Referring to the still unfulfilled and unredeemed Clause 87 of the Charter Act of 1833, Lord Lytton had observed in a confidential minute :—

No sooner was the Act passed than the Government began to devise means for practically evading the fulfilment of it. . . . . We all know that these claims and expectations never can or will be fulfilled. We have had to choose between prohibiting them and cheating them, and we have chosen the least straightforward course.

He added :—

Since I am writing confidentially, I do not hesitate to say that both the Governments of England and of India appear to me up to the present moment unable to answer satisfactorily the charge of having taken every means in their power of breaking to the heart the words of promise they had uttered to the ear.

Speaking on the same subject in the House of Lords on March 11, 1869, the Duke of Argyle avowed frankly :—

With regard, however, to the employment of natives in the government of their country, in the Covenanted Service, formerly of the Company and now of the Crown, I must say that we have not fulfilled our duty, or the promises and engagements which we have made.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The first effective obstruction to enable Indians to be placed "on an equality with the subjects of the British Crown," as promised by Queen Victoria was thus made. The Vernacular Press Act of Lord Lytton and the remission of the Indian cotton duties to propitiate the greed of Lancashire roused the feelings of the people to a still greater degree. Political agitation, quite on English lines, naturally followed and educated Indians, though few in numbers, began to talk of liberty and Self-Government. And as out of evil cometh good, fortunately for India, it was the beginning of the new national awakening which has been destined to play no mean part in the political development of the country. The great Imperial Durbar held in 1858 to announce that the Queen of England had assumed the title of the Empress of India proclaimed that the status of the Indian subjects of the Queen had been raised to the citizenship of the British Empire and from that time onward every Indian had been rightly dreaming of his rightful place in the Empire. The national feeling that had been roused still further gained in solidarity by the great religio-social movements like the Brahmo Samaj, the Arya Samaj, the Theosophical Society, the Ramakrishna Mission and other organisations formed and conducted more or less on similar lines. These led to a revival of the study of the ancient history and scriptures of the land and the mind that roamed over the "golden age of the past," now inspired by the Western spirit, began to contemplate on the glorious vision of the new dawn. While India was thus in a state of fermentation, religious, social and political, fortunately for it, on the heels of the exceedingly unpopular Viceroy Lord Lytton, came in Lord Ripon. That noble Viceroy, whose honoured name will ever be writ large in the pages of Indian history, freed the Vernacular Press from the fetters to which it had been subjected and realising the sacred character of the promises and pledges that had been made to the people of India by Her Majesty and her duly constituted representatives, formulated boldly his policy of Local Self-Government and thereby sought in true English spirit to lay the foundations of representative institutions in India. But he was not content with doing that only. He made also a brave and honourable attempt to amend the criminal law of the country so as to place the European and the Indian on an equal footing in the matter of trials and thus tried to redeem another sacred promise of Her Majesty. Anglo-India, official and non-official, combined together to thwart the Viceroy in his noble efforts and we have it on authority that a very serious attempt was made with the connivance of officials to forcibly deport Lord Ripon out of the country. But though his attempt to make the Ilbert Bill the law of the land failed and a compromise was effected by which the principle of the Bill was abandoned, Lord Ripon's regime gave a new impetus to the political life of the country. The great, the unique, and the unparalleled demonstrations held all over the country to bid him farewell may justly be termed a landmark in Indian history. When Lord Ripon left the shores of India the country was not in its normal mood. The tension between the Indian and European communities caused by the Ilbert Bill agitation was still lingering and when the diplomatic Lord Dufferin assumed the Viceroyalty "the fire was still smouldering." The cry of political liberty and political equality raised during the reactionary regime of Lord Lytton and re-enforced in strength and vigour by the Anglo-Indian opposition to Lord Ripon's benevolent attempts to raise the status and privileges of Indians gained more and more strength in the early years of Lord Dufferin's administration and, we have it on indisputable authority that the discontent that was smouldering was likely to produce danger, "tremendous in the immediate future."

It was just at this juncture that a distinguished Indian Civilian who loved the people of India as well as his sovereign realised that the time was come to gather together the forces that were then in operation and direct it to its proper channel. In the words of Allan Octavian Hume, whose memory will ever be cherished by the grateful millions of this land,

> no choice was left to those who gave the primary impetus to the movement. The ferment, the creation of Western ideas, education, invention and appliances, was at work with a rapidly increasing intensity, and it became of paramount importance to find for its products an overt and constitutional channel for discharge, instead of leaving them to fester as they had already commenced to do, under the surface.

Thus was laid the foundation of the great Indian National Congress. The movement was expressly intended

> to foster a wider altruism and a more genuine public spirit, by concentrating the most strenuous efforts on great national problems, and diminishing the absorption in local or purely selfish interests—to educate all who took part in it, not merely in the arts of public speaking and debate, developing the faculty of thinking out clearly opinions, and expressing them lucidly to others, not merely in habits of accuracy and research, but also in the practice of self-control, moderation and willingness to give and take—to educate them in fact into what has been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

described as a genuine Parliamentary frame of mind—to familiarize the country with the methods and working of representative institutions on a large scale, and thus, as this familiarity grew, to demonstrate to the Government and people of England that India was already ripe for some measure of those institutions to which the entire intelligence of the country so earnestly aspires.

The notification under which in 1885 the first session of the Indian National Congress was called into existence clearly stated that one of the objects of the future assembly was "indirectly *to form the germ of an Indian parliament which, if properly conducted, will constitute in a few years an unanswerable reply to the assertion that India is still wholly unfit for any form of representative institution.*"

In the second Congress the question of representative institutions for India was again debated and the Congress recorded its "fixed conviction that the introduction of representative institutions will prove one of the most important practical steps towards the amelioration of the condition of the people."

Henceforward the question of representative institutions was discussed in some shape or other, at almost every session of the Congress and in the words of one of the great orators of the Congress:

> We unfurl the banner of the Congress, and upon it are written, in characters of glittering gold, which none may efface, the great words of this Resolution: 'Representative Institutions for India.'

When the movement entered the second decade of its life more emphatic expression was given to the hopes and aspirations of the people "*to realise the dream of a united and federated India.*"

After this period the Congress had to enter on a new stage of its activities. Lord Curzon had become Viceroy of India with a flourish of trumpets about his love of India and his sympathy with its aims and aspirations. But the first year of his reign was marked by the reactionary policy of the Calcutta Municipal Act and an uneasy feeling crept into the minds of many people.

But the faith of the Congress was not shaken to any serious extent. It received with great enthusiasm a letter from Mr. W. S. Caine who had laboured not a little for the good of the people of India, in which he said of the Indian people:

> My belief in their future as a great Self-Governing portion of the British Empire, and my conviction of their natural capacity for Self-Government deepens and strengthens every year.

The President of the Congress, Mr. Romesh Chunder Dutt, who had just then retired from the Indian Civil Service after a long and honourable record of useful work and had even then acquired a reputation as a great scholar and historian, appealed to the authorities to remember that India, while loyal to the British rule sought "a large measure of Self-Government" and a "position among the modern nations of the earth."

One more year of the Curzonian regime and we find echoes of the cry:—

> But the times have changed, and the alien Government now ruling over us has entirely different ideas and constitutions. The English Government, though democratic at home, is imperialistic and bureaucratic here.

It is a significant commentary on Lord Curzon's statesmanship that he began his policy of reaction and repression and his many attempts to smother the growing ambitions of the people of India just at a time when a small Asiatic power had inflicted a crushing blow on Russia—the Colossus of Europe. When the news of the fall of Port Arthur was flashed forth, everywhere the feeling was that the world had witnessed the birth of a powerful Asiatic nation in a day. "The child of the world's age had proved to be its most remarkable offspring." Triumphant Japan stood "revealed in the full glare of a new light no longer in leading strings but capable of being, and fully determined to be, a dominant factor in Eastern Asia—a power to be reckoned with in any future political combination affecting the countries which faced the rising sun." The immediate and inevitable effect of the Japanese victory was to rouse the national self-respect of all the Eastern peoples and the strong belief in the capacities of Orientals to successfully imitate and adopt modern political institutions. The great leviathan China, roused to activity by the splendour of her neighbour, began moving with unprecedented rapidity in the direction of a liberal Government. In Persia, the Shah decided on the formation of a National Council to deliberate on all important affairs of State. While an absolute monarch like the Shah was progressing with the spirit of the times, nearer home, on the borders of India, the Amir of Afghanistan called into existence a "consultative assembly" with a view to enable the people to associate themselves with the work of the Government. While the "Unchangeable East" was trying to change itself rapidly, and while in China, in Persia and Afghanistan where English education had made little progress and little or nothing was known of the political teachings of Mill or Burke or Bright three great Oriental potentates had readily given up

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

their cherished notions of autocracy and parted with some of their powers and privileges, in India, Lord Curzon sitting safely in the citadel of Bureaucracy began talking derisively of the "microscopic minority" of fifteen million people who could read and write! He tried to arrest the progress of education, "to set back the dial of local self-government," to interpret the Queen's Proclamation in a "pettyfogging spirit" and, in the words of Dr. R. B. Ghose, to sacrifice the interests of the Indian people in order to conciliate English exploiters and administrators and "to humiliate not only His Majesty's Indian subjects but also the great ruling Chiefs." Above all by his attempt to break up the unity and the solidarity of the Bengalee speaking people, he "set Bengal in a blaze."

As the Hon. Mr. Gokhale pointed out:—

> To Lord Curzon India was a country where the Englishman was to monopolize for all time all power and talk all the while of duty. The Indian's only business was to be governed, and it was a sacrilege on his part to have any other aspiration. In his scheme of things there was no room for the educated classes of the country; and having failed to amuse them for any length of time by an empty show of taking them into his confidence, he proceeded in the end to repress them.

He created in the Indian mind a profound feeling of distrust and everything he did was calculated to convince the people more than ever that he was determined to prevent the onward march of the Indian people and keep them away, if not altogether divert them, from the path of Self-Government. Mr. Henry Nevinson, who made a tour in India during the period of Lord Curzon's Viceroyalty and who availed himself of every opportunity to study the genesis of the Indian unrest points out in his remarkable book on the "New Spirit in India": "Although no hard-and-fast line can be drawn in history, the arrival of Lord Curzon as Viceroy on December 30, 1898 marks a fully strong and natural division." No doubt between the year of the assumption of the direct Government of India by the Queen and the period commencing with the Viceroyalty of Lord Curzon, there was a constant attempt on the part of the bureaucracy to go backwards. But there were occasionally noble efforts made to move forwards also. But Lord Curzon it was who "set back the hand of the clock" and adopted a complete reactionary and retrograde policy. The support that he had from the Bureaucracy and the Conservative press at Home "gave a rude shock to the popular mind and the discontent which had long been brewing in the country burst into a flame." And so in 1905 everybody saw clearly "the beginning of the extraordinary ferment in Indian public life which has continued unabated to this day. Every responsible Indian politician warned the authorities of the serious consequences that were resulting from their reckless attitude and of the growing numbers of a class of people "who have lost all confidence in the good faith of Government and have persuaded themselves that England means to treat India as a mere pawn in her military and diplomatic enterprises, a close preserve for the classes and a happy hunting ground for the white adventurer." "In the general wreck of moderation and faith that followed," boycott of everything foreign was preached to the people and Swaraj held up as the goal of Indian aspirations. Quite "a radical and serious change had come over the spirit of the people." It was at this juncture that the Congress met in the sacred city of Benares under the presidency of one of the greatest Indians of modern times, Gopal Krishna Gokhale. In vain in his presidential address did he make an appeal to the authorities to give a right turn to the feeling of the people and make it a source of strength and not of weakness to the Empire:

> What the country needs at this moment above everything else is a Government, national in spirit, even though it may be foreign in personnel—a Government that will enable us to feel that *our* interests are the first consideration with it, and that *our* wishes and opinions are to it a matter of some account.

But Lord Curzon pursued his policy of reaction and repression. The patience of the people was tried sorely.

It looked as if the New Party had completely triumphed. What they were anxious for was repression, persecution and prosecution, all calculated to make the people lose faith in British rule; and Sir Bampfylde Fuller, apt pupil of Lord Curzon, and some of his officers were supplying a perennial source of arguments to the advocates of the doctrine of Swaraj. When the Congress met in Calcutta in 1906 "it was barely saved from a wreck by the reverence-compelling presence of Mr. Dadabhai Naoroji."

Dadabhai who throughout his life had been pleading for *British Spirit* and *British Justice* and denouncing everything *un-British* was emphatic in his claim that Indians should be in India what Englishmen were in their country. According to him there was only one remedy for the unrest and the economic evil which was at the root of Indian poverty. "*The whole matter can be comprised in one word, Self-Government, or*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Swaraj, like that of the United Kingdom or the Colonies." As to when a beginning should be made to enable the people to automatically develop full Self-Government, he gave the unhesitating answer: "*Not only has the time fully arrived, but it had arrived long past.*"

Under his presidency the Congress passed the following Resolution:—

That this Congress is of opinion that the system of Government obtaining in the Self-Governing British Colonies should be extended to India, and that, as steps leading to it, it urges that the following reforms should be immediately carried out:

(*a*) All examinations held in England only should be simultaneously held in India and in England, and that all higher appointments which are made in India should be by competitive examination only.

(*b*) The adequate representation of Indians in the Council of the Secretary of State and the Executive Councils of the Viceroy, and of the Governors of Madras and Bombay.

(*c*) The expansion of the Supreme and Provincial Legislative Councils, allowing a larger and truly effective representation of the people and a larger control over the financial and executive administration of the country.

(*d*) The powers of Local and Municipal bodies should be extended and official control over them should not be more than what is exercised by the Local Government Board in England over similar bodies.

Here is the message of India's Grand Old Man:

Self-Government is the only and chief remedy. In Self-Government lie our hope, strength and greatness. . . . I do not know what good fortune may be in store for me during the short period that may be left to me and if I can leave a word of affection and devotion for my country and countrymen I say: Be united, persevere, and achieve Self-Government, so that the millions now perishing by poverty, famine and plague, and the scores of millions that are starving on scanty subsistence may be saved, and India may once more occupy her proud position of yore among the greatest and civilised Nations of the West.

"Self-Government like that of the United Kingdom or that of the Colonies," that is what India should demand and for achieving it, she should strive her best. No obstacle could be considered too great to be overcome, and no sacrifice too dear to be made. The whole country was ringing with that cry and that was the only cry for the time being.

Some prominent members of the new party became everyday more clamorous and tried to form a political programme of their own in some respects inconsistent with the traditional aims and methods of the Congress movement. Nothing short, of the adoption of a universal boycott and of Swaraj or unrestricted Self-Government would satisfy them. And if certain extremists had been driven to the position of proclaiming complete Swaraj, the only excuse they could urge was that they had been forced to do so by the extremely repressive measures adopted by the iron hand of the bureaucracy. Maddened by official persecution in various forms, and distrusting the motives of the many moderate leaders who appealed to the members of the new party not to lose faith in constitutional methods of agitation nor in the higher purposes of British rule as stated by successive sovereigns and their accredited statesmen and administrators, they made a desperate attempt to capture the Congress and adopt resolutions to their entire satisfaction and alter the course of policy the Congress had hitherto adopted. But thoughtful Indian publicists who had for years been working constitutionally towards the objective of Self-Government on Colonial lines rallied their forces and the result was the unfortunate, yet memorable struggle at Surat. The time was come to definitely lay down in writing the objective of the Congress movement and the Convention at Surat which was attended by over 900 delegates definitely accepted it as the fundamental creed of the movement:—

That the attainment by India of Self-Government similar to that enjoyed by the Self-Governing members of the British Empire, and participation by her in the rights and responsibilities of the Empire on equal terms with those members is the goal of our political aspirations.

The creed of the Congress had once for all been settled and its constitution carefully drawn up but the work of the moderates had by no means been rendered easy and smooth. About this time it was fairly well-known that Lord Minto who found himself in a sea of troubles had, with the sagacity of the statesman, seen the necessity for some immediate changes and reforms in the administration of the State and in no wise undeterred by even the outbursts of anarchical crimes and outrages had strongly pressed on the attention of Lord Morley, the Secretary of State for India, the need for taking some immediate steps in the direction of associating the people with the government of the country. Of Lord Morley himself great expectations had been raised, and though he had been forced to give his sanction to some repressive laws and unjust deportations yet responsible Indian politicians looked forward to him, "the reverent student of Burke, the disciple of Mill, the friend and biographer of Gladstone," to courageously apply his liberal principles to the administration of India. There were some eminent Indians like Dr. Rash Behari Ghose who rejoiced that Mr. Morley was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

engaged "in digging the grave of the bureaucracy"; indeed "we can almost hear the thud of the spade and the music, yes, the music of the knell." He counselled his countrymen to be of good cheer. "For lo! the winter is almost past, the rain is over and gone, and the flowers begin to appear on the earth." The famous Minto-Morley Reforms were announced. "The clouds which had darkened the political sky" for a long time and which every one had watched "so long with fear and trembling had after all begun to dissolve in rain." Thanks to Lords Morley and Minto, the golden moment had been seized, and a new and a long wished-for policy of conciliation had been adopted. When, therefore, the Congress which in the previous year had broken up at Surat reassembled at Madras, there was a general wave of satisfaction that an important chapter had been opened in the history of the political relations between Great Britain and India. The President of the Congress rejoiced

> that the people of India will now be associated with the Government in the daily and hourly administration of their affairs. A great step forward has thus been taken in the grant of representative government for which the Congress had been crying for years. In a word we shall now have something like a constitutional government in the place of an autocratic and irresponsible administration.

He looked forward also *to a time* "*when an exultant President of the Indian National Congress will be able to announce to a united people, amid universal rejoicing, the extension to India of the Colonial type of Government.*"

But the joy of the people was destined to be short-lived. The task of framing the regulations for giving effect to the reform proposals had been entrusted to the bureaucracy and as if to be revenged on the public which had fought for the reforms, it virtually manacled and wrecked them. The method and manner in which the regulations and rules had been framed and worked which have virtually made the non-official members in the Legislative Councils impotent and driven many of them to despair will be described more fully when dealing with the problem of the reconstitution of the Indian Councils. Lord Minto, the noble Viceroy who did his best for India under the most trying situation was succeeded by Lord Hardinge and the Congress which met at Calcutta in 1911 "met in the full joy of the reunited Bengalees whose long suffering had been crowned with triumph, and who had heard the Partition of Bengal annulled by the King Emperor's own lips in the great Coronation Durbar at Delhi." More important still was the publication of the Despatch and the correspondence that passed between the Government of India and the Secretary of State on the administrative changes announced by H. M. The King Emperor and the recognition of the necessity of complete provincial autonomy.

The memorable passage in the Despatch laid down in clear and emphatic terms the ideal to be followed :—

> It is certain that, in the course of time, the just demands of Indians for a large share in the government of the country will have to be satisfied, and the question will be how this devolution of power can be conceded without impairing the supreme authority of the Governor-General in Council. The only possible solution of the difficulty would appear to be gradually to give the provinces a larger measure of self-government, until at last India would consist of a number of administrations, autonomous in all provincial affairs, with the Government of India above them all, and possessing power to interfere in cases of misgovernment, but ordinarily restricting their functions to matters of Imperial concern.

The real significance of this passage was thus commented upon on February 28, 1913, in a remarkable speech delivered at Cambridge by Mr. Montagu, the then Under-Secretary of State for India :—

> Where the difference lies is in this, that we have endeavoured to look ahead, to co-ordinate our changes in Bengal with the general lines of our future policy in India, which is stated now for the first time in the Government of India's Despatch that had been published as a Parliamentary Paper. That statement shows the goal, the aim towards which we propose to work not immediately, not in a hurry, but gradually.
>
> We cannot drift on for ever without stating a policy. A new generation, a new school of thought fostered by our education and new European training has grown up, and it asks, 'What are you going to do with us?' . . We have never answered that, and we have put off answering them for so long. At last, and not too soon, a Viceroy has had the courage to state the trend of British policy in India and the lines on which we propose to advance.

Lord Crewe, pulled behind by the reactionaries Lords Lansdowne and Curzon, no doubt tried to repudiate the hopes raised by the "exuberant language" of the Government of India. But neither his Lordship nor any of his successors could stay the march of India in any manner, and the great ideal of provincial autonomy boldly enunciated in an Official Despatch and firmly planted in the hearts of a people which must inevitably tend to Self-Government for India could not certainly be smothered even by the hand of a Secretary of State for India.

The official recognition of the principle of provincial autonomy was certainly a bright star helping the people to march onwards. But this was not all. There was visible on the politica

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

horizon another bright star which promised a great future for the country. For years attempts had been sedulously made by some of the enemies of Indian progress to separate Hindus and Mussalmans and further make the Mussalman community believe that their interests were distinct and separate from those of the Hindus and that it was not to their interest that they should join hands with their Hindu brethren in political agitation. Several leading Mahomedans and some of the truest and the noblest English friends of India like Sir William Wedderburn had been endeavouring for years to make the Mussalmans realise the imperative necessity there was for their working in amity with the Hindus for the common good of the country where they will be brought together in loving and brotherly service for the motherland. Thanks to the good offices of some of the distinguished leaders of both the communities like the late lamented Mr. Gokhale and H. H. The Aga Khan, the efforts to reconcile their differences met with happy response and all India rejoiced when the Moslem League at its session in 1911 also adopted the ideal of Self-Government for India. The Congress of 1913 placed on record its warm appreciation of the adoption by the All-India Moslem League of the ideal of Self-Government for India within the British Empire. It was happier still to express its complete concurrence in the belief the Moslem League had so emphatically declared at its last sessions that the political future of the country depends on the harmonious working and co-operation of the various communities. Henceforward Hindus and Mahomedans began to concentrate their attention on the one united ideal for them: "the India of the future will be a stronger, nobler, greater, higher, aye, and a brighter India than was realised by Asoka in the plenitude of his power, a better India than was revealed to Akbar in the wildest of his visions."

When the 29th session of the Congress met at Madras it was five months after the present great world war had commenced—a war in which Great Britain had joined and quite justly, to keep her solemn word with Belgium and above all to prevent the ruthless destruction of the rights of smaller nationalities; and the princes and people of India naturally rallied their forces to help the Empire in its great struggle for liberty and the cause of civilization. It was certain the war "will knock off the last weights of mediæval domination of one man over many, of one race over another" and no man can "bar the imponderable influences of an expanding world."

The alacrity with which India had proferred help by sending her troops to the battlefield in Flanders and the magnificent help rendered in various shapes to the Empire at a period of great crisis had touched the hearts of the English people and even politicians who had invariably in the past shown their stony hearts to the people of India acknowledged in exuberant language India's timely services, avowed that the old angle of vision had changed and Great Britain should no longer think of India as a Dependency but as a joint and equal partner in the great heritage of the British Empire. The Hon. Babu Bhupendranath Basu, whose duty it was to voice the aspirations of his countrymen, declared that what India wanted was neither subordination nor separation but "a joint partnership on equal terms."

The resolution on the subject, passed at the Congress, ran as follows:—

That in view of the profound and avowed loyalty that the people of India have manifested in the present crisis, this Congress appeals to the Government to deepen and perpetuate it, and make it an enduring and valuable asset of the Empire, by removing all invidious distinctions here, and abroad, between His Majesty's Indian, and other subjects, by redeeming the pledges of Provincial autonomy contained in the Despatch of the 25th August 1911, and by taking such measures as may be necessary for the recognition of India as a component part of a federated Empire, in the full and the free enjoyment of the rights belonging to that status.

The great war had afforded India an opportunity to demonstrate "the courage, bravery and tenacity of her troops even when pitted against the best organised armies of the world and also the capacity of her sons of all clans and nationalities to rise as one people under the stimulus of over-powering emotion." In the words of Mr. Austin Chamberlain, "the people of India, sepoys and Maharajas, villagers and highly educated public men, have given their support because they are deeply convinced that in this war the British Empire is fighting in a just and righteous cause. The Indian people have a high sense of right and wrong. They saw that in this war the Allies were in the right, and they regarded the cause of the Allies as the cause of India."

But "the real innerness of the striking manifestation of loyalty was," as correctly described by Mr. Charles Roberts, M. P., the Under Secretary of State for India, "to be found in the desire of the Indian peoples that Indian soldiers should take part in the war side by side with their British comrades."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The most striking and historic event of the war, an event calculated to produce consequences of a far-reaching character was, therefore, the participation of India in the world war of the Empire. In announcing the news of the despatch of the Indian troops to France, H. E. Lord Hardinge observed :—

> There is nothing like comradeship in arms and joint participation in the dangers and hardships of war to level distinctions, inspire mutual respect, and foster friendship. I cannot help feeling that as a consequence better relations will be promoted amongst the component parts of the British Empire. Many misunderstandings will be removed and outstanding grievances will be settled in an amicable and generous manner. In this sense, out of evil good may come to India, and this is the desire of us all.

Lord Hardinge's expectation was not in vain. The Indian troops which fought side by side with the troops from Canada, Australia, New Zealand and South Africa distinguished themselves by their gallant behaviour and splendid heroism and some of her distinguished sons were recommended for the coveted distinction of the Victoria Cross. In the words of Mr. Asquith "the battlefields of France and Flanders bore undying tribute to their bravery and devotion." Mr. Asquith proudly stated "he did not think that in all the moving exhibitions of national and Imperial patriotism which the war had evoked there was any which had more touched and rightly touched, the feelings of this House and the country than the message sent by the Viceroy of India announcing the magnificent response which the Princes and people of that country have made to our need." Mr. Bonar Law was more enthusiastic still and he made a very striking observation : "This assistance from India also was coming, not from force but from good-will, and he believed that it was coming because, on the whole, every one who left this country to take part in the Government of India, from the Viceroy to the humblest official, was inspired by the tradition that it was his duty, not to exploit India for the benefit of this country, but to rule it for the good of the people of India."

Among the numerous touching and grateful appreciations of British statesmen nothing had stirred the hearts and raised the hopes of the Indian people more than the notable statement of Mr. Bonar Law (at a great meeting at Guildhall, held on May 18, 1915, under the presidency of the Lord Mayor.) "The Dominions of the British Empire had not been created by the war, but the conditions had been changed by the war, and it was his hope, and if it was taken up in earnest while the metal was still glowing red hot from the furnace of war, he believed it could be done, that as a result of it we might see a Parliament of the British Empire, in which every part of that Empire, in proportion to its resources and its numbers, would share in the duty and the honour of ruling the British Empire."

Lord Crewe who spoke in the same meeting, in endorsing Mr. Bonar Law's sentiments regarding the hopes of the future, uttered the remarkable words:—"I would like also to think that the association of India and of the Colonies at such a gathering as this is a significant sign of the essential comprehension which, as the years roll on, would, as I firmly believe, sweep away all those obstacles of distance, of creed, or of race which seem to interfere with the complete union of the different members of the great Imperial Confederation—a union which would hinge upon the free activities of each, and which would be firmly based upon a common belief in the progress of the whole." At the same meeting Mr. Asquith referred publicly, in speaking of the services of India, to the greatness of the "Empire which knows no distinction of race or class where all alike are subjects of the King Emperor and are joint and equal custodians of common interest and fortunes." Lord Haldane made pointed mention of the fact that India had freely given her lives and treasure in humanity's great cause and "hence things cannot be left as they are." The mighty struggle had made every one "realise our oneness, so producing relations between India and England which did not exist before. Our victory would be a victory to the Empire as a whole and could not fail to raise it (India) to a higher level."

More hopeful still was the message which Mr. William Archer gave to the British democracy regarding its obligations to India. "It now rests with us to help her forward, honestly, diligently, and with deliberate, intelligent purpose, on the path which shall lead her out of tutelage, and up to the eminent place in which her innate capacities entitle her to the economy of the Empire and of the world."

All India was proud to learn that Great Britain had been impressed profoundly by "the spectacle of a whole nation from prince to peasant, rallying to her side and placing their resources and services unreservedly at her disposal. In the exuberance of her gratitude India was assured of her title to self-rule being recognised and to her being lifted from a position of dependency to that of partnership in the Imperial scheme." Sometime elapsed and there was a feeling

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that British enthusiasim would appear to have cooled down. Mr. Asquith had spoken of "the refashioning of the fabric of the Empire" and all over England the proposal that the ministers of the Dominions should be admitted into the Councils of the Empire had been received with great approval. The Prime Ministers of Canada and Australia had even been invited to attend the meetings of the Cabinet. The responsible minister who in answer to a question in the House of Commons had denied representation to India to the Economic Conference held at Paris, promptly sent Mr. Hughes of Australia to attend its sittings with Lord Crewe and Mr. Bonar Law: "In all the discussions very little reference to India was found, and what there was of it was not altogether hope-inspiring. The Secretary of State for India had hardly had a cheering or comforting word to utter during the whole of the sixteen months he had occupied the position of what Sir William Wedderburn once described as the seat of the Grand Mughal at Westminster. He had found time to put through Parliament two such uncalled for and retrograde measures as the Indian Civil Service Act and the Government of India Act, and the Prime Minister had spared Parliamentary time for their passage through both Houses in all their stages; but the annual debate on Indian affairs had been suspended and there had been no comprehensive, authoritative statement on the policy of His Majesty's Government in relation to India."

It would be idle to conceal the fact that an uneasy feeling began to creep into the minds of the people and responsible politicians felt that when the Colonies were trying to get a proper place for themselves in refashioning the fabric of the Empire, India's claims for equality of status and her right to share the privileges of the Empire were likely to be neglected. There was also a fear and a well-grounded one, that the Colonies also would obtain a voice in the administration of India and the idea of more masters for India was positively revolting to its sense of self-respect, and especially at a time when it was justly and anxiously looking forward to her proper place in the Empire. These circumstances gave a fresh impetus to India's demand for Self-Government and an insistent demand for a declaration of the policy of the State in regard to her political future. About the same period Mrs. Besant began to urge on the country the supreme need of following the advice of Mr. Bonar Law to strike the iron while it was hot and press the claims of India for autonomy with boldness, persistence and increasing vigour. By her forceful contributions to the Press, her touching eloquence and by her *brochures* and pamphlets she made the country from one end to the other ring with the cry of Home Rule. The attitude adopted by some of the Provincial Governments towards her, served but to give fresh stimulus to the cause she was advocating. A profound sense of the great danger to the Empire caused by the sudden outburst of the war had softened the rigour of the extremist school of thought and its adherents anxious to render every assistance they could to the cause of the Allies threw in their lot once more with the Indian National Congress and its avowed aims. When, therefore, the 30th session of the Indian National Congress commenced its memorable session in Bombay, under the presidency of Sir S. P. Sinha who had been in the inner Councils of the Government for some time he but gave expression to the prevailing feeling not only of the delegates assembled there but of the country as well when he proclaimed once again that the only satisfactory form of Self-Government, to which India aspires, cannot be anything short of what President Lincoln so pithily described as "Government of the people, by the people, for the people." In his presidential address he made an earnest appeal to the British nation to show its approval "of the goal to which we aspire." The Congress took a further step forward when it passed the following resolution:—

That this Congress is of opinion that the time has arrived to introduce further and substantial measures of reform towards the attainment of Self-Government as defined in Article I of its Constitution, namely, reforming and liberalising the system of Government in this country so as to secure to the people an effective control over it.

But more noteworthy still was the direction given to the All-India Congress Committee

to confer with the Committee that may be appointed by the All-India Moslem League for the same purpose and to take such further measures as may be necessary; the said Committee to submit its report on or before the 1st of September 1916 to the General Secretaries, who shall circulate it to the different Provincial Congress Committees as early as possible.

Accordingly the All-India Congress Committee invited proposals from the various provincial Congress Committees, considered all the suggestions and prepared a scheme at its meeting held at Allahabad on the 22nd, 23rd, and 24th April 1916. In November a joint Conference of the All-India Congress Committee and of the Moslem League deliberated over the scheme for over two full days, discussed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it again at Lucknow on the 25th, 26th and 27th December. The scheme was once again considered in the Subjects Committee of the Lucknow Congress and finally adopted unanimously amidst great rejoicings by the sessions of the Congress and of the Moslem League held about the same time in the historic city of Lucknow. While the Congress and the Moslem League Committees were preparing their scheme of reforms it was authoritatively known that the Government of India was at about the same time contemplating a Despatch to the Secretary of State on the question of the reforms and changes to be made in the constitution of the Government of India. It was then that the Nineteen Non-Official Elected Members of the Viceroy's Council felt it their duty to lose no more time in giving a reasoned statement of India's views and aspirations in a document to be presented in their name. This is the genesis of the Reforms adumbrated in the Memorandum of the Nineteen and in the scheme adopted unanimously by the Congress and the Moslem League and those that suggest that novel and revolutionary proposals have been sprung up on the authorities by the Indian people at a time when the Empire is in the throes of a tremendous struggle are consciously or unconsciously misrepresenting the motives and actions of the Indian leaders. Many of the reforms advocated are as old as the Congress itself and self-government has been the objective from the beginning. "Generations of British statesman have repeatedly laid down that policy, solemn declarations of successive Sovereigns have graciously endorsed it, and Acts of Parliament have given it legislative sanction."

To use the words of Sir S. P. Sinha : "Autonomy within the Empire has been the accepted political faith of the Congress."

> I appeal to the British nation to declare their ungrudging approval of the goal to which we aspire, to declare their inflexible resolution to equip India for her journey to that goal and to furnish her escort on the long and weary road. Such a declaration will be the most distinguished way of marking their appreciation of India's services and sacrifices—her loyalty and her devotion to the Empire. Such a declaration will touch the heart and appeal to the imagination of the people far more than any mere specific political reforms.

The country is therefore fully justified in demanding a declaration of the policy of the Government in this respect. Of the immense political and moral value such a course would carry with it, very little need be said. The Rt. Rev. Dr. Whitehead, the Lord Bishop of Madras, who has known service in different parts of India and who has had abundant opportunities to study at first hand the conditions of India and the aspirations of its leaders, has suggested the very same course in a recent contribution to the *Nineteenth Century and After*:

> I cannot help thinking that in the same way the British Government would enormously strengthen its position in India if it were to make the self-government of India as an integral part of the British Empire its avowed object and ideal, encouraging educated Indians definitely to look forward to this ideal and shaping its own policy consistently with a view to this one great end. The Government would then practically adopt the platform of the Nationalist Party. There would be no differences between them as to the end at which they are aiming, and though there would naturally be much difference of opinion, not only between Englishmen and Indians, but also between Indians and Indians and Englishmen and Englishmen with regard to the particular steps that might wisely be taken at any particular time, still both alike would be working for a common ideal. The difference that this would make in the relations between the Government and the educated Indians as a body, as represented by the National Congress, would be immense. It would alter the whole of the political situation and would do more than anything else to allay the unrest which has been such a disquieting feature of Indian politics during the last fifty years, and it would give a consistency to our work and policy which at the present moment they do not possess.

His Lordship has rightly pointed out with considerable insight:

> The danger of the present situation consists largely in the fact that, with notable exceptions, Englishmen in India are not only opposed to the feelings and sentiments of educated Indians, but also to the inevitable tendency of their work and policy. We need to realise that we cannot now base the Government of India upon any other foundation than that of the will of the Indian peoples, that we are here as servants of the Indian people and not as their masters, that a foreign bureaucracy can only be regarded as a temporary form of Government, and that our ultimate aim and object must be to enable India to become a Self-Governing part of the British Empire, and to develop her own civilization upon her own lines.

But the Congress will not be content with a mere declaration of the policy of the Government in regard to Self-Government. It must, as a first step in that direction, take early measures for the introduction of such changes and reforms as are directly calculated to achieve the high purpose in view. The first great step necessary is the reconstitution of the Indian Councils, the Legislative and Executive Councils of the Viceroy and of the Provincial Governments. And only if this is done "hope may come where despair holds sway, and faith where doubt spreads its darkening shadow."

POST-WAR REFORMS : A SYMPOSIUM.

BY

THE RAJA VASUDEVA RAJA OF KOLLENGODE, C.I.E.

MY thoughts on the subject naturally arise mainly from the standpoint of the class to which I belong. I believe that no body of citizens is more vitally concerned in the scheme of political reforms than the large and ancient class of land-owning aristocracy which has been the backbone of the country. Any scheme that ignores or minimises this important class is sure to be disastrous to the country. In view of the esteem in which our Government have hitherto held the landholders, and in view also of the political position of the corresponding class in Great Britain, I feel assured that the interests and legitimate aspirations of the landholders will be duly considered in any scheme of Indian Reforms that may finally be sanctioned.

It is idle to deny that the people who ordinarily claim to represent Indian public opinion are not always friendly to the interests of the large owners of landed property. A certain class of politicians has almost adopted as its creed that members of the aristocracy are not much fit to hold offices or to represent general public interests. It is, therefore, not reasonable to expect that the aristocracy could feel safe in any scheme which will be dominated by this class of politicians. Unless, therefore, special arrangements are made for securing adequate rights and privileges to the landholders, they will, I am afraid, find themselves practically unrepresented, and exposed to serious risks in the name of representative Government.

While I agree to a substantial enlargement of the Legislative Councils, as suggested in the Memorandum submitted to His Excellency the Viceroy by the nineteen elected members of the Imperial Council, I am by no means convinced that a mere enlargement, however safeguarded, will assure adequate protection to all the varied interests of the country. If the Legislative Councils are to be invested with such vast powers as to give them practically complete control over the internal administration, the question has necessarily to be considered whether a single chamber system of legislature will be safe. I am speaking solely in the interests of the large landed classes. There are, no doubt, other important interests that would need protection. Democracies all the world over have shown a special tendency to tax property out of existence. It is always easy to propose and carry out measures of public utility if only the required money would come out of other peoples' pockets. In the present backward condition of industries and commerce in this country, the tendency to finance popular projects and industrial experiments by adding to the burden of taxation on land is all the greater. Under these circumstances, the desirability of constituting a second chamber of legislature consisting of representatives of the landholders and similar proprietory classes cannot be too strongly emphasised. The double chamber system prevails not only in England, but in all British Colonies and all countries which have adopted the British model. It is, perhaps, significant that while Indian politicians have persistently demanded self-government on colonial lines, they have not cared to urge the claims of the proprietory classes to have an upper chamber of Senate like those existing in the Colonies. Is it imagined that India alone can work representative institutions without the safeguard provided by a second chamber ? It seems to me that the power of veto vested in the Governor or Governor-General, or in the last resort, in the Crown, will be inadequate. For, in regard to contentious questions which arouse acrimonious discussion, the Governor or Governor-General may be seldom disposed to exercise the right to veto, for fear of being identified with the minority concerned. I would, therefore, urge my brother landholders to press at this early stage the demand for a second chamber of legislature in which they must have a preponderating voice, but which may also be thrown open to other large interests in the country. The details can be worked out if the principle for which I contend is accepted.

With regard to the suggestion that the legislature should have complete control over internal administration including finance, I fear there will be difficulties in practice. It is conceded that the Government of India should be independent of local control in respect of naval and military affairs, foreign relations, war, peace and treaties. Presumably in respect of these things, the Government of India would act according to the mandate of His Majesty's Government in England.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I am afraid this division of responsibilities into internal and external is not so easy as it seems. For instance, should the Government of India, after a review of external affairs, decide largely to increase the army in India and also to provide a navy for India, how are they to carry out their object? They could not have the requisite funds except under a vote of the legislature in India. To give power to the Government to provide for the external defence of India, and to leave it to the legislature to grant or deny money for the purpose, is the surest way of bringing about a breakdown of the whole system. The crux of all administration is finance; the distinction between external and internal affairs is unreal, and any scheme based on such a distinction is like building a house on quicksand. By all means, let us ask for a very much larger share in the management of our affairs than we now have, but it would be foolish to ask for a great deal more than is at all practicable, or to put forward proposals which could be easily demolished.

Proposals have been made, as regards the Council of the Secretary of State, either to mend it or to end it. Should the Council be re-modelled, I would ask that a moiety of it shall be composed of Indians, and in view of the large interests of landholders, I would also ask that a clear third of the Indian Members shall be from our class. It is not clear what exactly we stand to gain by securing "men who have made their mark in British public life" in the India Council, or in our Executive Councils. Considering the way in which the party system of Government works in England, the chances are that men will be put in, not so much for their personal merits as for party services. The kind of men contemplated are probably those who, in the House of Commons and elsewhere, strive to serve Indian interests. But such men generally may not care to get into these Councils nor are they likely to be appointed. The whole thing will gradually degenerate into a matter of patronage and prove a fruitful source of complaint against the fitness of the persons selected. The idea underlying the proposal seems to be, that the English public men in the Council will make common cause with the Indian Members as against the Anglo-Indian officials. May not the end be achieved in a more direct manner by increasing the Indian element?

There is much to be said in favour of the proposal that half the number of members of the Executive Council should be Indians, and I trust that the authorities will be convinced of the justice and propriety of this idea. I would add that at least one of the Indian members should always be a representative of the landholders. I cannot, however, accept the suggestion to remove the statutory obligation that a certain proportion of the Executive Councils shall be selected from the public services in India. The effect of this will be that non-official Europeans, such as merchants and bankers, will be eligible for appointment to the Councils. Are not the non-official Europeans in some respects even more uncompromising opponents of Indian aspirations, as popularly understood, than officials? For instance, on the question of our economic advancement, do we not find English merchants and bankers so wedded to the existing system of exporting raw products and importing manufactured articles that it is difficult to convince them of the need for change? Can we reasonably expect them to support a policy of creating and enlarging local industries, such as would reduce the volume of our present export trade and also reduce our need of imported articles? As I have already said, it is very doubtful if we would secure the services of the right sort of men from British public life. If one-half of the members of the Executive Councils are Indians, that should be sufficient for the present.

I have also serious doubts as to the wisdom of the suggestion that all members of an Executive Council should go out when the Viceroy or Governor lays down his office. If the entire personnel of a Government suddenly changes, it will be difficult to maintain the equilibrium of the administration and a continuity of policy. Whatever may be the merits of such a system elsewhere, it does not appear suitable to the present or proposed constitution of India. The experiment was some time ago tried in one of the important States of Southern India, when the Dewan and his Councillors retired simultaneously, and the experiment has not been repeated.

I cordially support the other proposals, namely, the admission of our people into the Naval and Military services, allowing us to enlist as volunteers and to carry arms on the same condition as Europeans, and abolishing all racial or class restrictions on recruitment to the public services. It is also quite reasonable that, in any scheme of Imperial Federation, India should be given a place similar to that of the Colonies. I see no reason why the other partners of the great British Empire should not welcome our company in their deliberations affecting the common interests of the Empire, in which our stake is no less than theirs.

THE MAXIMS OF TIRUVALLUVAR

BY

THE HON. MR. JUSTICE T. V. SESHAGIRI AIYAR.

AS a student in the college classes, I read portions of the Kural and of the Kambaramayanam, prescribed by the University. I loved them both. I have since been trying to acquaint myself with the glories of the Sanskrit literature. This desire has so possessed me that I could find no place in my heart for Tamil. Quite recently, I heard discourses on Valmiki. The Baghavathar is as great a student of Kamban as of the Sanskrit poet. The comparison and contrast which he brought out between the versions of the two great poets left in me a desire to go back to the love of my younger days, and I have since been having a peep into Kamban whenever I could find time.

Fate seems to have ordained that Kambaramayanam's twin sister, the Kural, should not be neglected. The Editor of the *Indian Review* has placed that temptation in my way. I have read the English rendering of the Kural by V. V. S. Aiyar * and feel that I have too long stayed away from the pleasures which I once keenly enjoyed.

The Kural marks the high water tide of the Tamilian culture and civilisation. It is not an adaptation from any known Sanskrit treatise. It is a deliniation of character in all its aspects which the ancient civilisation regarded as the ideal. If the first century of the Christian Era (which apparently gave birth to the poet) could have influenced ideals and thoughts in the way they are depicted in the Kural, the Tamils can justly boast that they had reached a standard of life and of polity when the world, as we know it now, was in its infancy, which have not been very materially added to since. The Christian missionaries, who translated portions of the Kural, have claimed for its teachings the influence of the first apostles of Christ. I consider this a great tribute to the universality of the lessons inculcated in the book.

The greatest merit of the book is its simplicity and directness. One feels as if he were sitting under the feet of a world-teacher in reading the verses through. There is absolutely no sectarianism in them. Another striking feature is the instilling of wisdom not by declaiming against the futility of the pleasures of life, but by and through them. A cheery and optimistic view of life is the predominent note. The author is at his best when he speaks of domestic life. A love of the things of the world—wife, children and wealth—is not regarded by Tiruvalluvar as so many hindrances in the path of salvation, but as easy gradient steps which when trodden on with purity and foresight would each bring the gate of Heaven nearer to the aspirer. In this, the poet excels even Lord Buddha. The blessings of a married life are the theme of many a beautiful verse ; "Those alone can praise the sweet sounds of the guitar and of the fiddle who have not had the good fortune to hear the prattle of their children." Nothing but human experience and an instinct which is the outcome of the liveliest home recollections could have given utterence to such a sentiment. As a tribute to the terseness of its sayings and the profoundity of its wisdom, it has been said of the Kural, that it is like a mustard seed into which had been extracted the essence of all that is best in the seven oceans. This is not altogether a hyperbole. Those that have the will and the knowledge to understand the Kural cannot fail to appreciate the truth of the saying.

The scheme of the book is in harmony with its teachings. The introductory portion begins with the praise of God and ends with the glorification of righteousness. Part I is divided into two sections. In the first section, the virtues of the householder are extolled. The second section deals with the life of an ascetic. It is clear that this second phase of life is not to be adopted by one who wants to fly away from the world ; but as a denouncement to be sought after after having lived the life of a virtuous house-holder. As Lord Sri Krishna has said before, Tiruvalluvar preached that the highest form of renunciation is not that in which helpful action is avoided, but is one in which ill-conceived desires are killed.

The second part is concerned with statescraft. It is much on the lines of the Panchatantara, the Arthasastra of Koutilya, and the writings of Machiavelli. There is more robust common sense in these verses than one can find elsewhere. Thiruvalluvar considered eloquence as a necessary adjunct for a councillor of the State. At the same time, he said "verily they have a passion for

* Published by the Author at Pondicherry.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

much speaking who know not to say their mind in a few well-chosen words." Many a platform orator might well follow this caution.

The third part depicts the course of true love. All writers of the old school have in this respect chosen for their theme a period of separation between the lovers. The strength of affection, according to them, is best tested when lovers meet again after a time of enforced absence. Kalidasa's "Megasandesa" is conceived in that spirit. So also the exile of Sita in Lanka. Similarly Thiruvalluvar makes the hero depart to a battle field after a brief spell of married life. The longings of the husband and of the wife and their subsequent reunion are told exquisitely.

I must say a word about the English rendering. It seems to me that Mr. Aiyar has rendered Thiruvalluvar in better English than Dr. Pope. The reason is not because Mr. Aiyar knows English better, but because he has understood the author more thoroughly. The translation brings out the meaning perfectly and deserves very high commendation.

I must not omit to say a word upon the well-written preface. It is a clear synopsis of the subject matter and explains satisfactorily the reasons which have led to the undertaking.

Lastly about the author. Unfortunately we have no authoritative records of his birth and antecedents. He is said to have been born of pariah parents. If that is so, the hold he has acquired upon the people of southern India testifies to the fact that high merit wherever found has been venerated in Madras. Nandanar, Nammalwar, Thiruvalluvar are names to conjure with. They are worshipped and venerated as saints. I do not wish to indulge in politics, but I would exhort my Brahmin brethren to continue to cherish for true merit and greatness, the same regard which their forefathers showed to the saints I have mentioned. If that is done, there must come love and co-operation. If the rallying point of all the sons of India be the exaltation of merit wherever it may be found, strife and lickerings must end and a common bond of brotherhood must prevail.

SUNDERING SEAS.

BY

D. G. D.

The day was loud with wind, and wild with rain,
"I know," he said, "she will not come again,
Alas! and I—I cannot go to her.
I have no blame to deal, she cannot stir
To wakefulness the old love that is dead,
The old dead love, ah me!" Above his head
The wind sobbed in the swaying ivy tree,
And, looking on the hills, he could not see
The grey rain reeling there, only he saw
A dark face, beautiful, rise up and draw
Near unto him from out the autumn day,
Gaze a brief instant there, and die away.
"Ah, thou art beautiful!" I heard him say
"My God how beautiful! Goodbye, goodbye."
The poor lips faltered as they spake the word,
The sad voice broke, sank as a sound unheard
Mingling with wind and rain; and then he tried
To call her name, but the word stumbling died
On twisted lips, and ere he turned to go
Seaward with his unfathomable woe
The tears (he had so long forbade to rise)
Came brimming through the brave reluctant eyes.
I saw his shoulders shaking in the rain,
And the writhing lips that fought to speak, in
[vain.

INVALIDID HOME TO INDIA.

BY

THEO. W. LA TOUCHE.

Lo! like a mother with her anxious arms
Outspread; with smiling eyes and radiant brow;
Her bosom pregnant with unutterable love,
Dear India greets our eyes, with dearer charms
Than when we left her shores; her peaceful
[palms
Waving gay welcomes to her sons, who now,
Sore bruised but cheerful homeward plough
The seas, from 'midst the battles deathful storms—
And now she clasps us fondly to her breast,
Exulting that her sons right nobly fought
And ranked amongst the bravest of the West!
While we, our deepest wounds at once forgot,
Rejoice with her, and wildly long again
To rush where glory shines—alas in vain!

Company *Vs* State Management of Indian Railways

BY

PROF. PANCHANANDAS MUKHERJI, M.A., F.R.E.S.

ENQUIRIES have recently been started by the Government of India regarding the comparative advantages and disadvantages of the two existing methods now in force of administering State-owned railway lines. These enquiries were suggested by the fact that they will have to give notice before the 31st of December 1917, if they desire to terminate the contract with the East Indian Railway Company, which holds the contract up to the 31st of December 1919.

The complexity of the question will be evident from the fact that three such expert bodies like the Chambers of Commerce in Bengal, the United Provinces, and the Punjab should hold quite distinct and opposed opinions on it. The Bengal Chamber is an uncompromising advocate of company management: it approvingly quotes the words used by Lord Dalhousie in his famous Railway Minute of April 20, 1853, namely, that—

> The conduct of an enterprise which is undertaken mainly for commercial purposes, and which private parties are willing to engage for, does not fall within the province of any Government: least of all, should it be taken as any part of the Government of India. One of the greatest drawbacks to the advance of this country in material prosperity has been the total dependence upon the Government in which the community has placed itself, and its apparent utter helplessness to do anything for itself. . . . The enlistment of private enterprise for the formation of these works, directly, but not vexatiously, controlled by the Government of the country, acting for the best interests of the public, was a principle for which I contended several years ago when closely connected with that branch of public works.

The Bengal Chamber also agrees with the more or less similar view taken by another authority, the late Earl of Cromer, when serving as Finance Member of the Viceroy's Council:—

> It is true, he said, that a railway is generally a practical monopoly. The State should, therefore, exercise so much supervision over its working as will prevent the monopoly from being exercised in a manner detrimental to the public interests. Thus the State should possess a right of inspection in order that the line may be certified by competent authority to be safe for the transport of goods and passengers. It should regulate the maximum tariff, and fix the gauge on which the line is to be constructed. It is specially necessary that a conditional right of purchase, after the lapse of a certain period, should be reserved. But when provision has been made for these, and some other points which I will not now enumerate, the necessity for State interference ceases.

The Committee of the United Provinces Chamber of Commerce are, on the other hand, of opinion that the Government should have the direction and working of all State-owned railways in their own hands in preference to entrusting them to private companies. They urge that almost all the principal railways in India belong to the State and that it is of greater advantage to the country that they should be worked directly by the State than that the management should be handed over to the companies.

The Committee of the Punjab Chamber of Commerce adopt a view which is a compromise between the two opposing views. They are of opinion that the well-balanced arrangement that at present exists of Company and State management under the control of the Railway Board should not be disturbed.

When there is such pronounced diversity of opinions on this question, it would seem to be presumptuous on my part to enter into a discussion. But I believe that a useful purpose would be served if the arguments pro and con could be dispassionately examined and criticised with a view to arriving at some sort of a workable policy. But before doing so, it would be useful to know the true position of existing railways in India, in order to understand the precise nature of the alternatives we are discussing.

As is well-known, the railways first constructed in India were built between 1850 and 1869 by companies under contracts with Government, which guaranteed to them a fixed interest on their capital; and they were also given their land free of charge. Under all these contracts the State reserved the power to purchase the lines at the end of 25 or 50 years—this power of the State to purchase railways on certain conditions and at stated periods has all along remained the bedrock policy of the British Indian Government, which has frequently exercised this power.

It was Lord Lawrence who, in 1869, wrote a very able minute on the question of Company management *vs.* State management, strongly advocating the entire reversal of the Guarantee policy and replacing it by a system of State construction and direct State management. His policy was accepted by the Duke of Argyle, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

then Secretary of State for India, and remained in force for ten years. Meanwhile famine, war and currency difficulties conspired to make the Government give up the newly adopted system. So, in 1879, companies were again allowed to enter the field, and from that year till now the construction of railways has been carried on, partly by the State, and partly by companies with capital raised partly by Government and partly through the agency of companies. A great majority of the lines taken over by the State were leased to the then existing companies, and have continued to be worked by them; but three important lines, the North-Western, the Oudh and Rohilkhand, and the Eastern Bengal, are worked directly by State administration. The only lines of any magnitude, which are not owned by Government, are the Southern Punjab and the Bengal and North-Western, but of these and also of the branch line companies, Government holds the right of purchase at certain dates.

The actual position, then, is that Government either owns, or can be the owner of, all the important railways in British India, and that of those which it does own, it works three itself, representing a total mileage of 7,000 miles and has leased the remainder to companies representing a total mileage of about 19,000 miles. But its responsibility does not end here. Under its contracts with the Companies, the State undertakes to supply the companies with capital. The raising of capital by the companies themselves is also provided for, but the amount so furnished represents relatively a small proportion of the whole. The contracts also give the State power to require companies to carry out alterations or improvements in the line or in the working, such as may be thought necessary for the safety of the public or for the effectual working of the line, and the rates and fares charged are subject to maxima and minima fixed by Government. The relationship between the State and the Companies is, in fact, not unlike that of a partnership in which the State, having in the past provided the bulk of the capital, and still providing the bulk of what is now needed for the extension of the business, is the senior, and the several companies, the junior, partners. This is, of course, a very different position from that which usually obtains in a country like the United States, where railway management is left entirely to private enterprise.

In the very beginnings of railway development in India, in the year 1853, Lord Dalhousie recorded in his Minute this governing principle of the maintenance of control in the hands of the State; to this policy, whatever other fluctuations of railway policy there may have been in the past sixty-three years, the Government of India have steadily adhered.

> I heartily trust, he wrote, that the East India Company and the Government of India may hold by the principle on which they have acted in the present case. I trust they will ever avoid the error of viewing railways merely as private undertakings and will regard them as national works over which the Government may justly exercise, and is called upon to exercise, a stringent and salutary control. This control should not be an arbitrary right of interference, but a regulated authority defined and declared by law, which is not to be needlessly or vexatiously exercised, but which, in my judgment, is necessary at once for the interests of the State and for the protection of the public.

The fact that this principle has been steadily maintained means that any discussion of what is loosely termed nationalisation of railways starts from very different data in India than in most other countries, where railways are managed by private enterpise. For the greater part of our railways are, in one sense of the word, nationalised already in that they belong to the State. Those which are worked by the companies are subjected to a far greater measure of control than is usually associated with working by private enterprise. What I mean to discuss in this paper is not *nationalisation*, as it is usually understood, but the important problem of whether, as opportunity offers, the sphere of Company working, or the sphere of working by the State, should be extended.

Ideas of State socialism have a very strong hold on the minds of the majority of Indian publicists, who advocate the Belgian and Prussian system of entire State construction, State management and State development of railways in India. In the sessions of 1914 and 1915, resolutions were moved in the Indian Legislative Council advocating the State management of Indian Railways on the following, among other, grounds:—

1. The saving to the State of the shares of profits now paid to the Managing Companies and the consequent relief to the Indian taxpayers.

2. The development of trade and commerce on national lines instead of the present artificial diversion by means of block rates.

3. The promotion of inter-provincial trade.

4. The growth and development of interests, specially in the interests of this country.

5. The centralization of control in a single State Department located in India and amenable to Indian public opinion, instead of in Boards of Directors in London.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

6. The possibility of improving the conditions of third-class passengers and of facilitating easy movement of labour from province to province.

7. The provision of employment of larger numbers of Indians.

8. The removal of any future possibility of strikes among railway employees.

Without going into a discussion of the validity or sufficiency of these arguments for supporting the State management of railways in India, I desire to point out my doubts and difficulties about some of them. The present cry for direct State construction and management of railways in India would seem to imply a policy which would leave the promotion and development of all future railway enterprises in India to Government and Government alone. But would it be possible for the State, unaided by private effort, to afford railway facilities throughout the length and breadth of this vast continent? There are specially times of stress and difficulty when the State would find it almost impossible to divert its funds to railway construction. Moreover, feeder railways, which are an urgent necessity in most parts of the country, can develop rapidly and on sound lines with the aid of private companies.

In these days of decentralization and devolution, it is not prudent to centralize such a big administrative department: in a vast continent like India, the whole administration of railways in one hand will not be easily manageable. The Government of India is already overburdened with diverse economic activities which are left in private hands in other countries. To saddle them again with another such heavy charge would be an undue and needless change of policy.

I cannot understand why it is supposed that State management of railway would put an end to all possibility of strikes among the railway employees. The following extract from Pratt's "State Railways" (p. 37) will show that strikes are as likely to take place under State management as under Company management:—

> The danger which may arise from the fact of a large body of workers in a country or a colony being in the direct employment of the State was well illustrated by the strike of engine-drivers and firemen in Melbourne in 1903 . . . . . The engine-drivers and firemens' society gave 15 hours' notice to the Premier that unless he withdrew his own notice, all the men would leave work.

Happily in this case the public took the side of the Government and the strike collapsed. If the strike happened under company management, the State, as an impartial authority, could intervene and bring about an amicable settlement. If it took place under State management—there would be no appealing authority and either party must have to submit. Indeed, it has always seemed to me that the reason which was adduced by J. S. Mill to support a second legislative chamber equally supports the policy of the State's holding aloof from the direct management of railways and acting the part of a second chamber in railway administration. One of the chief arguments brought forward in favour of the State management of railways is, that the profits which now go to the pockets of the Company will fill the coffers of the State. I venture to think, however, that if the various (very reasonable) demands that are made on railway companies (*e.g.*, the improvement of the conditions of travel of third class passengers, the encouragement of indigenous industries, etc.,) were to be satisfied by the State when it took over the management of the railways, the railways, instead of showing a margin of profits, may prove to be a burden on the taxpayer, specially when it is borne in mind that the cost of State-management is greater than that of Company management.

The doubts and difficulties expressed above make me hesitate to support a policy of entire State management of railways. At the same time I do not think that the present system is faultless. Some defects of the present system are very glaring and need prompt remedy. Great harm is done to agriculture and industry by the system of block rates followed by almost all railway companies in India, except the East Indian Railway Company—the system through which one railway company is enabled to charge a specially high rate, generally the full maximum rate authorised by Government, for short distances over its own railways in order to prevent goods getting on to another line.

Complaints are not uncommonly heard—specially in the course of the evidence before the Indian Industrial Commission—about difficulties being experienced by new industries in the matter of railway facilities for the transport of raw materials and of finished products. Indeed, there is a close connection between the manipulation of railway rates and the industrial development of the country. Small concessions such as those made to the Tata Iron and Steel Works mean a great deal to new industries. It is gratifying to note in this connection that the East Indian Railway Company has taken the lead in making concessions to industries: it is to be hoped that its example will be followed by all the other railway companies. This will remove a grievance and help to develop Indian industries and manufactures.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I think it has been rightly urged (*a*) that extra profits in excess of the maximum 8 per cent. dividend earned by non-Indian private companies should be employed in further development of railways; (*b*) that the capital of railway promoting companies should be as largely indigenous as possible; and (*b*) that the higher railway appointments should gradually be thrown open to educated Indians.

To remove these defects and to effect these improvements, I do not think it is necessary for the State to take over the management of *all* the railways now managed by companies. On the other hand, the present system, under which Company-managed and State-managed railways *co-exist* and work under common regulations, should be continued. The chief reason for the co-existence of the two systems of railway working is thus admirably set forth by Thornton* :—

> The strongest, if not the only really valid, argument of general application in favour of non-purchase, and of leaving the companies in possession of their railways as long as they may be willing to retain them. Government proprietorship being meanwhile restricted to the lines which *Government itself has constructed, is the healthy emulation which might be expected to arise between State agency and Companies' agency when operating in close juxtaposition and almost within sight and hearing of each other.* Both agencies would then be, as it were, constantly on trial: both agencies would be ever aiming at an ever-rising standard of combined economy and efficiency, would show themselves studious to avoid waste, eager to adopt improvements, solicitous to attract customers by continual offers of additional accommodation; would, in short, present a spectacle of commercial competition conducive to the general good.

The State should, however, stipulate in future contracts with Companies to exercise more strict control over them, so that improvements necessitated by changed circumstances and altered public opinion may be carried out within the period of the contract. I think it can very well be stipulated in the new contracts, that resolutions on the railway administration of any line passed by the Indian Legislative Council, and approved by the Government of India, shall be binding on the companies. This would, I think, obviate many of the present disadvantages of company management and would also keep open the door of future reform on approved popular lines. Finally, it is very necessary that there should be greater publicity in the matter of railway administration in India—specially as regards the methods and principles of fixing rates and fares within the fixed minima and maxima.

* Indian Public Works, p. 70.

Why India Should Help the War Loan

BY M. DE. P. WEBB, C.I.E.

THE Indian War Loan has at length come to pass, and India can now stand proudly shoulder to shoulder with the other great Divisions of the Empire in the all important work of hurling back the forces of Evil by which we all are now attacked.

Many reasons have been given why the people of India should subscribe to the utmost of their ability towards the Indian War Loan just opened by Government. But there two which seem to me to stand out above all others; and they are these:—Firstly, *Self-preservation is the first law of nature.* India is being wantonly attacked by a treacherous inhuman foe both by land and by sea—by sea *via* the vast oceans away to the south, and by land *via* Persia, Mesopotamia and Egypt. Therefore, India *must* defend herself, or run the risk of being ravaged, pillaged, and destroyed. To defend India means a great Navy and a powerful Army, both of which cost money.

The second reason is that India is herself a great and powerful country with a history as glorious as that of most other great countries, and with a civilisation, a gentleness, and a philosophy that place her in the front rank of civilised nations. India well understands and thoroughly appreciates the obligation that rests upon every civilised human being to protect the weak, fulfil the promised word, and maintain name and honour untarnished. And so, when India sees the peace of the world and the very foundations of civilisation jeopardised by the covetous brutality of a military oligarchy in Central Europe—when India sees, innocent little countries like Belgium, Poland, Serbia and Montenegro "trampled into a bloody mire" by hordes of German savages in their insane efforts to overthrow France, Russia and Great Britain, then India claims in view of her traditions, her wealth and her power—nay, India *demands* that she shall be allowed to take her full and proper part in hurling back the enemies of civilisation and in restoring peace and order to an outraged world.

These are, to me, the two chief reasons why India which has already helped magnificently with men and materials, must now help with all her might and to the very utmost of her resources with her great monetary forces.

MR. V. P. MADHAVA RAO, C.I.E.

BY MR. CHIMANLAL MAGANLAL DOCTOR, M.A., LL.B.

Asst. Legal Remembrancer, Baroda.

MR. V. P. Madhava Rao, C.I.E., is one of the most prominent of Indian Administrators at the present day. He has had the unique distinction of having held the high office of Prime Minister in three of the most enlightened Native States, *viz.*, Travancore, Mysore and Baroda.

Mr. Madhava Rao has had the rare advantage of acquiring administrative experience and achieving distinction both under the British Government and the Governments of Native States. For, he entered Mysore service fully over a decade before the Rendition of 1881 and had already risen to a high position in that service when the State passed into the hands of His Highness the late Maharaja Chamarajendra Wodayar. Mr. Madhava Rao's career is particularly interesting as he is essentially a self-made man and has risen to his distinguished position by sheer force of character and by dint of honest substantial work. He proved a success in many departments of public service and showed beyond doubt that an Indian could fill with distinction any post however onerous and responsible the duties attaching to it may be.

Viswanath Patankar Madhava Rao comes of an ancient family of Mahratta Deshastha Brahmins, long settled in Tanjore, who are supposed to have emigrated from the Satara District to South India, in the wake of the Mahratta conquest of Tanjore. Born in 1850, he was educated in the Kumbakonam College under the distinguished educationist, Mr. W. A. Porter, and took the B. A. degree of the Madras University in 1869. Even in his College days, he was thought of highly by his Principal, who was much attached to him and who, struck by his "independence of thought" entertained a "high opinion of his personal character." In 1870 Mr. Madhava Rao entered the Mysore service as a clerk in the office of the Guardian of His Highness, the late Maharaja, and was soon made Head Master of the Royal School, where His Highness the late Maharaja was being educated under the guardianship of Colonel G. B. Malleson, C.S.I., Mysore being at that time under British Administration.

Mr. Madhava Rao was not long in service before he came under the notice of the British officers, who gave him a start in the general administration as Public Prosecutor. Captain T. G. Clarke, who was Commissioner of the Nandidroog Division, predicted for Mr. Madhava Rao even at such an early date, a brilliant future and wrote that :—

> Colonel Malleson under whom he (Mr. Madhava Rao) served, has also spoken of him in flattering terms and in entering the administrative branch of the service, therefore, he starts with a high promise of obtaining distinction in the public service.

Sometime later, Colonel T. Clerk, Commissioner of the Mysore Division, recorded of him, that :— "Mr. Madhava Rao's character was good and his abilities were of the highest order." In the course of a decade, when the administration was handed back to the late Maharaja, Mr. Madhava Rao had worked his way up through the different grades to the position of a Subordinate Judge.

Mr. Madhava Rao had, from the beginning, the rare good fortune of being associated with the ablest and most popular of the Dewans of Mysore, *viz.*, the late Mr. Rangacharlu. In fact, Mr. Rangacharlu had gathered about him a few of the rising and talented young men in the service. Mr. Madhava Rao was the youngest and the most privileged member of the circle, one of the most distinguished of the others being the late Sir Sheshadri Iyer, Mr. Rangacharlu's successor in the Dewanship. In this select circle the various administrative reforms set on foot by Dewan Rangacharlu were freely discussed and given shape to. Mr. Madhava Rao thus came to have intimate acquaintance with the details of administration, even before entering the administrative branches of the service. It is no wonder that, thus equipped, he was able to effect those administrative reforms in Travancore and Mysore as Dewan, which have already earned for him the warm appreciation and regard and gratitude of the people and of the Government.

On the death of Mr. Rangacharlu, Mr. (afterwards Sir) Seshadri Iyer succeeded to the Dewanship of Mysore, and Mr. Madhava Rao exchanged the Judicial for the Revenue Department and was, in a few years, posted as Deputy Commissioner of the Shimoga District. In Shimoga Mr. Madhava Rao proved himself an executive officer of the best type. His accessibility to men of all grades, his readiness to hear and redress grievances, the interest he took in the welfare of the agricultural population and the many works undertaken by him for improving the sanitation of towns and villages in providing drinking water, in opening out roads and in planting avenues and restoring irrigation tanks

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and generally looking after the interests of the people, won for him their love and respect. It was when he was Deputy Commissioner of Shimoga that the first town extension in the State was carried out by him in Sagar and the extension was named after the late Maharaja of Mysore. Sir Oliver St. John, the then British Resident, who happened to be touring through the District, formed a high opinion of him and congratulated the late Maharaja of Mysore in having in his service an officer of Mr. Madhava Rao's stamp. As Deputy Commissioner of Bangalore he devised and successfully carried out the system of granting relief to weavers who were almost the first to suffer when famine appeared. This system was subsequently adopted in Madras and has now become a recognised method of relief.

After being a District Officer for nearly seven years, Mr. Madhava Rao was appointed Inspector General of Police, and he has laid the Indian Community under a heavy obligation to him by having, as the First Indian Inspector General of Police, helped to dispel the then prevailing idea that Indians were unfit to hold independent charge of any office in which power of organization, firmness, initiative and resourcefulness are essential for the efficient discharge of public duties. As Inspector General of Police, he re-organised the force, improved its tone and established the well-known Police School at Bangalore, which has done so much useful work since and has served as a model for similar schools in Madras and Bengal. It was in connection with the Police School that Mr. Madhava Rao solved the problem of giving equality of opportunity to the different classes of the community for gratifying their legitimate ambition to serve in the Government of their country. Knowing that the classes who made good executive officers were rather backward in intellectual capacity, he decided to start a training school for the officers and graduated the test for admission so as to permit of young men of the intellectually backward communities getting an entrance into it equally with the more forward classes. Accordingly if the candidate was a Brahmin he insisted on his having passed the Matriculation examination as the minimum qualification in his case. For non-Brahmin Hindus he fixed the middle school test and for Mahomedans he was satisfied if the candidate could read and write and knew some arithmetic.

Such was the reputation Mr. Madhava Rao had acquired for himself as a capable administrator that when Mysore was threatened with plague, the Resident, Sir Donald Robertson, at once recommended him as the only officer who could be entrusted with the delicate and responsible duties connected with plague administration. Her Highness, the Maharani Regent, accordingly appointed him as Plague Commissioner in addition to his duties as Inspector-General of Police. This appointment afforded Mr. Madhava Rao an excellent opportunity for giving full play to his powers of organization and administration.

The difficulties connected with the enforcing of the rather severe measures which were then in vogue, such as compulsory evacuation and disinfection and getting the people exposed to infection to submit to inoculation are now matters of history. In Mysore there was even greater opposition to these measures than in other parts of India, but Mr. Madhava Rao rendered a good account of himself by carrying on the campaign with great humanity and firmness.

For his services as Plague Commissioner the Regency granted him a substantial bonus and the Government of India conferred on Mr. Madhava Rao the Companionship of the Indian Empire and also gave him the Kaiser-i-hind Gold Medal in the first year of its Institution.

While still engaged in the arduous work of Plague Commissioner, Mr. Madhava Rao was appointed a Member of the Council of Regency and was entrusted with the Revenue portfolio. In 1901 when his Highness the present Maharaja of Mysore was installed on the throne of his ancestors, Mr. Madhava Rao was specially selected to improve the working of the Revenue Department and was appointed Revenue Commissioner.

Mr. Madhava Rao was the first to be appointed as Revenue Commissioner, an office which was created with a view to securing greater and more direct control and supervision for the important branch of the administration which deals with land revenue and allied matters.

AS DEWAN OF TRAVANCORE.

After a couple of years' service as Revenue Commissioner and Councillor, Mr. Madhava Rao was, in March 1904, invited by His Highness, the Maharaja of Travancore, to be his Dewan. On the eve of his departure to Travancore he was specially entertained by the European community of the Civil and Military Station, Bangalore, in the Mayo Hall. Sir James and Lady Bourdillon attended it and Mr. Madhava Rao who was as great a favourite with the European as with his own community had a splendid send-off. The Resident, Sir James Bourdillon, used to say that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Mr. Madhava Rao's career had much in common with that of Sir Dinkar Rao of Gwalior. He was also entertained in the Mylapore Club, in Madras, where Sir S. Subramania Iyer and Sir Bhashyam Iyengar and the elite of Madras society joined in congratulating him and Travancore on his selection for the Dewanship of that State.

Within the short period of two years, as Dewan of Travancore, Mr. Madhava Rao managed to introduce reforms of a far-reaching character—reforms which any administrator would consider himself fortunate in being able to achieve during a whole life-time. First and foremost, stands the re-organization of the settlement department. The new scheme has since been worked out and has proved an unqualified success. It must also be mentioned that, in introducing the new scheme of settlement, Mr. Madhava Rao was able to abolish the obnoxious system of levying fines on Service Inam Lands, sometimes amounting to 25 and 40 times the assessment, before they were confirmed to the holders, as also the extortionate fines sometimes amounting to 40 times the assessment on what were called "escheat cases."

The accounts and finances of the State, which were in great confusion, were entrusted to a financial expert and the re-organization of the accounts and audit department within such a short time, elicited the warm approval of the Government of Madras.

Mr. Madhava Rao's energies were directed to other departments as well. A new Department called the Excise Department was organised and was made responsible for the management of salt, abkari, tobacco, customs and other items of separate revenue, yielding 45 lakhs or nearly half the total revenue of the State.

Much had been done for education in Travancore in previous administrations and in fact, Travancore stood first in point of expenditure on education in proportion to revenue and also in regard to literacy. During Mr. Madhava Rao's administration, the principle was laid down that no child in the State, whatever his caste or social position, should be allowed to grow up without the rudiments of education. As a first step towards realising this ideal, free education was given to all the backward classes.

Great abuses had grown up in connection with the management of temples in Travancore. Non-Hindus and the lower classes among the Hindus had to pay fines for polluting Hindu temples and sacred tanks without being given a chance to be heard in their defence. In performing the purificatory rites, the priest's decision as regards the ceremonies to be performed and the sums to be spent on the same was final and the civil authorities summarily levied the fines fixed by the priests. Minister after minister had allowed these abuses to take their course without check, but Mr. Madhava Rao was a man of a different stamp altogether. Within a few weeks of his taking charge of his new duties, he had to deal with a case in which unjust fines had been levied from innocent owners of animals and from Christians who were supposed to have polluted a temple. He quashed all the proceedings as illegal and the Maharaja of Travancore was soon persuaded to declare that the practice should be discontinued. The scale of expenses for the purificatory rites was to be fixed by a commissioner appointed for the purpose and thousands of rupees have been saved to the State as the result of this reform.

Another important measure and the one that will stand for ever as a memorial to the far sighted statesmanship of Mr. Madhava Rao's administration of Travancore is the institution of the Popular Assembly which meets and discusses public questions every year at the capital, under the presidency of the Dewan. Mr. Madhava Rao was later on able to secure from the enlightened Maharaja of Travancore the privilege of election for this unique institution.

But the measure that will ever be associated with his Dewanship and which has benefited the people most and entitled him to their lasting gratitude, is the abolition of what is known as taxation in kind.

The substitution of money payments at a reasonable rate was hailed by the ryots as an immense relief and when the abolition of payment in kind was announced, the Dewan was flooded with congratulatory telegrams and addresses from all parts of the country.

AS DEWAN OF MYSORE.

While engaged inseeing these reforms carried out, Mr. MadhavaRao was offered in March 1906, the Dewanship of Mysore, the State in which hehad spent the bestpart of his life. On the eve of his departure from Trivandrum Mr. Madhava Rao was given a magnificent send—off and presented with an address.

Mr. Madhava Rao's return to Mysore was hailed with acclaim by all classes of the people.

During the three years of his Dewanship the State made considerable progress in several directions. The machinery of Government underwent some notable changes. The Civil Service was re-organised and the competetive system re-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

introduced on an improved basis. A Legislative Council was established for the first time in Mysore. First steps were taken for the separation of Executive and Judicial functions. Rules were framed for the more efficient working of the district and taluq establishments. By means of agricultural exhibitions and demonstration of the working of improved implements and through the medium of the agricultural journal, knowledge of scientific agriculture was spread among the rural community. The co-operative movement received his special attention and a large number of societies were brought into existence replacing the agricultural banks which had proved a failure. The financial system was thoroughly overhauled. A famine relief fund was created in 1906-07 without dislocating the finances of the State and every year a sum of Rs. two lakhs is being added to it. A committee consisting of two Councillors was formed with a view to effect retrenchments in the departments in which costly establishments were being maintained without any adequate return for the money spent. Mr. Madhava Rao's policy was one of Retrenchment and Reform and Reduction of Taxation.

Among the more important of his fiscal reforms may be mentioned the abolition of the *Halat* tax which was a kind of export duty on supari and bore heavily on the supari industry. The abolition involved the surrender of a revenue of nearly 4 lakhs of Rupees. . . .

The rates were reduced by more than 50 per cent. and the tax abolished altogether. The result of this far reaching relief was seen in the revival of the industry within a few years and the return of prosperity to the tract. New gardens are springing up and depots for supari have been opened in Shimoga itself since the extension of the Railway to it. The evils of sandalwood monopoly were greatly mitigated and the ryots were given a share in the value of sandalwood growing on their lands. The municipal regulation now in force in the State, which was passed during his administration, bears evidence of his democratic tendencies. He was instrumental in giving a pure water supply to the important towns of Shimoga and Haripur. He was the first to realise the claims of outlying stations to have their requirements in the way of drainage and water supply attended to equally with those of the capital cities. A scheme for the improvement of the famous place of pilgrimage, Melkote, was sanctioned.

It was during his Dewanship that the question of the institution of the Department of Public Health assumed a practical shape and a regularly organised department with a qualified staff of sanitary officers for districts and taluqs under the control of a Sanitary Commissioner was brought into existence and it has demonstrated its usefulness by the good work it has turned out. Indigenous medicine received support, and a college for teaching Ayurvedic medicine was established in Mysore. The third installation of the Cauvery Power Scheme cost the sum of Rupees 12 lakhs, Electric light to the Civil and Military Station, Bangalore, was supplied and formally inaugurated on the 1st January, 1906.

That important branch of the administration *viz.*, Education, received full attention from Mr. Madhava Rao. It was during his Dewanship that Primary Education was made free, that the minimum pay of the village school master was raised to Rs. 10/-; that manual training and kindergarten were introduced in all the schools, as also religious and moral instruction.

But the distinctive feature which distinguished Mr. Madhava Rao's career from that of other Indian administrators is the recognition by him of the fact that no substantial or permanent good will result from merely improving the machinery of Government if the people are not trained in habits of self-reliance and self-help. Having been brought up in a district in which the village communal life was still alive although nearly smothered by the over-government of the bureaucracy, his ambition was to see the old village panchayet and village self-government restored to its pristime purity. The utter neglect of the village tanks in Mysore and the hopelessness of getting their repair and upkeep attended to by the Government agency suggested to him the idea of awakening and bringing into full play the old communal spirit which had helped to cover the whole face of India with self-governing village communities and which were described by early British administrators as so many little republics. He worked at this idea long and the presence of the Irrigation Commission at Bangalore afforded him an opportunity of framing a scheme of village self-government by first formulating proposals for the tanks in villages being handed over to a Committee of members elected by the villagers themselves.

Mr. Madhava Rao has had his full share of blame allotted to him in regard to two distinct measures. The first is the Mysore Mines Regulation of 1906. In regard to this legislation no elaborate attempt at justification is necessary. Sufficient answer to the criticisms passed on it is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

provided by the fact that it is no innovation and the Regulation was based on the facts bearing on the working of gold mines in Australia and South Africa. It must also be noted that he was only responsible for publishing the Regulation, it having been passed during the previous regime. The Newspaper Regulation is another measure that has been disapproved. It is true that certain of its features deserve to be reconsidered and Mr. Madhava Rao himself had prepared an amended Regulation in accordance with a promise he had given in the Representative Assembly but his term was over before it could be passed.

It will thus be seen that, on the whole, his three years of Dewanship in Mysore were marked by continued financial prosperity and he had a large share in the retrenchments made and reforms introduced in the different departments of the State. This is what the "Vokkaligara Sangha," an association formed for promoting the interest of the agricultural community of Mysore numbering nearly a third of the total population, said of his Dewanship, in an address presented to him immediately on his retirement:—

During your regime you inaugurated a number of reforms conceived in a liberal spirit, and there is no doubt, that they will promote the prosperity and the good of the people. The establishment of the Legislative Council for making Laws and Regulations, the organisation of a Department of Public Health for the prevention of disease and improvement of sanitation, the appointment of a veterinary officer to look after the condition of cattle, the publication of an agricultural Gazette for the dissemination of improved knowledge in agriculture, the popularising of the cattle shows and agricultural exhibitions, the gradual displacement of old agricultural banks by Co-operative Credit Societies, the creation of a Famine Reserve Fund, the raising of the minimum pay of the village school masters, the introduction of religious and moral education in schools and colleges, the abolition of school fees in village schools in order to place the benefit of elementary education within the reach of the poorest classes, the introduction of Sloyd and kindergarten instruction into schools, the elaboration of a system of local self-government based on the ancient Panchayat system in connection with the village Tank Panchayat Bill, the abolition of the sandal monopoly and of *Halat* or duty on arecanut are all notable events in your administration for which you have earned the gratitude of the people of Mysore.

Since his retirement from the Dewanship of Mysore Mr. Madhava Rao toured through the whole of India with a view to study the conditions of the different parts of the Empire. He like Swami Vivekananda, has been of opinion that for the uplift of India it is essential that facility should be given to the masses to learn Sanskrit, as it is through that language that direct access can be had to the ancient stores of Hindu culture and spirituality. He was of immense help to his Holiness the late Jagadguru of Sringeri, in founding what is known as the Indian Sanskrit Institute in Bangalore, where higher learning in Sanskrit is being imparted under the ancient method. There is a movement on foot to make the Institute the centre for combining the Pandit method with the critical method of Western nations.

As regards social reforms Mr. Madhava Rao's belief is that reform should proceed from within, to be of any value or permanence, as was seen in the Tiruvadi Parishad of Pandits, in December 1912. He is a staunch Hindu and his views on Hinduism may be gathered from the address which he delivered at the Parishad in Tiruvadi. He said in that memorable address:—

We have at the back of our religion and institutions philosophical truths, the validity of which has not been shaken hitherto and is not likely to be shaken in the future, and these central truths are common to all the sects that had their origin in India. . . . . Dr. Lefroy, Bishop of Lahore, is said to have remarked that even the poorest and wholly illiterate Hindu peasant will engage in the discussion of or in speculation in, the deepest philosophical or ethical questions. This is the culture which Hindu philosophy, which is at the back of the Hindu Religion has secured for India and on which the institutions which help man in his journey through life are moulded.

So far as I have been able to judge, Purusharthas mean that even in the pursuit of wealth, or rather in securing the means of livelihood and satisfying the reproductive instincts of the race, the Hindu is governed by the ideals of Dharma or Hindu ideals of social order and righteousness and that all his activities have emancipation as their final end.

Mr. Madhava Rao holds Indian ideals in high respect and thinks that Indian institutions are not as inelastic as people suppose.

This is what he said at the Parishad:—

Taking the broad periods from the Vedic times to the times of the Epics and from the times of the Epics to the time of Buddha and from the time of Buddha to what is known as the Puranic period and from the puranic period to the time of Sankara, there have been changes in doctrine, in practice, in institutions and customs and in the very Gods that were the object of worship, and even in the physical character of the people; but the basic ideas have persisted and maintained the underlying unity and the essential spiritual ideals of Hinduism.

The Parishad proved a great success and the opinions expressed by its members on various questions of social reform showed that the pandits were alive to the needs of the times and a large number of them gave Shastraic support to some of the social reforms. It will thus be seen that Mr. Madhava Rao is an enlightened Hindu with conservative instincts and not an iconoclast

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in matters of social reform and religion. He seems to have a stern historical sense in recognising the organic growth of Hindu society and its institutions, and does not wish to break away from India's past, but only looks to the evolutionary process for progress in such matters. In one word he has faith in evolution and not in revolution.

Mr. Madhava Rao identified himself with the District Conference in Tanjore and delivered an address at the annual meeting in 1913 at Shiyali. His address created some sensation as it contained a vigorous attack on the land policy of the British Government in ryotwari tracts. He condemned the system of the recurring settlements and said that that system had no justification either in ancient Hindu practice or in the teachings of economic science. His contention, in brief, was that there is no such thing as an unearned increment in regard to agricultural land.

In the beginning of 1914, he had taken up the question of the necessity of imparting instruction in non-language subjects through the medium of the vernaculars. One of the reasons which induced Mr. Madhava Rao to advocate the system was that it was necessary in order to bring the light of modern knowledge to the masses and to bridge the gulf between them and the English educated classes. In order to facilitate the making of vernaculars the medium of instruction, it is necessary, in his opinion, to have our provinces redistributed on a linguistic basis. These and other problems were engaging his active attention in his retirement. When he was thus engaged in public movements of various kinds, the call came from His Highness, the Maharaja Gaekwar, inviting him to take up the Dewanship of Baroda in March 1914.

AS DEWAN OF BARODA.

Soon after he took his office, Mr. Madhava Rao presided over the sessions of the local Legislative Council when the celebrated Baroda Purohit Bill was hotly discussed. The object of the Bill being laudable, the need for such a piece of legislation was accepted by a majority of the Legislative Council. Before discussing the details, Mr. Madhava Rao announced the postponement of the discussion on the Bill *Sine die*, so that both the people and the Government may have sufficient time to give fuller consideration to the details. Mr. Madhava Rao had a great hand in the modification of some of the objectionable features of the Bill, which he thought would work harshly upon the people affected, and the Baroda Purohit Act as sanctioned by his Highness the Maharaja Saheb, was published in the local "Government Gazette" at the end of the year 1915. On August 4th, 1914, war broke out between England and Germany, and soon after its declaration, Mr. Madhava Rao presided over a public meeting of the citizens of Baroda, when in a neat little speech he vioced the deep and abiding loyalty of the people and appealed to the people to subscribe to the Imperial War Relief Fund. In the year 1915, a Health Exhibition was held in Baroda to promote sanitation under the inspiration of Mr. Madhava Rao. It was the first of its kind in Baroda and was a great success.

In the same year Dr. Harold Mann of Poona, visited Baroda and gave some lectures at one of which Mr. Madhava Rao presided, when he, although the responsible minister of an important state, boldly advocated permanent settlement, and strongly denounced the policy of enhancing the land revenue assessment at every revision settlement.

By a strange coincidence, a few days after, the revision settlement of Mabuva Taluk of Navsari District came for sanction when Mr. Madhava Rao is said to have strongly advocated the cause of the ryots. In the end a settlement for sixty years was granted instead of for thirty years as originally proposed. The rates were heavy, but it was some consolation that they were not liable to be enhanced for at least sixty years.

During the same year the First Sanskrit Conference was held at Baroda, and a Sanskrit Pathshala was established as a result. The credit for the idea of holding such a Conference was given to Mr. Madhava Rao, by no less a personage than His Highness the Gaekwar.

In 1916 Mr. Madhava Rao organised the First Music Conference, and it is noteworthy that the sessions of that Conference proved a great success.

Mr. Madhava Rao, prior to retirement, went on a long leave of three months from 8th May 1916 with a reputation for sound statesmanship, independence, boldness, and as a tactful administrator.

He is essentially the people's man and as such his views on Local Self-Government and village panchayats and on the institution of Madhyastha Panchas (conciliators) are quite sound and democratic, as may be seen from his remarks regarding these subjects in the Baroda Administration Report, for 1914–15 which has been recently published. In the same Report he advocates the recruiting of the public services of the State by competitive examinations,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

view with which all men with practical wisdom will concur, in as much as we cannot expect a long succession of rulers, as able as the present enlightened Maharaja of Baroda who has the knack of selecting the right person for the right place. His views on the industrial problems of the State are full of sound statesmanship, and, if acted upon, it is quite certain, the State will very shortly reach a high stage of industrial efficiency. He also advocates improvements of administrative methods by the establishment of administrative research in order to bring the several departments of the State to an up-to-date condition and to remove antiquated methods and generally improve the methods of work. The writer of this sketch would like to draw special attention to the said Report for fuller information about Mr. Madhava Rao's bold and intrepid views on the several problems of the Baroda State. Its concluding chapter is the most important one, summarising as it does, Mr. Madhava Rao's opinions, while the chapter on local self-government will give the reader an idea of what Baroda has done and is doing with regard to village panchayats, taluk and local boards, district boards, municipalities and vishisht panchayats (special municipalities.)

Suffice it to say that his great administrative abilities, his democratic leanings, and his love of justice and fair play are bound to confer immense benefits upon the State and its subjects.

It can be seen from the facts already set forth, that Mr. Madhava Rao was out and out a people's man. A broad-minded toleration and a large-hearted sympathy for the wants and grievances of the people committed to his charge, and, a keen sense of justice to secure for them their just rights, are the characteristic and outstanding features of his administration. The establishment of the Popular Assembly in Travancore and the Legislative Council in Mysore was undoubtedly the outcome of Mr. Madhava Rao's liberal proclivities.

While Mr. Madhava Rao is out and out a people's man, he is not quite blind to the faults of his countrymen, and when he was Dewan of Travancore, he administered a well-deserved rebuke to the presenters of an address for representing only class interests, and during the course of his speech on that occasion in Trivandrum, he said :—

> I would advise you not to dissipate your energies in spasmodic efforts to ventilate class grievances, but proceed to form local and provincial associations on a broad basis, sinking all differences of caste and creed, and place before you the single aim of the good of your country and your fellowmen.

This is a piece of advice that is very often required as there is many times a tendency in our people to split and care only for their own communal interests.

Both as a man, and administrator, Mr. Madhava Rao is entitled to the admiration of his countrymen. His official career has been briefly noticed above and a passing reference made to his views on matters of social and religious reform. His force of character, his strong personality, his selfless devotion to the cause of the social amelioration of the masses, and his unpretentious religious life have always struck those who have come in contact with him as the keynote of his success in life.

Let us conclude this sketch with Mr. Madhava Rao's views on Native States, as he is the best living authority on the subject.

He thinks that the Native States are a great national asset and will play a great part in the work of National regeneration. The rulers and the ruled are bound together by ties of common traditions and sentiment, and the Native Rulers are always accessible to the humblest peasant to patiently hear his complaints, treat him with sympathy and then and there redress his grievances if they are convinced that a wrong has been done. The chord of sympathy that binds the rulers and the ruled makes the administration not a mechanical lifeless thing but a living reality to the people. There is a greater security of life and property in well-governed Native States like Mysore, Baroda, Travancore etc., than in British India. Native Princes have a better insight into the needs of their country and are enabled to introduce social legislation for the betterment of their subjects. Reforms like the Separation of Judicial and Executive functions and Compulsory Education, for which British India has yet to wait, have been introduced long ago in progressive Native States like Baroda and to some extent in Mysore, which shows the advantages of Native rule.

To these views of Mr. Madhava Rao, it may be added that the Native States have afforded the best field for the development of administrative gifts, powers of initiative and organisation in Indian administrators. They have produced such brilliant administrators as Raja Sir T. Madhava Rao, Raja Dinkar Rao, Sir Salar Jung, Rangacharlu, Sir Seshadri Aiyar and Mr. V. P. Madhava Rao himself who would have shed glory upon the cabinet of any European nation had they been born in those countries.

IN BRITISH INDIA.

Since his retirement from Baroda Mr. Madhava Rao has found time to devote himself more freely to the political, social and religious movements in British India. On the publication of the well-known Memorandum of the Nineteen Non-Official Members of the Imperial Legislative Council on Post-War Reforms, Mr. Madhava Rao gave his weighty support to them in an excellent contribution to the *Madras Mail*.

Presiding over a meeting of the citizens of Tanjore, he criticised the land policy of the British Government in unmistakable language :—

The survey *patta* was the first place, they have any policy at all (otherwise where is the difficulty in embodying in an enactment the principles on which land revenue should be assessed and settlements revised?) Just apply this principle of leaving everything to the bureaucracy, to the state of things that prevailed in England at the commencement of the present war. We should have had by this time the whole of India under the heel of Germany, not to speak of the humiliation of England herself and her reduction to a second rate Power. It is the fierce and relentless criticisms of the Press that showed up the weak points of the Cabinet and drove it to put its house in order. Contrast this with the state of things in India where, regardless of the teachings of the modern the charter of emancipated serfs. Taking the last pronouncement of the Government of India in resisting the proposals of the Deccan Decentralisation Commission, that from time immemorial the State is entitled to a certain proportion of the produce of the land, and the Government and its agents are the best judges of what the proper assessments should be in regard to different tracts of the country, the question arises how is the proportion to be fixed, who is to fix it, and whether the ryot, who is affected by the assessment, should be heard before it is fixed, so that agricultural industry in the land may be maintained at its highest efficiency. The contention of the Government is that its highly trained officers may be trusted to fix the assessment in a manner that will make the rates sit lightly on his ryots, and that, as a matter of fact, as the enquiry conducted during Lord Curzon's time showed the assessments were not excessive, that the settlement officers are sympathetic to the ryot and try to make his lot an easy one on the whole. All these proceed on the assumption that the Government agency is infallible, that all its members at all times are animated by the same feeling of sympathy and desire to be moderate in their demand, and that we can place implicit trust in their discretion. This is neither the place nor the occasion for discussing the question whether the Government have been consistent in their policy, whether, in science of economics, the destinies of 80 per cent. of the population of India are left to be regulated by antiquated ideas of a tradition-bound bureaucracy, who would have been cured of their subjectivity long since in a country in which public men and their measures receive the freest criticism.

Mr. Madhava Rao's interest in social and religious problems in India is well-known. During the Christmas week of 1916, he was invited to preside over the third All-India Hindu Conference at Lucknow. In the course of his presidential address he held :

"On social and religious questions the Government take little or no interest. This is of course proper from their point of view. But when the Government becomes truly national, socio-religious questions will become recognised fields of activity for Government as may be seen from the legislation adopted in Mysore and Baroda on the question of infant marriage. But the fact of our having an alien Government now throws additional burden on the community as it will have to look after its social evolution and the adjustment of social institutions to changing conditions. These functions the Hindu Sabha will have to exercise even on a larger scale when self-rule has been given to India composed as it is of different races and creeds. It is thus that the question of having a Hindu Sabha becomes all-important."

Mr. Madhava Rao's interest in educational matters is no less keen. Presiding in April 1917, at the Jubilee Celebration of the Kumbakonam College, which he left about 48 years ago among the very first batch of graduates, he laid stress on the need for scholarship in Sanskrit and announced that he would set apart funds that would yield an annual income of Rs. 100 to be associated with the honoured name of Mr. Porter.

I select Sanskrit, as it holds the key to literature in philosophy and religion which affords the best solution for the problems of life and is calculated to promote spiritual culture in those that study it. The value of this study in the scheme of education will be all the better appreciated just now when there is moral chaos in the western world, where religion, divorced from sound philosophy, has undermined the basis of ethics and led to the promulgation of the doctrine that, where a State is concerned, the eternal principles of justice, mercy and humanity have no place in the dealings of one human being with another. We are better placed than those western people. As far as our education is concerned, we cannot always command the services of men of the ethical greatness of Mr. Porter, but we have in our Epics and Puranas, not to mention the Vedas, examples of lives led, where truth, dharma and justice have been placed above all personal considerations and men and women, born and brought up as gentle princes and princesses have undergone physical and moral sufferings of the most severe character rather than surrender truth or perpetrate an injustice.

In recognition of his ripe experience and varied activities in public life, Mr. Madhava Rao has now been invited to preside over the Madras Provincial Congress at Cuddalore in May 1917. It is hoped that he will continue to take the same interest in the political life of British India that he has already taken in three of the important Native States.

Shakespeare and Everyday Expressions

BY MR. LIONEL BURROWS.

AN acute correspondent of a Calcutta contemporary recently announced the interesting discovery that the popular and pregnant "I don't think" has descended to us from Shakespeare. This naturally raises the question whether such phrases of everyday expression were really the children of the writers in whose pages they are found or were merely adopted by them from the colloquialisms current at the time. The truth seems to be that a living language grows by an evolutionary process in which the survivals are selected on the common sense principle that men speak and write in order to be understood; there is thus a continual barter between speech and writing, usage being the sole and absolute arbiter as to what shall be retained and what rejected. Sometimes writing borrows from speech and, if usage approves, the protests of pedantry are futile. Montaigne said long ago that "they who would fight custom with grammer are fools," and we know that Swift denounced 'mob' and 'banter' as vulgarisms in vain. Sometimes speech borrows from writing and literary expressions are converted into popular sayings unconscious of their superior origin. The greater the writer and the truer his presentation of life, the more is this likely to happen; and the benefit of any doubt as to whether, in a particular case, proverbs and other common expressions have sprung from literature or literature from such expressions, may generally be given to such a writer, for it is safe to presume, until learned research has proved the contrary, that current phrases found in his work have as respectable and individual a paternity as Mr. Churchill's "terminological inexactitude" and Mr. Asquith's "wait and see." Even where it can be shown that a particular phrase was used by the people before a great writer borrowed it, it is probable that the prominence given to it by him has ensured its permanence.

We may thus assume that Charles Lamb's "Dodd was it" is responsible for a common colloquialism of to-day, that Dickens originated "how not to do it," and that other well-known writers have bequeathed us "at sixes and sevens," "turn over a new leaf," "by hook or crook," "smell a rat," "through thick and thin," and "plain as a pike-staff." It is Shakespeare, however, who has most enriched our expression in this way. Inspired by the discovery of "I don't think," we have run through his comedies and have been rewarded by many similar finds. Some of them have become absolute colloquialisms debarred from polite literary society, others are used freely both in speaking and writing without reference to their origin; some have preserved their first form, others have been altered without being disfigured beyond recognition. In *Love's Labour Lost*, that satire on the folly of words, Biron offers to "lay my head to any good man's hat" and would have won his bet. The Julia of *Two Gentlemen of Verona* gives us: "And seal the bargain with a holy kiss," while one of the outlaws asks Valentine to be their captain with the words:—

"To make a virtue of necessity,
And live, as we do, in this wilderness?"

In the farcical *Comedy of Errors*, Dromio of Syracuse says: "Every why hath a wherefore," and again: "Mary, he must have a long spoon that must eat with the devil," an expression that achieved fame in the Boer War. In *A Midsummer Night's Dream*, Theseus talks of "single blessedness," Lysander observes that "the course of true love never did run smooth," and Helena says that her heart "is true as steel." From *The Merchant of Venice* come the words of Shylock:—

"If I can catch him once upon the hip,
I will feed fat the ancient grudge I bear him."

Portia, in the same play, informs us that "it is a good divine that follows his own instructions," Antonio that "the devil can cite Scripture for his purpose," and Launcelot Gobbo that "it is a wise father that knows his own child" and that "truth will out." The expressive "in the twinkling of an eye" is also the engaging Launcelot's. *As You Like It* is one of the most prolific of the comedies as the following will show:—

Celia. . . . "that was laid on with a trowel."
Rosalind. . . "one out of suits with fortune," and "too much of a good thing."
Jaques . . . "with lack-lustre eye".
Touchstone "an ill-favoured thing, sir, but mine own;" also "the Retort Courteous" and "the Lie Direct."
Orlando . . . "Neither rhyme nor reason can express how much."
The Duke. . . "Sweet are the uses of adversity,' and "we have seen better days."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In *The Taming of the Shrew*, the tinker Sly says; "let the world slide;" Petruchio, who has been called all sorts of names from a selfish boar to a sensible madman, tells us of his "way to kill a wife with kindness," and Baptista remarks: "Pitchers have ears." Lavache, the clown in *All's Well That Ends Well*, tells his mistress that one of his reasons for wanting to marry Isbel is that "he must needs go whom the devil drives," and later on relates how a melancholy man of his acquaintance "sold a goodly manor for a song." In the same play, Lafeu calls Parolles of the famous drum-bringing episode "a general offence," and Parolles himself opines that "a young man married is a man that's marr'd." During their early bickering in *Much Ado About Nothing*, Benedick calls Beatrice "my dear Lady Disdain," and she responds: "I know you of old;" Benedick also gives us: "Sits the wind in that corner," and "paper bullets of the brain," while Beatrice adds: "as merry as the day is long," and the undying Dogberry declares, in his best malapropish manner, that "comparisons are odorous." *The Merry Wives of Windsor* makes a poor play, but is much to our purpose. In it, that very potent piece of imbecility, as Hazlitt calls Slender, agrees to marry Anne Page in the hope that "upon familiarity will grow more contempt;" Mistress Quickly talks of "an old abusing of God's patience and the king's English," and leads the decadent Falstaff on with "the short and the long of it." Mrs. Page cannot recollect "what the Dickens his name is," and Falstaff, though a sorry spectacle as a general butt, gives us "As good luck would have it," is indignant that "a man of my kidney" should be made acquainted with the inside of a buck-basket, and is almost his old self in "let the sky rain potatoes." In *Twelfth Night* Olivia's sprightly maid talks of "a horse of that colour," and tells Toby Belch and Aguecheek that they will "laugh yourselves into stitches" over Malvolio's discomfiture; Fabian mentions "the windy side of the law," and the disguised Viola relates how

> "She sat like patience on a monument,
> Smiling at grief."

The inviolable Isabella of *Measure for Measure* dwells on the fantastic tricks of men which "make the angels weep," while that pleasant *deus ex machina* of a Duke tells her at the end that "what's mine is yours, and what is yours is mine," a sentiment that has been somewhat perverted in its popular form. In *The Winter's Tale*, Leontes says that his son and he are "almost as like as eggs," and that cheery rogue Autolycus describes himself as "a snapperup of unconsidered trifles."

Village Government in British India

BY "AN INDIAN."

THIS is one of the series of monographs by writers of the London School of Economics and Political Science and edited by the Director of the School. Mr. John Mathai is a brilliant graduate of the Madras University and has spent no less than two years in going through the books and records relating to the subject, in the Library of the India Office, in London. The book* "lays no claim whatever to any special understanding of the Hindu village community in its palmy days or to having made any research in that direction," but aims at presenting a connected picture of the methods by which the village communities have met their simple administrative needs, excluding the holding and cultivation of land, "so far as they may be gathered from the relics which have survived and have been recorded."

Mr. Sidney Webb, Professor of Public Administration in the University of London, whose sympathetic interest in Indian affairs is too well-known to need mention, has contributed a valuable preface to the book wherein he points out that in the most advanced countries of the present day such as the United Kingdom, Germany and the United States of America, "we find that by far the largest part of government is now that which is not carried on in the capital cities, at the bidding of Parliaments; but that which is being administered locally in village or parish or commune, in municipality or county or district, by the direction and for the advantage of the people of these localities;" that in the course of this century there is bound to be a very great development of local government in India; and that the aspirants for Indian Self-Government, a large number of whom have hitherto attended exclusively to the affairs of the Central Government, will do well to pay more heed to municipal and rural administration which indeed concerns the

* "Village Government in British India." By John Mathai. With a Preface by Sidney Webb. 4s. 6d. Fisher Unwin, London.

people more intimately and gives greater scope for the exercise of autonomy.

Mr. Mathai has devoted the first chapter, which is introductory, to the consideration of the village community in general and in the subsequent chapters has dealt with education, poor relief, sanitation, public works, watch and ward, and administration of justice, respectively. Much of the matter is necessarily familiar to the Indian reader as it deals with features of village administration now obtaining or obtaining till very recently; but there are some very interesting references to old inscriptions which should effectively silence those Western critics of ours who would deny to us the capacity and therefore the opportunity to govern ourselves or to work representative institutions. Thus two inscriptions recently discovered in a temple at Utteramallur, in Chengleput District, which belong to the 10th century A.D. speak of the existence of small committees, six in number such as the Garden Committee, the Tank Committee, and the Committee of Justice for the administration of the village; of the village being divided into wards of which there were as many as thirty; of the committee members being selected by lottery according to certain rules and observances at the rate of one member per ward; and of their being required to possess certain qualifications regarding property, age, education, business capacity and character. In fact there are references to show that women sometimes served on these committees, thereby proving that the constitution of the village was more advanced than that of our proudest municipality! Those who injured the interests of the village or the temple were known, according to an old inscription, as *Grahma-drohins* or *Grahma-kantakas* and liable to punishment and they were debarred from participating in certain ceremonies connected with the temple.

The following extract about how a village tided over a famine will be found interesting:—"A South Indian inscription sets forth the story of a village which suffered from famine:—

"In A D. 1054, the village of Alangudi (in the Tanjore District) appears to have been afflicted with a famine caused probably by failure of vain. The villagers had consequently no funds to purchase paddy for their own consumption or seed, grains and other things necessary for cultivation. Whatever the cause the famine-stricken inhabitants of Alangudi could expect no help in their distress from the royal treasury. They had to shift for themselves as best they could. Accordingly they applied to the local temple treasury from which they obtained 1,011 *Kalanju* of gold and 464 *Palam* of Silver, consisting of temple jewels and vessels. In exchange for this, the members of the village assembly alienated 8¾ *Veli* of land in favour of the god. From the produce of this land the interest on the gold and silver received from the temple was to be paid. . . . ."

It was not by any means the violation of the sacredness of temple funds in desperate circumstances; for the temple was looked upon as a general benefactor of the village, aiding in education, feeding strangers and the poor, and affording relief to the village in famine times, as is borne out by the early inscriptions.

In the chapter on the administration of justice Mr. Mathai has warmly defended the village courts of our Presidency and the village panchayats generally commenting on the opinion of Sir Henry Maine who held that the village panchayats were 'barbarous institutions' with 'accompaniments which are condemned by modern morality and modern civilization' Mr. Mathai says somewhat sarcastically: "They had no codes of law, either substantive or adjectival, in which whatever ideas they had could be embodied in any fixed form, nor, so far as we may make out, had they any written record of their decisions spreading over many generations. They merely trusted to their native wit, to experience, to a shrewd sense of passing events to a fleeting memory of what their fathers did. They were plain men of the world, unsophisticated by much education, who, in spite of frequent failures, tried by whatever means lay in their power to heal quarrels and make peace and knew by bitter experience how good a thing it was for brethern to dwell together in unity. That the revival of such an institution should bring back with it any fixed system of revolting ideas is incomprehensible." He has naturally great hopes in the beneficial influence of co-operative societies some of which with the consent of their members have gone beyond their bye-laws and settled disputes between litigants, started schools and reading rooms, carried out small sanitary works and in other ways furthered the corporate life of the villages. "Even amid the sound of war and the birth—throes of a new world, there is no higher call in India to the men of our generation than to see this process go forward." The book deserves to be widely read and ought to find a place in every library.

INDIAN LABOUR EMIGRATION.*

BY

MR. C. F. ANDREWS.

I am aware that the conclusion I have reached on this subject must appear revolutionary, in the light of what I have written before. But I have been driven to it by what appears to me the inevitable logic of facts.

Originally I had a firm conviction that it was good for Indians, even of the "coolies" class, to emigrate. My one objection was to the indenture system itself; and I expected that, if the indenture system were removed, other things would right themselves. But I have been forced, step by step to the conclusion, that at present any form of recruited emigration of the ordinary Indian villagers to far distant lands under strange conditions is likely to lead to great moral evils.

There are other grounds of objection to Indian recruited labour emigration. The political argument for instance is very strong indeed. The economic argument, also, that India itself is short of labour is not without weight. But the moral argument appears to me to go deepest. And, as far as my own personal judgment is concerned, the verdict on that side is final.

It is difficult to set down in any detail the causes of this moral deterioration which, I have noticed in South Africa and Fiji and I shall not attempt to do so. But it is easy to grasp the central fact, that Indian village life is a very complex growth, which needs much greater knowledge of its conditions, before you can successfully traasplant it. The following extract written by a planter, who knew the conditions of Fiji, appears to me to go to the root of the matter:—

Coming to the actual conditions of the Fiji people it was clear that they could not be tolerated. The causes of the disgraceful depravity were indicated as:—(1) the breaking of family life, (2) the herding of the people together in barracks, (3) no provision for the rites and customs of their own home surroundings.

It seems to me that the chief offenders were the Indian Government, who ought not to have sanctioned the emigration without themselves undertaking to provide the people, which they would have had to do by transplating bodily whole viliages, or a considerable part thereof.

As any scheme for transplanting the whole villages to Fiji is not a practical question, there seems no need to discuss it at this juncture. What now appears to me as certain is that just as individual indentured labour recruiting has failed in the past, so in the long run 'family' recruiting would be a failure also, though for a time it might mitigate the moral evil. It will be seen that this point goes far beyond the mere question of abolition of indenture.

In taking up this position, I am well aware that I am going much further than anything published in Mr. Pearson's and my report on Fiji. I have not had any opportunity of going over with Mr. Pearson the reasons which have led to this new conclusion, and therefore I would wish it to be clearly understood that I speak only for myself. One point, however, should be noted, viz:—Now in the report itself, we urged that a break, or pause, of at least two years should be made in Fiji Indian labour before any new system was tried.

For my own part, I can see that this suggestion was inadequate. My present opinion is, that no alternative system of distant emigration of unskilled Indian labour is likely to succeed at present, least of all in those countries which have suffered from the moral evils of indenture. The simpler problem of transplanting Indian labour within the borders of India itself should first be tried. Perhaps in some future generation wider range of emigration, under much more intelligent conditions, may be undertaken by Government. But the acknowledged failure of the past should make us very careful before we start another State-attempt in this direction.

Statement sent by Mr. C. F. Andrews to the Government of India for the Inter-Departmental Conference in London.

[ONLY SHORT NOTICES APPEAR IN THE SECTION.]

Political and Literary Essays. By the Earl of Cromer. Macmillan & Co., Ltd., London.

Now that we have it on the authority of Lord Curzon that on the conclusion of Lord Cromer's career in Egypt he was offered and refused the Viceroyalty of India, the Essay on *Political Ideals* in this volume will probably prove of some interest to readers of this *Review*. Lord Cromer quotes with approval the principle, enunciated in the Government of India Despatch of December 1911, to the effect that "the only possible solution could appear to be gradually to give the Provinces a larger measure of Self-Government, until at last India would consist of a number of administrations, autonomous in all provincial affairs, with the Government of India above them all, and possessing power to interfere in cases of mis-government, but ordinarily restricting their functions to matters of Imperial concern." Like most statesmen and writers, however, who have not come into personal touch with problems of Indian Government he thinks the system to be introduced at the close of the war in relation to the Self-Governing Colonies and in relation to India must be "very different." Then or take leave to disagree with him.

For the rest there is little in the volume before us of more than ephemeral interest, and a section to doubt whether it was worth while to enhance the Essays from the Reviews in which they first appeared. We all know now that "when the Allies come to discuss terms of peace they will be treating with a Government and a nation who in the past have shown the most cynical disregard for all the engagements which they have taken, and that therefore no sort of reliance can be placed on any engagements which they may take for the future." And though it is interesting to learn that so proved an administrator as Lord Cromer regards Lord Curzon as "the most able exponent of that same Imperialism to which Great Britain is wedded as a necessity of its existence," we in India who admire to the full Lord Curzon's virtues know something also of these "defects of his qualities" to which every great man is necessarily subject. One last quotation from a very illuminating Essay entitled "The Suicide of the Turk." "There is every reason for dissociating the Turkish regime, whether past or present, from the true teaching and real interests of Islam." We sincerely trust the Ulemas will subscribe to this pronouncement.

Town-Planning in Ancient Deccan. By C. P. Venkatarama Iyer (Saidapet.)

This book throws considerable light on a very important subject. Ever since the advent of Professor Geddes, the intellect of the country has been in a state of ferment in regard to the problems of town-planning and architecture. As Professor Geddes says in his Introduction to the book: "But when all reasonable scepticism is allowed for, the main impression of the book is unshaken—for ancient glories there were; and these on a scale exceeding not only our modern wealth and well-being, or the modest hopes of our social improvers, but even the constructions of our would-be Utopia-makers. That India, and particularly South India, was, and this up to a not so remote past, one of the greatest city-making regions of the world, is ever being more plainly re-established by the investigators of books and of buildings alike; and I have been fully convinced also by my own eyes." The book deals at first with the origin and growth of Deccan cities. The author points out how in India cities have mostly grown around temples. The author then describes the famous towns of Madura, Vanji, Conjeevaram and Kaveripattinam and gives also the old and excellent rules as to the construction of houses. The past unexplored mines of Tamil classical literature have to be thoroughly worked to bring into the light of day all the precious nuggets of our old and noble civic and national ideas and we hope this great work will be done soon by the author and other Tamil scholars.

English Biography. By Waldo H. Dunn, M.A., Litt. D.; J. M. Dent & Sons Ld., London.

Professor Dunn's "English Biography" follows the line adopted by other writers in the series entitled the "Channels of English Literature." The history of biographical literature has seldom been the theme of any adequate enquiry and Prof. Dunn's exhaustive study of this peculiarly fascinating branch of literature must be welcome to all lovers of this art. However, students of Leslie Stephen and Sir Sidney Lee who have made biographical literature so invaluable and charming will come across many a new and unfamiliar name in this treatise. The volume gives an admirable account of the history and a criticism of the art in its varying aspects and serves equally as a compendium of reference in biographical literature.

Dewan Amarji : The Soldier Statesman. By J. P. Joshipura, M.A., Published by B. V. Chhaya, B.A., LL.B., Rajkot.

The story of this great Soldier-Statesman of Junagadh is told with appropriate eloquence and enthusiasm. Dewan Amarji was a rare type of Soldier-Statesman and could only be compared with the great Sivaji alke in his daring and his genius. This Brahmin-statesman typifies the two great virtues of the Mahratta Chieftain, devotion and courage. And though Amarji had a more limited field of work in Kathiawad and Gujarat in the latter half the eighteenth century, the story of his adventures is full of the pluck and daring worthy of Shivaji himself. The stirring nature of his career is matched by the dramatic character of the end so tragic yet so fitting for a hero.

Indian Architecture. By Messrs. A. V. Thiagaraja Iyer and M. A. Ananthalwar. Part I A. V. Thiagaraja Aiyar & Sons, Madras.

We have before us the first part of a great work on Indian Architecture published in monthly parts by Messrs. Thiagaraja Iyer and Ananthalwa- of Mysore. The undertaking is a most patriotic one and judging from the first part, we have no doubt it will be a most useful compilation. The authors have brought to their work not only special training and knowledge of Architectonics but a vast knowledge of Indian languages, religion and history. In the part before us, there is a General Introduction dealing historically with Indian Architecture accompanied by illustrations of choice specimens of various styles with maps to show their geographical distribution. The main subject is distributed into three books : Book I dealing with the Ancient Literature or Architectonics ; Book II with the study and description of the several styles and monuments of Indian Architecture and Book III with modern Architecture. In the part before us, we have the first few pages from each book. The chapter II of Book II is devoted to the temple at Srirangam. We have therein an account of the origin and foundation of the temple, its plan and measurements, its architectural value. The whole is illustrated with beautiful photographs.

A Political History of Japan During the Meiji Era (1867-1912). By Walter Wallace McLaren. (London : George Allen and Unwin, Ltd., pp. 380. Price 12/6 net.)

The book before us endeavours to supply information which is essential to the formation of an accurate judgment as to the real meaning of Japan's unprecedented political development during the past half a century. A right understanding of the real nature and extent of Japan's political ambitions, not to speak of her desire for economic and commercial expansion, is more necessary now than ever, since for the past two years and a half Japan's action, as a member of the group of the *Entente* Allies, is in many aspects shrouded in mystery, and seems to casual observers to be devoid of any settled final objectives. The author, an American, with some experience as a professor of politics in Tokyo, reviews in the first part of the book the movement for the restoration of the Emperor, which was rendered possible by the self-abnegation of the feudal magnates, and presents a careful survey of the evolution of the existing political institutions and the powers exercised by each. In the latter part of the book, he traces the history and character of the Parliamentary *regime* ever since its inception in 1889, and sketches the political parties in the country, their internal dissensions and their struggles with the various oligarchical cabinets ; and he estimates also the influence on Japanese politics that the recent growth of her militarism and political power has brought about.

The chapter dealing with the growth of representative institutions is particularly clear while the close identity, which has always existed between what is known as 'the clan government' and the dominance of the military party, has ben sketched out both historically and causally. The effect of the Chino-Japanese War is reviving the militarist spirit, the constitutional crisis which followed that war, the growth of the power of the parties in the successive cabinets, and the effects of the Russo-Japanese War, have all been traced in a clear and lucid light. The growth of Japan's power, whose net result was to consolidate and strengthen her position in the Pacific and in Asia, the steady bulging out of American hostility of, and distrust in, the growth of Japan—these complete the story of her development into one of the great powers of the world. The whole of the Meiji era has been marked by the continuous dominance of the military party in spite of the repeated attacks of the popular leaders—a circumstance which is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

explained by the author to be due to the inherent chauvinism of the Japanese, to which the militarists have always and successfully appealed, and to the weakness of the political parties consequent on their lack of cohesion, absence of principles and their venality. The origin and progress of Japanese national spirit is traced to its beginnings in the pre-Meiji feudal soil, one of the earliest fruits of which was the Restoration. One note of warning, which the author sounds, is the apprehension with which the world at large and the Chinese in particular have viewed the sudden growth of the military power and spirit of the Japanese. This is all the more disquieting, because of the absence of any constituted opposition to the military party dominant. Though the future alone can demonstrate the truth of this foreboding, yet we may say with justice that circumstances are, to some extent, seemingly forbidding; as an instance, it may be mentioned that the whole of Eastern and Southern Asia is represented as the field for the spread of Japanese *Kultur*, that there are various associations to propagate this ideal of world domination, and that militarism has for the present captured the various political organisations and almost silenced the demand for constitutional reform and popular government. We commend this book to the careful and serious attention of the public.

Shakespeare's Chart of Life

BEING STUDIES OF
HAMLET, KING LEAR, OTHELLO AND MACBETH
BY THE REV. DR. WILLIAM MILLER, C.I.E.

CONTENTS.

KING LEAR AND INDIAN POLITICS
HAMLET AND THE WASTE OF LIFE
MACBETH AND THE RUIN OF SOULS
OTHELLO AND THE CRASH OF CHARACTER

Dr. Miller does not appear as an annotator or critic. He fixes his student's attention especially on the ethical side of Shakespeare's teaching. According to him the plays of Shakespeare, whether designedly or not, are not calculated merely to amuse. They have each "an inner meaning," a "central idea," which it does the student good to search out and assimilate.

The Madras Mail.—Dr. Miller has taught Shakespeare for over 40 years to hundreds of students, who have passed through the Christian College. And in his classes, if he has enforced one lesson more than another, it has been that these plays must have been written with the object, among others, of making plain the moral principles, which underlie the ordinary occurrences in human life, and that it is this feature of Shakespeare's plays which makes them not only an intellectual discipline but a means of real benefit to those upon whom they have their full and proper influence.

DIARY OF THE MONTH

March 24. A deputation of ladies from various provinces of India waited on His Excellency the Viceroy to present an Address on the subject of Indentured Labour.

March 25. Allies' continued success in the west and capture of more villages.

The New Russian Government has issued a proclamation to the people.

March 26. The Earl of Ronaldshay accompanied by the Countess arrived at Calcutta to-day and took his seat in the Throne room when the warrant of his appointment as Governor of Bengal was read by the Chief Secretary. Lord Carmichael, after handing over charge, left for Bombay *en-route* to England.

March 27. Mr. Setalvad has been appointed Vice-Chancellor of the Bombay University *vice* the Rev. Dr. Mackichan who is proceeding home.

March 28. Fall of St. Quinten.

Mr. Asquith moves a Resolution in the Commons demanding franchise for women.

A Gazette extraordinary publishes rules *re* : the Indian Defence Force.

March 29. Martial Law has been proclaimed in Spain.

March 30. The German Chancellor, speaking in the Reichstag, blames England's blockade as the cause of German submarinism and appeals for American sympathy.

March 31. His Excellency Lord Ronaldshay receives welcome addresses from eight public bodies at Calcutta.

Three great meetings in London conveyed resolutions congratulating the Russian Democracy.

April 1. Dewan Amarnath, Chief Minister of Kashmir State, died at Srinagar.

April 2. Sir William Meyer's conference with the Bombay Chamber of Commerce.

The Hon. Mr. V. S. Srinivasa Sastry speaks at Lucknow on "Our Political Critics" with Mr. Syed Nabiulla in the chair.

April 3. King George's message to the Imperial War Conference.

The American President's great speech to the Congress for participation with the Allies against the German Government.

April 4. American preparedness ; Colonel Roosevelt called at the White House and offered to raise an American force for service in France. Frantic enthusiasm throughout U. S. A.

April 5. The American Senate voted for War, 82 for and 6 against, which the Congress has ratified.

April 6. An explosion of shells occurred at Essen and thirty eight persons are reported to have been wounded.

April 7. The sixteenth session of the Nadwat-ul-Ulema or the assembly of Muslim theologians was held at Madras with Mr. Justice Abdur Rahim in the chair.

April 8. Meeting of the All-India Congress Committee at Calcutta decided to hold the next Congress at Calcutta and to send a deputation of eight members to England for Congress work.

April 9. America's break-up with Bulgaria. Brazil's entry into the war.

April 10. British Victory at Vimey.

German plots in China and South America.

Capture of Monchy.

April 11. German intrigue in Russia.

Sinking of Spanish steamers.

April 12. Mr. Lloyd George's great speech at the American Luncheon Club, the American Ambassador presiding.

April 13. Mr. Asquith's vindication in the Commons of Lord Kitchener in the Dardanelles enterprise.

His Excellency the Viceroy's speeches at Lahore.

April 14. Big French offensive.

Reported fall of Lens.

British advance in Mesopotamia.

April 15. Exposure of German plots againstIndia

Capture of 10,000 German prisoners.

April 16. Dr. Wilson's inspiring appeal to Americans.

Labour troubles in Germany.

April 17. Anti-German riots in Brazil.

The Australians in London reviewed by H. M. the King.

April 18. Mr. M. K. Gandhi has been prohibited from entering the District of Champaran by order of the Magistrate under Section 144 of the Criminal Procedure Code.

April 19. Violent fighting round St. Quinten. Sinking of Enemy destroyers.

April 20. Resignation of the Cabinet in Lisbon. Martial Law in Spain terminates to-day.

April 21. The Bengal Provincial Conference meet at Bhowanipur under the presidency of of Mr. C. R. Das.

Mr. Gandhi has been allowed to proceed with his investigations and the order against him withdrawn.

April 22. The Secretary of State for India announces that it has been decided that India should be fully represented at all future Imperial Conferences.

Blackstone as a Jurist.

Mr. J. E. D. de Montmorency, writing in the *Journal of the Society of Comparative Legislation*, (January 1917), describes Blackstone's achievements as a great jurist and lawyer. His work has been very vehemently attacked by the chief legal theorists of his own and of the succeeding ages, viz., Bentham and Austin. Blackstone's theory of law, though vigorously assailed is neither confused, nor a pure figment of the mind without any basis in experience. He differentiates between 'laws of physical nature' which are not laws at all, but inherent conditions of stability and permanence in a non-conscious material structure, and 'laws of man' which are commands consciously imposed upon conscious personalities by a personality capable of enforcing such commands. Blackstone's view of the *Jus Naturalæ* is based on that of Hobbes, Selden and Plowden who in their turn largely took their views from Christopher St. Germain who is the direct link with the Schoolmen, Dante and Marsilio, and the classical sources from which they drew. Blackstone took the same view of the law of nature (*Jus Naturalæ*) that the profoundest thinkers before and since his time have taken. There is in man, an unvarying intuition of right and wrong, and it is of the same fundamental nature as the orderliness that is manifest in material nature. There are critics who complain that Blackstone has thought it necessary to supplement inherent law by direct, revealed or divine law as set forth in the Holy Scriptures; but he especially declares that this is really a part of the original law of nature, and is closely part of it.

Blackstone was really the first of the moderns, the frank adopter of the new ideas of Montesquieu promulgated in *The Persian Letters* and *The Spirit of the Laws*. He adopted without hesitation the new theory of heredity and environment in law. The law at any moment is the result of the processes of growth and environment. Such a conception was unspeakably repellent to Bentham whose one idea was 'that men should break loose from the trammels of authority and ancestor-wisdom on the field of law. Blackstone argued in effect that time and the process of history are the only tests of true utility and he believed that time and history had given to English Common Law, as long before it had given to Roman Law a prominent position, in view of its permanently utilitarian and easily adjustable character. Blackstone was a convinced optimist in the teeth of many admitted evils, since he saw that the English Constitution and the English Common Law, had, broadly speaking, through many centuries, served an independent people and had played a great part in preserving that independence in the successive ages, during which Europe at large had undergone the travail and sorrow of unstable laws and constitutions. Blackstone was a legal Platonist, and believed in a model code—an ideal law of nature—and he thought that the English law not only contained a large element of this law, but that the process of further growth would give it a closer approximation. He believed in a rapid evolution of the English Common Law which would cleanse it from all impurities and that an era of liberalism was at hand. And he saw with perfect clearness, that with liberal-minded judges and a wise legislature, the legal institutions of England were capable of vast improvement. And he is not belied to-day when the great Common Law of England divides with the laws of Rome, the allegiance of modern civilisation.

The Social Aim of Education.

Writing on the above subject, in the current number of the *Mysore Social Review*, Dr. S. Venkoba Rau, B.A. points out the need for a socialised curriculum for schools:—

The school curriculum and the methods of teaching and of study must be socialised to make the pupils good members of society. The subjects taught must really be subjects which interpret and prepare for efficient living in the present-day world. Their school work must prepare them for their present as well as future life, and be recognised as a series of social undertakings by the teacher and pupils alike. Every one must be active and must co-operate in the work. When all are actively engaged and every one is contributing something to the solution of the difficulty or the development of the point, the result will be profitable to all alike. The scientific task to which education should set itself is to make the subject-matter of its instruction the material of personal intercourse between the teacher and the pupils and also among the latter themselves. The making of the actual subject-matter of any text book into a material of personal conversation and discussion is the best way to insure its mastery by each pupil.

The Empire and the War.

Professor F. J. C. Hearnshaw, writing in the *United Empire* for February 1917, points out that the present British Empire is not the first but the second of which the British crown has become successively possessed. The first Empire broke up and was dispersed as the result of the War of American Independence. Though many fragments of the first Empire survived to form the nucleus of the second, they survived in so changed an environment of political conditions and ideas that they had to be reincorporated and in a sense reacquired. The first Empire was built up under the so-called old Colonial system, according to the mercantile principles of which, dependencies were sought for, secured and valued as estates to be worked for the benefit of the mother country.

But in the last quarter of the 19th century, the old era of indifference and neglect gave way to a period of eager interest and diligent cultivation. The causes for this change are detailed in the following:

The entry of Japan into world-politics had raised pacific problems with which neither Australia nor Canada could hope to deal apart from Great Britain. The eastward expansion of Russia towards the frontiers of India and China had caused serious Asiatic questions to emerge. Above all, the unification of Germany, the founding of the *Deutsche Kolonial-Gesellschaft* (1884) and the startling appearance of the new Teutonic Empire as a power, with a passion for overseas dominion, and with an evident determination to mop up everything not yet absorbed by Europe in Africa and Oceania, had roused apprehension in every part of the British Empire. Finally, the immense development of the United States, the increase of its population (from five millions to eighty millions in less than a century), the exploitation of its resources, the expansion of its protected commerce, emphasised the fact that the day of small insulated national states had passed, and that the day of Imperial Federation had dawned. Hence British statesmen—prominent among whom were Lord Carnarvon, Mr. W. E. Forster, Mr. Joseph Chamberlain, and Lord Rosebery—ceased to regard with complacency the "imminent and inevitable" dissolution of the Empire, and began to seek diligently for means to prevent what they could only consider a deplorable and unnecessary catastrophe. Their aspirations and efforts met with a ready response in the Dominions. The Imperial Federation League was formed, and for ten years (1884-1893) it wrestled with the problem of how to find some means by which real unity of administration could be given to the many and various elements of the so-called "British Empire." It failed; partly because of the genuine difficulties of the problem, due to distance, diversity, divergence of interests, complicated by inter-colonial conflicts relating to tariffs and immigration law; partly because it prematurely committed itself to a false and impossible solution of the problem, viz., the establishment of a unitary Empire in which the Dominions and Dependencies should send representatives to be outvoted and submerged in the existing overburdened and effete Parliament of the United Kingdom. But though the Imperial Federation League was dissolved and its specific proposals were abandoned, the policy of consolidation did not cease to operate. Circumstances, indeed, did not allow the matter to drop out of mind. In particular, the aggressive designs of Germany—her seizures in Africa and Oceania, her threats to Egypt and India, her penetration of China and South America, her commercial attacks and her maritime challenge—compelled attention to the urgency of the question. Hence the existing links, constitutional and economic, which bound the Mother Country to the Dominions were gradully strengthened. The Judicial Committee of the Privy Council began to give some sort of unity to the legal systems of the Empire: the Imperial Conferences, instituted as part of the Jubilee Celebrations of 1887 and 1897, became permanent and increasingly important; a new Committee of Imperial Defence, first appointed by Lord Salisbury, began to survey the military and naval problems of the Empire as a whole.

Two problems which have not been faced before the present war viz, (1) how to give the Dominions an equitable share in the determination of foreign policy, and (2) how to secure from them an equitable contribution towards the great and growing burden of imperial armaments, have now been brought to the front. And these final problems of Imperial Federation will be solved by the war. One thing, however, vitiates Professor Hearnshaw's article; he tamely follows the scheme formulated by "The Round Table" urging imperatively a written constitution for the Empire with a new Federal Executive and a new Federal Parliament.

Scientific Parliamentary Reform.

Mr. W. H. Cowan, M. P. writing in the new year number of *Science Progress*, condemns the frequently urged proposals for empirical alterations in the Parliamentary system, and urges a *bona-fide* attempt at reorganisation on scientific principles which would be universally welcomed. Alterations which have been made in Parliamentary procedure have resulted in a progressive curtailment of the rights of private members, while successive leaders of the Commons have affected a pedantic attachment to ancient tradition which has excused them from making any comprehensive attempt to adopt mediæval practice to modern conditions. The fiction of the Speaker's Eye is an instance of this survival. The whole machinery of the House of Commons has by almost imperceptible stages, been deflected from its original purpose, and is now employed to impose upon the nation the autocratic will of cabinets. Cabinet autocracy is dependent partly upon the power of the Prime Minister to appoint and dismiss his colleagues and partly upon his latent power of dissolution and it is reinforced by all the influence of a vast and complex party organisation in the House and in the country. The average member of the Commons ends by placing his conscience in commission, and the preservation of the solidarity of the party is given out as the saving of the Empire from disruption. The power of party organisation makes itself felt chiefly in the selection of candidates. The control of the Commons over finance is an empty boast; and the so-called congestion of business is the cause to which are conveniently attributed the neglect of many important matters, the postponement of necessary legislation and the inadequate discussion of vital questions. Trifling alterations in procedure, permitting for example the carrying over of Bills from one session to another and limiting the duration of business would go far to relieve the congestion of business which is the excuse for so many legalised irregularities.

Two Parliamentary reforms would suffice to relieve the elected representatives of the people from cabinet autocracy on the one hand and from party tyranny on the other. The election of the Commons for a fixed term of 4 or 5 years would deprive the Prime Minister of the power of dissolution, and would make the ministers the leaders and not the masters of the House. The substitution of ballot-voting for open voting in the division lobbies will diminish to a little extent party tyranny. While the contention that the members must be denied the ballot in order that their constituents may know how they vote in each division is disingenuous and designed to conceal the real object of open voting. The closure, so often oppressive and even brutal in its application, would lose much of its harshness, while preserving all its utility under the ballot. Neither of these two reforms, would, by itself, be adequate for this purpose.

There are also constitutional questions of the first importance long overdue for settlement, e.g. the devolution and the reconstitution of the upper House, the establishment of 'Home Rule' all round, the setting free of the Imperial Parliament for Imperial matters and the facilitating of Imperial Federation. The franchise and electoral reforms include four principal topics (1) the reform of the franchise, (2) definition of the basis for the redistribution of seats, (3) reform of the system for the registration of electors, and (4) method of elections and the manner in which the cost of elections should be borne. Reform of the franchise and registration of electors are closely allied subjects; the former implies the widest possible extension of the right to vote, it is a question of expediency and it must ultimately resolve itself into the enfranchisement of all reputable persons male and female of a specified age. Redistribution of seats must be on a scientific and therefore permanent basis. The boundaries of many existing constituencies must be rectified, a few constituencies must be merged in others, a certain number of new Parliamentary divisions must be created; and all this must be done in such a way as to secure numerically equal voting areas. And there must be an automatic readjustment of boundaries in accordance with the results of each successive census and the actual work of redistribution must be entrusted to an impartial judicial commission. Methods of election must be fixed from time to time according to equity and expediency; and minority and proportional representations might be given effect to. Side by side with these reforms, the real causes of Parliamentary inefficiency and decline must be tackled with.

A Discourse on Buddhism.

There is an instructive and comprehensive sketch of Buddhism and its features by Mr. F. Pooley in the last number of the *Buddhist Review*. The Buddha saw that change is inherent in nature and is the essence in itself, that the reality of the universe is found in energy ; and he clearly saw that unless an alleged truth is consistent with all other knowledge, it cannot be the truth, and he found out by deep earnest cogitation that the universe is a self-determined system which manifests itself in the changes which we witness individually or collectively. He said that the world is full of sorrow, because it is full of error, and men go astray because they think that delusion is better than truth. He recognised that ignorance is the root of evil and traced the twelve *nidanas* or links leading respectively from blind ignorance through formative and organising appetences to a cleaving of things, self-hood and renewed births.

The Buddhist culture is essentially practical and insists on self-deliverance born of self-conquest and accompanying the self-culture is an outward process enjoined, *viz.*, universal all embracing love, and a friendly and boundless and unobstructed mind. Buddhism does not teach the existence of good in the same sense as the Christian, Jewish and Mahomedan faiths ; but it affirms that the source of enlightenment is omnipresent and eternal, and merely takes up an agnostic position neither affirming nor denying a god-head, but nowhere denies a first cause. There is nothing isoteric about Buddhism, in spite of what has been written on the subject. Buddhism has no dogmas in the sense that Christianity has dogmas, although many analogies exist and the follower is strictly enjoined to cease following, if he proves that the teachings are false. Nor is Buddhism founded on revelation. A conflict between Buddhism and science is impossible as the Buddhist can accept propositions as true, only after they have been proved by careful scientific investigation Buddhism denies the existence of the soul in the sense of an ego—a thing in itself—but does not deny the thinking, aspiring personality that each one feels and knows oneself to be. It also teaches that this personality is perpetuated after death by impress on a new birth, such new birth being decided by the *Karma* of the recently deceased person. The soul is simply a synthesis of tendencies built up by a gradual process of evolution and subject to universal laws of growth and decay. Every being in its present existence is the exact product of all its deeds in former existences, and according to its deeds it will continue in future existences. Although Buddhism denies the existence of a soul behind the ego, a thing in itself, yet it proclaims the existence of something eternal. The eternal is not a thing, a concrete actuality, a material existence, but the omnipresence of those eternal verities, which render possible all that is true, good and beautiful. These eternal verities are the norms of existence, and they produce those uniformities in nature, and form in their entirety the reasons for all rationality, the source of sciences and the source of enlightenment. And the ultimate norm of truth can neither be made nor un-made ; it has never originated and it will never cease. To become at one with these eternal verities is the driving power, which impels the true Buddhist to the better path and the higher plane. *Nirvana* is a state of mind in which the limitations of individuality disappear and the eternity of truth is contemplated, and it renders one's own individuality as objective as that of others, and it is the surrender of self to truth.

Buddhism is often accused of pessimism, but this is due to a misconception of its teachings. It faces the inevitable problems of evil, pain and sorrow but it also preaches deliverance from these. There are a few analogies and contrasts between Buddhism and Christianity. Both appealed to nature and transcended the limitations of caste, rank, nation and race ; both built their fabric upon an older foundation, but without a sacrifice of essentials ; but the greatest contrast exists between the Christian creative attitude and the quitest teachings of Buddhism. And Buddhism aims at the extinction of individuality, while Christianity thinks the individual of infinite worth.

The War and World-Thought.

After mentioning the various contributions to science made by the Hindus, Prof. Jacob Kunz PH. D., in the pages of a recent issue of the *Hindustanee* observes :—

The most scientific nations, Germany, England and France, filled with the most deadly hatred, are engaged in a most terrible War of mutual annihilation . . . . At the same time our daily life is more and more absorbed by material cares. We have no more leisure nor sence for the culture of the finer impulses of the heart. . . . . Here arises the need for religion.

A Conscience Clause in India.

In the current number of the *International Review of Missions*, there is an article from the pen of the Editor, Mr. Oldham, which argues out, of course, from Missionary point of view the merits and demerits of the demand for a conscience clause recently made. The questions to be settled in reference to this problem are important as well as difficult and complex, and they involve this fundamental difficulty as to how those who believe in Christ are to live and work in a world which does not accept their ideal.

From the Missionary point of view, the Christian teaching in Mission schools and colleges is not only an integral but the most important part of the teaching given. And if the conscience clause were enforced, the question would arise whether, under the new conditions, it would be worth while for Missionary institutions to remain under the grant-in-aid system ; and then there would be an extensive reorganisation and possibly a considerable contraction of missionary education. Christian Missions have, in the past, been one of the strongest supports of the view, that the moulding of character is the chief end of education, and that moral training to be effective must be based on religion ; and if they are to continue to render this important service, they can clearly do so only by being allowed to teach the religious beliefs which are held by them.

It is difficult to foresee to what extent the introduction of a conscience clause would affect attendance at religious instruction. And if the quiet even rule of school rule were relaxed, the religious work of the institution would be seriously interfered with. And it is scarcely possible to make attendance at religious instruction voluntary without creating the impression that it is of less importance than the other subjects in the curriculum, whereas the spring and inspiration of the Missionary movements are found in precisely the opposite conviction.

The real issue in connection with conscience clause movement is, whether it is or is not desirable that the Missionary schools should have a place in the public system of education. Only those have a real grievance against aids being given to Mission schools from public funds, who believe that the kind of education imparted by them is so undesirable that it should not find a place in the public system. It is an intelligible and reasonable policy for the State to encourage, as far as circumstances permit, a variety in the types of education provided ; and where parents have a choice between different institutions, there appears to be no valid objection to the support by the State, of schools which, though they may not find favour with all, are nevertheless contributing to the general advancement of the people.

A serious difficulty arises where a Missionary school or college is the only institution of its kind in a district, and in these circumstances a parent is without real freedom of choice. And for these reasons, a weighty body of Missionary opinion is in favour of admitting in what may be described as 'single school areas,' the right of parents to withdraw their children from religious instruction, of which they do not approve. If this right of parents in 'single school areas' is to be recognised, the further question (appearing to be casuistic to us) remains, whether this recognition should be a voluntary act on the part of Missionary schools or should be imposed on them by statute.

The demand for the conscience clause is closely connected with national and political aspirations, and it would be very unfortunate if, in opposing that demand, Missions should appear to be in conflict with the national movement. It should also be considered whether the time has come for the abandonment of the principle of strict religious neutrality enunciated by Government in the Despatch of 1854 ; as the imposition of a conscience clause by legislation involves a departure from the strict principle of religious neutrality. For these above reasons, Mr. Oldham thinks that it ought to be possible to find a common ground with a large section of Indians in regard to the main questions involved.

The Efficacy of Self-Government.

The current number of the *Round Table* contains the following remarks on Home Rule for Ireland :—

They contend that if the majority of the Irish are politically backward, are lacking in enterprise, are easily swayed by agitation and phrases, these defects have been intensified by a system which compels them to obtain what they desire by factious pressure on England, and that to throw upon them the responsibility for government is alike the best cure for these defects and the only foundation of individual self-respect and national self-confidence. It is responsible government, following after a period of good government, that has made the Anglo-Saxon world what it is to-day.

The Historical Basis of Irish Nationalism.

In view of the impending Irish settlement, it is very good to understand the background of history against which the Irish people see themselves as members of a distinct nation. Such an account of the historical basis of Irish nationalism is given in some consecutive numbers of the *New Statesman* of last month. It is important to emphasise in the beginning that during many centuries of Gaelic rule, Ireland was a nation with one code of laws, one language, and one High-King. Even before the 5th century Irish intercourse with Europe was large and seems to have been direct rather than by way of England. During the sixth and succeeding centuries, there was scarcely a corner of the known world to which Irishmen did not penetrate, taking with them religion, learning and the arts; and foreigners flocked to her as a university. Irishmen like St. Gall, Virgilius, Bishop of Salzburg, the scholar Dungal, the greatest astronomer of the time, Johannes Scotus Erigena of the 9th century, these make the significant fact in early Irish history, not the recurring unrest of provincial kings and the lack of a strong central government, but a great civilising mission to Britain and France. This most promising Irish civilisation would have developed into something greater, if it had not been interfered with by invaders first from Scandinavia and then from England of the Normans. For good or for ill, Ireland had not shared the fate of Britain in being subjected first to the Roman Empire and afterwards to the invading Angles and Saxons. Norsemen and Danes who established themselves in many parts of Ireland between the 8th and the 11th centuries, never conquered the country, but became mere plunderers and ravagers. After the final defeat of the Danes by Brian Boru who finally released Ireland from Danish horrors by his great victory over the foreigners in 1014, Ireland enjoyed a century and a half of national revival. It was during this time that many of the famous churches of Ireland were built, that historians wrote of the Danish wars, and the famous Irish heroic tales were written.

The weakness, however, of the Irish monarchical system, together with much civil strife and certain troubles of the Church, gave Henry II an opportunity of effecting a conquest of Ireland such as the Romans had not essayed and the Danes had not succeeded in. Soon the conquered Irish, instead of being treated as subjects of a residential Norman king were regarded as enemies of an absentee Norman king and aristocracy. And Anglo-Norman government never for a moment ceased to be an anti-national institution. Not only the original Irish, but even the English invaders were turbulent and divided after the mediæval fashion. The Irish again and again rallied to recover the defence of their liberties, up to the time of Elizabeth, Crommell and William III. The Irish tendency for complete national expression was too powerful to be restrained by English edicts, and its most remarkable triumph was the Irishising of the mediæval English settlers. It was the Tudors who were most eager in destroying the language and the liberties of the Irish. Nothing could be more characteristic of the vitality of Irish genius than the fact that amid the fire and slaughter of the 16th and 17th centuries, Irish poets and historians went on with their labour of keeping alive the tradition and spirit of the nation. Cromwell's massacres, by which a third of the population perished by sword, plague and famine could not root out the Irish spirit which continues as undaunted to-day as ever it was.

Indian Currency Reforms.

The Editor of the *Wealth of India*, commenting on the Indian contribution of 100 millions sterling towards the expenses of the war, makes the following observations on the need for a revision of the fiscal policy of this country :—

We need hardly point out that the exports from India consist mainly of raw produce, and that these are the result of the labours of millions of small agriculturists who are themselves in debt to local sowcars at various rates of interest. What chance is there then of these poor cultivators allowing long credits to their foreign purchasers? And for their inability to do so, if they are to be restricted from selling abroad, we can only say it will be an economic tyranny rendered possible by the political subordination of India to England. Such a course may be inevitable during the period of war, but after peace, a juster method of dealing with India will have to be adopted. And that is, a reform of the currency policy of this country as the result of which, its management by the Government will be done away with and a gold currency introduced, the main feature of which will be the circulation of a large number of notes on a gold basis.

The Lines of Progress in India.

A writter to the *New Statesman* of February 1917 suggests a few main lines on which progress should proceed among Indians. The first great necessity is to reform the Civil Service. Educated Indians are to-day a formidable rival to the Indian Civil Service in the competition for the well paid, dignified and responsible posts, as well as for the right and power to direct policy; and feelings on this point tend to grow more and more embittered every day. One other thing is that the Civil Service dare no longer act on the opinions it has formed where these come into conflict with the wishes of any powerful section of the community. As public opinion has certainly found expression and can certainly awaken echoes throughout the greatest part of uneducated India, the Indian Government tend more and more to take the line of least resistance and to shirk all serious undertakings. It does not find courage to put through contentious measures in the teeth of vested interests which have learnt how to work up a popular agitation, or again to embark on a bold policy of taxation for developing the country. The writer proceeds to discuss among the various substitutes for the present system of Civil Service Government, the possibility of the adoption of Colonial Self-Government which is for the present deemed by him as impracticable. But he advocates a modification of the present system and recommends the direct appointment of Indians to be members of the Executive Councils from which Civilians might be altogether excluded. The Executive Councils must be composed of Englishmen fresh from Home and Indians; and in these the advantage of experience would be with Indians, and they would have in practice the direction of the policy of Government in Indian affairs. This would have a steadying influence of infusing responsibility in many Indians, and the possession by Indians of the chief executive posts would react on the attitude adopted by Englishmen towards Indians throughout the country. And the Empire would have the advice and co-operation of the best men in India in the delicate and dangerous task of raising India's status from that of a servant to that of a partner. The main weight in the Executive Councils ought to be given to Indians, but this should be linked with fairly extensive concessions of a different nature e.g., fiscal autonomy; elected Indians to act as advisers to the Secretary of State; increase in the number of responsible and well paid posts by Indians, and improvement of Indians in the army etc.

The Religious Problem in China.

The March issue for the *Positivist Review* has an article on the 'Religious Problem in China' by Mr. Sih-Gung Cheng, where is made known the religious problem which is awaiting solution at the hands of the Chinese Government just now. In China, religion is understood in a sense different from that common in Europe. The co-existence of three religions, Taoism, Buddhism and Confucianism has caused no conflict and the population is not divided among them, as would most likely have been the case in Europe. The Chinese have amalgamated all the three systems into one, and the great mass of them are Confucianists, Buddhists and Taoists at the same time. The exclusiveness of religion began to be felt in China when Christianity had gained a foothold. Catholic missionaries, however, tried to tolerate native worships, and even Protestants tolerate many worships and social practices. To the religions of China, Christianity has practically nothing to add. The Sermon on the Mount has been supplied by the teachings of her sages; and there is not probably a single moral precept in the Christian Scriptures which is not substantially also in the Chinese Classics. The miraculous and divine nature of Christianity which has been defended on the ground of social expediency rather than on that of truth, has again been supplied. Buddhism has an advantage over Christianity in priority of time. What Christianity has done for China has to be sought for in its secular aspect, e.g., the opening of schools, the establishment of hospitals, the relief of the poor etc.

In China, where the process of transition from the mediæval regime to the modern has not yet completed its course, one sees the revival of Confucianism with the growth of Christian influence. To-day one realises that it is not Confucianism, but a corruption of it that is responsible for the stagnant and chaotic state of China's politics and science. A study of comparative religion does not disqualify Confucianism as a religion, but shows its superiority to many others from a rationalistic point of view.

The latest controversy is whether provision should be made in the new constitution that is being drafted for a state religion. There is a proposal that Confucianism should be made the state religion and that religious liberty should be observed.

Militarism and Degeneracy.

A writer in the *Candid Review* ridicules the idea held in some quarters, among the military classes in Germany and elsewhere, that war and militarism are in some way or other ultimately beneficial to society. He denounces the application of the biological theory in moral law and says touching the usual plea of the "survival of the fittest" theory :—

If our conception of nature and of morals is so false as to lead us to imagine that we ought to advance the process of crude natural selection, we ought to turn our attention more particularly to the cultivation of disease, to refrain carefully from measures aimed at the extinction of certain diseases, and to revile and persecute those whose labours have shown the way in which such extinction may be realised. For there can be no question that on the whole disease tends to attack the feeblest and least valuable individuals in the community. The prevention of disease on a large scale means the survival and perpetuation of persons of weak constitution and degenerate heredity who, under natural selection, uncontrolled, would speedily die out. War on the other hand, kills out only those of military age and physique ; a soldier has to pass a certain medical standard of efficiency. The weak and incapable are not liable to be killed in battle, and the tendency of modern warfare is to exterminate the most vigorous part of the community.

Democracy.

Mr. W. D. S. Brown, in the course of an article in the March number of the *Theosophist*, points out:

The development of democracy is especially essential to the success of international federation, because, otherwise, such federations will be little more than trade combines for the exclusion of rival combines. The resolutions passed at the Paris Conference should be warning enough of the dangerous lengths to which a military alliance is prepared to go under commercial pressure. The power of co-operation is already admitted ; the danger is that it will be used as a weapon and not as a safeguard. Even within the British Empire we find a privately organised attempt to keep one part of the Empire—India—in a position of subjection to the remainder, presumably for fear that a recognition of equal rights would curtail the profits made by one part of the Empire at the expense of another. It follows, therefore, that until a Government respects the rights of its own people, it is not likely to respect the rights of other peoples, and any scheme of federation that does not respect the rights of all will be partially, or wholly, an imposition, however fine it may sound from the platform.

How do we know that other nations can be relied on ? We do not know. We have got to find out by trying them. If each nation waits for the others to make the first move, no move will be made. The nation that does make the first move will have proved itself fit to lead in the coming civilisation ; not in the old sense of being able to get its own way regardless of its consequences, but in the new sense of being ready to give way for the common safety. If Britain cannot lead in this respect, how can she continue to plead high ideals in justification of the War? The co-operation of the Allies, in spite of every attempt from the other side to sow discord, has proved that nations who had recently regarded one another as traditional enemies can trust one another when faced by a common danger ; can anyone say that such co-operation is impossible when directed to securing the common safety ?

POST-WAR REFORMS.

I. Dr. G. B. Clark. (*Late M. P. for Caithness.*)

When the war is over, (writes Dr. Clark in the *Forward*,) there will be many problems of the greatest importance affecting the whole structure of the British Empire, which both Parliament and the people of the United Kingdom will need to consider. Among them is the question of the future administration of India.

The present system of Government is like that of Russia, a bureaucratic one. It is a Government of officials responsible only to themselves, though unlike that of Russia, it is honest and efficient, and there is no corruption. Of the fourteen hundred bureaucrats who govern India, less than one hundred are Indians, and, consequently, it is practically a Government of foreigners alien in race and language. Like the Tsar, the Viceroy has despotic powers, tempered a little by the influence of the Secretary of State for India in London. He may use those powers in the interests of the people, but very often, he only begins to understand their requirements when his term of office expires. From the time he arrives, until he departs, he rarely comes in touch with the people. He is in the hands of the officials, and dependent upon them for his information about the condition of the country. There was a period in the history of India when a benevolent despotism was the form of Government best suited to it but, in consequence of the influence of Western civilisation, that time has now passed away. Progress and evolution operate upon States as well as upon individuals, and old and time-worn institutions have to give way to newer and more modern methods.

The India of to-day must get rid of the old exclusive methods of legislation and administration and adopt a more liberal and democratic one in the future. An attempt in this direction was made by the Indian Councils Act of 1909. Speaking during the Debate on the Second Reading of the Bill, Mr. Asquith said in reply to a critic: "It is most desirable, in the circumstances, to give the people of India the feeling that these Legislative Councils are not mere automatons the wires of which are pulled by the official hierarchy;" and, doubtless, that was the intention of the Liberal Cabinet. But the working of the Act has shown that the object of its promoters has not been attained, and that illustration has been afforded of another measure "that keeps the word of promise to the ear but breaks it to the hope."

The case (the Memorandum of the Nineteen) is thus stated:—

It is not the work of amateurs, but the well-considered proposals of men who, for their knowledge and ability, have been elected to the highest office in India, and who represent the educated and progressive class of every race and faith in that vast territory. The present bureaucratic system is now an anachronism and can no longer be maintained. All the unnecessary and absurd disabilities must be removed and a large measure of self-government conferred upon the Indian people. . . . . .

The Colonial Secretary can always consult the High Commissioners for the Dominions, and the Agents-General of the Colonies, on any questions affecting them, but there are no analogous officials representing the presidencies and the provinces of India. It would be better to reform the Council rather than abolish it. Instead of limiting its membership to old Civil Servants who have had long service in India, and some of whom are completely out of touch with the India of to-day, it might be composed of three members of this class, three Indians appointed by the elected Councillors in India, and three men of affairs from this country, not necessarily connected with India. Such a Council might be of great use to the Secretary of State when new and important questions have to be considered.

Discussing the various disabilities and disqualifications which are imposed on the people of India, Dr. Clark writes strongly on the subject of the Arms Act and the exclusion of Indians from Commissions in the Army.

This position of racial inferiority is very humiliating to the Indian people and especially to the intelligent class who come to this country for their education, take degrees at our universities, are called to our Bar, and enter various professions.

As regards the hopes held out to India Dr. Clark reminds Lord Sydenham and other reactionaries with a convenient memory, that Mr. Asquith, as Prime Minister, on several occasions, recognised the part played by Indians in the War, and spoke of the Indian people "as joint and equal custodians of one common interest and future," and that both he and other responsible statesmen have hinted, by no means obscurely, that in the future the Government of India will be more representative of the people and more under their control. II. Mr. V. P. Madhava Rao, C.I.E.

(*Late Dewan of Mysore, Travancore and Baroda*)

"The fortunes of India are inextricably bound up with those of England, and, whatever the short-comings of England may be, it is only through her that India can hope to become a self-governing nation. Anything, therefore, that may weaken England's power cannot but tell on the well-being and prosperity of India. It is, on the other hand, to England's own interest as an Imperial Power to do everything to strengthen India's position so that she may become a self-supporting and self-reliant nation within the Empire.

"I think England fully realises that the time has arrived for giving India self-government, but her difficulty appears to be whether India can safely be raised to the position of a self-governing country. The case of the Colonies is simple. They are kindred nations who are offshoots of the parent stock and the question with them is one of bringing them into closer union with the central Government and has practically been solved. But the case with India is different. Her populations belong to an alien race and a different civilisation. And the British nation, who, in the ultimate resort are the arbiters of the destinies of the Indian people, have not troubled themselves to understand Indian problems and have left the government of the country in the hands of her experts. Some catastrophe like the Mutiny and, in a milder form, the Indian unrest of 1905, rouses her attention and on these occasions, through her national assembly, the Houses of Parliament. Some action is taken to redress India's grievances and improve her Government. In the present World-War, however, England appears to have been much impressed by the spectacle of a whole nation, from prince to peasant, rallying to her side and placing their resources and services unreservedly at her disposal. In the exuberance of her feelings of gratitude India was assured of her title to self-rule being recognised and to her being lifted from a position of dependency to that of partnership in the Imperial scheme. The enthusiasm, however, would appear to have cooled down somewhat latterly and the visit to India of the Editor of the *Round Table* and the *Commonwealth of Nations* is not calculated to inspire confidence in the minds of the people of India as to much being done to change the character of her rule. He is supposed to represent the Lord Milner-school of thought, which, in regard to the so-called subject-races, has greater faith in the efficacy of strong, and according to their lights, good government than self-government. The Government will still be bureaucratic in spirit although there may be an increase in the representative element in it and in the appointments in Government service open to the sons of the soil. But this will not meet the present requirements of India. What India needs, and is ripe for, is Government of the people, by the people and the full recognition of the principle that there should be "no taxation without representation."

"This is a matter of no mere sentiment or aspiration, due to borrowing fine phrases from the politics of the West without understanding their meaning. It is a positive necessity for the well-being of India and for the integrity of the Empire. There is no question that the bureaucracy has outlived its usefulness, and while unwilling to part with power, it is unable to adapt itself to the changed conditions in India. The India of to-day is not the India of five years ago and since the war, the change is working even more rapidly than in the previous three years. The retired Governors and officials who generally shape opinion at Home on Indian questions are woefully behind the times and shout shibboleths like "vakil raj," "babu politicians," "Martial races," "unwarlike communities," "ignorant masses" and "self-seeking educated classes," which have long since been exploded. India has passed the stage of being governed on the old lines by highly trained Englishmen sent out to administer the country. So long as government was confined to policing the country, dispensing justice, collecting taxes, and promoting to a large extent the material and moral welfare of the people, it was simple enough, and no agency could have done it better than the Civil Service, which has earned the gratitude of the people and the admiration of the whole world. But if India is to become a self-supporting and self-reliant nation, something more is wanted than these elements of good government. The British Government, however sympathetic and however well-intentioned it may be, cannot, from the nature of the case, undertake this task with any chance of success. The work will have to be taken up by indigenous agency, by statesmen and philosphers like Stein, Fichte and others in Germany in the beginning of the last century, or the patriots who piloted the passage of Japan from the old order into the new. The only measure of economic and social reconstruction introduced by the British Government is the co-operative credit system in Lord

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Curzon's Viceroyalty. Beyond this, the Government have not done much to strengthen the economic position of the people or train them in habits of self-help and self-reliance.

"It is the fashion to attribute the spontaneous rally of India to the side of England, when war was declared, to the good Government which had conciliated and secured the loyalty and devotion of the masses to the British nation. This is at best a half truth and I do not think I am exaggerating when I say that this was due mainly to the influence of the much maligned and much misunderstood intellectuals of India who alone were in a position to judge the good work England had done and what it would mean to India if Germany won in the present war. It is the educated classes that gave the lead. Of course, it is well-known that a great deal of this unhesitating action is due to the emphatic and courageous way in which Lord Hardinge had indentified himself with the national cause. I will not here attempt to show how untenable is the position, so often assumed, that the Civilians are the protectors of the masses and the Indian publicists are fighting for their own aggrandisement. Masses and classes are, however, ideas and phrases borrowed from the West and are utterly inapplicable to the conditions in India.

"How the English rulers in India have not outgrown the ideas of Government which may have answered in the earlier years of British rule but are quite inapplicable to modern conditions may be gathered from the attitude of the spokesmen of the Indian Government in the discussions in connection with the Consolidation Acts and from the Despatch sent by the Government of India on the proposals of the Decentralisation Commission to bring schemes for revision settlements before the Legislative Councils. If it were a national Government, even of the Russian type, it will be quick to respond to stimuli from without. The exigencies of self-preservation and strengthening her power of resistance has led the Russian Government to adopt compulsory education and give a voice to the representatives of the people in the Duma in deciding the policy of the State, even as the war was going on. All this will point to the necessity of increasing the representative character of Indian rule and consulting the people more generally and trusting them to a larger extent than has been the case hitherto.

"The heart of India is sound at the core and Congresses and Leagues and leaders like Mr. Tilak and Mrs. Besant require, at this crisis in India's fortunes, more freedom of speech and publicity for their utterances rather than discouragement, or repression. The people have to be educated on the one hand and on the other opinion has to be focussed on what measures should be adopted for giving India self-government within the Empire. I can, in the light of the recent speech of Lord Carmichael, understand how difficult must be the position of rulers when confronted with what they believe to be a widespread conspiracy to subvert British rule; but even in regard to such a state of things I would venture to suggest that the best course to adopt is to summon the well-disposed sections of the community to his aid and take counsel with them. However this may be, in regard to the reorganization of the Government of India, the proposals should not have gone to England without being subjected to discussion in India, both in the different Legislative Councils and in the Press. It is discussion alone that will enable Government to decide what constitution is best for each Province and for the Federal Government. The way in which the proposals have been sent to England, without even the Imperial Legislative Council being consulted, shows that the old bureaucratic spirit still rules in India." (The *Madras Mail.*)

III. The Hon. Mr. N. K. Kelkar.

(*Member, Legislative Council, Central Provinces.*)

Now the "essentials" of the scheme, as they appear to me, are these. Indians of status, position and education, whether they are Hindus or Mahomedans or Indian Christians, are no longer in a spirit of absolute trust, content either with the present method of initiating policies or the composition of the personnel which administers the affairs of the country. They want to have a hand both in the shaping of policy and the carrying out of the administration from day to day; and they want to be associated with the administration, not in the subordinate capacity, in which sense it is sometimes claimed that the administration is already largely in Indian's hands in almost every department, but in being given opportunities to shoulder its burdens and responsibilities in the same manner in which all higher officers of Government are called upon to do. (*Presidential address at the Yeotmal Conference.*)

INDIA'S WAR CONTRIBUTION.

I. H. E. Lord Chelmsford.

His Excellency the Viceroy wound up the concluding session of the Imperial Legislative Council on March 23, with the following reference to India's war contribution :—

This has been a notable session and the Hon'ble members have, I think, every reason to be gratified with it. They have signified, in no uncertain manner, their desire to associate India with the sacrifices which our Empire has had to make in connection with this war, and I am glad to think that the Government of India, in making their offer of £100 millions to the Imperial Government, did not misinterpret the wishes of this Council. Some of you may have felt that the initiation of this policy by the Government reduced the subsequent legislative proceedings to little more than a formality, but this, believe me, is a superficial view. I can assure you that as regards the grave issues which this budget has raised, we do feel our real dependence on your support. We have acted in your name and on the strength of the mandate which you gave us in your loyal resolutions of the 8th September 1914, and the 24th February 1915, and we desired an endorsement of our actions which should go beyond the passing of the bills necessary to give them legal validity. It was, therefore, with the highest satisfaction that I found you to be in practically unanimous accord with the Government in supporting the proposals we laid before you. I think you would all wish me to congratulate Sir William Meyer on the skill with which he framed his budget, on the lucidity with which he expounded it, and on the reception which it has received throughout the country. I do not minimise for one moment the heavy responsibilities which this budget has placed upon us. There will be a sacrifice not of luxuries, not of the frills and trimmings of civilisation, but a sacrifice in a large measure of the necessities of ordered Government, and the result must be arrested progress in education, in sanitation, in public works and kindred subjects which are in other countries the touchstone of civilised life. . . . . .

Coincident with this session has come the triumphant progress of our gallant troops in Mesopotamia. We have all admired the military skill and determination which has marked the leadership of our army in the field, and we cannot forget the gallantry and endurance of the troops throughout the operations, which have taken place under the most trying conditions. We need not worry over the questions to whom, apart from the Generals and the Army in the field, the credit of those operations is due. But I should be doing less than justice to India if I did not briefly touch upon the history of the last year. The fall of Kut marked the nadir of our fortunes. The Indian Army had been bled white in providing troops and equipment for four fronts. The breakdown on the medical side in Mesopotamia had brought a storm of obloquy on Indian administration. The hardships of a summer in Mesopotamia had decimated and sapped the strength of our troops. The sick pouring into India had placed a strain on our hospital resources, which were frankly insufficient. All this had to be remedied. It is not easy for men to concentrate attention on work when criticism, some true, much of it based on the flimsiest grounds, is showering down upon their heads. But the fact remains, that the work has been done, and, so far as our resources have enabled us, I believe, we have made up the deficiencies of a year ago. Am I going beyond the mark when I say that we ought to pay a tribute to the labours by which the late and the present Commander-in-Chief and the Army Headquarters have accomplished this, and enabled General Maude and his heroic companions-in arms to achieve the success over which we are rejoicing to-day? History will some day record its verdict on these events, and we are too near to them ourselves to be sure of our judgment. But three stages seem to stand clearly out: the first in which India threw all she had and far more than had ever been contemplated into the great struggle; the second, the inevitable breakdown due in part to the exhaustion of our military resources, in part to adverse fortune; and the third, the patient building up again of the forces which has made our recent operations possible. It is easy to be wise after the event, and we to-day can see how things might have been ordered differently. We hope we have profited by our failures and have atoned for them, and made provisions against their recurrence.

II. The Rt. Hon. Mr. Chamberlain.

Moving the resolution authorising India's war contribution in the House of Commons, on March 14, Mr. Chamberlain said :—

He was confident that the members of the House would unite in gratefully recognising the feeling of comradeship and the community of interest which prompted the gift. He recalled the war services of the Indian troops, of whom there were now 300,000 on active service, and paid a tribute to the part played by officers in the British Indian army and officers in the Medical Service and Imperial Service Troops, and also to the unrivalled generosity of the Indian Princes. Mr. Chamberlain spoke of the labour corps, motor transport and munitions supplied by India, and mentioned that India's output of small-arms had increased threefold and of field-gun cartridges twelvefold since the war. He claimed that the military efforts of the Indian Government seconded by the Princes, Chiefs and Peoples of India had been no mean contribution to the success of the Empire.

III. Mr. Lloyd George's Message.

In accepting India's war gift, the Prime Minister sent the following Message to His Excellency the Viceroy who read it at the Council Meeting on March 23 :—

I wish, on behalf of the British Government, to express to the Government and the people of India our most sincere gratitude for the magnificent contribution which India has just made to the financing of the War. Coming, in addition to the enthusiasm and loyalty manifested throughout India on the outbreak of the War and to the invaluable military services since rendered by the Indian Army, this gift is to us a moving proof that India shares whole-heartedly with the other subjects of the Crown, the ideals for which we are fighting in this War. That India should come forward of her own accord at this crisis and render such real and opportune assistance is not only a source of sincere satisfaction to His Majesty's Government, but must produce a better mutual understanding among all the races and peoples under the British Crown.

Hon. Mr. Malaviya on Indian Councils.

Speaking on the Budget debate in the Imperial Legislative Council on March 23, the Hon. Pundit Madan Mohan Malaviya said :—

I mean no disrespect to your Excellency or your colleagues in the Government of India but I am sorry to say that not you but His Majesty's Secretary of State is the Government of India, because it is an open secret, we all know it to our regret, that every matter of importance relating to the revenues of India must be decided by the Secretary of State for India. A few minutes ago my hon. friend, Mr. Wacha asked whether we were not a self-governing body ; I honestly wish we were ; but I regret to say we are not, because in all matters of importance the fiscal policy of the Government of India is laid down by the Secretary of State. The influences to which he is subjected decide for the time being what particular course is to be taken on any question. To-day it may be those who denounce the evil of supplying opium to China ; to-morrow it may be the Lancashire merchants who do not want to lose any of their profits ; the day after, it may be the War Office which thinks that certain burdens should be cast upon India. The Government of India may protest, I gratefully recognise that they have protested on many occasions ; but their protests have gone in vain on too many occasions. Now, this is as unsatisfactory as anything could be, and I hope after the war is over this will be one of the most important questions that will be taken up, and that the Government of India will be really established in India and removed from London.

The second point is the constitutional position of this Council. I have already entered my protest against the manner in which the offer of £100,000,000, was settled. I do not mean any disrespect to the Government of India, but I feel it my duty to them and to his Majesty's Government and also to my country, to say that while the Council was in existence it was entirely wrong on the part of the executive Government to decide to make such a contribution without the consent of the Council. It shows as if this Council exists in name only and has really no fiscal powers except to legalise taxation. This again is highly unsatisfactory. Lastly, as regards the general position of the members of this Council, while we feel grateful that his Majesty's Government have invited representatives from India to assist the Secretary of State at the War Conference, we cannot conceal the feeling that, as it was on our recommendation that his Majesty's Government agreed to invite Indians to represent India at the Conference, it was due to us that we should have been consulted before the nominations were made. The Government would have lost nothing if that courtesy had been shown to the Council ; on the contrary, there would have been a real feeling of satisfaction throughout the country. We feel that we, who offer our humble services free to the Government and who have a recognised status as the chosen representatives of the people, should not be passed over when a question like that, in which we have shown an interest, is to be decided.

These considerations lead me naturally to the larger question raised by my hon. friend, Mr. Sastri and other members on Post-War Reforms. We have been advised by some gentlemen that we should not refer to that question at present. Those who offer such advice do not realise the position. They seem to forget or fail to appreciate what your Excellency was pleased to tell us in the opening speech of this session, that from May to October last, that is for six months before the session of the Legislative Council which produced the Memorandum submitted by nineteen of us elected members to your Excellency, to which also you were pleased to refer, the Government of India were engaged in considering the Despatch on the question of Post-War Reforms which you addressed to the Secretary of State for India in the autumn of last year. With that statement of your Excellency before us, I feel I am bound to refer to the matter. I do so particularly because as the hon. Mr. Basu has said, this Council will not meet again till September. We are hoping that this war, this accursed war, will have come to an end and that his Majesty the King-Emperor will have been able to proclaim a glorious peace before that time. In that view it is not improbable that this question of Post-War Reforms will be taken up for consideration before we meet again. Your Excellency's Government has spent six months over the Despatch you have sent to the Secretary of State and we the elected additional members of your Council, have submitted to you a Memorandum over which we spent a great deal of time and thought. The Indian National Congress and the Moslem League have also put forward a carefully considered scheme of reforms. There is thus no doubt much material before the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Government to help it to come to a decision on the reforms. But, my Lord, we do not know what proposals your Excellency's Government have made on the subject, and we request that you may be pleased in fairness to the members of this Council, to publish those proposals, in order that we may submit our criticism on them with a view to help the Government to arrive at a correct conclusion. I need hardly say that the question of reforms is a much larger one now than it was before the war. As Mr. Lloyd George said the other day, the war has changed us very much. It has changed the angle of vision in India as well in England. I venture to say that the war has put the clock of time fifty years forward, and I hope and trust that India will achieve in the next few years what she might not have done in fifty years. Some persons are frightened at the use of certain expressions; some dislike the use of the term 'Home Rule;' some cannnot bear to hear even of 'Self-Government on Colonial lines." But all will have to recognise that the reforms after the war will have to be such as will meet the requirements of the India of to-day and of to-morrow, such as will satisfy the aspirations of her people to take their legitimate part in the administration of their own country.

My Lord, among these reforms, one of the most important forcibly suggested by the discussion on the Budget to-day is that India should enjoy fiscal autonomy, and that its Legislative Council, which is constituted by law, should have the sole power to determine what taxes should be raised and how the money raised should be spent. The action that has recently been taken by the Lancashire party in England with reference to the increase made in the import duties on cotton goods throws a lurid light on the need of having fiscal autonomy conferred on India. As regards the general question, the claim of us Indians to have a real voice in the administration of our domestic affairs is unanswerable. Justice is on our side. The forces of time are on our side. We rejoice to think that His Majesty's Government is engaged in a righteous war, in the cause of liberty and justice, and the freedom of nations, small and great. It is in no small measure due to this knowledge that from the beginning of the war we have heartily offered our humble services and have earnestly prayed for the success of His Majesty's arms. Before this war we admired England because she loved liberty and had helped other nations to acquire freedom.

Hon. Mr. V. S. Srinivasa Sastri on the Reforms.

In the course of a speech in the Imperial Legislative Council on March 23 the Hon. Mr. V. S. Srinivasa Sastri referred to the Post-War Reforms in the following words :—

Within twelve months of your Excellency's assumption of office, it has been possible for your Lordship to confer on this country three great blessings. The first I would mention is the suspension of indentured labour during the period of the war, which I hope will be converted into complete abolition of that iniquitous institution. The next I would mention is the organisation of the Defence of India force. Lastly, I will mention—well, I forget the third achievement for the moment, but i will pass on—I do not know how many still remain to be achieved by your Excellency, but there are two which I must take the leave of the Council to mention as those which I would like to see Your Excellency's regime be marked by. One is the enactment, on however humble a scale, of the principle of compulsion in the sphere of elementary education. The other is the inauguration of a scheme of political reforms before Your Excellency lays down office. On the contrary I expect that, long before that time comes perhaps, we shall be enjoying the fruits of the new scheme which I am sure is being framed between the Government of India and the Government in England. It has been pointed out, my Lord, several times that at this time of war we ought not to embarrass the Government with any suggestions of ours. I do not know that the thought of what should be done in India to satisfy the gowing ambitions of the country is not present night and day to those who have charge of responsible interests either here or in England. We know as a matter of fact the thought is for ever present in your minds, in the minds of those with whom you are in daily association in the work of Government in India. If we at this time throw in our counsel so that you may take that into consideration also in settling matters, it is rather hard for us to be accused of seeking to embarrass the Government with our ideas at this time. It is too little realised, I fear in official circles, or if realised it is conveniently forgotten, how intense are the feelings of young India in the matter of realising the great hopes that have been held out from time to time. It is somewhat strange that decades ago when public life was rather low in this country and public demands had not risen to any high pitch, it was left to English administrators and statesmen to lay down

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in clear and generous terms the policy of continuous improvement which was to end in the final emancipation in a political and economic sense of the people of this country.

Now that during the last few years public opinion has become articulate and people are asking for one thing and another, it is astonishing to think, it is saddening to think, that officials should seem to stand aghast and scared at the coming prospect. What is it that is happening in this country, they seem to say to themselves my Lord, no one of us, at least no one of us who has thought of the affairs of India in a serious way, desires any catastrophic changes. Far, far be that from our minds. But let me frankly tell Your Excellency and Your Excellency's Government that we do look forward to large, substantial and satisfying items of reform consistently with their being stable and lasting. The only things that we hear amid the official reserve and the official silence in regard to these matters are the views of retired pro-consuls like Lord Sydenham, whose distrust of educated Indians, I venture to state from this place, is fast becoming a menace to the peace and welfare of this country. My Lord, it was only a few days ago that the premier of England, referring to the catastrophic change that has come over Russia, spoke of it in terms to which I would venture to draw the attention of the Council. He referred to it with his characteristic insight as events marking a world epoch and as the first great triumph of the principles for which we entered the war, *i.e.*, the dethronement of autocracy and the establishment on a sure footing, let us hope, of popular freedom. We ask for the identical thing in this country. Shall it be said that India was the last country in the world to obtain this great triumph of the principles for which England and India alike are making terrible sacrifices? Let it not be said that any school of English politicians stood deliberately in the way of according to India that popular freedom which they hail in the case of Russia, even when it is inaugurated in that catastrophic manner of which we have heard. We want peaceful progress; we want constitutional and ordered progress; we want, however, at the same time that it should be declared clearly to Indians that they shall one day be free. It is necessary in my opinion also to state how soon. Shall it be said twenty or thirty years hence that, at a time when the world was passing through a terrible crisis and the nations stood facing each other, some in friendly co-operation, some in the bitterest hostility, the Indians asked for freedom, but that they were told to 'wait wait, wait.'

Your Excellency, it is now time that we were told definitely what it is that we are to expect. I make no doubt whatever that Your Excellency is already contemplating the announcement to India, at a seasonable time no doubt, of the goal towards which India politically will evolve under the fostering care of the British Government. It strikes me that the hour has long come when that should be made perfectly clear. While there are many authorities, high and low, in the country ready to deprecate and discourage, ready to intern and exclude, there is none—sad though—high or low, to speak a word of hope, to hold out to the coming generations the promise of freedom for which England has always stood, for which she is striving to-day, and for which both England and India together are striving with one mind and one heart.

Mr Hiranand Khemsing.

It will take too long to detail here the reforms which are needed and which must be installed after the War without loss of time. These have been enumerated in the memorandum drawn up by the non-official members of the Viceroy's Legislative Council and have received the seal of approval from the Indian National Congress and the Muslim League. I have been induced to make a mention of them because Sindh swims or sinks with the rest of India, and I wish only to add that the people of Sindh heartily join the people of the other Provinces in urging upon the British Government the necessity and desirability of installing a substantial measure of Self-Government in the country.—(*Presidential Address, Sindh Provincial Conference.*)

Indentured Labour.

In the House of Commons on the 4th April Mr. Chamberlain stated that an inter-departmental Conference, on which the Government of India would be represented, would be held in London in May to discuss the question of the abolition of indentured emigration from India. Meanwhile it had become necessary to stop indentured emigration in order not to interfere with military recruiting in India. The Viceroy had informed Mr. Chamberlain that he and the Government of India wished that the indentured system of recruitment of labour for the colonies should not be resumed. It has later been announced that at the conference on emigration to be held in London in May the India Office will be represented by the Parliamentary Under-Secretary of State, one India Office official and the following officers from India:—Sir James Meston, Sir S. P. Sinha, Lieutenant-Colonel W. M. Kennedy, and Mr. N. E. Majoribanks, I.C.S. The two last-named gentlemen will attend the Conference as having expert knowledge of the conditions of recruitment of labour.

Licensing Difficulty in Natal.

The refusal of the Dundee Town Council to grant a license to an Indian merchant, says the *Commonweal*, is the latest instance of the exhibition of colour prejudice in Natal. Mr. Karodia, who had settled as a trader in Natal for the last twenty years, recently purchased a building at a cost of £3,000, to which he desired to remove his business quarters. The Licensing Officer refused to grant the necessary license, because the opinion of the borough "was that that particular street, where Mr. Karodia's new building was situated, was reserved for European traders," and that this case might become a precedent for other Asiatics to attempt to occupy the quarters "reserved for Europeans". It is amusing that the Licensing Officer should write that he wished "to avoid class distinctions and keep the main street of the borough for Europeans." Is it a case of avoiding or perpetrating class distinctions? asks our contemporary *Indian Opinion* writes:

An Indian, because he is an Indian, is refused permission to transfer his business to premises owned by himself, even though it had been clearly shown that the man was carrying on his business from month to month, not knowing when it might be closed down. Such action amounts to rank tyranny.

Indentured Labour Statistics.

The report of the Indian Immigration Trust Board of Natal for the year 1915 which recently was published contains some interesting figures.

During the year 17,745 Indians completed their indentures, of which 5,167 completed their first term of indenture of five years; 6,085 had re-indentured under Act 17 of 1895 without a break, and 6,495 re-indentured under 42 of 1905 after a priod spent in Natal as 'free' Act people.

The number of re-indentures during the year was under Act 17 of 1895, 608; and under Act 42 of 1905, 3,194; the total 3,802, being 1,347 men less than the previous year.

The distribution of re-indentured Indians was as follows:—Coal Companies 50; tea and sugar estates 2,682; public bodies 8; up-country farmers 116, various 153! South African Railways 71.

Indians were returned to India as follows:—Madras 3,141 and Calcutta 703. Of these 98 were sick, etc.; 2,753 were entitled to a free passage under the law, and 993 received free passages under the Relief Act of 1914. Altogether there were 182 persons more returned than the previous year.

The actual number of those Indians who sailed and who were entitled to free passages from the Board was 2,851 souls (equal to 2,288½ adults) being 711 souls (equal to 557½ adults) less than the number of entitled Indians who went last year.

The cash and jewellery taken to India by returning Indians amounts to £31,591 and £11,987 respectively—a total of £43,578, showing £782 less cash than last year, but an increase of £912 in jewellery.

The general average is £16 16s. for each man and woman.

The special average is, sick ..	£4	1 7
Entitled ..	£17	12 11
Relief Act ..	£13	19 8

The average for the sick shows an increase of 13*s.* 8*d.* each, while the entitled show a decrease of £1 7*s.* 10*d.* each man, and the Indians under the Relief Act a decrease of £2 10*s.* 7*d.*

The cost of returning the above 2,288 adults to India was £16,425 16*s.*, which includes collection and accommodation at the Durban Depot, passage money, salaries and gratuities of medical staff, both at Madras and Durban, clothing, tinware, receiving and sending to their homes, and other expenses.

Technical Scholarships in Travancore.

In Travancore a system of foreign scholarships to enable youngmen to be trained in foreign countries for industrial, technical and commercial pursuits was inaugurated in August 1916. In accordance with this system it is offering this year six scholarships, four of which will be tenable for two years each in England and the other two for a like period in India. The foreign scholarships are for students who will specialise in (1) weaving and dyeing, (2) chemical industry, (3) soap-making, and (4) leather and tanning. The scholarships are of the annual value of £150, exclusive of passage money and college tuition fees. The two other scholarships will be worth Rs. 50 each, exclusive of tuition or college fees. These are tenable in India and will be awarded to students who will specialise in wood distillation and manufacture of shellac, sealing wax, etc.

The Gwalior State Trust, Ltd.

His Highness the Maharaja Scindia has recently announced the formation of a new enterprise known as the "Gwalior State Trust, Limited." The objects for which the company is established are :—(1) To assist in every way possible the development of industry and commerce in the Gwalior State. (2) To render financial or any other assistance in commercial enterprises and in the creating of new manufactures and in the fostering and development of industries already in existence in the Gwalior State and (3) to encourage and foster in the Gwalior State the increased use of up-to-date machinery in agriculture and similar industries hitherto dependant on manual labour.

Soap Industry in Baroda.

An attempt is being made by the Baroda Durbar to develop the soap and oil industries in the State. With a view to assist the development of these industries, the Durbar has appointed Mr. J. Chakrabaty, F.C.S., Technical Chemist of the University of Paris, as expert adviser. Mr. Chakrabaty has for about five years been the Managing Director and Chemist of the Oriental Soap Factory at Calcutta, and in 1915 was engaged by the Mysore State to investigate the possibilities of the soap industry in that State. His experiments proved successful, as a result of which the Mysore State started a soap factory at Bangalore.

War and Mysore Industry.

A striking instance of the development of an Indian industry as the direct result of the war is found in the Mysore State. Prior to the outbreak of hostilities, the State derived a considerable revenue from sandalwood which was disposed of at periodical sales, principally for shipment to Germany. With the advent of war, buyers failed to appear at the sale and Mr. Alfred Chatterton, Director of Industries and Commerce, accordingly sought the assistance of the chemists of the Indian Institute of Science at Bangalore, with a view to establishing a sandalwood oil industry in Mysore and thus utilising the raw material formerly shipped to Germany. As the outcome of the experiments made in the laboratory at Bangalore, it was found practicable to inaugurate such an industry, and within a brief period, the works were so greatly extended that the manufacture of the oil is now yielding a monthly revenue of Rs. 1½ lakhs. The co-operation of the Institute of Science was essential to this development and the profits derived from the industry within a single year, it is said, will almost equal the whole amount so far expended on the Institute. The value of a well-equipped scientific institution is forcibly illustrated in this case. Sandalwood, which was formerly exported for the manufacture of oil, is now profitably treated in India and the loss of the German manufacturers means a corresponding gain to an enterprising Indian State.

New Industry in Hyderabad.

Great progress, we are told, has been made in Hyderabad in making motor spirit from the mahua. The tree abounds in the State and the authorities gather about 25,000 tons of its flowers every year. Some 10,000 tons are used for liquor, leaving a balance of 15,000 tons which are at present on the market. Mr. G. E. C. Wakefield, the Director-General of Revenue, says :—"We have run several kinds of motor cars successfully for some time on a spirit prepared from mahua at half the cost of petrol. Annual consumption of petrol in Hyderabad and Secunderabad is about 100,000 gallons and we require only about 1,500 tons of mahua to make that quantity." Mr. Wakefield adds : "A cheap motor spirit spells great reduction in the working charges of railways, water pumps, motor cars, in fact every description of power engine."

Pudukottah Co-operative Conference.

The first Co-operative Conference was held in the Secondary School premises at Alangudi on March 23, with Mr. Sidney Burn, I.C.S., State Superintendent, in the chair. Eighteen resolutions were discussed and passed.

One resolution wanted the Durbar to permit the co-operative societies to undertake tank repairs and other public works. Before putting it to vote, Mr. Burn observed that when he was the President of the Trivandrum Taluq Board it was his experience that the people of the place adjoining Trivandrum did successfully, and at less cost, some works on a co-operative basis, so much so that he thought that these should be done more extensively by such means. The resolution was carried. In declaring the Conference dissolved, Mr. Burn observed that the subject of a State Bank was a fascinating one, and that it was stupid to send their money outside. He said that the question could not be decided in a moment, but required careful consideration. He assured them, however, of course, without detriment to his official consideration, that the Durbar was always willing to help the people.

The Maharajah of Bikanir.

In his speech on the occasion of receiving the freedom of Edinburgh on April 12, H. H. the Maharajah of Bikanir said he regarded it, not as a personal tribute, but a generous recognition of the unique position in the Empire of the Indian Princes and of the services which along with their fellow countrymen it had been their proud privilege to perform for their beloved Emperor and for the Empire. He paid a tribute to the great part which Scotsmen had played in India, where they had exhibited that sterling honesty and grip, as well as the intellectual and physical gifts distinguishing the nation. He was greatly impressed by the close resemblance in so many things between Scotsmen and Rajputs. They from India appreciated very greatly the generous, sympathetic and patient handling of Indian needs and sentiments, not only by the Imperial Government, but also by the Ministers of the Oversea Dominions, whose warm welcome and sympathy they would never forget. He was convinced that one result of the Imperial gathering would be the definite and permanent strengthening of Imperial ties.

Responding, when the degree of Doctor of Laws was conferred upon him, His Highness said that India would be deeply grateful to the Edinburgh University for its generous hospitality and the kindness extended to her student sons.

Mysore Military Forces on War Duty.

In the course of the Report of the Mysore Military Forces for 1915-16 it is stated that the Imperial Service Regiment remained in the field throughout the year, and was employed on the important duty of guarding the Suez Canal. The Lancers had encounters with the enemy on three occasions, and acquitted themselves creditably. The British Government recognised the good services rendered by the officers of the Lancers, including Colonel Desaraj Urs, who was mentioned in General Wilson's despatch, Mr. B. Chamraj Urs, who was promoted to the First Class Order of British India with the title of Sardar Bahadur, Jamadar Lingaraj Urs, who was admitted to the Indian Order of Merit, and four other officers who were awarded Distinguished Service Medals.

Progress in Cochin.

An instance of the progressive spirit of administration in certain Indian States, says the *Commonweal*, is furnished by the Cochin Durbar. While leave was refused by the Madras Government for the introduction of a non-official Panchayat Bill in the local Legislative Council, the Cochin Durbar, satisfied with the successful way in which the Village Panchayats have so far exercised their powers, have now invested them with the additional powers of trying petty civil cases—a good recognition of successful administration by Panchayats. The Cochin Panchayats, it may be stated, had till now control over rural sanitation, agriculture and roads. We hope the Madras Government will not say that the villagers in Cochin State are more enlightened and more progressive than those under their direct charge.

H. H. The Maharaja of Travancore.

A largely attended public meeting was held in the Victoria Jubilee Town Hall, at Trivandrum, recently, to concert measures for celebrating the *shashtipurthi*, or sixtieth birthday anniversary of H. H. the Maharaja of Travancore. The meeting was attended by all classes of people, including European residents in the station. His Highness has been on the *musnad* for the past 32 years, but only one previous Maharaja has celebrated his *shashtipurthi* in the history of the State. Dewan Bahadur M. Krishnan Nair, the Dewan, presided, and after several speeches, resolutions were passed for the celebration of this auspicious event in a fitting manner; also for raising a permanent memorial. The total amount subscribed was over Rs. 10,000.

INDUSTRIAL & COMMERCIAL SECTION.

Lord Willingdon on the future of Trade.

His Excellency Lord Willingdon, in the course of a long and interesting speech at Bombay on March 22, thanked all organisations in the city connected with trade and commerce for their cordial and thorough co-operation with the Government during the war and the great assistance they had given in many difficult questions, and said :—"A few weeks ago General Knight informed me that he had received communications from certain business firms suggesting that they might be willing to give position in their firms to suitable officers of the army or navy who, while incapacitated by wounds from further military service, were otherwise in good health and anxious to secure employment in civil life. I thought this matter sufficiently important to write to the Secretary of State and he a few days ago cabled to me cordially approving of the idea and suggesting that he should appoint a committee at the India Office which might deal with any applications which might be sent. Might I invite you, gentlemen, to consider whether there is possibility of developing this suggestion and further, if in the event of your viewing it with favour, you could form a committee out of your members and deal direct with the committee to be appointed by the Secretary of State." . . . . . "If we consider the possibilities of our trade and commerce after the war, I think the outlook is very bright indeed. We are already supplying, notwithstanding the difficulty of freightage, Egypt and the Mediterranean with our natural products to an extent hitherto unknown and when a stable and settled administration exists in Mesopotamia and in that great tract of country which has hitherto been known as German East Africa, I think, I may say without undue optimism that this city and presidency are peculiarly well-situated for developing a large and profitable trade between ourselves and those countries. I think there is good reason for confidence in the future. There is one note of warning I would wish to strike, one question I would like to ask the members of your Chamber to-day. Are we looking ahead far enough to prepare for all possible emergencies, are we organising satisfactorily all our forces here so as to make our position secure for future years ?"

Tanning, Pottery and Paper.

At the last sitting of the Industrial commission in Calcutta, Mr. R. P. Adams, Chief Inspector of Factories, Bengal, stated in his evidence :—

There are at present only about five tanneries in Bengal, all of which are small and of little importance. There appears to be no doubt that the tanning industry is one which could be very largely and profitably developed. The money that is now spent in the preparation of skins for shipment abroad would, to a great extent, be saved as such preparation would be unnecessary if the skins were tanned in India and this would, moreover, have the desirable effect of taking the trade out of the hands of foreigners. In developing this industry it would be necessary to employ a large staff of trained European experts.

I have on various occasions visited the Calcutta Pottery Works and am convinced that this is an industry which admits of development. There is a large demand in India for porcelain insulators for electrical purposes. This demand has hitherto been met by importing these articles, but I do not see why there should be any difficulty in manufacturing them in pottery works in India.

The manufacture of paper in India, at present, has to depend almost entirely on raw materials such as wood pulp, caustic soda, bleaching powder, sulphate of ammonia, white clay, etc., which have mostly to be imported from Scandinavia and other parts of the Continent. Paper mills have experienced of some difficulty since the outbreak of war in obtaining these materials and high prices are having to be paid. Almost all these raw materials could be manufactured in India. As regards wood pulp, which is required in large quantities, experiments have already been carried out on a small scale by the Tittaghur Paper Mills Company and it has been demonstrated that bamboo, which is obtainable in large quantities in India and Burma, can be successfully converted into pulp suitable for the manufacture of paper. The only difficulty seems to have been the capital required to lay down a plant large enough to turn out the raw material in paying quantities.

Indians in Railway Service.

Replying to the Hon. Mr. D. E. Wacha's question at a recent meeting of the Imperial Legislative Council *re* employment of Indians in the higher branches of the railway service, Sir Robert Gillan said:—The policy of Government is definitely to increase the number of Indians in the higher branches of the railway service on State-worked lines. This is shown by recent recruitments for the traffic department and the general statistics of Indians employed. The Great Indian Peninsula Railway invited applications from Indian gentlemen for appointments in the superior grade of the traffic department. The East Indian Railway also have submitted proposals to the Railway Board for the training of Indians to qualify them for appointment as officers in the locomotive department—a branch of work which Indians have hitherto not taken up.

Co-operation in the Central Provinces.

The total population of the Central Provinces and Berar is 14 millions. Out of these 14 millions 70,000 are members of co-operative societies, and on their behalf the Provincial Co-operative Bank has contributed, as a first instalment only, Rs. four lakhs to the Indian War Loan. The principal co-operative bank has already contributed largely to the British War Loan, and its total War Loan holdings spread out over the 70,000 enrolled members average exactly Rs. 7-12 per head. If the balance of the provincial population make as good an effort as the members of the co-operative societies have done, says a contemporary, we may expect from the Central Provinces and Berar a total contribution of between Rs. 10 crores and Rs. 11 crores towards the War Loan.

Trade between Russia and India.

It is interesting to note, says the *Indian Engineer*, that while India has sent her trade commissioners to Russia to study the prospects of trade between India and Russia after the war, Mr. Kadomtzeff, the Russian Consul in Ceylon, has recently been on a business trip to India to enquire into the prospects of trade between India and Russia. He visited Madras, Calcutta, Karachi, Bombay and other large commercial centres, and is apparently satisfied with the results of his trip. In the course of an interview with a representative of the *Times of Ceylon* he stated that it is calculated that before the war something like a hundred thousand tons of cargo used to be sent every year to Russia *via* Germany and Austria, and the war will have done something if in future the trade is carried on direct.

Imperial Preference.

The Committee of the Indian Merchants Chamber recently sent a representation to the Secretary, Commerce and Industry Department, Government of India, stating that India should receive preferential treatment in Colonies like South Africa, with which she had been able to do large business recently. She imported practically at a nominal rate of duty goods from all the Colonies, including South Africa, and it was but fair she should get preferential treatment from them. The reply from the Commerce and Industry Department was to the effect that the question of the financial relations between India and South Africa was considered in 1903, when it was stated that the policy of the Government of India precluded the offer of any corresponding concessions to South African produce imported into India. As the Government of India were not thus in a position to treat with the South African Colonies on this basis, negotiations were allowed to drop. The general question of trade relations between different portions of the Empire would come under consideration in connection with the questions of the commercial policy to be adopted after the war, and the Government of India considered that it would be premature to make any further statement at present.

India in the Commons.

In the Commons Sir J. D. Rees emphasised the seriousness to India of the prohibition of the import of coffee into the United Kingdom, and urged the Imperial Government to allow the import of the Indian coffee crop by license.

Mr. Chamberlain replied that he was communicating with the Board of Trade on the subject. Mr. Chamberlain said that the Indian Government was considering the recommendations of the Committee regarding the granting of the same rate of exchange for rupees into krans to troops in Persia as to the Indo-European Telegraph officers in Persia. The decision would be reached as soon as possible.

New Process of Paper Manufacture.

In the manufacture of paper pulp by the sulphite process, more than 50 per cent. of the original weight of the wood is waste. A new process of R. W. Strehlenert, a Swedish engineer, utilizes this residue for a coal of high heating value. An experimental coal-making plant is to have an initial capacity of 6,000 tons a year. As the total pulp production of Sweden and Norway is about 1,000,000 tons a year, the new industry may save a good supply of raw material.

Indian War Loan Lottery in Bombay

The Government has permitted the Western India Turf Club to hold a lottery for the benefit of the War Loan, and the Club have organised one on a large scale. Particulars are given in an advertisement. The tickets will be Rs. 10 each and unlimited in number, and if half a crore of rupees is subscribed the first prize will be Rs. ten lakhs, while if the total is over half a crore, it will be more. The second prize will be half as much as the first and the third prize half as much as the second. The total number of prizes will be 1,000, and all the money will be divided among them, except 5 per cent. which will be deducted for expenses, any surplus after paying these going to the Bombay Presidency War and Relief Fund. The prizes will be payable in 5½ per cent. War Loan Bonds, repayable in 1920. Tickets will be obtainable at the head offices of the Turf Club, Town Hall, Bombay, and at branch offices of the Club, and at all the branches of nearly all the big banks and banking agents in India. The lottery will open on the 16th instant and close on the 14th June.

British Trade during War.

The *New York Tribune* expresses surprise and admiration that British exports during 1916 reached the total value of $2,460,000,000, while Great Britain was carrying on a war costing $25,000,000 daily and lending her Allies $2,000,000. Only once before have these exports been exceeded, and that was in 1913 when they were eight million pounds larger. There has been an increase in the exports of both woollen and cotton textiles, while steel and iron exports were 20 per cent. greater in the year just closed than in 1915, despite munition work at home and submarines at sea.

Cloth Substitutes.

It is stated in the *Canadian Textile Journal* that the Teutonic powers have developed a somewhat unique fabric used for great coats and the heavier clothing materials. The yarn for these goods is made from narrow strips of kraft paper. These strips of paper are given a surface of adhesive glue on which is blown wool-flox or short shoddy stock. This paper is then spun and the yarn is used for the body of the cloth. This material should be warm, but its wearing qualities in wet or murky weather are doubtful. On the other hand, a mixture of these yarns with jute or linen yarns should make a very serviceable material.

Joint Stock Companies in India.

Thirty joint stock companies with an aggregate authorised capital of Rs. 2,48,12,000 were incorporated in British India and registered in the month of January 1917. These included three banking and loan companies, one printing, publishing and stationary company, four trading companies other than those specified above, two cotton mill companies, two jute mill companies, one cotton and jute screws and presses company, one flour mill company, one saw mill company, eight tea planting companies, five coal mining companies, one land and building company, one company other than those specified above. Of these 30 companies 22 were registered in Bengal, five in Bombay and three in Madras.

Co-operative Movement in Bombay.

The Bombay Government in the annual report of the working of co-operative societies, in the Bombay Presidency during the year 1915-16, record further progress in the development of the movement. During the year 147 new societies were formed. The total number of societies stood at 963 with 104,924 members on the roll and a total capital of nearly Rs. 97 lakhs. The increase over the figure of the previous year is 24 per cent. in membership and 19 per cent. in capital compared with increases of 27 per cent. and 23 per cent. respectively in 1914-15.

The Bengal Coal Industry.

The entire output of certain of the most important first class seams in the Bengal fields has been already requisitioned by the Government for naval and military purposes and it is possible all first class Bengal coal may soon be similarly taken up. The position which has thus been created is one regarded with some anxiety both by the suppliers and the consumers of coal. Unfortunately a recent increase in naval and military requirements has coincided with a very serious reduction in the output. It may be difficult, the committee fear, for an adequate supply of all coal for industrial purposes to be procured and they have brought this probability prominently to the attention of the Government of India. They have also since suggested the best solution will be for the Government to extend their powers of State-control to all collieries in the Bengal fields. Such an extension of the existing system would, it is anticipated, go far to improve the present situation, for it would ensure the coal remaining, after the needs of the army and navy had been met, being utilised most advantageously in the general interest :—*Indian and the Eastern Engineering.*

Fiscal Autonomy.

Rao Bahadur P. Theagaraya Chettiar, in the course of an address at the Madras South Indian Chamber of Commerce, observed on March 31 :—

A policy of absolute free-trade will not advance the best interests of this country, with our industrial backwardness and economic dependence on the one hand, and the special measures which other countries are taking to safeguard and advance their trade and industries on the other. We have affirmed that unless the Government of India with a single aim to secure the expansion and development of Indian manufactures and to extend Indian trade in foreign countries, are at liberty to bargain for the best terms in the markets of the world and with the Governments of other countries, even as the Governments of the Self-Governing Dominions are doing at present, it is idle to expect Indian commercial problems to be solved to the real advantage of India and Indian interests. In short, what we have asked for, and what is an imperative necessity, is the freedom to settle our own commercial, industrial and economic questions, in our interests, without any subordination of such interests to those of any others. We recognise that we are a part of the Empire but we are doubtless as much a unit of the Empire as any of the Self-Governing Dominions. Into the details of this policy, and as to how best it should be worked out, we shall enter on a future occasion. The commercial exploitation of India by others than Indians must cease ; the industrial and fiscal freedom of India must be firmly established ; and the economic independence of India must be ensured. Not until then will India materially prosper ? As it is, we are under foreign domination in respect of banking organisations for the financing of internal and external trade. Even institutions under Government control are indifferent to Indian interests. We are under even greater domination of a like character in respect of shipping and navigation, not to speak of the poor part the Indian railways under State control are playing in the encouragement of Indian industries and manufactures. Industrial and commercial education, not to speak of scientific research in aid of industries, is conspicuous by its absence. In these and other respects a great deal of constructive work will have to be undertaken immediately. May we look forward to the Government and the people moving as one in these and other matters, with the common aim and common endeavour to advance the moral and material prosperity of this country.

Jute Industry.

Recent trade returns suggest that the manufactured jute industry has suffered little if at all up to the present from the trade depression caused by the exchange crisis. Only in three months in the history of the mills has the number of gunny bags exported exceeded the total reached in January, 1917. Tonnage or no tonnage and Council Bills or no Council Bills, the enormous total of 85 million bags—20 million sacking and 65 million hessian—was sent away. August, 1916, with 86 million bags, December, 1915, with 88½ million, and October, 1915, with 91 million are the only months in which the total has ever been larger. The exports of gunny cloth tell a like tale. The figure of 120,000,000 yards has only thrice been exceeded —in July, 1915, and in August and November 1916—and in each case by small amounts. The month of August, 1916, was very nearly a record in both departments and the value of manufactured jute goods exported, reached the total of Rs. 482 lakhs. That month apart, January 1917, with its total value of Rs. 362 lakhs (£2,400,000) will easily bear comparison with the best that has preceded it.—"Statesman."

New Weights and Measures.

Sir Guilford L. Molesworth, speaking at a meeting of the East India Association, at Caxton Hall recently, said that the condition of the weights, measures, and money in India was a disgrace to civilisation. That the introduction of the decimal system in India would be a great success was shown by the experience of Ceylon, where it was introduced in 1871. There was a growing feeling in favour of the metric system in India, and it only awaited the adhesion of Great Britain to become the universal system of the world.

Trade with Russia.

By virtue of the decision taken by the Council of Ministers on the 20th October 1916, the import into Russian Empire of articles of luxury is prohibited from the 14th February 1917. Exemption is made in the case of goods being imported (1) on behalf of the Government, (2) for duly proved needs of national defence and (3) by special permission granted by ministers of trade and finance and by the Senate and the Governor-General in the case of imports into Finland. The Russian Consulate will give information to firms and persons interested, regarding the specification of atricles the import of which is prohibited by the aforementioned order.

Cottage Industries in Bengal.

One thing is certain, observes the *Madras Mail*, and that is that under Lord Ronaldshay's administration, the movement to support and encourage local and cottage industries, which Lord and Lady Carmichael encouraged and with which Lady Carmichael was specially connected will not suffer. H. E. Lord Ronaldshay, replying to the address of welcome presented by the Mahajana Sabha, deplored the tendency of indigenous industries to decay when brought into contact and competition with machine-made goods. He saw no reason why the two should not flourish side by side, especially in view of the fact that it was in the product of the home industries that the artistic genius of the people found its natural expression. Unfortunately for this artistic genius and its expression, it has very little chance when the poor labourer whose expenditure on clothes for instance is limited to the price of a single cloth a year, has to decide between the comparative advantages of a machine-made article and one that is indigenous and hand-made, when the price of the former is less than half that of the other.

Canal Irrigation in the United Provinces.

The following is a summary of the lecture delivered by Prof. H. Stanley Jevons, M. A., F.S.S., on Monday, March 12, at Allahabad :—

Wherever irrigation has been long introduced, the character of the agriculture changes in many respects. There is generally a disappearance of of the habits of careful cultivation and use of water which may be observed in tracts irrigated from wells. There has been a great increase of outturn ; and on this account, and because of the greater security of the harvests, the total annual value of agricultural produce has increased enormously in every district where irrigation has been introduced for some 15 or 20 years. It takes a considerable time for the cultivators to learn the proper use of canal water and to adapt their crops and methods of rotation, manuring, etc., to it.

The extent of the benefit which the population derives from the introduction of canal irrigation depends very much upon what transport facilities are available. In a district well-provided with railways and with metalled roads, leading directly to the railway stations, the cultivators have the opportunity of marketing commercial crops, and consequently they gradually learn to grow money making crops, maintaining themselves chiefly on the *kharif* crops.

The conditions in the Punjab Canal Colonies are entirely different from those where irrigation has been introduced into districts already populated. In the Colonies the land is blocked out into squares of about 27 acres, each of which forms a compact holding, and this was the original size of holding given to most of the peasant grantees, who for example form 78 per cent. of the settlers in the Lower Chenab Colony. The average size of a tenant holding is showing a regrettable tendency to diminution owing to the operation of the law of equal division of estates on inheritance. This, if not checked, must arrest the present upward tendency of the standard of living of the population and probably ultimately reduce it. There are only two ways of preventing this : (1) by enacting a law of primogeniture and a minimum size of holdings for which rent could be recovered from such tenants as are mainly dependent on agriculture for their livelihood, or (2) by the diffusion of education in the villages. The first course would be very difficult politically. To render the latter effective, however, communications should be greatly improved first, the main roads being metalled and some new roads being made connecting all the larger villages with market towns which can be made also centres of cultural influence.

Pine apples.

The yield of pine-apples per acre varies according to the system of cultivation and the fertility of the soil. When closely planted, or when a large number of suckers are allowed to develop, the fruits are numerous, but usually of small size. As far as I am aware, there are no plantations in this country devoted solely to the cultivation of pine-apples which are usually grown in mango groves, and no particular care is taken regarding the cultivation of the plant or its after-cultivation. Consequently, the fruit sold in our stalls are small. But in other countries where great care is bestowed to the cultivation of the plant, the fruits are usually of large size and highly flavoured. The yield varies from 6,000 to 15,000 fruits an acre. When the fruit is intended for export, it is graded according to the degree of excellence and according to size. From the salesman's point of view, it is preferable that the fruit should be packed too green rather than too ripe as in the latter case they deteriorate during a long journey and the delays incidental to their transit from the grower to the retailer.—*New India.*

The Fig.

The lifetime of this tree is said to be between 12 to 15 years and during the period of existence it bears, provided manuring, etc., are done properly. It gives two crops one in July—September and another in February—May but stray fruits can be had at all times of the year. The fruit takes two months to ripen. From careful enquiries made, it has been ascertained that a well-cared for young tree can give as many as 500 fruits in a year. It is only trees between three to ten years, that bear well and as the tree grows older, the produce diminishes; but there are exceptions to this rule. Instances are not wanting in which young trees in good condition do not bear well; though this is attributed to the ill-luck of the gardener, yet the fact of the matter appears to be the absence of beetles which play an important part in fertilization. Though some people compute the crop at 8 tons of fruit per acre of 300 trees, yet I am led to think that it will not exceed 3 tons or 4 tons at the highest.

There are in this Presidency, extensive tracts of good red soil with watering facilities in cool places like Hosur, Krishnagiri, Coimbatore, and these areas can be more profitably cultivated with figs which is highly paying. As this plant has been found to thrive in plains also, like the Chingleput district, the scope for its cultivation seems enormous. The fig being *a food by itself*, its cultivation would add greatly to the food supply of the country.—*New India.*

Conference of Agriculturists.

A Conference of agriculturists attended by over 8,000 representative delegates from Gujurat and Kathiawar was held at Junagad under the presidency of Mr. M. C. Patel, B A. LL. B., Bar-at-Law, in February last, and passed some very important resolutions affecting the interests of the agriculturists. They related to (1) the giving back to the agriculturists the proprietory rights over land, (2) the permanent settlement of the revenue, (3) check over the over-increasing assessment, (4) Advisory Council of Agriculturists to keep the assessment authorities in coming to right decisions, (5) the necessity of free and compulsory agricultural education, (6) the beginning of such education to be made by the village Panchayats, (7) freedom to the agriculturist to possess arms, (8) the starting of village Panchayats and co-operative societies, (9) facilities to the agriculturists by the Railway Companies, (10) irrigation, canals, heavy securities, cow-killing, and (11) the discontinuance of child-marriage.

Farms and Enclosures.

To the American, the word farm calls to mind a single enclosed piece of land adequate in area to support a family, in other words, a consolidated "economic holding." It is doubtful if the corresponding word elsewhere, in the world, calls a similar picture to the mind of most human beings . . . . To the thoughtful, the word would call to mind almost insuperable obstacles in the way of good farming, because to reach the strips belonging to one man's farm it is necessary to cross strips belonging to other men's farms, and the work must proceed in common, making difficult, if not impossible, differentiation and improvement in culture. Enclosure means separating out these pieces of land and consolidating them as far as possible so that each man's holdings may consist of two or three separate pieces, the ideal of a single consolidated holding being impossible of universal attainment.—*American Economic Review.*

Progress of Agriculture.

It must be recognised that any success which could be hoped for out of the Agricultural Department, observes the *Hindu*, must eventually depend mainly on the extent to which the Departmental officers are able to enlist the co-operation of the ryots. We need not go far for a concrete illustration of this statement. Marked progress has been achieved in the Central Provinces in the last few years, and what the secret of this success is can be easily seen from the Report for 1915-16 on the Progress of Agriculture in India by Mr. J. McKenna, Agricultural Adviser to the Government of India. The most important and noticeable feature of the Central Provinces Department of Agriculture in the development of district work is, says Mr. McKenna, "the enlistment of an increasing amount of sympathy and co-operation with the leading agriculturists throughout the province."

Labour in the United Provinces.

The following is the Labour Bulletin of the United Provinces for February last:—In the western districts there is reported to be a scarcity of labour, and even local demands are met with difficulty. In the eastern districts, which are the principal recruiting districts of the provinces for other parts of India, labourers are finding ample employment locally, and, as the prospects of the coming harvest are unusually favourable, there is little likelihood of their seeking work elsewhere.

Literary.

THE HINDU IDEA OF ART AND BEAUTY.

Speaking on Hindu Art, before the *Societe Internationale de Philologie*, on Friday, Mr. Harendranath Maitra said that, due to a difference in the evolution of the two great world civilisations—that of Greece, from which the civilisation of modern Europe was descended, and the Hindu civilisation—the Indian and European temperaments were to-day different, and this difference showed itself in their respective attitudes towards art and beauty. According to Indian philosophy, beauty was not objective, but sujective. It was not inherent in form and matter, but belonged only to the spirit, and could only be apprehended by spiritual vision. There was no beauty in a flower or tree, in man or woman, as such. All these were fitted to fulfil their parts in the cosmos; yet their beauty did not lie in this fitness, but in the divine idea impressed upon those human minds that were turned to receive it. The more perfectly that minds were tuned to the divine harmony the more clearly was beauty perceived, and the more capable did they become as artists of revealing it to others. Beauty belonged to the human mind; there was neither ugliness nor beauty in matter alone, and for an art student to devote himself wholly to studying form or matter with the idea of extracting beauty therefrom was as vain as to cut open a drum to see whence came the sound. Even the ordinary artist of India tried to conceive the whole spirit of Indian thought as symbolised in the conception of Buddha sitting on the lotus throne—calm, impassive, his thoughts freed from all worldly passions and desires, his mind and body raised above all intellectual and physical strife, filled with more than human power and compassion derived from perfect communion with the source of all truth, all knowledge, and all strength.

THE NEW ERA.

We have received the first three issues of the *New Era*, a sprightly weekly journal started at Lucknow and edited by Mr. Gulam Husain. In view of the recent awakening among the Mahomedan community to the progressive needs of the time, there is surely need for such an addition to Muslim journalism. We understand that our contemporary comes into existence after depositing a security of Rs. 1,500 but says the journal "we are fortified by our resolutions not to swerve an hair's breadth from the path of duty to our country and our sovereign."

MISSIONARY TEACHINGS.

Miss Macmillan, lecturing in Edinburgh, complained of the false impressions spread about the country by Christian Missionaries. She remarked:

If one compared the Hinduism, Muhammadanism, and Buddhism that the best scholars praised and admired with those written about in Sunday school magazines by some missionaries, one could not but be surprised at the contrast. It was as if some one came to Edinburgh, and, for a description of it, told all about its slums, prison, crimes, and vices. It was quite a task correcting such manifold false impressions.

Many Christian missionaries admitted there was something valuable in religions other than their own, but they described these elements as "Christian." Considering that these other religions, except Muhammadanism, were older than and prior to Christianity, why should the missionaries not be fair and speak of the Hindu or Buddhist elements in Christianity?

WILLIAM DE MORGAN.

We have lost one of the sturdiest and most industrious of our literary veterans says a writer in *Bookseller*. Even those to whom Mr. William de Morgan's laborious and carefully-finished work as a novelist made no special appeal could not withhold their tribute of admiration from a man of versatile gifts who, at the age of sixty-seven, turned from another art in which he had gained reputation to win fresh distinction as a writer of fiction. It may be that Mr. de Morgan would have achieved a still wider popularity in his later career if it had not been for his curious and incorrigible mania for spinning out his novels to inordinate length. For him it was written in vain that "Man wants but little here below, nor wants that little long;" and he is even said to have cherished the ambition of writing a novel with many more words in it than any of those which had already made his name something of a terror to readers with limited leisure or patience. Still, for all that, he was a true literary artist, and well deserved the substantial measure of success as a novelist which he won in his old age, and securely maintained until his death.

THE NEED FOR THINKING.

Dan Griffiths writes in the *Socialist Review*:

The social problem, including the problem of war, is psychological as well as political and economic; it is the reflex of the "mind" of the people; it is due to bad feeling and bad thinking. The real problem is how to provoke thought.

Educational.

INDIAN EDUCATION.

Indian leaders as well as the Indian public, observes the *Hindu* of Madras, have often come in for a good deal of adverse criticism for their advocacy of the more urgent claims of education on public funds than of some other objects of expenditure. A reference to the detailed memorandum on Sir William Meyer's Budget will, however, show how greatly public criticisms have been justified. We notice from this document that only £3,623,400 has been set apart for expenditure on education out of a total revenue of £98,870,800. Prussia, on the other hand, spends an eighth of her budjet on education, while poor Serbia, considered to be a most backward country, allots a fifteenth of her total revenue. What is spent on the whole of India is much less than what is spent by the single city of London which comes to nearly £5,000,000. It cannot be contended that it is the war that has brought about this state of affairs; for in pre-war years the amount allotted to education was considerably less than that allotted now. Surely, this is a sufficient commentary on the enthusiasm of Government towards the cause of education in this country.

EDUCATION AND LOCAL SELF-GOVERNMENT.

The Municipality of Kumbakonam supports four schools for boys and two for girls, levying no fees. In its Budget for 1917-18 an additional boys' school is provided for, but the Government refuse sanction to the non-levy of fees. Why should a seventh school be handicapped by fees, when the representatives of the ratepayers are prepared to support it, and why should Government interfere with the discretion of the Municipality? Municipalities are blamed for inefficiency, says *New India*, but what can men do, who are liable to constant interference.

THE VICE-CHANCELLOR OF THE BOMBAY UNIVERSITY.

Mr. Chimanlal H. Setalvad has been appointed Vice-Chancellor of the University of Bombay in succession to the Rev. Dr. Mackichan who left for Scotland to preside at the General Assembly of the United Free Church of Scotland. We Congratulate Mr. Setalvad on a successful term of office.

SCHOLARSHIPS FOR GIRLS.

During the last few years the Bombay Government have inaugurated the policy of paying small scholarships, of the value of Rs. 2 and Rs. 3, to girl students in primary schools, with the object of inducing them to stay a longer time at school and of preparing them for the training colleges. It has been found that this system of scholarships has tended to create a healthy competition for regularity of attendance and better progress. No pressure is placed upon the girls to make them either become teachers or attend training colleges, but it is anticipated that as the number of girls completing the higher standards increases, there is a greater likelihood of some of them voluntarily coming forward to be trained as teachers. It has now been decided that the scholarships should be tenable in any of the standards from the 4th to the 7th and that their value should, in special cases, be raised to Rs. 4. These scholarships are not confined to girls' schools, of which only a very limited number teach beyond the fourth standard, but may be held by girls attending boys' schools also.—*Times of India.*

MOSLEM CULTURE.

The sixteenth session of the Nadwat-ul-Ulema was held in Madras recently, Maulvi Syed Shah Sulaman Sahib Phulwair of Patna, presiding. Mr. Justice Abdur Rahim, in his address as Chairman of the Reception Committee, said that the aim of the Ulema was to stimulate and develop the spiritual energy of Islam in the Mussalmans of this country. He also said that they ought to have in each presidency at least one Madrasa, where the highest teaching in Theology and Muslim History would be available and researches carried on in arts and sciences developed by Arabs in Arabia, Spain, and Africa, and in India by the Persians and Moghuls. He appealed to his co-religionists to take a more active part than they have hitherto done in the amelioration of the submerged classes and other philanthropic movements.

HOSTEL ARRANGEMENT.

On the 24th ultimo the new hostel at Jay Narayan's School, Benares, was opened by H. H. the Maharaja of Benares. The hostel is a three-sided building, facing the school, with accommodation for seventy-two boys, and quarters in the centre for the Principal, who will act as warden. A large number of guests were present. A brief history was given of the school and its work since its foundation in 1818 by Maharaja Jay Narayan Ghosal, who entrusted it to the Church Missionary Society.

Legal.

WOMEN SOLICITORS.

Some curious observations were made about the fitness of women to practice as solicitors at the second reading of the Solicitors (Qualification of Women) Bill in the House of Lords. Lord Buckmaster, who moved the second reading of the Bill, recalled the time when 'a woman sat on the Woolsack, but, possibly through lack of legal training, she administered such a wholly unprecedented form of justice that it was said, the city of London rose in meeting against her.' The Lord Chancellor thought that the active practice of a profession was not compatible with the proper work of women as mothers and in attending to their families. The Earl of Halsbury observed that it was true that a woman had sat on the Woolsack 'but she had to adjourn the proceedings to become the mother of Edward I.' Lord Sumner and the Earls of Selborne and Loreburn supported the motion. It is interesting to notice that in several other countries, such as France, a very considerable part of the United States, in Norway and Sweden, and within the British Empire itself in parts of Australia, New Zealand and Canada, women are allowed to practice as solicitors, without any catastrophe resulting therefrom.

A LAWYER'S REMINISCENCES.

In the course of his interesting reminiscences in the new Calcutta illustrated weekly, the *Looker on*, Mr. Eardly Norton writes :—"So far back as I can go into the years of my infancy, I have never wished to be anything but what I am, a free-lance Barrister unfettered by official obligations and untied by judicial responsibilities. My father, John Bruce Norton, frequently took me as a boy of six to spend whole days in the Courts and corridors of the old Supreme Court in Madras. In the former I sat breathless at the clash of wit against wit and was wholly fascinated by the splendour of the Bench at Sessions and the picture of jurymen arrested by the eloquence of the Counsel who in my sight were giants. From the corridors I saw, and winced at the flogging of the prisoners on the triangles in the courtyard, a brutality soon after removed to the precincts of the jail. I retain very vivid recollections of parading before my mother's cheval glass arrayed in my father's gown and bands, passionately enforcing imaginary grievances of unrealised clients to shadowy juries."

LAWYERS IN THE NEW MINISTRY.

The number of lawyers in Mr. Lloyd George's Administration is larger than in Mr. Asquith's observes the *Law Journal*. This fact, so gratifying to the profession, seems to have escaped the attention of the acrimonious persons who were always complaining, that the legal element in the old Ministry was too large. Eight lawyers hold position of Cabinet rank in the new Administration, viz., Mr. Lloyd George, Sir Robert Finlay, Lord Milner, Sir Edward Carson, Sir George Cave, Lord Robert Cecil, Mr Duke, and Sir F. E. Smith. In the old Ministry there were seven, Mr. Asquith, Lord Buckmaster, and Mr. McKenna have ceased to be Ministers of the Crown, while Mr. Lloyd George, Lord Robert Cecil, Mr. Duke, and Sir F. E. Smith, the other lawyers among Mr. Asquith's colleagues, remain. The four new lawyers in posts of Cabinet importance are Sir Robert Finlay, Sir Edward Carson, Sir George Cave and Lord Milner, who if not precisely a lawyer is, like Mr. McKenna, a 'lawyer-like person,' since he was called to the Bar at the Inner Temple, thirty-four years ago, and sought for some time to practise.

THE LORD CHANCELLOR OF ENGLAND.

The appointment of Lord Finlay as the Lord Chancellor of England, observes the *Patna Law Weekly*, will indeed be very gratifying to Indians. His Lordship, when he was at the Bar, commanded very extensive Indian practice in the Privy Council, and we may confidently hope that his Lordship's direct experience of Indian questions of Law will be of immense value and assistance to his colleagues in the dicision of appeals from India. There cannot be now two opinions about the matter that the best Judge is he who has had also the best practice.

RECLAMATION OF CRIMINAL TRIBES.

A public meeting was held on March 22 at the Mission College Hall, Lahore, under the auspices of the Salvation Army, His Honour the Lieutenant-Governor presiding. Mrs. and Commissioner Booth Tucker gave a very interesting account of the work of the Army in reclamation of the criminal tribes in the Salvation Army settlements. Pundit Harikishen Kaul, who was recently in charge of the criminal tribes, also gave a glowing account of the self-sacrificing work done by the Army. His Honour spoke of his own experience of the criminal tribes when a young officer and said that the Government had reserved 10,000 acres in the new colonies for their settlement.

Medical.

MR. CHAMBERLAIN'S TRIBUTE TO I.M.S.

Presiding at a meeting of the Indian section of the Society of Arts, in London, on March 28 at which Sir Havelock Charles read a paper by Surgeon-General Sir Pardey Lukis on Opportunities for Original Research in Medicine in India, Mr. Chamberlain said that the medical services in India had given freely of their best in the War. He paid a tribute to the admirable work, remarkable energy and progress of Sir Pardey Lukis while Director-General of the Indian Medical Service, and also to the great impartiality and ability with which Sir Havelock Charles had discharged his often difficult and disagreeable work at the India Office. Mr. Chamberlain said he was convinced that nowhere in the Empire was there a large field than in India for research and fruitful experiment, and he appealed to the leaders of the medical profession in the United Kingdom to make themselves acquainted with the opportunities offered by India to spread that knowledge among their pupils and not to grudge India some of their best pupils.

INDIGENOUS MEDICAL INSTITUTIONS.

The Hon. Mir Asad Ali Khan, speaking at the Ayurvedic and Unani Tibbi Conferrence at Delhi, on March 17 pointed out :—

Great credit is due to the steady working of institutions, like the Ayurveda Mahamandala of Allahabad, the Delhi Ayurvaidic and Unani Tibbi College, the Madras Ayurvaidic College and the various Ayurvaidic institutions at Mysore, Bombay, Satara, Poona, Gondal, Calcutta, Benares, Lahore and other places. The zeal, with which many a Kaviraj like Messrs. Gananath Sen, Jogendranath Sen and Bhushan Roy of Calcutta and Vaidyarathna Pandit Gopala Charlu of Madras and others are rushing forward the cause of Ayurveda is highly commendable and praiseworthy. In this very city, the fire of Unani and Ayurveda is ever burning by the ceaseless and untiring efforts of our venerable Hakim Ajmal Khan Sahab. The Government too is sympathetically disposed towards this cause, and I am hopeful that, after the War is over—and let us as dutiful and loyal subjects of His most Gracious Majesty the King-Emperor pray for the success of the British arms—it may possibly render aid to deserving institutions, and offer facilities for the free growth and development of the indigenous system.

THE TREATMENT OF LEPROSY.

Sir Malcolm Morris urged that the India Office should encourage the treatment of leprosy in India with a view to stamping it out. He stated that, when in India in 1914, he saw an English member of one of the services who had been terribly affected with leprosy, every trace of which had disappeared under Sir Leonard Roger's treatment.

BENGAL AYURVEDIC CONFERENCE.

The Bengal Provincial Ayurvaidic Conference met on April 7 at Dacca under the presidency of Vaidyaratna Jogendranath Sen of Calcutta. About 320 dolegates from different parts of Bengal attended the Conference. The President in the course of his address referred to the resolution moved by the Hon. Mir Asad Ali Khan in the Supreme Legislative Council to place Ayurvedic and Unani systems of medicines on a more scientific basis by educating the Kavirajas and Hakims in western anatomy, physiology and chemistry, and which resolution was under the consideration of the Local Governments. The President protested against the remark that western education was necessary to make Ayurvedic system scientific. He, however, suggested that Kavirajas should be trained in anatomy, physiology and chemistry according to Ayurvedic methods. In this connection Mr. F. W. Robertson, Additional Magistrate of Dacca, opened an exhibition of Ayurvedic medical herbs and plants. He said the aim of the exhibition was to propagate ancient Ayurvedic lore and he hoped it might be possible to open a nursery of Ayurvedic plants.

In this connection it is interesting to read in the *Social Service Quarterly* the following observations on the report of the Subathu Leper Asylum founded in 1868 and maintained by the well-known mission to Lepers. "The Asylum has two departments, one for Europeans and the other for Indians. The Punjab Government contribute an annual grant of Rs. 7,223 for the up-keep of the Asylum for Indians. At the end of year 1915–16, the number of the inmates in the Asylum was 106. The year under report was notable for the introduction of the treatment of leprosy by the hypodermic use of a Chaulamoogra oil mixture prepared at the Central Research Institute, Kasauli. Five patients have been receiving injections of the mixture regularly, and though the Superintendent expresses the hope that good results may follow and the patients may be able after two or three years to be discharged cured from the Asylum, he is careful enough to point out that the treatment is in the experimental stage.

Science.

LORD MONTAGU ON AVIATION.

Lord Montagu of Beaulieu, Inspector of Motor Vehicles for India, who has made a special study of problems connected with the mastery of the air, delivered a lecture at Bombay recently, in which he described the advance made in recent years by British and other inventors in aviation. Lord Montagu dwelt on the necessity of a fleet of seaplanes for the defence of India, and remarked that a wealthy citizen of Bombay could not demonstrate his patriotism in a more practical and useful manner than by devoting Rs. 1,50,000 for the purchase of a flight of seaplanes for the defence of the west coast. Lord Montagu repeated his prophecy that within ten years there would be established a mail and passenger service by aeroplane between India and Europe.

STAR MOTION.

The star with the greatest proper motion so far discovered is one in Ophiuchus, of magnitude 9·5, which is drifting northward 10 seconds a year —perhaps some hundreds of miles per second of time. This was lately revealed to Prof. Barnard on a comparison, with the Blink microscope, of a recent stellar photograph and one made 18 years ago. An eighth magnitude star in the southern heavens has a proper motion of 8·7, seconds; and the seventh magnitude Groombridge 1830, of Ursa Major, the original "runaway star," has a yearly drift of 7 seconds.

THE DEVELOPMENT OF ZEPPELINS.

ACCORDING to *L'Industrie Electrique*, there is reason for thinking that the Zeppelins now make use of a "fish-shaped" aluminium basket suspended at a distance of 1,000 m. from the vessel, and carrying an observer. The basket is furnished with electric light, fed from a small battery of accumulators, and the observer is in telephonic communication with the Zeppelin.

AEROPLANES FOR INDIA.

We understand that the construction of aeroplanes is to be undertaken in India under the control of the Director of Aeronautics, Simla. The Indian Forest Department have been instructed to forward specimens of indigenous timber to the Civil Engineering College, Sibpur, where they will be tested as to their suitability for use in the construction of propellers and other aeroplane parts.

SIGHT FOR THE BLIND.

Dr. E. E. Fournier d'Albe has invented an instrument, the Optophone, which consists of a small "siren" disc illuminated by a straight Nerust light; an optical arrangement for projecting an image of the line of luminous dots furnished upon the type to be read; a set of selenium or antimonite bridges exposed to the light reflected by the type; a Brown "wireless" telephone relay connected with these bridges; and the telephone receiver used for reading.

What happens is this: the reader clamps the wireless receiver to his ears, passes the paper slowly before him on a little table, switches on the current, and listens intently. As each letter comes within the radius of the siren a certain note sounds in the ear. The actual sound heard depends upon the shape of the letter.

SHELLS KILL WITHOUT WOUNDING.

The explosion of heavy shells can kill persons without apparent wounds. This effect is due to a perturbation of the nervous centres, arising from the explosion of the heavy shells, and the consecutive actions which are produced. Such perturbations are caused by a sudden distention of the circulatory system of the human body due to a sudden pressure exercised upon the whole surface of the body. This pressure reaches a maximum upon the abdominal region, from which all the visceral blood is driven toward the interior portion of a body.

A GREAT DISCOVERY.

The *British Medical Journal* gives an account of a discovery which is of supassing interest to doctors and of immense importance to the world at large. It is understood that the discovery is quite as important as the X-rays and much more remarkable. With the X-ray, in a darkened chamber, and with elaborate apparatus, it is possible to obtain pictures of the bones and more solid substances contained in the body; by means of the new discovery detailed pictures can be obtained in broad daylight of any organ of the body, brain, liver, kidneys, spleen, etc. Pictures can also be obtained of abscesses of the liver, cuts or wounds in any organ. This wonderful result is achieved by utilising the electricity which the body is believed to generate. The discoverer of this wonderful aid to surgery is stated to be James Shearer, aged 30, a sergeant in the Royal Army Medical Corps. He is a Scotsman who graduated M.D. and Ch.M. at the University of Washington.

Personal.

LORD RONALDSHAY ON INDIA.

The Earl of Ronaldshay, the Governor of Bengal, presided at a meeting of the East India Association, when Lady Katherine Stuart read a paper on "To-morrow in India."

Lord Ronaldshay said: The angle from which the East looked out upon life was somewhat different from that of the West. In the case of both, characteristics that were lacking in the one were to be found in the other, so that they ought to be complimentary and supplementary. The Englishman in India was a very small drop in a very large ocean; he was living in exile in strange surroundings, and among people who were strangers to him—at any rate, when he first went there—and somewhere in his subconsciousness the instinct of self-preservation was at work. But undoubtedly this insular characteristic was one of the obstacles to a closer understanding between the English and Indian peoples. It was not, however, the only obstacle, he was afraid. Personal experience had proved to him that the peoples of India were endowed to an unusual degree with instinctive hospitality and great warmness of heart, and that any little act of courtesy or kindness shown by an Englishman to an Indian would always be returned with interest; but however anxious the Indian might be to fraternise with the stranger within his gates, he was undoubtedly hampered by the rules and restrictions of ancient social custom and tradition. Nobody could deny that the strict rules of caste were as much an obstacle to closer social relations between East and West as the insularity of the Englishman. How to get over the two obstacles was the great and burning question to all who desired to see more cordial relations between the people of India and the people of England, and for the answer he thought they must look largely to time. But they could also look to sympathy.

To-day that goodwill was happily being aided and abetted by other factors arising out of external circumstances. For some years past Indian gentlemen had worked side by side in close co-operation with Englishmen in the highest positions of government in the country—no doubt to the very great advantage of both. There was nothing like the sharing of common responsibility, and the bearing of common burdens, to assist a man to an understanding of his fellow-men. He was sure that the doubts of the cautious Englishman had been dispelled by experience—he was thinking, of course, of the Indian members of Executive Councils and so on—and, on the other hand, he was also sure that those Indians who had been working in those positions had realised, as perhaps they had not quite done before, that the motive which actuated the Englishman was something more than a mere desire to hold place and power. There might be a legitimate difference of opinion as to the rate of progress which should be maintained along a path upon which we had deliberately set our foot, but there could be no doubt whatever that we should steadily and conscientiously pursue the policy which we had adopted of associating the best intellect and ability of India with us in the government and administration of the country. Another factor working towards a better understanding betwen East and West was the present conflagration in Europe. Men who had fought side by side, whose blood had mingled in common sacrifice upon the battlefield, were likely to find that they had created ties of comradeship and fellowship which would be infinitely more potent than any obstacle that could be raised by any social custom or tradition.

LORD CARMICHAEL.

The *Pioneer* writes: On departing, the Governor of Bengal, Lord Carmichael, found a discontented province with difficult problems ripe for solution. Most of these still remain, and time has not made them easier to solve. Though unable to deal with the causes of discontent, he undoubtedly by his personal charm managed to alleviate the results. Into the various causes of Bengal's troubles, he has searched unceasingly, though there may be those who think it better to grasp the nettle firmly than to enquire why it stings. He has started a useful tradition of intimate association with all classes of people. He will be always remembered for genial cynicism which never failed to rise superior to the cares and troubles incidental to an important administrative post. He undertook an extremely difficult task, and failed in the more unpleasant part of his duties with philosophical disregard. Philosophy begins in wonder. But it should not end in contemplation.

THE LATE SIR P. M. MEHTA.

In the rooms of the Bombay Presidency Association, on the 4th April, Mr. D. E. Wacha unveiled a portrait of the late Sir Pherozeshah Mehta, which was subscribed for and presented to the Association by the members.

Political.

MADRAS LOCAL CONFERENCE.

The Madras Local and Municipal Conference assembled for the first time on the 17th March in the Victoria Public Hall. About 200 representatives of municipal councils and district and taluk boards from almost all districts attended. The Hon. Mr. Ramachandra Rao in requesting His Excellency to open the Conference said that the gathering had been organised on its present basis with a view to focus public opinion on many vital questions relating to local administration. They believed that a voluntary organisation such as this was very much needed to further the work of the local authorities in this country.

His Excellency the Governor, in the course of his speech said : The field of our labour is large indeed. It is limitless, for each achievement opens before us vistas of a higher standard to be reached, and in any country there is no more valuable and in a true sense patriotic service than that which is given by those who, putting aside their own interests and advantages, give their time to public work. In all such work there are delays and disappointments. Hopes and ideals are not always realised, but there is always a priceless reward in the often unexpressed gratitude of those whose burden has been lightened, and who have been relieved from suffering or hardship or protected from dangers by such disinterested labours. Such work is worthy of the best men that can be found and I trust that as time goes on this will be more and more recognised. To all those who are interested I would recommend a study of the programme of this conference and of its discussions.

Various important papers relating to the different aspects of Municipal work were also read in the conference.

BRITISH PARLIAMENT AND THE DUMA.

In the House of Commons Mr. Bonar Law moved the following resolution sending fraternal greetings to the Duma on March 22.

"This House sends the Duma fraternal greetings, and tenders to the Russian people heartfelt congratulation upon the establishment among them of free institutions, in the full confidence that they will lead to not only the rapid and happy progress of the Russian nation, but the prosecution, with renewed steadfastness, and vigour, of the war against the stronghold of autocratic militarism which threatens the Liberty of Europe."

THE INDIAN PROBLEM.

Mr. Percy Alden, M.P., writes in the *Star* :—

The problem that faces us with regard to India, and perhaps Egypt, is certainly serious and difficult. The final authority will no doubt have to remain for some time to come in the hands of the Imperial Government. For long it will be necessary to maintain armies both in India, Egypt, and other Dependencies, but to an ever-increasing degree these armies will become native; and as they become native, and as the civil administration is more and more associated with the people of the country so governed, it would be possible to transfer from time to time powers which have hitherto rested with Great Britain to the better educated and more disciplined portions of these large communities. It is not enough that India or Egypt should supply leaders—they must also be able to supply an educated electorate. For that reason the Liberal Party regards it as a profound responsibility resting upon Great Britain to see that the Government of these Dependencies does take the necessary steps gradually to educate and train the native populations for a self-government which, though remote at present, is none the less sure to come to pass in the fulness of time. India will also claim an ever-increasing part in Imperial affairs, and she should be encouraged, all the more because of her splendid achievements in this war, to look in that direction for the consummation of her hopes and aspirations.

CONGRESS FOR CEYLON.

The *Ceylonese* advocates the establishment of a National Congress for Ceylon. It is objected in certain quarters that no such organization should be undertaken in war time. To this objection, the *Ceylonese* gives the telling reply :

'The War does not seem to stand in the way of an Irish settlement. It has not prevented ministerial changes in England and France, and a general election in Australia. The Russian Revolution has been acclaimed as a new accession of strength to the Allies. The War has not dissuaded the nineteen elected members of the Indian Imperial Legislative Council from submitting their memorandum of reforms. Why, then, in the name of common sense, should it be allowed to stand in the way of a National Congress for Ceylon?'

CONGRESS PRESIDENTS.

As everything now must be classified as Brahmana and non-Brahmana, says *New India*, a correspondent has taken the trouble to sort out the Presidents of the National Congress. There have been 9 Brahmanas, but 2 of them were elected twice, so they count as 11. There were 17 non-Brahmanas, which divide up: 6 Hindus, 3 Musalmans, 3 Parsis, but one of them 3 times, so that they count 5, and 4 Europeans, one of them twice, counting 5, and 1 Christian.

General.

THE MILITARY SPIRIT IN BENGAL.

Some of our Anglo-Indian contemporaries, the *Englishman* for instance, may carp and cavil at us but there can be no question that some of our young men are displaying a soldierly ardour, not unworthy of the representatives of a martial race. The sad story of young Panna Lal Ghose has been told in these columns. He had served in Mesopotamia with distinction as a member of the Bengal Ambulance Corps and had risen to the position of a Lance-Corporal. He returned home after the disbandment of the Corps and entered into private employment. But as soon as the formation of a Double Company was sanctioned, he offered for enlistment. But notwithstanding his stalwart physique and his former service as a member of the Ambulance Corps, he was disqualified for a slight defect in the right eye. How was he then passed as a member of the Ambulance Corps? However, that may be, the young man took the matter so seriously to heart that he hanged himself. The Double Company is fast filling up to the bewilderment of those who thought that the project would end in a fiasco. It is not generally known how keen are the young lads who wish to join the Bengali Double Company.—*Bengalee.*

DEFENCE OF INDIA OATH.

The following is the form of oath or affirmation that has to be taken by every non-European British subject who is enrolled under the Indian Defence Force Act:—"I.....do swear (or affirm) that I will be faithful and bear true allegiance to His Majesty, the King-Emperor, his heirs and successors, and that I will, as in duty bound, honestly and faithfully serve in the Indian Defence Force, and go wherever I may be ordered in India by land or sea, and that I will observe and obey all commands of any officer set over me even to the peril of my life, so help me God."

THE PUNJAB UNIVERSITY COMPANY.

The following Press *Communique* has been issued by the Punjab Government:—"His Honour the Lieutenant Governor has great pleasure in announcing that the number of applicants for enlistment in the Punjab University Company exceeds 200. It is believed that the great majority possess the qualification of having passed the Entrance Examination of the Punjab University, while most of the remainder intend to take that examination this spring. Orders are now being issued for the medical examination of the candidates by the Civil Surgeon of the district to which they belong. A further announcement will be made when the number of fit candidates is known. His Honour takes this opportunity of conveying to the candidates his best wishes for their success in their military career, and his acknowledgments to all who have worked to make the movement a success. But efforts must not be relaxed. More recruits are required and the Lieutenant Governor hopes that in a few weeks he will be in a position to announce that the number of fit candidates is sufficient to provide a company of 228 men."

TOWN-PLANNING.

The Government of Burma has issued a resolution on the report of the Suburban Development Committee, Rangoon, and the report of the departmental Committee on town-planning in Burma. The Committee's recommendations cover the following improvement of communications between the town and suburbs: By a continuation of the existing roads or the construction of new main roads and by the extension of railway, tramway and motor car systems. The division of the suburban area into blocks, according to the purposes to which the land should be put for the poorer middle class, and well-to-do population. Extension of Rangoon municipal limits, with a view to better the development of such areas and to provide means by municipal bye-laws for enforcement of restrictions as to the type of building to be erected in each of the zones.

THE SIKH WOMEN.

Shrimati Satyabala, a Sikh lady, writing in a recent number of the *Sikh Review*, makes a strong plea for her people to give up living in the reflected glory of a brilliant past. Her ideas on women's education deserve to be quoted:—

The question of education in general, and that of female education in particular, has been viewed very narrow-mindedly. Education does not consist only in reading and writing. Completion of school education is only the primary stage of education. A B.A. lady, if morally weak or inclined to be selfish, self-opinionated or lazy is more a curse to her family and society than a blessing. We want a system of home education, school education, college education, technical education, and, above all, moral and religious education, such as would produce firm-minded, steady unselfish, virtuous, highly cultured, useful women who may be a substantial factor in our national wealth.

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.

EDITED BY G. A. NATESAN.

Vol. XIX. APRIL, 1918 No. 4

INDIA AND THE WAR

BY THE EDITOR

THERE never was a time when the British Empire was confronted with a graver crisis than at present. The German menace threatens not only Europe but Asia as well. The Russian debacle leaves the enemy "an open course across Russia to the Pacific and through southern Russia to the confines of India." We are glad that in response to the Prime Minister's appeal to India, H. E. the Viceroy convened on the 27th a special All-India War Conference of the representatives of the princes and people of India to concert the necessary measures to prepare ourselves for any contingency. Instead of "wrapping up the hard facts of the military and political situation and trying to keep things from the public gaze" it was well H. E. the Viceroy made a plain statement of the situation and of the necessity for India to be forewarned. Germany has "thrown out into Central Asia her pioneers of intrigue, her agents of disintegration," and the black emissaries are trying to find in Afghanistan a field for their nefarious activities; and should the occasion unfortunately arise, it will be our duty "to fulfil our obligations to the Amir of Afghanistan by assisting him in repelling foreign aggression and further guard our own with the whole man power and resources of India ready behind us." The princes and people of India through their representatives have in conference assembled authorised the Viceroy to convey to H. M. the King Emperor India's "determination to continue to do her duty to her utmost capacity" in the present crisis. It would be superfluous at this hour of the day to remind the people of India as to how their fortunes are inseparably linked with those of the British Empire. The Raja Sahib of Mahmudabad but voiced the feeling of the country when he said "that the Indian was confident that the victory of the Allies meant freedom to India as to the other Allies," for as the Hon. Mr. Srinivasa Sastry truly pointed out "In spite of reactions and temporary vascillations there was behind the British Empire a principle of progress and self determining freedom."

The magnitude of the impending danger must make every one realise his duty to the Empire which has moulded our destinies hitherto and is pledged and bound to lift us to our rightful place in the Empire. We feel it at the same time our duty to press on the attention of the authorities that if ever there was a need for adopting unhesitatingly and unreservedly the policy of trust, it is now. If H. M. the King Emperor's appeal to his Indian subjects is to obtain the widest and heartiest response, it is essential that his representatives here should take the earliest steps to remove many a running sore and we join in the fervent appeal of the Hon. Pundit Madan Mohan Malaviya that "at this crisis there should be no distinction, there should be equality of opportunity for all, to the humble and the highly born, to the Indian and the European alike."

We can only conclude in the words of Sir William Wedderburn's wise counsel :—

"We trust that on this momentous occasion, India will appear, not as taking advantage of England's necessities, but as a faithful and trusted colleague co-operating in a settlement that will bring happiness to India and peace to the world."

AFTER THE WAR WHAT?

BY

THE REV. DR. HUME, M.A., D.D.

SOME people think the war will end soon. Others think it will not end for a long time. It will end some time. Therefore more and more people are thinking what ought to be and what is likely to be when fighting stops. It is open to any one to express his thoughts on this subject. Beyond doubt there has been a great deal in this war that has been very wrong. This being so, first, till those who have felt wrong, had wrong aims, have done wrong, mourn their wrong; or at least till the world as a whole recognizes what has been wrong, what its causes, and who mainly have been responsible for the wrong; and till such evil has been adequately reprehended, punished and measurably exorcised, the war will not have really ended. Every disease must be diagnosed before it can be rightly treated. Secondly, the world must so thoroughly have learned the lesson of the war that it will not recur. A disease must not only be diagnosed, it must be cured.

In an effort on those two lines to consider what will be after the war some things appear clear. Few, if any, nations yet admit that they themselves are appreciably responsible for the conflict. Both sides loudly say it is the other side that is responsible. This makes it hard for one who tries to see straight to express a conclusion. Nevertheless are not some things beyond question?

1. Has not Germany for forty years definitely though secretly, been preparing for this War? Was not everyone of the Allies unprepared? This undeniable fact places the main responsibility on Germany. At every public function of the German navy for years the most enthusiastic toast has been to *Der Tag i.e.*, "The Day," the time when it shall meet and (according to hope) shall defeat the British navy.

2. A second undeniable fact is that the controlling trust of the rulers and leaders of Germany has been in *machtpolitik i.e.*, dependence on material force; the doctrine that might makes right; in Bismark's phrase (in contradiction to Christ, *Blessed are the meek for they shall inherit the earth*) *Beati possidentes i.e.*, Blessed are those who possess.

3. A third German principle and policy has been that of sending spies and money secretly to undermine the loyalty of portions of the peoples of other countries. This is the way in which Germany has gained control over Turkey, has brought about the collapse of Russia, effected the great debacle in Italy, made trouble in Ireland, and tried to make trouble in America. It is a mean, sneaking, underhanded way of dealing with nations, while outwardly professing friendliness.

4. Another outstanding fact is Germany's light and easy disregard of her pledged word and of treaties, whenever they interfered with her ambitions. Her ruthless descent on little Belgium, to defend whose integrity she had given her pledged word, when she thought that the invasion of that little country was the way to secure the quick capture of Paris, characteristically showed Germany's disregard of honor. That one initial defiant violation of honor and truth has caused the German *ruler's* word to be considered utterly unreliable. Yet how fine that the nations are *hoping* that the word of the German *people* will prove more trustworthy.

5. Again it is clear that the German rulers and too many of the German people have lacked in common humanity. A milder word than brutality cannot be applied to Germany's ruthless submarine policy, and to her heartless treatment of huge numbers of inoffensive men, women and children in occupied territories. When 1,200 innocent human beings pursuing in mid-ocean in the steamship *Lusitania* a voyage from Europe to America were suddenly killed and sunk, Berlin was filled with bell-ringing and flag-waving. Germany's policy of "frightful-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ness" has shown moral degeneracy and has *driven* into the war America, the country which was trying to keep out of the conflict.

Turning now to what *must* be after the war some things are certain:—Some new moral standards must be, will be, reached.

1. *A new standard of greatness will be reached.* One of the present ideals of the West is *efficiency*. It is almost an idol. People in India are sometimes depreciated by the Anglo-Saxon because they are not as efficient as they might be. Now beyond a doubt, according to the pre-war standard, the Germans have been and are the most efficient people in the world. In science, in planning, in anticipating, in executing material undertakings Germany *is* supremely efficient. She knew it. The world now knows it and is aghast at the sight. For this reason she thought that Germany was really great, and so should and would dominate the world. Her national hymn is *Deutchsland ueberalles*, *i.e.*, Germany over everything. Who now calls Germany truly great?

2. *A new estimate of smallness will be set up.* Pride and inhumanity will be considered the main element of smallness. According to Christ the chiefest blindness and most unpardonable sin is disregard of human beings. "Depart from *me*, ye cursed, into the eternal fire prepared for the devil and his angels: for *I* was hungry, thirsty, a stranger, naked, in prison and ye visited *me* not." The supreme inefficiency is not understanding and not sympathizing with men. When Germany crucified Belgium, she showed herself a bully and a coward. But by that one inhumane act she raised against herself the indignation and contempt of the world. Ethically that was committing suicide. For every man that she killed or enslaved in Belgium she raised up against her ten men in the countries of the world. Even on the low plane of physical efficiency that is defeat. As never before the immoral is seen to be the small and the unsuccessful.

3. *A new valuation will be given to the peaceful spirit.* The unpreparedness and the physical inefficiency of the Allies will be considered the evidence of the worth of their standards. That is clear proof that they were and are nations to be trusted. Their ideals are therefore to be the ones for all nations in the future. Their one chief aim is to make the world a *peaceful* world in which the smallest nation shall have as safe a chance as the largest to live its own life as its people may desire. The world will believe that the Master knew the truth when He said "Blessed are the meek, for they *shall* inherit the earth; Blessed are the peace-makers".

4. *The power of high aims to unite will be clearer after this war.* Hardly anything is more marvellous than the attractive, uniting force of high ideals which has made most of the nations to become Allies, though previously they were largely living apart and living for themselves. It is amazing how the richest, the most enterprising nation, one far distant from Europe, was drawn into this alliance! First, she lavished money, men and women to relieve distress in Belgium, France, Serbia, Montenegro, Armenia. But when the fearfulness of the inhumanity of Germany's war-god became too horrible to be only reprehended and hooted, then thoughtfully, but with absolute determination, America threw herself into the conflict. Yet when she did so, her President truly affirmed that whatever the cost to herself, she would never ask or receive one inch of territory or one dollar of indemnity for herself. She fights only to make the world safe for her little sister nations. In seven months she spent for this war almost as much as in the previous 128 years of her national existence!

Those who have a firm faith in God can feel sure that He *will* make the wrath of man to praise Him, and that the outcome of the war will be to make His ideals clearer, nobler, more livable than ever before.

"ALL ABOUT THE WAR—THE INDIAN REVIEW WAR BOOK".—A comprehensive and authentic account of the War with numerous illustrations, portraits, cartoons, maps and diagrams. Edited by G. A. Natesan with an introduction by His Excellency Lord Pentland and an appreciation by Lord Hardinge. Price Rs. 4. To Subscribers of the "Indian Review." Rs. 3.

THE THEORY OF THE DRAIN

BY

PROF. S. C. RAY, M.A.,

(*Calcutta University.*)

ECONOMICS, says Marshall, has a bearing on the higher well-being of man, and concerns itself chiefly with those motives which affect most powerfully and most steadily man's conduct in the business part of life. It is, according to him, a study of the *economic aspects* and *conditions* of man's political, social and private life. Man's higher nature is nowhere reflected better than in the field of the earning and spending of wealth, where he is influenced by his personal affections, his conceptions of duty and his reverence for higher ideals. The economic condition of a people, therefore, depends on the *manner* in which they produce their wealth, the *manner* in which they spend it and the conditions of life and work which tend to mould their character. The production of material wealth depends on the physical, mental and moral health and strength of a people, which are the basis of their efficiency. The efficiency of a nation, which is, in other words, its sound economic condition, is accordingly to be judged by the elements which contribute to that health and strength, and its inefficiency, by opposite virtues. Efficiency does not depend on the possession of an abundance of material goods alone, but first, on the wise use of material wealth, where it exists, for the purpose of increasing the physical, mental and moral strength and health, and secondly, on the cultivation of the physical, mental and moral qualities of man. It is not always correct to say that the economic condition of a nation is sound, because it has a mass of material wealth, or that it enjoys certain advantages under the protection of a powerful sovereign state, such as sound credit or peace, or that it gets fair, perhaps liberal price for goods sold or services rendered; but it depends on the manner in which the wealth is produced and spent, and on the existence of conditions of life and work tending to mould the character of the nation. Such conditions, according to Marshall, are "hopefulness, freedom and change" as well as food and climate. The difference between a wealthy inefficient and a wealthy efficient, country is analagous to that between an indolent and wealthy man and an energetic, healthy and active producer of wealth. Marshall states—and his statement is proved by the experience of great nations—that "freedom and hope not only increase man's willingness but his power of work: physiologists tell us that a given amount of exertion consumes less of the store of nervous energy if done under the stimulus of pleasure than of pain; and without hope there is no enterprise."

The theory of the drain has often been debated from the material point of view, but never, I believe, from the moral or psychological standpoint. The return in material and other equivalents of the money which India pays to other countries hardly compensates for the deterioration of physical, mental and moral strength and health which the economic operation of *Debits* and *Credits* suggests. My purpose is to discuss how far the equivalents which India receives either in goods or services for her money or goods conduce to such strength or health; and if they do not, they cannot be said to promote the economic condition of the people. And in that view, the latter constitutes a 'Drain.'

India makes annually various payments to foreign countries, including England, and receives in exchange various kinds of goods and services. These are called respectively the *Debits* and *Credits* of India. On the *Debit* side, appear the following items:

(*a*) Value of imports of manufactured goods;

(*b*) Remittances made by private persons of incomes accrued in India, for expenditure in foreign countries;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(*c*) Payments for services done by ships and merchants;

(*d*) Interest on foreign capital invested in various commercial and industrial undertakings in India; and

(*e*) Home charges, which include

(1) Interest on public debt payable in England;

(2) Payments on account of the India Office, the civil departments, and other miscellaneous charges;

(3) Pensions of retired civil and military servants and allowances to officers on leave in England;

(4) Army and Marine effective charges;

(5) Price of stores.

On the *Credit* side of the account, appear:

(*a*) Value of exports of agricultural and mineral products;

(*b*) Capital imported into India on private account for commercial and industrial investments;

(*c*) Remittances made by private persons of incomes accrued in foreign countries for expenditure in India.

I shall attempt to discuss the various items on the debit and credit sides in the light of the principles laid down by Prof. Marshall. From a broad survey of these debits and credits it will be apparent that India sends out goods for which she receives goods and services in return; in other words, the foreign countries receive value not only for their goods in kind, but also for their services. This in itself is an advantage over India; for the former increase their national wealth by services, while the latter adds to her wealth by the sale of goods alone.

(*a*) Coming now to the first item on the debit side, imported goods mostly manufactured, and to the first item on the credit side, export of agricultural and mineral products—which must be considered together—it will be evident that the latter compete with the former under very unequal conditions. The former are capable of easy and enormous expansion, or they follow the law of increasing returns, while the latter cannot be produced to the same extent and follow the law of diminishing returns. Exports of agricultural goods mean export of soil and diminution of fertility and exports of mineral products mean export of national wealth. We consume imported goods without creating new wealth, while the foreign importers in consuming exported goods create new wealth. This non-creation of wealth out of imported goods does not connote conditions of life and work which tend to mould the character of the people or increase their efficiency; and therefore constitutes a drain.

(*b*) The next item represents remittances made by private persons of income accrued in India for expenditure in foreign countries. No man of commonsense will deny that money expended in any country materially benefits that country and that the money that is sent out from India for expenditure elsewhere constitutes a drain in the sense that the people who contribute to that wealth do not get the benefit of that wealth.

(*c*) Payments for services done by ships and merchants signify the dependence of India upon the resources of other countries; for the manner in which the money is spent does not denote conditions of life and work which tend to mould the character of the people and increase their powers of self-reliance. They, therefore, constitute a drain.

(*d*) and (*e*) (1). Interest on foreign capital invested in this country is divisible under two distinct heads: (i) interest on public debt (mostly productive) raised for the construction of railways and irrigation works; (ii) interest on capital invested by private companies and persons on industrial and commercial undertakings. It is argued that the investment of the latter kind of capital has developed the material resources of India and that there is no economic objection to borrowing money from outside to bring out her latent wealth. While admitting the partial truth and soundness of this argument, I am reluctant to admit that it represents the whole truth. The industrial and commercial houses of India make huge profits every year and a large number

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of persons no doubt earn their bread as employees, middlemen, etc. But we must not overlook the economic dependence which presses as an incubus upon the nation and prevents them from developing their latent worth for the service of the country. I do not deny that these undertakings contribute materially to the wealth of the country as a whole; but I do deny that the wealth of a country is the unerring test of its prosperity irrespective of the manner in which it is acquired. "Prosperity" says Macunn, "depends on *reward* of *work* or *effort*. It is a good thing in its way, of course, that men should, by doing work, be fed and clothed. But the question whether that work, or food, or clothing be a good investment or bad,—*depends not on the work but what we get for it*; not on what *disappears* but on what *reappears*." Indeed, a large number of the people work, are fed and clothed by this means; but the fruits of the work do not reappear as part of the country's wealth, but disappear without leaving any mark on the economic life of the country. It is work which produces no moral or mental health or strength and the loss is not counterbalanced by other kinds of occupations and activities. It is pure consumptive work and as such is a drain on the country. Moreover, while admitting that a substantial saving in interest accrues to India by lending to her the credit of England, it cannot be denied that a creditor country naturally exercises great, sometimes dominating influence, over the debtor country, tending to cause loss of mental and moral strength and health and consequent decline in its economic condition.

In respect of the first kind of debt incurred for railways and irrigation works, it is extremely fortunate that by far the greater portion of the debt is covered by valuable assets and that the interest is more than covered by the net profits of these works. These profits form part of the public revenue which is wholly spent for the public service, and the interest that is paid to foreigners does not conduce to economic inefficiency and should not be called a drain. But circumstances may arise in which loans may have to be raised in a foreign country for unproductive purposes, *e.g.*, war, famine, etc. In such a contingency, the interest payable by India will benefit foreigners and India will derive no advantage either in the shape of profits of works or of expenditure of the income of the creditors within the country. Although such a contingency has seldom yet arisen and may not arise in the near future, it is nevertheless conceivable; and, in that case the payment of interest would undoubtedly constitute a drain.

(*f*) The next head, I will consider, is the price of stores (on the debit side) which India requires for the Army, the Railways, and the Civil and Public Works Departments of Government. It does dot explain away the theory of drain by arguing that India receives full value for her money. On the contrary, it prominently brings out the condition of economic dependence in regard to manufactured goods. Neither does the doctrine of Free Trade come to her rescue. For this dependence is incompatible with the existence of equality of conditions as regards the attainment of physical, moral and mental strength and health in the competing nations which is implied in the Free Trade doctrine, but a condition of industrial inferiority for India, which is incompatible with the efficiency of the nation; in other words, this economic dependence tends to weaken the physical, moral and mental strength and health of the people and is, therefore, a drain.

(*g*) Items included in *e* (2) to (4) *viz.*, payments on account of India Office charges, pensions and allowances to officers represent an expenditure of a large sum in a foreign country from which India does not derive any remote economic gain. It is said that in return for this expenditure India enjoys freedom from external aggression, peace within her borders, and the services of capable, intelligent and experienced public servants. This argument is vitiated by one fundamental error. The public servants who are sent out to this country are paid, in many cases, 5, 10 or even 20 times the salary which is the equivalent of their worth in their own country. I concede that this increased salary is paid as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

compensation for their hard life in an inhospitable climate in a foreign country; but that India has actually to pay a disproportionate price for efficient administration still remains a stubborn fact. The political dependence of India no doubt renders it obligatory on the sovereign nation to take the most elaborate and efficient measures for the maintenance of the supremacy of the British Crown and the preservation of the British character of administration in this country by making British influence supreme. But this circumstance does not take away from the payment the character of a 'drain'. England is levying from India charges which are out of proportion to the inherent capacity and intelligence of the persons who are employed in this country to maintain her supremacy. The effect of this is to deprive Indians of that freedom and hopefulness which are the basis of national efficiency. National efficiency cannot be measured by the theory of *quid pro quo*, but by the ultimate reward for the work which the people perform and the mode of life which they lead. The expenditure is therefore a drain as it does not tend to elevate the character of the people.

Similar observations are applicable to the Army and Marine effective charges, which represent charges incurred in England in connection with the training of troops for service in India. I would go further and maintain that every rupee that is spent on the maintenance of a defensive British Army in this country is a drain, because it deprives the people of the country the advantages of a military training. Military training tends to induce discipline, excite the patriotic feeling, generate a high standard of civic duty and strengthen the moral fibre of the people. For lack of military training, the Indians are deteriorating in certain physical and moral virtues, *e.g.*, in habits of order, in respect for obedience to authority and in self-sacrificing courage which the authorities deplore. The falling off in these national virtues indicates a severe drain on the health and strength of the people, physical and moral, and is more vital and insidious than the financial drain which the expenditure on the Army and Navy involves. It may be urged that this is due to the political relation between England and India; but it cannot, nevertheless, explain away the actual and potential effect of the operation.

As regards the financial drain involved in the expenditure on the British Navy employed on the Indian waters, it is pointed out that India gets the special advantage of a cheap Navy, as she has to contribute a trifle of £100,000 for the protection of her trade on the high seas, and that as the safety of India is associated with the safety of Great Britain the latter can legitimately claim from India a higher contribution than she already pays. This contention seems to me to be untenable. The case of the colonies, which is analogous to that of India as regards naval defence, shows that England has taken upon herself the moral obligation to protect Imperial interests which are organically blended with those of its constituent parts. As these interests are of wide scope and application, none of the colonies and dependencies can be fairly required to contribute towards the cost of an Imperial Navy unless they are allowed to have a voice in the deliberations of the Empire. India, specially, is a protected country, still under the administrative tutelage of England; and Imperial naval defence ought not to be made the excuse for levying a proportionate contribution from a country which has no administrative autonomy. It would have the appearance of a strong country exercising moral coercion on, and of dictating duties to, a weak which it would be bound to perform without the enjoyment of correlative rights. The naval contribution which India makes to England, small though it is, may, therefore, be deemed to be unjustified and unnecessary.

It seems to me to be clear that whether we look at the Army and Navy expenditure from a financial or from a political point of view, we cannot avoid the conclusion that it constitutes a drain, in that it tends to weaken the efficiency and character of the people. To sum up: the money and goods which are sent out of India are, indeed, a full material *quid pro quo* for the goods

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and services which she receives in return. But the transfer of this money and these goods does not produce new wealth indicating the existence of physical, mental and moral health and strength, developed or potential, nor increase such health and strength resulting in the creation of new wealth, nor produce conditions of life and work tending to elevate the character and efficiency of the people. Material wealth alone, unless associated with mental and moral wealth, brings on deterioration of character, produces social and political vices, weakens the social fabric and destroys all national stimulus. Wealth, whether it belongs to an individual or a nation, does not, *ipso facto* benefit the possessor, just like liberty, or health or strength or learning. "Every one of these blessings," says Lieber (Pol. Ethics Vol. I p. 455), "unconnected with other essentials, has become at times the cause or promoting auxiliary of suffering, vice or crime." These essentials are deemed to be, in a nation, a healthy, vigorous, industrious and educated people, capable of competing with other nations of the civilised world on equal terms and under equal conditions, and on a status which develops their mental, moral and physical health and strength ; whatever circumstances prevent them from arriving at this condition of life and work, act as a *Drain*.

INDIA : A POEM

BY

PROF. N. V. THADANI, M.A.

I

Oh ! thy dreams are the deeds of the ages to be ;
Oh ! thy deeds are the dreams of the ages of yore ;
Arise ! for the life of the world unto thee
Is calling for ever from the sea and the shore.

Arise ! for the world is on fire, and the flame
Is burning through the heart of its being, and to thee
It is given alone that fury to tame,
Its wrongs to redress and render it free.

Arise ! and re-kindle the torch of thy light ;
Arise ! and uphold thy banner of peace ;
Silence the thunders of madness and might,
That are shaking the earth, her sorrows to increase.

Mother of the ages ! in the warmth of thy youth
Awaken the nations to the smiles of their birth—
As children that play on the seashore of truth,
And scatter the sands and the shells of their mirth.

II

India ! thou hast heard the call :—Arise for the March of the ideal !
India ! thou hast heard the trumpet blown from the Himalyan heights !
Awake to the call of thy mission ! The voice of the God in thunder
Hath whispered in music in thy ears the message of the world of life.
The world is a-bleeding with the wounds of many passions and hate,
And strife and aggression have opened their arms to engulf it in death ;
The fire is yet out-spreading and threatens to consume all life,
And the winds of ambition are fanning it over the heart of thy children ;
Awake, oh Mother ! and silence the ruthlessness and terrible rage
Of this world-shaking war, with thy voice in celestial music
Rolling over the sea and the shore and calling the nations to peace.
Then arise and advance, Oh Mother ! to the star-land of eternal fame,
Bearing in thy hand the banner of harmony and lasting love,
Low from the valleys, high from the mountains, up to the kingdom of light
Where myriads of suns of glory are shining, and the smiles of Heaven,
In the radiant colours of the rainbow wedded with the blushes of morn,
Inspire thy heart to approach into the bosom of the Life of the World !

Education Through the Vernaculars*

BY MR. M. K. GANDHI

THE Gujarat Education League that has called us together has set before it three objects :

(1) To cultivate and express public opinion on matters of education.

(2) To carry on sustained agitation on educational questions.

(3) To take all practical steps for the spread of education in Gujarat.

I shall endeavour to the best of my ability to place before you my thoughts on these objects and the conclusions I have arrived at.

It must be clear enough to everybody that our first business is to consider and form an opinion about the medium of instruction. Without fixing the medium all our other efforts are likely to be fruitless. To go on educating our children without determining the medium is like an attempt to build without a foundation.

Opinion seems to be divided on the matter. One party claims that instruction ought to be imparted through the vernacular (Gujarati in this province). The other will have English as the medium. Both are guided by pure motives. Both are lovers of their country. But good intentions alone are not sufficient for reaching a goal. It is world-wide experience that good intentions often take a man to a bad place. It is, therefore, our duty to examine on their merits the contentions of both the parties and, if possible, to arrive at a final and unanimous conclusion on this great question. That it is great no one can doubt. We cannot, therefore, give too much consideration to it.

It is, moreover, a question which affects the whole of India. But every Presidency or province can come to an independent conclusion. It is in no way essential that before Gujarat may move, all the other parts of India should arrive at a unanimous decision.

We shall, however, be better able to solve our difficulties by glancing at similar movements in other provinces. When the heart of Bengal, at the time of the partition, was throbbing with the Swadeshi spirit, an attempt was made to impart all instruction through Bengali. A National College was established. Rupees poured in. But the experiment proved barren. It is my humble belief that the organisers of the movement had no faith in the experiment. The teachers fared no better. The educated class of Bengal seemed to dote upon English. It has been suggested that it is the Bengali's command over the English language that has promoted the growth of Bengali literature. Facts do not support the view. Sir Rabindranath Tagore's wonderful hold on Bengali is not due to his command of the English language. His marvellous Bengali is dependent upon his love of the mother-tongue. "Gitanjali" was first written in Bengali. The great poet uses only Bengali speech in Bengal. The speech that he recently delivered in Calcutta on the present situation was in Bengali. Leading men and women of Bengal were among the audience. Some of them told me that for an hour and a half, by a ceaseless flow of language, he kept the audience spellbound. He has not derived his thoughts from English literature. He claims that he has received them from the atmosphere of the soil. He has drunk them from the Upanishads. The Indian sky has showered them upon him. And

---

*From the Presidential Address to the Second Guzarat Educational Conference specially translated for the *Indian Review*.

The Second part of the Address dealing with the problem of a National Language for India and the third and concluding portion on the Defects of the Present System of Education will appear in successive issues.

I understand that the position of the other Bengali writers is very similar to the poet's.

When Mahatma Munshiramji, majestic as the Himalayas, delivers his addresses in charming Hindi, the audience composed of men, women and children listen to him and understand his message. His knowledge of English he reserves for his English friends. He does not translate English thought into Hindi.

It is said of the Hon. Pandit Madan Mohan Malaviaji, who, though a householder, has, for the sake of India, dedicated himself entirely to the country, that his English speech is silvery. His silvery eloquence compels viceregal attention. But if his English speech is silvery, his Hindi speech shines golden like the waters of the Ganges under the sunbeams, as they descend from the Mansarovar.

These three speakers do not owe their power to their English knowledge, but to their love of the vernaculars. The services rendered by the late Swami Dayanand to Hindi owe nothing to the English language. Nor did English play any part in the contributions of Tukaram and Ramdas to Marathi literature. The English language can receive no credit for the growth in Gujarati literature from Premanand's pen as of Shamal Chat's and quite recently of Dalpatram.

The foregoing illustrations seem to afford sufficient proof that love of, and faith in, the vernaculars, rather than a knowledge of English are necessary for their expansion.

We shall arrive at the same conclusion when we consider how languages grow. They are a reflection of the character of the people who use them. One who knows the dialects of the Zulus of South Africa knows their manners and customs. The character of a language depends upon the qualities and acts of the people. We should unhesitatingly infer that a nation could not possess warlike, kind-hearted and truthful people, if its language contained no expressions denoting these qualities. And we should fail to make that language assimilate such expressions by borrowing them from another language and forcing them into its dictionary, nor will such spurious importation make warriors of those who use that speech. You cannot get steel out of a piece of ordinary iron, but you can make effective use of rusty steel, by ridding it of its rust. We have long laboured under servility and our vernaculars abound in servile expressions. The English language is probably unrivalled in its vocabulary of nautical terms. But if an enterprising Gujarati presented Gujarat with a translation of those terms, he would add nothing to the language and we should be none the wiser for his effort. And if we took up the calling of sailors and provided ourselves with shipyards and even a navy, we should automatically have terms which would adequately express our activity in this direction. The late Rev. J. Taylor gave the same opinion in his Gujarati Grammar. He says: "One sometimes hears people asking whether Gujarati may be considered a complete or an incomplete language. There is a proverb, 'As the king, so his subjects; as the teacher, so the pupil.' Similarly it can be said, 'As the speaker, so the language.' Shamalbhatt and other poets do not appear to have been obsessed with an idea of the incompleteness of Gujarati when they expressed their different thoughts, but they so coined new expressions and manipulated the old that their thoughts became current in the language.

"In one respect all languages are incomplete. Man's reason is limited and language fails him when he begins to talk of God and Eternity. Human reason controls human speech. It is, therefore, limited to the extent that reason itself is limited, and in that sense all languages are incomplete. The ordinary rule regarding language is that a language takes shape in accordance with the thoughts of its wielders. If they are sensible, their language is full of sense, and it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

becomes nonsense when foolish people speak it. There is an English proverb, "A bad carpenter quarrels with his tools." Those who quarrel with a language are often like the bad carpenter. To those who have to deal with the English language and its literature, the Gujarati language may appear incomplete for the simple reason that translation from English into Gujarati is difficult. The fault is not in the language but in the people before whom the translation is placed. They are not used to new words, new subjects and new manipulations of their language. The speaker, therefore, is taken aback. How shall a singer sing before a deaf man? And how can a writer deliver his soul until his readers have developed a capacity for weighing the new with the old and sifting the good from the bad.

"Again some translators seem to think that Gujarati they have imbibed with their mother's milk, and they have learnt English at school, and that they, therefore, have become masters of two languages, and need not take up Gujarati as a study. But attainment of perfection in one's mother-tongue is more difficult than effort spent in learning a foreign tongue. An examination of the works of Shamalbhatt and other poets will reveal endless effort in every line. To one indisposed to undergo mental strain, Gujarati will appear incomplete. But it will cease to so appear after a proper effort. If the worker is lazy, the language will fail him. It will yield ample results to an industrious man. It will be found to be capable even of ornamentation. Who dare belittle Gujarati, a member of the Aryan family, a daughter of Sanskrit, a sister of many noble tongues? May God bless it and may there be in it to the end of time, good literature, sound knowledge and expression of true religion. And may God bless the speech and may we hear its praise from the mothers and the scholars of Gujarat."

Thus we see that it was neither the imperfection of Bengali speech, nor impropriety of the effort that was responsible for the failure of the movement in Bengal to impart instruction through Bengali. We have considered the question of incompleteness. Impropriety of the effort cannot be inferred from an examination of the movement. It may be that the workers in the cause lacked fitness or faith.

In the north, though Hindi is being developed, real effort to make it a medium seems to have been confined only to the Arya Samajists. The experiment continues in the Gurukuls.

In the Presidency of Madras the movement commenced only a few years ago. There is greater intensity of purpose among the Telugus than among the Tamils. English has acquired such a hold of the literary class among the Tamils that they have not the energy even to conduct their proceedings in Tamil. The English language has not affected the Telugus to that extent. They, therefore, make greater use of Telugu. They are not only making an attempt to make Telugu the medium of instruction; they are heading a movement to repartition India on a linguistic basis. And though the propagation of this idea was commenced only recently, the work is being handled with so much energy that they are likely to see results within a short time. There are many rocks in their way. But the leaders of the movement have impressed me with their ability to break them down.

In the Deccan the movement goes ahead. That good soul Prof. Karve is the leader of the movement. Mr. Naik is working in the same direction. Private institutions are engaged in the experiment. Prof. Bijapurkar, has, after great labour, succeeded in reviving his experiment and we shall see it in a short time crystallised into a school. He had devised a scheme for preparing text-books. Some have been printed and some are ready for print. The teachers in that institution never betrayed want of faith in their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cause. Had the institution not been closed down, so far as Marathi is concerned the question of imparting all instruction through it would have been solved.

We learn from an article in a local magazine by Rao Bahadur Hargovindas Kantawala that a movement for making Gujarati the medium of instruction has already been made in Gujarat. Prof. Gajjar and the late Diwan Bahadur Manibhai Jushbhai initiated it. It remains for us to consider whether we shall water the seed sown by them. I feel that every moment's delay means so much harm done to us. In receiving education through English at least sixteen years are required. Many experienced teachers have given it as their opinion that the same subjects can be taught through the vernaculars in ten years' time. Thus by saving six years of their lives for thousands of our children we might save thousands of years for the nation.

The strain of receiving instruction through a foreign medium is intolerable. Our children alone can bear it, but they have to pay for it. They become unfit for bearing any other strain. For this reason our graduates are mostly without stamina, weak, devoid of energy, diseased and mere imitators. Originality, research, adventure, ceaseless effort, courage, dauntlessness and such other qualities have become atrophied. We are thus incapacitated for undertaking new enterprises, and we are unable to carry them through if we undertake any. Some who can give proof of such qualities die an untimely death. An English writer had said that the non-Europeans are the blotting-sheets of European civilisation. Whatever truth there may be in this cryptic statement, it is not due to the natural unfitness of the Asiatics. It is the unfitness of the medium of instruction which is responsible for the result. The Zulus of South Africa are otherwise enterprising, powerfully built and men of character. They are not hampered by child-mariages and such other defects. And yet the position of their educated class is the same as ours. With them the medium of instruction is Dutch. They easily obtain command over Dutch as we do over English, and like us they too on completion of their education lose their energy and for the most part become imitators. Originality leaves them along with the mother-tongue. We the English-educated class are unfit to ascertain the true measure of the harm done by the unnatural system. We should get some idea of it if we realised how little we have reacted upon the masses. The outspoken views on education that our parents sometimes give vent to are thought-compelling. We dote upon our Boses and Roys. Had our people been educated through their vernaculars during the last fifty years, I am sure that the presence in our midst of a Bose or a Roy would not have filled us with astonishment.

Leaving aside for the moment the question of propriety or otherwise of the direction that Japanese energy has taken, Japanese enterprise must amaze us. The National awakening there has taken place through their national language, and so there is a freshness about every activity of theirs. They are teaching their teachers. They have falsified the blotting-sheet simile. Education has stimulated national life, and the world watches dumbstruck Japan's activities. The harm done to national life by the medium being a foreign tongue is immeasurable.

The correspondence that should exist between the school training and the character imbibed with the mother's milk and the training received through her sweet speech is absent when the school training is given through a foreign tongue. However pure may be his motives, he who thus snaps the cord that should bind the school-life and the home-life is an enemy of the nation. We are traitors to our mothers by remaining under such a system. The harm done goes much further. A gulf has been created between the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

educated classes and the uneducated masses. The latter do not know us. We do not know the former. They consider us to be 'Saheblog.' They are afraid of us. They do not trust us. If such a state of things were to continue for any length of time, a time may come for Lord Curzon's charge to be true, viz., that the literary classes do not represent the masses.

Fortunately the educated class seems to be waking up from its trance. They experience the difficulty of contact with the masses. How can they infect the masses with their own enthusiasm for the national cause? They cannot do so through English. They have not enough ability or none for doing so through Gujarati. They find it extremely difficult to put their thoughts into Gujarati. I often hear opinion expressed about this difficulty. Owing to the barrier thus created the flow of national life suffers impediment.

Macaulay's object in giving preference to the English language over the vernaculars was pure. He had a contempt for our literature. It affected us and we forgot ourselves and just as a pupil often outdoes the teacher so was the case with us. Macaulay thought that we would be instrumental in spreading western civilisation among the masses. His plan was that some of us would learn English, form our character and spread the new thought among the millions. (It is not necessary here to consider the soundness of this view. We are merely examining the question of the medium.) We, on the other hand, discovered in English education a medium for obtaining wealth and we gave that use of it predominance. Some of us found in it a stimulus for our patriotism. So the original intention went into the background, and the English language spread beyond the limit set by Macaulay. We have lost thereby.

Had we the reins of Government in our hands we would have soon detected the error. We could not have abandoned the vernaculars. The governing class has not been able to do so. Many perhaps do not know that the language of our courts is considered to be Gujarati. The Government have to have the Acts of the legislature translated in Gujarati. The official addresses delivered at Darbar gatherings are translated there and then. We see Gujarati and other vernaculars used side by side with English in currency notes. The mathematical knowledge required of the surveyors is difficult enough. But Revenue work would have been too costly, had surveyors been required to know English. Special terms have, therefore, been coined for the use of surveyors. They excite pleasurable wonder. If we had a true love for our vernaculars we could even now make use of some of the means at our disposal for their spread. If the pleaders were to begin to make use of the Gujarati language in the courts they would save their clients much money, and the latter will gain some necessary knowledge of the laws of the land, and will begin to appreciate their rights. Interpreters' fees would be saved, and legal terms would become current in the language. It is true the pleaders will have to make some effort for the attainment of this happy result. I am sure, nay, I speak from experience, that their clients will lose nothing thereby. There is no occasion to fear that arguments advanced in Gujarati will have less weight. Collectors and other officials are expected to know Gujarati. But by our superstitious regard for English we allow their knowledge to become rusty.

It has been argued that the use we made of English for attainment of wealth, and for stimulating patriotism was quite proper. The argument, however, has no bearing on the question before us. We shall bow to those who learn English for the sake of gaining wealth or for serving the country otherwise. But we would surely not make English the medium on that account. My only object in referring to such a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

use of the English language was to show that it continued its abuse as a medium of instruction and thus produced an untoward result. Some contend that only English-knowing Indians have been fired with the patriotic spirit. The past few months have shown us something quite different. But even if we were to admit that claim on behalf of English, we could say that the others never had an opportunity. Patriotism of the English-educated class has not proved infectious, whereas a truly patriotic spirit ought to be all-pervading.

It has been stated that the foregoing arguments, no matter how strong they may be in themselves, are impracticable. "It is a matter for sorrow that other branches of learning should suffer for the sake of English. It is certainly undesirable that we should suffer an undue mental strain in the act of gaining command over the English language. It is, however, my humble opinion that there is no escape for us from having to bear this hardship, regard being had to the fact of our relationship with the English language, and to find out a way." These are not the views of an ordinary writer. They are owned by one who occupies a front rank among the Gujarati men of letters. He is a lover of Gujarati. We are bound to pay heed to whatever Prof. Dhruva writes. Few of us have the experience he has. He has rendered great service to the cause of Gujarati literature and education. He has a perfect right to advise and to criticise. In the circumstances one like me has to pause. Again the views above expressed are shared with Prof. Dhruva by several protagonists of the English language. Prof. Dhruva has stated them in dignified language. And it is our duty to treat them with respect. My own position is still more delicate. I have been trying an experiment in national education under his advice and guidance. In that institution Gujarati is the medium of instruction. Enjoying such an intimate relation with Prof. Dhruva I hesitate to offer anything by way of criticism of his views. Fortunately, Prof. Dhruva regards both systems, the one wherein English is the medium and the other in which the mother tongue is the medium, in the nature of experiment. He has expressed no final opinion on either. My hesitation about criticising his views is lessened on that account. It seems to me that we lay too much stress on our peculiar relationship with the English language. I know that I may not with perfect freedom deal with this subject from this platform. But it is not improper even for those who cannot handle political subjects to consider the following proposition: The English connection subsists solely for the benefit of India. On no other basis can it be defended. English statesmen themselves have admitted that the idea that one nation should rule another is intolerable, undesirable and harmful for both. This proposition is accepted as a maxim beyond challenge in quarters where it is considered from an altruistic standpoint. If then both the rulers and the nation are satisfied that the mental calibre of the nation suffers by reason of English being the medium, the system ought to be altered without a moment's delay. It would be demonstration of our manliness to remove obstacles however great in our path, and if this view be accepted, those like Prof. Dhruva who admit the harm done to our mental calibre do not stand in need of any other argument.

I do not consider it necessary to give any thought to the possibility of our knowledge of English suffering by reason of the vernacular occupying its place. It is my humble belief that not only is it unnecessary for all educated Indians to acquire command over English, but that it is equally unnecessary to induce a taste for acquiring such command.

Some Indians will undoubtedly have to learn English. Prof. Dhruva has examined the question

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with a lofty purpose only. But examining from all points we would find that it will be necessary for two classes to know English :—

(1) Those patriots who have a capacity for learning languages, who have time at their disposal and who are desirous of exploring the English literature and placing the results before the nation, or those who wish to make use of the English language for the sake of coming in touch with the rulers.

(2) Those who wish to make use of their knowledge of English for the sake of acquiring wealth.

There is not only no harm in treating English as an optional subject, and giving these two classes of candidates the best training in it, but it is even necessary to secure for them every convenience. In such a scheme the mother-tongue will still remain the medium. Prof. Dhruva fears that if we do not receive all instruction through English, but learn it as a foreign language, it will share the fate of Persian, Sanskrit and other languages. With due respect I must say that there is a hiatus in this reasoning. Many Englishmen, although they receive their training through English, possess a high knowledge of French and are able to use it fully for all their purposes. There are men in India who although they have received their training through English have acquired no mean command over French and other languages. The fact is that when English occupies its proper place and the vernaculars receive their due, our minds which are to-day imprisoned will be set free and our brains though cultivated and trained, and yet being fresh will not feel the weight of having to learn English as a language. And it is my belief that English thus learnt will be better than our English of to-day. And our intellects being active, we should make more effective use of our English knowledge. Weighing the pros and cons, therefore, this seems to be the way that will satisfy many ends.

When we receive our education through the mother-tongue, we should observe a different atmosphere in our homes. At present we are unable to make our wives co-partners with us. They know little of our activity. Our parents do not know what we learn. If we receive instruction through the mother-tongue we should easily make our washermen, our barbers, and our bhangis, partakers of the high knowledge we might have gained. In England one discusses high politics with barbers while having a shave. We are unable to do so even in our family circle, not because the members of the family or the barbers are ignorant people. Their intellect is as well-trained as that of the English barber. We are able to discuss intelligently with them the events of "Mahabharata", "Ramayana" and of our holy places. For the national training flows in that direction. But we are unable to take home what we receive in our schools. We cannot reproduce before the family circle what we have learnt through the English language.

At the present moment the proceedings of our Legislative Councils are conducted in English. In many other institutions the same state of things prevails. We are, therefore, in the position of a miser who buries underground all his riches. We fare no better in our law courts. Judges often address words of wisdom. The court-going public is always eager to hear what the Judges have to say. But they know no more than the dry decisions of the Judges. They do not even understand their counsels' addresses. Doctors receiving diplomas in Medical Colleges treat their patients no better. They are unable to give necessary instructions to their patients. They often do not know the vernacular names of the different members of the body. Their connection, therefore, with their patients, as a rule, does not travel beyond the writing of prescriptions. It is brought up as a charge against us that through our thoughtlessness we allow the water

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that flows from the mountain-tops during the rainy season, to go to waste and similarly treat valuable manure worth lakhs of rupees and get disease in the bargain. In the same manner being crushed under the weight of having to learn English and through want of far-sightedness, we are unable to give to the nation what it should receive at our hands. There is no exaggeration in this statement. It is an expression of the feelings that are raging within me. We shall have to pay dearly for our continuous disregard of the mother-tongue. The nation has suffered much by reason of it. It is the first duty of the learned class now to deliver the nation from the agony.

There can be no limit to the scope of a language in which Narasinh Mehta sang, Nandshanker wrote his *Karanghelo*, which has produced a race of writers like Navalram, Narmadashanker, Manilal, Malbari and others; in which the late Raychandkavi carried on his soul-lifting discourses, which the Hindus, Mahomedans and Parsis claim to speak and can serve if they will; which has produced a race of holy sages; which owns among its votaries millionaires; which has been spoken by sailors who have ventured abroad; and in which the Barda hills still bear witness to the valourous deeds of Mulu Manek and Jodha Manek. What else can the Gujaratis achieve if they decline to receive their training through that language? It grieves one even to have to consider the question.

In closing this subject I would invite your attention to the pamphlets published by Dr. Pranjiwandas Mehta, of which a Gujarati translation is now out. I ask you to read them. You will find therein a collection of opinions in support of the views herein expressed.

If it is deemed advisable to make the mother-tongue the media of instruction, it is necessary to examine the steps to be taken for achieving the end. I propose to recount them, without going into the argument in support:—

(1) The English-knowing Gujaratis should never, in their mutual intercourse, make use of English.

(2) Those who are competent both in English and Gujarati, should translate useful English works into Gujarati.

(3) Education Leagues should have text-books prepared.

(4) Moneyed men should establish schools in various places in which Gujarati should be the medium.

(5) Alongside of the foregoing activity, conferences and leagues should petition the Government and pray that the medium should be Gujarati in Government schools, that proceedings in the law courts and Councils and all public activites should be in Gujarati, that public services should be open to all, without invidious distinctions in favour of those who know English, and in accordance with the qualifications of applicants for the post for which they may apply, and that schools should be established where aspirants for public offices may receive training through Gujarati.

There is a difficulty about the foregoing suggestions. In the councils there are members who speak in Marathi, Sindhi, Gujarati and even Kanarese. This is a serious difficulty, but not insurmountable. The Telugus have already commenced a discussion of the question, and there is little doubt that a re-distribution of provinces will have to take place on a linguistic basis. Till then every member should have the right to address his remarks in Hindi or his own vernacular. If this suggestion appears laughable, I would state in all humility that many suggestions have at first sight so appeared. As I hold the view that our progress depends upon a correct determination of the medium of instruction, my suggestion appears to me to have much substance in it. If my suggestion were adopted the vernaculars will gain an influence, and when they acquire State recognition they are likely to show merits beyond our imagination.

(CONTINUED FROM THE LAST ISSUE)

THE HISTORY OF BENGALI LITERATURE

BY MR. HARI PADA GHOSAL, M.A.

CHAPTER IV

THE SEVENTEENTH CENTURY LITERATURE

THE INTERREGNUM IN POETRY

AFTER Mukundaram we do not find any great name among the many poets who flourished before Bharatchandra. This period is a gap. Except the mighty figure of Kasi Das, there is none among the lesser luminaries who may claim a high place in the golden galaxy of the literary horizon of Bengal. But still the melodious harp was not left unsounded. This age may fairly be called an age of translations. The Bengali genius went to sleep to refresh itself after the violent strain in Mukundaram.

Among the poets who wrote in praise of the goddess Mansa, the twin poets Ketakadas and Khemananda come to our view. Their names are knit together in a way that reminds us of the two English dramatists Beaumont and Fletcher. These two literary partners are so much associated that they are mistaken for one person. Their date is uncertain but it may be reasonably supposed that they flourished about the beginning of the seventeenth century. There are only 2,600 verses and sixty-six poems of which forty are of Khemananda and twenty-six of Ketakadas. Though Khemananda excels in dealing with emotion and Ketakadas with humour, yet there is very little that may be taken as showing high political excellence. But the story is common and it excites pity and sympathy. It is well known in every Bengali household. Chand Sadagar (merchant) of Champainagar was dead against worshipping the goddess Mansa and used to strike serpents (favoured creatures of the goddess so much so that they are taken as her personifications) whenever he met them. This enraged the goddess who caused the death of his six sons and he himself lost his merchandise on the sea. But still he remained inexorable. In course of time a son of the name of Nakhindar was born to him. Nakhindar married Behula, daughter of Saya. Chand caused an iron house to be built upon the summit of the Satai hill, in which the married couple was to pass their bridal night. In spite of all his precautions Nakhindar breathed his last from the effect of snake-bite. Behula floated on the river's breast with her husband on a boat made of plantain trees and at length reached Tribeni after six months. Here she was introduced to the gods in heaven by Netai, a washerwoman of the gods who were pleased with Behula and granted her the life of her husband. Chand got back his six lost sons on condition that he would henceforth worship the goddess Mansa and bear no ill-will towards her favourite creatures, the serpents. His wealth was also restored to him. The worship of the goddess was established on earth after the arrival of Behula with her husband and her brothers with their lost wealth, to her husband's home.

It is needless to say that the feelings of a people are greatly affected by the environments they are surrounded with. The delta of the Ganges being marshy and there being snakes, the people grew terrified and sought some means of propitiating an imaginary deity whom they made queen over these tiny creatures whose bite brought about instantaneous death and from whom they could not see any means of escape. Hence they flew to the deity who might protect them by her divine power. Their inability to find the remedy led them to stick fast to their faith. Call it superstition or anything you like, but it springs from that instinctive moral nature which is the part of our very being. Call it rude but it has a consoling efficacy. "The sacred picture which is believed to shed a hallowing and protecting influence over the poor man's cottage can bestow a more real consolation in the darkest hour of human suffering than can be afforded by the grandest theories of philosophy" (Lecky)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The belief may be false but it is conducive to human happiness. A similar snake-worship was prevalent in the delta of the Nile.

KASIRAM DAS

There is not a little difference of opinion among scholars about the exact date of this great poet. In fact we cannot reconcile ourselves to any one of the various dates conjectured by writers of literary history. So we refrain from fixing any date that may be taken as precise and final. But we may reasonably say that Kasi Das flourished early in the first quarter of the seventeenth century. We know from his older confession that the place of his birth was Singigram in the sub-division of Katwa in the District of Burdwan. He was a Kayastha by caste. His father's name was Kamalakanta. He had three brothers all of whom took delight in literature and one of them Kristodas wrote Sri Kristobilas, a translation of the Bhagbat.

The theory that Kasi Das was ignorant of Sanskrit has now been exploded. It originated in the fact that Kasiram did not closely follow the original in writing his Mahabharat. Of all the translations of the Mahabharat that of Kasi Das was the most complete and best. Before him many dealt with the same subject so that he was not a worker in a new field. Babu Nagendra Nath Basu, a great lover of our old literature, to whom our language is much indebted, has given a list of about thirty-five poets who practically translated the Mahabharat before Kasi Das. The Mahabharat of Kasi Das is the best known in every Bengali household. There is a controversy as to its genuineness. According to many he wrote a good portion of the famous book, but in spite of all their contention, it is beyond doubt that none but the masterly hand of Kasi Das could produce a book which is charming throughout from beginning to end. That he was the author of the whole of the Mahabharat is incontestably proved by internal evidence. There is no change, no variation in the style and method of composition. The language is always refined and invariably chaste. There is no unevenness or irregularity; all is wrought in a vein quite befitting a poet of the first water. Whatever may be the evidence, even though it is meagre, we are not willing to dethrone this great poet from the high seat of honour which justly belongs to him as the sole author of this book of books.

Let us now turn to see how the poet was singularly successful in this most ambitious feat of intellect. We love Kasi Das and Kirtibas as our personal friends. None could be more popular than these twin sons of the Bengali muse. From the cottage to the palace, from the most negligible and dirty nook of a grocer's shop to the spacious and beautifully decorated hall of knights and the bower of ladies, they are equally admired. Burns was the most popular poet in Scotland in the sense that his poetry delighted the simple Scottish peasants who read his poetry while they drove the plough. Such is the case with Kasi Das and Kirtibas. But their superiority lies in another direction. We do not find any high thoughts in Burns. He sang only of the poor mouse when he turned the earth with his plough-share and of the daisy which he trod under his "shoon." But Kasi Das and Kirtibas sometimes "scaled the toppling crags" of poetry. Their Pegasus soared high through the aerial regions and reached often the "table-lands to which our God is moon and sun." Different shades of emotion have been artistically dealt with by Kasi Das. Innumerable episodes centre round the main story which is an account of the life and prowess of the five Pandavas, their quarrel with the Kurus culminating in the great war on the classic field of Kurukshetra and resulting in the total extinction of the great Kshatriya heroes who took the one side or the other in this most disastrous warfare. The episodes are so charming that we cannot spare them. We cannot imagine how the poet could patiently write the gigantic volume. It is indeed the work of a master-spirit. The largeness of the scope was not a desideratum. There is no sign of langour. The poet is cheerful throughout. Some of the characters are didactic but never repelling. The descriptions are like little pictures. They are beautiful and at the same

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

time natural. Kasi Das did not invent like Mukundaram, any new metres. Perhaps his eyes were fixed upon bringing his great work to a speedy termination. He had no time to stop and turn round. In fine, let me say that if any one wishes to see the nation face to face, he must read the Ramayana and the Mahabharat, the grandest books of the world. They are dear to our soul. They are our life-blood. They teach us the virtues of truthfulness, forgiveness, perseverence, humbleness of spirit, self-abnegation and reverence for God. They may be fitly termed the Bibles of our literature. Our children suck their great lessons with their mother's milk. From the cradle to the grave they are our companions and guiding stars in the journey of life. Many have been made poets by reading them. These store-houses of poetry are full of precious gems which are like diadems on the crowns of our many modern poets. In fact, the seventeenth century may be called an interregnum and Kasi Das its sole dictator. Besides the Mahabharat, Kasi Das wrote three other books—Jalaparba, Sapnaparba, and Nalopakhyan.

We have said something about Dharmamangals in the chapter preceding the last. They were composed in honour of the god Dharma who was the object of worship of the so-called Buddhists in the last days of their decadence. Gradually the subject was taken up even by great exponents of the orthodox Hindu faith and in their eagerness to relate the glory of Hindu gods and goddesses, they lost sight of the god to glorify whom they were originally composed. Thus the Buddhistic idea is least felt in Ghannaram's Sri Dharmamangal. It can be hardly recognised through the superfœtation of innumerable illustrations drawn from the author's rich storehouse of scholarly acquisition. This kind of complete transformation is met with in Ghannaram Chakrabarthy. He was born in 1679 A.D. in the District of Burdwan. His father's name was Gourikanta. Ghannaram was naughty and quarrelsome in early boyhood and his father sent him to the tol of Rampur, the then famous seat of learning in Burdwan. The salutary influence of this place brought about a change and he became attached to his books. His preceptor presaging the glory that awaited the boy-poet in no distant future early gave him the title of Kabiratna (the gem of poets). At last by the order of Maharaj Kirtichandra Rai of Krishnapore, he composed his famous Sridharma-mangal. The book is composed of twenty-four chapters consisting of 9,147 verses and was completed by the year 1709. The hero is Lousen. He is a man of self-control and possesses extraordinary feat of arms. He is a favourite of the gods and practised hard austerities. But the poet wanted that magical power which wields all the different materials into a harmonious whole. He wanted art to combine and knit up various elements. The verses are monotonous. They disgust even the most patient reader. Ghannaram was the master of a large vocabulary. There is alliteration almost in every verse.

He was a man of pure character, humorous and amiable. His descendants are still living at Krishnapore.

Of the two brothers of Kasi Das, Kristo Das was elder and Gadadhar younger. Both of them were good poets. Kristo Das wrote Srikristobilas —a translation of the Bhagbat. The Juggannath-mangal of Gadadhar Das is a good and interesting book. Bhabami Prosad Rai was another poet. He was born blind about the middle of the 17th century. His power over language, his taste and poetic power were not of a high order. Contemporaneous with Bhabani Prosad was Rupnarain Ghosh who was a better poet than him.

Let us now take a review of the 16th and 17th centuries and state the important features in the literature of the period. Kabikanka Chandi is a mirror of contemporary Bengal. Domestic life as it was in those times is clearly reflected in the glowing pages of that remarkable book. Though the Bengalis are under the ban and anathema of racial interdiction as the most cowardly of nations, yet any one who has sympathetically and carefully gone through the literature of the period in question, cannot say with justice that they were wanting in heroism

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and bravery about 300 years ago. The poets depicted contemporary society. Their characters are very often heroic. The people in general still loved learning and education was not stationary or neglected. Even men of lower castes were learned in Sanskrit and were good scholars of their own literature. Women occupied a conspicuous place in society. They were taught to read and write. There were some hackneyed subjects such as the descriptions of the six seasons of the year which was the common property of the ancient poets of Bengal.

The most remarkable feature in the old literature of Bengal is its *life*. This life—this vitality—this power which animates and vivifies is found in Kirtibas, Kasi Das and Dharmamangal. This animus inspires the poetry of Mukundaram. The contrast between spirit and lifelessness is clearly visible when we come down to the age of Bharat Chunder. The voice of the people, the spirit of universality, naturalness and simplicity which animates Mukundaram, speaks to the heart. What is it but the picture of poverty of Kalketu and patience of Fullara that have been drawn by the poet? What is it but the picture of Dhanapoti, Srimanta and Khullana? They were born in humble cottages of Bengal but they are fit to be placed side by side with the mighty heroes and heroines of the Ramayana and the Mahabharat. The period succeeding the age of Bharat Chunder is an age of artificiality and unnaturalness. The language is refined but it is without an ideal. Here there is no life, no simplicity, but a mere chaos of exuberence, heartlessness and artificiality. This literature has not drawn its power from the pure fountain-head of popular sentiments. It was fed by outlandish ideals, corrupt and vitiated taste of foreign conquerors and hence its depravity and distortion. Nurtured by popular feeling and thoughts, the Kaviwallas kept it alive in remote villages even in those days of vitiated taste.

The Reorganisation of Government Colleges

BY "COLLEGIAN"

THOUGH the main results arrived at by the Public Services Commission are disappointing, the elaborate investigation undertaken by them has, in spite of the Commissioners themselves, brought to light several valuable suggestions towards the reorganisation of the services. With reference to the subject of this article itself, a number of ideas given expression to by the Commissioners would deserve to be adequately recognised and utilised in reforming the existing state of affairs. The first excellent finding has been the necessity to separate the administrative and the collegiate branches of service from each other. The inclusion of the officers of both the branches in the same cadre with a common struggle for promotions has been one of the worst crimes of recent government policy. The indignity of men with years of collegiate service to their credit being superseded in their promotional prospects by raw lads will, it is hoped, be put an end to. The combination of the collegiate officers and the administrative officers resulted in a niggardly apportionment of places to the former class. With a separation must come an extension of the collegiate service to fulfil its necessary fuller development.

According to the Commission every college should be itself a unit of the departmental service. Changes from the administrative into the collegiate divisions are not to be countenanced while changes from one college to another are ordinarily permissible. The recognition of a vital unit in the college will be found to be a very favourable influence towards the growth of a fuller college life. As things are at present all the fine and subtle associations of a corporate college life

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are rudely destroyed by a central authority. When a recruitment has to be made in the staff of a college, the best men competent to sit over the selection or at least assist in the selection are the principal and senior professors of that college. As having actually come in contact with the talents of the young men trained under them they are the best judges of their merits. It is to be hoped that with the recognition of the separate entity of every college, the patronage of the appointments in the different colleges will not harmfully be centred in a central authority but be tempered and guided principally by expert and appropriate opinion. Anybody who knows the character of the administration of the department in this Province knows that no principal and no professor, even of the Presidency College, can have a substantial voice in the matter of recruitments to the staffs of the colleges.

In the matter of appointments, the Commission has recommended the institution of selection committees, consisting of three officials and two non-officials. In a department like the judicial we are familiar with the appointing authority vested in the High Court. It ought to be possible to achieve such a simple procedure in the educational department. If the Director could sit with representative professors of different departments of knowledge, taking care always to include an Indian element we can be certain of a proper selection committee.

A very important finding of the Commission has been the urgent need "to move up large numbers of officers from the subordinate service" to an upper grade. In their anxiety to keep distinct a class I and a class II, on an imaginary difference in the type of work performed by the members of the several cadres, the Commission by its very failure to do so, clearly demonstrate the great need for a thorough democratization of the collegiate service. What the Commissioners have conceived as mere "effective teaching" and "demonstrating," they have entirely allotted to officers of the class II while the fulfilment of a high university standard is to rest on the shoulders of officers of class I. According to the specifications of the Commissioners there is no third alternative possible at all in the economy of collegiate work to be fulfilled by a third class of subordinate officers. There is conceivably no lower grade of work than "effective teaching" and "demonstrating" in collegiate education and the distinction of a class of "teachers" serving in the subordinate service is a visionary nothing in the Commissioners' minds.

In their attempt to substantiate the mere "effective teaching" that forms a considerable part of Indian collegiate work, the Commissioners talk glibly of the large element of boys between sixteen and eighteen found among the students of Indian colleges, whose defective education, according to the Commissioners argues the inevitable mere "effective teaching" among the members of the college staff. It must remain a comment of surprise to any one in India to think that the youth of 16 or 18 years is a hindrance to an absorption of the highest university ideal in pursuing studies. The Government has arbitrarily fixed the age of Matriculation in this country at fifteen. Those who are familiar with the actual rate of mental development of the lads of this country know well how cruelly the government rule has thwarted the educational progress of the best youths. The Commissioners have probably meant to emphasise the inadequacy of the Matriculation test to qualify for admission into colleges. They may plead indeed for making the school course longer. The Commissioners will, however, have no reason to think that according to the present standards Matriculation has been too easily allowed at all. The proportion of successful matriculates to those applying for the examination test has always been cruelly small in this country. Simultaneously, class-promotions in schools have also been stiffened up and a boy who enters college at sixteen at present is in many cases a specimen of more than average ability very fit indeed to receive collegiate education on the best university principles.

To return however to the myth of a difference in the type of work performed by a college staff

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

That there can be any conscious difference in the principles of instruction pursued by the different members of a college staff is too absurd to maintain. There are two sets of divisions in Indian college staffs which have long been considered as fulfilling an inferior portion of instructional work than the others. These are the "tutors" and the "demonstrators." The latter class is chiefly engaged in correcting exercises by students and in assisting them to do practical experimental work in the laboratory. The Commission has clearly paid a high regard to "demonstrating" work in including "demonstrators" in class II. With reference to "tutors," these are mostly employed to correct literary composition exercises. But within recent years a better understanding of the principles of composition-teaching has led directly to the abolition of an inferior cadre of tutors in our colleges. Composition has been conceived as both a lecturing and correcting task and it has been recognised that this two-fold work should be shared by all the members of the college-staff pertaining to the literary department, irrespective of their seniority.

The college lecturer must combine in himself both professorial and tutorial duties in this country. University professors attend to research work, but the duties of college professors should clearly be to profit the under-graduates under them. It is foolish however to draw fast the line of demarcation between the college professor and the research professor. It should certainly not be impossible for the college professor to become the university research professor; indeed every facility should be afforded to favour such a transition. Without the possibilities of research on any scale no college professor can justify his place, or prove of inspirational value to his students. The only solution then to improve the tone of collegiate education will lie in not obliging the members of college staffs to deliver too many lectures. There ought to be a fair division of work and the work allotted to each should be of such limited proportions as to allow of the best university ideals be pursued by the lecturers.

In this Presidency there are at present five Government Arts Colleges, two of which are of the second grade and the rest of the first, one of which teaches to the highest university standard—the Honours courses. The following table will furnish the manner in which the institutions are manned in the matter of their staffs.

Name of College	Number of Students	I. E. S Men.	P. E. S. Men	Subord. Collegiate Service	Other Inferior Service	Total	Highest degree taught
The Presidency College	548	10	7	22	6+6 Demonstrators	45+6	B. A. Honours
The Kumbakonam College	339	1	6	6	2+2 Demonstrators	15+2	B. A. Pass
The Rajahmundry College	291	1	4	8	3+2 Demonstrators	16+2	B. A. Pass
The Mangalore College	106	...	1	4	8+1 Demonstrators	14	Intermediate (Includes a high school department)
The Anantapur College	...	...	2	4	3	9	Intermediate
	12		20	44			

The magnitude of the amount of teaching work involved in the Presidency College cannot be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

easily realised. There are eight branches in the Honours course and there are three classes in each making up twenty-four, and similarly there are ten classes in the B. A. and at least eight in the Intermediate. These forty-two classes are manned by forty-five men. The inadequacy is apparent. According to subjects there are eleven principal divisions. But even these eleven are too wide classifications. A department like English for instance should really consist of several more minute divisions of specialisation at least in a college where the Honours courses are instituted. It should have a chair for *Language*, one for *Poetry*, one for *Prose* and one for *Drama*. The work may not even be divided on an exclusive basis but every one may share the work of the special sphere of any or every other. But the need to afford scope for concentrated work severally in the different divisions should seem apparent. Take again history. It falls easily into distinctions to be ancient, modern, English and Indian Histories, Political Science and Political Economy. There is thus room for quite six independent workers of equal status. These divisions are made even now among the several members of the same department of subject but the division covered under false and insolent fictions. Whether belonging to a higher or lower cadre, senior or junior, divisions of similar responsibilities are made among the members and the entire work has been going on. Excluding demonstrators and pandits, out of the 39 members in the Presidency College 22 or more than half are only of the "subordinate service," a service too inferior even to come within the purview of the Commission's inquiry. For eleven subject divisions there are only 17 men of the superior service. As has been pointed out each of the eleven divisions is capable of being split up into vital other sub-divisions deserving of independent recognition. And even without it, many of these subjects have to be lectured upon to not less than seven different grades of university classes.

Of the proportions shown in the table above the figures of the Rajahmundry College come next to the Presidency College in the iniquity of the distribution of places between the superior and the inferior grades.

Excluding pandits and demonstrators who deserve to be placed as high at least as the present "subordinate" service, there are seventy-six appointments in the Government Colleges of this Province. Justice would require that all these seventy-six places should be graded on one common footing, which shall be essentially Indian, and shall be recruited from among the best graduates of the Indian universities. In giving its assent to the principle of direct recruitment to the superior services in a large measure the Commission has entered into a useful discussion of the material to choose from. It has been suggested with great wisdom that the young men actually teaching in unofficial colleges might well be drafted into Government service with the obvious profit to the Government of the probation being passed at another's expense. It is a pity that this idea has not struck the authorities at all, all these times. Government colleges, few as they are, must justify themselves by striving to be model institutions, manned by the most eminent members of the profession, official red-tape, technical rules requiring irrelevant qualifications from candidates and the rule of seniority at the expense of efficiency and academical distinction have all combined in the past to discourage the admission of the most brilliant men into the Government Collegiate Service. The raw and untried man was always entertained at the lowest rung of the ladder and an inevitable monotony has gone on in the spirit of the Government Colleges.

The principle of recruitment to Government Colleges from young men actually teaching in unofficial colleges and gaining useful experience thereby will be best paralleled by the present practice of recruitment to the judicial service. The experience gained by a lawyer assists him to become a good judge. Similarly, the lecturer who shows promise after actual trial at an unofficial college is a most eligible person to fill a place in the select government collegiate cadre. This principle if carried out as it should be, will

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for one thing, widen the vision of the educational authorities in the country to enable them to encourage and to turn to the best account the best teaching talent available in the country.

It has been stated by the Commission that three years' practice at the bar is essential for recruitment to the judicial service. If the Government should plan its collegiate machinery in a somewhat similar scale to that of the judiciary, as it will be very worth its while to do, it may take care to ensure a proper period of probation, and three years should be quite a sufficient period. As the Commissioners have pointed out, it would not be possible to get all the recruits from unofficial colleges. In the case of raw men then, who should necessarily be recruited also on the strength of their brilliant academical achievement and the probable testimony of their professors, the three years of probation should have to be in Government service, and in the case of recruits already engaged in teaching allowance should be made to diminish from or entirely do away with, the period of probation according to the period of experience already gained.

As a practical method of salaries it may be suggested that a custom at present prevalent in the case of Probationary Deputy Collectors may well be adopted. The probationer will receive Rs. 150 during the first year, Rs. 175 in the second year and Rs. 200 in the third year. When he is finally given a place in the regular service he will draw Rs. 250, which is the salary suggested by the Commission as the starting place in all the provincial services.

Of the 76 appointments, if five are relegated to probationers there would remain 71 places for the regular cadre. If three different grades are instituted like the scheme of Mr. Justice Abdur Rahim it will serve the best interests if 47 places are on Rs. 250 to 500, 16 places on Rs. 500 to 750 and 8 places on Rs. 750 to 1,000. This division provides for 24 appointments to be on salaries of more than 500. It will be observed that there are at present 12 collegiate appointments in the Indian Educational Service. These would all be transferred into either of the new grades suggested, according to the seniority of the members.

The objection to any scheme of democratization of services can come only from the representatives of the British interests. It will, however, be an unfortunate thing if the Government should look upon the collegiate service in the same light as on administrative services like the Salt, Police and Forest, as a welcome means of finding lucrative employment for Britishers. The late Mr. Gokhale used to maintain that untrained British graduates had no place at all in the Indian Educational service. The importation of British graduates should always be restricted to getting brilliant men with established reputations, if they could be obtained, to fill research professorships, maintained, preferably by the universities.

It cannot, however, be anticipated that the Government will accept any scheme of organisation where the interests of British graduates are not specially guarded. As a practical compromise it may be suggested here that the government may take to itself the prerogative of nominating British graduates to the cadre to start at Rs. 500. In such a case there should be provision made to restrict the Government from making such nominations to such a degeee as practically to perpetuate the traditional monopoly of the Britishers. The recruitment to the Rs. 500 to 750 grade by promotion from the lower grade should never fall to below fifty-per cent. of the places.

Such a scheme should provide for the best Indian graduates practically equal privileges with the British graduate, though the latter will, as has been suggested above, start higher. Appointments to the first grade should freely be made of Indians though tempered perhaps with considerations of efficiency. Not less than half of the appointments in the first grade should be held by Indians.

Nothing less than such a thorough overhauling will answer the best purposes. An extended, independent and dignified service is what is needed. Every possibility should be afforded to the Indian graduate to rise to the highest place.

WHAT IS SACRED MUSIC?

BY MR. CLEMENT A. HARRIS

Is there any real line of demarcation between sacred and secular in music, or is such a line, like the equator, imaginary?

Not only have contradictory replies been given to the question, but the existence of any demarcation has been denied on contradictory grounds. Musicians have denied it on the ground that all good music is sacred, and the extreme wings of the religious world have denied it on the ground that, in itself, no music is sacred! Thus the votaries of the "Plain Song" or "Gregorian" system have maintained that music is only sacred so far as it is made so by tradition or a Decree of the Church, a contention implied in the Pope's Encyclical on Sacred Music, of 1905.

The Greek Church goes farther, and, regarding music as sacred only when it is the vehicle of sacred words, prohibits the use of instrumental music in church. In this attitude towards the art extremes meet, for the Puritans prohibited, and a few of their descendants still prohibit, the use of the organ in church. Till quite recently the Society of Friends went even farther still, condemning music not only in worship, but as a recreation.

It has been reserved for the great Centre Party in the Christian Commonwealth to recognise that music has a religious message of its own independent of ecclesiastical sanction, and that the term "Divine Art" by which it is so frequently called is no misnomer. Thus, anomalously enough one of the most eloquent and discriminating tributes to the moral purity and innocence of music comes from the pen of the world's greatest composer of comic operas.

"Herein lies one of the Divine attributes of music" writes Sir Arthur Sullivan, "in that it is absolutely free from the power of suggesting anything immoral. Its countless moods and richly varied forms lend it to every organisation, and it can convey every meaning but one,—an immoral one." (Life, by Arthur Lawrence P. 285.)

Startling as this statement is, close analysis generally proves contradiction of it to be founded not upon music itself, but upon its accessories,—objectionable words for instance. Unlike painting and sculpture, music can only represent what is bad by being bad. Mozart felt this when he wrote to his father "Passions, however violent, should never be portrayed in all their ugliness, and even when describing the most horrible situations, music should never offend, but always please the ear,—in short should always remain music." Obviously, he considered that what was not beautiful was not music; and there is a great affinity, if not identity, between what is beautiful and what is good. Surely if anything in music is an attempt to represent evil, it is the Pandemonium scene in Berlioz's "Faust." Yet, at least to the writer, it is the words and not the music which represent an Inferno. The music depicts strenuous and tumultuous conflict and anger, but not necessarily culpable anger. It might be the anger of "Michael and his Angels" just as well as that of "the Devil and his Angels." One does not, while hearing this Pandemonium scene, feel contaminated with evil, as while hearing good sacred music, one feels the better for it.

Sensuous in the literal and better meaning of the word, music often is, but to be this is not to be immoral, otherwise it would be immoral to be "in the body" at all!

The worse effects music is capable of are almost always due to triviality, and are impossible to a composer with a reverence for his art.

It does not follow, however, that, because innocent all good music is sacred music. To say this is to deny to the art the power to voice those lighter moods of mankind without which the difference between sacred and secular would not exist. Goethe recognised this. Few writers have had a loftier conception of music than he did, but he is keenly sensitive to its variety of mood.

The dignity of art appears to the greatest advantage perhaps, in music, because that art contains no material to be deducted. It is wholly firm and intrinsic in value, and it elevates and ennobles everything which it expresses. Music is religious or secular

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

.the holiness of Church music, the gaiety and lightness of popular ballads, are the hinges upon which true music turns.

The existence of sacred and secular elements in music is nowise disproved by the difficulty, or even impossibility of precisely locating the line of demarcation between them. Mankind recognises many opposite qualities whose mutual border line it cannot discover.

Nor is such a line of demarcation the less distinct because, where traceable, it does not follow a conventional or expected course. Much music profoundly devotional in expression, has been written without any expressed religious ntent, and much that is trivial has been set to sacred words.

It is enough that in every quarter of the world, and in all ages, music has been the "Handmaid of Religion" its power of expressing religious feeling often exceeding that of words, and that not less has Religion been the "Nursing Mother" of music. For in all countries the best music is that inspired by religion. The most sublime creations of musical genius in the Western world, to the average listener and to the cultured musician, are respectively Handel's "Messiah" and Bach's "St. Mathew Passion" and if Beethoven's symphonies were not written with an expressly religious object many of his movements are so essentially religious in expression that sacred words have been adapted to them. The same principle holds good in the East. The temple songs of the Egyptians, so far as one can infer their character, were simple and dignified; the few Jewish airs which are at all authentic are either very simple or declamatory in style; and though many Mahomedan melodies, at least as rendered in Persia, are marred by confusing elaborations, recitations from the Koran, as given by Lane in his *Modern Egypt*, the Call to Prayer sung by the muezzin from the minaret of his mosque and the song sung at sunrise, as given by Villoteau, are bold and elevating. In no case are these liturgical songs frivolous or superficial. The few ancient hymn tunes of the Chinese extant show the line of demarcation even more strongly. Built on a pentatonic scale, they are severe in their simplicity and devotional in character, while the *secular* music of the Celestials is in no recognisable scale at all, and to European ears sounds little better than a nasal whine.

What then are the essentials of sacred music? First I would place that quality which is music's most striking and individual characteristic—if we may judge from a remarkable concensus of opinion among the world's greatest thinkers. I refer to its power to portray the ideal and immaterial, its witness to a life to come, the mysterious foretaste it gives of an existence beyond this body of flesh. Thus, Thoreau writes

> Let us hear a strain of music, and we are at once advertised of a life which no man has told us of, which no preacher preaches. Music is the language of the universal laws promulgated; it is the only assured tone. There are in music such strains as far surpass any faith which man has ever had in the loftiness of his destiny .....I know there is somewhere a people where this heroism has place...this cannot be all rumour. When I hear this, I think of that everlasting something which is not mere sound.

To Jean Paul Richter music likewise speaks of things invisible; but he seems to have less faith than Thoreau in ultimately finding them: "Away! away"! thou (music) speakest to me of things which all my endless life I have not found, and shall not find". John Henry Newman as one would expect, finds it impossible to believe that the extraordinary intimate message which music has for the soul will prove to have been a false one:

> Can it be he asks, that those mysterious stirrings of the heart, and keen emotions, and strange yearnings after we know not what, and awful impressions from we know not whence should be wrought in us by what is unsubstantial?...No, they have escaped from some higher sphere; they are the outpourings of eternal harmony in the medium of created sound .....they are something besides themselves, which we cannot compass, which we cannot utter, though mortal man, and he perhaps not otherwise distinguished from his fellows, has the power of eliciting them.

Music which has this quality is sacred music in the highest possible sense, whether written for the Church or not.

A second note in sacred music lies in the distinction between joy and pleasure on the one hand, and between sorrow and despair on the other. Its joy, even when most ecstatic, must be such a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gladness as exults in Handel's "Rejoice Greatly" not the sensuous gaiety of a polka or galop. Its sorrow must be a sorrow " not without hope " such as that of one of the most marvellous passages in music. " The Lord hath laid on Him the iniquity of us all " in the "Messiah"—not the wailing of a dirge. It is significant that no composer has achieved his truest interpretation of religious hope in a funeral march. Those to whom mourning brings a personal grief almost invariably ask for " I know that my Redeemer liveth," " O rest in the Lord," or " Blest are the Departed " to be played in place of a Dead March.

It only remains to add that in applying these principles two factors extraneous to music itself have to be borne in mind. The first is the power of association. Time was—to wit, in the fifteenth and sixteenth centuries,—when Masses were composed on the airs of popular songs and love ditties. Not only so, but the words of the song were sung by those to whom its theme was assigned, while the liturgical words were sung by those who sang the parts! " The Roses Red" and " Adieu, my loves " were well-known instances (Bonavia Hunt's History of Music, p. 10; Naumann, History of Music, p. 282). Nowadays, certain excerpts from Handle's operas, thoroughly devotional in character, make excellent voluntaries only because nobody knows their origin; and probably few who sing the hymn, "O Sacred Head surrounded" to its usual tune,—one of the most profoundly devotional in existence,—suspect that like several others, the air was originally a secular song.

The second factor is racial and individual temperament. Thus, to the Teutonic mind, the religious music of France and Italy, especially perhaps their organ music, is, with one or two exceptions, shallow to the point of irreverence. It does not follow that it produces the same effect of inappropriateness to the Latin mind.

The sensuous beauty of Rossini's Church-work at its best always suggests to the present writer its occupying the same position in the world's library of sacred music that the Song of Solomon occupies in Holy Writ. The inclusion of the " Song of Songs " in the sacred Canon has occasioned some Occidental minds considerable perplexity; to the Oriental mind it probably occasions none whatever! In regard to individual temperament, there could be no better example than that of Joseph Haydn. His Masses have been objected to as " difficult to reconcile with the true dignity of Church music". Yet this was certainly due to no want of reverence on his own part in composing the " Creation". " I knelt down", he says, " every day and prayed God to strengthen me for my work" and he told the poet Carpini that " at the thought of God his heart leaped for joy, and he could not help his music doing the same."

HORACE HAYMAN WILSON

BY MR. SHUMBHOO CHUNDER DEY, B.L.

BIRTH AND BOYHOOD

WILSON was born on 26th September, 1786. It is not known for certain where the future scholar and Orientalist first saw the light of heaven, but it is very probable that that event took place somewhere near London; and this we infer from the circumstance of his being sent in his sixth year to a school in Soho Square. Wilson's school-days were remarkable for the striking proof which he gave of his future greatness. It would seem that Wilson was born with a predilection for the Far East, as appears from the fact of his very first juvenile compositions having been on subjects connected with the two most noted countries in Asia, namely, India and China.

Wilson's thirst for knowledge of all sorts was very great, and he never failed to avail himself of opportunities for gaining it. When the school was closed for the long vacation, he would go and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

stay with his uncle, who held an appointment in the Assay Department of the Government Mint. Being led by curiosity he would accompany his uncle every day to the Mint, and pick up some knowledge of chemical analysis, the properties of metals, and the processes of assaying. This circumstance did him yeoman's service in shaping the course of his subsequent career.

VOYAGE TO INDIA

Curiously enough though the natural bent of his mind was towards polite learning, more especially Oriental lore, Wilson at an early age had made up his mind to qualify himself for the medical profession ; and, in 1804, when he was only eighteen years of age, got himself admitted at St. Thomas' Hospital, and began to take lessons in the healing art. Having prosecuted his studies for three or four years, he became qualified to practise, and on September 17, 1808, was appointed Assistant Surgeon in the East India Company's service. Not long after, he left England in charge of some troops bound for India. The vessel met with an accident in the way, which delayed the voyage, so that it could not be completed in less than six months. But young Wilson, who knew how to turn his leisure to good advantage, managed to gain some knowledge of Hindusthani from an educated Hindu, who happened to be his fellow-passenger on board the ship. This was the initial step which ultimately led to his ascending to the topmost rung in the ladder of Oriental learning and linguistic studies.

EMPLOYMENT IN THE CALCUTTA MINT

Wilson reached Calcutta with his troops in March, 1809, but he did not remain with them long. An opportunity soon presented itself for changing the medical, and to take to a more congenial profession. It so happened that shortly after his arrival in Calcutta, a new hand was required by the officials at the Local Mint. Wilson at once offered himself, and as he was not a perfect novice, found no difficulty in getting himself employed there. In 1810, Dr. John Leyden * so well known for his scholarly attainments, was appointed Assay Master at the Calcutta Mint; and Mr. Wilson was appointed to act as Assistant Assay Master.

At about the same time he was also appointed Secretary to the Mint Committee. It would seem that the two offices were allied to each other, so that whoever was Assay Master, also became, as a matter of course, the Secretary. These two offices, important as they were, placed Wilson in a position of pecuniary independence ; and although they made great demands on his time and attention, still he managed to find leisure for the cultivation of his taste for linguistic studies. In this way he laboured hard to learn some Indian languages. But though a man of a literary turn of mind, Wilson never neglected the duties of the important offices which he held under Government. In fact, he worked remarkably well as a Government servant, and became a general favourite with his official superiors, who were candid enough to appreciate his valuable services, and to state in so many words that they were deeply indebted to him for many useful reforms in the coinage. His work at the Mint had this importance attached to it that, it led him to turn his attention to Numismatics, and the subject got such a firm hold on his mind that he continued its study with due care and diligence, and succeeded, in after years, in producing a very valuable work on that subject. Need we say that we refer to his *Ariana Antiqua* which deals with the coins of Afghanistan.

HIS STUDY OF SANSKRIT

While studying the subject of coins and coinage, the labours of Mr. Colebrooke in the

*John Leyden, the son of a Scotchman of the shepherd class, is distinguished as a poet and Oriental scholar. He was a friend of Sir Walter Scott, whom he assisted in the collection of materials for his *Border Minstrelsy*. He was, also, a linguist of no mean order. Having served in India in various capacities for some years he died in 1811. Scott mourned him in some feeling lines introduced into the *Lord of the Isles*. Leyden's principal poem, *Scenes from Infancy*, appeared in 1802, and his *Poetical Remains* were published posthumously in 1821. Some of his verses have found place in D. L. R's once popular *Selections from the British poets*. Leyden's translation of the Memoirs of Babar was completed by Erskine.

Digitized by Arya Samaj Foundation Chennai and eGangotri

field of Sanskrit learning held out quite a charm to him, and it was not surprising that he was led to try his hand in the same sphere. Indeed, the study of Sanskrit, though difficult, has a value of its own, and a man like Wilson could not avoid the temptation of being induced to it as if by the force of instinct. Mr. Colebrooke finding in young Wilson an apt and intelligent student, gladly gave him all the help which he could possibly afford, and, thus, initiated him into the study for which he had already made himself famous, and for which his name has become a household word in India. Wilson began his study of Sanskrit with his usual zeal and earnestness, and as the bent of his mind naturally tended in that direction, he in a comparatively short time got together a fair knowledge of that venerable parent of languages. But with all his efforts Wilson could not attain to the greatness of his master and patron, Colebrooke, who was the ablest and most accurate scholar of his time. In fact, accuracy of scholarship was not Wilson's strong point. True it is he wrote a Sanskrit Grammar which was largely used in the Haileybury College, but, as a matter of fact, it was not well executed, and its introduction into the curriculum of study in that college was owing principally to the good offices of the well-known Professor Francis Johnson than whom a better grammarian, a more careful reviser of proof-sheets, and a more generous friend in placing his own stores of learning at the disposal of other scholars, never existed.

"In reality," says Professor Monier Williams, "Wilson owed his celebrity to his boldness in entering upon investigations which no one had before attempted, to his excellence as a writer, to his faculty of lucid exposition, to the unusual versatility of his genius, including as it did, poetical, dramatic and musical powers of a high order, and perhaps, more than anything else, to his untiring industry and the wide range of his contributions to almost every branch of Oriental research."

All these are very good qualities, and no wonder that by their aid Wilson rose to a very high position in the world of letters. His boldness was remarkable. No work, however hard and difficult, daunted him: he was up to anything and such was his tact and intelligence that he generally acquitted himself well of it. As for the excellence and quickness of his pen they are best proved by the voluminous nature of his works, none of which, however, is below the average. In fact, one and all of them are worth reading. His genius was cosmopolitan. He was a poet of no mean order. True it is that his original poems are only few and far between; but his translations of Indian dramas are very many and they testify to his powers as an ardent and skilful wooer of the Muse.* He was himself an accomplished actor, and was especially noted for his impersonations of old men. And not only did he possess musical voice, he also knew to play well on some musical instruments. Thus he was an all-round man, and was in a position to play almost any part that might be given him. As for his industry it was simply wonderful. He was a miracle of labour and diligence, and found pleasure in work,—incessant work,—work without ceasing. In fact, work was delight as well as worship with him. His contributions to Oriental learning were all but marvellous and covered quite a field of subjects. His essays which were on a variety of matters were collected and edited by Dr. Renhold Rost, Chief Librarian at the India Office, in five superb volumes. Though appointed Secretary to the Asiatic Society of Bengal early in 1811, Wilson did not commence to contribute articles to the organ of that Society until 1825. In point of fact, the bulk of his works was written after he had retired from the Indian service.

HIS STAY IN BENARES AND LABOURS THERE

At the end of 1819, Wilson was sent by the Government of India to Benares, and he remained in that famous seat of Sanskrit learning and Hindu religion for a year, re-organising the Sanskrit College there, collecting materials for his *Hindu Theatre*,—a monumental work, and adding to and improving his knowledge of Sanskrit by intercourse with the ablest and most erudite Pandits then living in Hindusthan. Wilson, though

* Some of his verses have found place in D. L. Richardson's once popular *Selections from the British Poets*.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a true-born Briton, was such a warm lover of Oriental learning as to have almost identified himself with it. So that it was only natural that in the fierce controversy which had been raging for some time at Calcutta between the Anglicists and the Orientalists, as to whether education should be imparted to the natives through English or through their own vernaculars, he took the side of the latter.

With a view to give some idea of the great versatility of Wilson's talents, we cannot do better than give the following extract from the biographical notice in the Report of the Royal Asiatic Society for 1860, referred to at the outset of this Memoir,—a notice which, considering that Wilson was for many years both Director and President of that Society, and an incessant contributor to the pages of its journal, might well have been made more complete. Says the Report:—

> Neither official duties nor literary pursuits nor these combined, were sufficient for the active mind of our late Director (while he was resident at Calcutta). As a member of Society he joined with ardour in every scheme of public amusement; and was, besides, the originator and promoter of many measures for the permanent improvement of the people among whom his lot was cast. The theatre at Chowringhee owed for many years its success to his management and histrionic talents; while his musical skill and proficiency gave him a place in every concert. But his name will live in India, and especially in Bengal, for the part he took in promoting useful instruction. H. H. Wilson was the first person who introduced the study of European science and English literature into the education of the native population whose knowledge of English had hitherto been confined to qualification for situation of an office clerk. For many consecutive years Wilson was the Secretary of Public Instruction at Calcutta, and he devoted himself especially to directing the studies of the Hindu College from the date of its establishment.

THE BODEN PROFESSORSHIP

Wilson lived and worked in Calcutta till the close of the year 1832.

When the intelligence of his election to the Boden Professorship reached India, Wilson lost no time in resigning his appointment at the Mint, and made the necessary preparations for his return to England. On the eve of his departure from this country, the Pandits met to bid him farewell, and one of them, who was more enthusiastic than the others, addressed him in a Sanskrit *Sloka* which being rendered into English would run thus:—

> The Pandit swans, who dwell in this lake of the Sanskrit College, are deprived of their wings by the influence of malignant fate when thou art gone away for good.

It was said that this flattering *Sloka* moved Wilson's serious face to tears.

WILSON AS BODEN PROFESSOR

Wilson left Calcutta in January 1833,—the very year in which Macaulay arrived at it,—and on landing in England went direct to Oxford, where he took a house in St. Giles' Street. His inaugural lecture was delivered sometime in the summer term of the same year. He chose for his subject, "The General Principles of Sanskrit Grammar,"—a subject which he thought likely to interest classical scholars from the point of view of its bearing on Comparative Philology,—a subject which had come to receive special attention at the hands of European savants of the day. It is not known for certain whether he gave any other lecture on the same subject; but there is no doubt that he delivered two public lectures at Oxford before general audiences on "The Religious and Philosophical systems of the Hindus." These lectures were written to help candidates for a prize of £200 given by Mr. John Muir,*—a well-known old Haileybury man and great Sanskrit scholar,—for the best refutation of the Hindu Religious system. The prize was obtained by one Mr. Mullens.

His usual lectures were given to classes of one or two, and rarely more than four University men. But the audience, though few, were select. Mr. Monier Williams was a regular attendant, and so was Mr. E. B. Cowell, both well-known names in this country. Mr. Cowell was candid enough to say that when he was an Oxford graduate, he learned Sanskrit from Professor Wilson; and he, also, said that the good Professor was always ready to give lectures, three times a week to one person alone in any book he liked to choose. Thus, it is clear that Wilson was not only anxious to store his own mind with knowledge of all kinds, he

* This gentleman was Judge of Fatehpore, and retired from service in 1853. He must not be confounded with Dr. Muir, who was Lieutenant-Governor of the N. W. Provinces and is well known in Anglo-Oriental literature for his "Sanskrit Texts."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was equally ready to impart it to others. Mr. Monier Williams, to whom we are mainly indebted for our information on the subject, has observed that it was, perhaps, more by the ardour of his enthusiasm for Oriental studies,—an ardour which, though outwardly suppressed, occasionally burst forth to kindle sympathetic fire in his pupils,—than by any striking excellence in the matter or method of his lectures that he promoted the cultivation of Sanskrit at the University. Verily, therefore, was Mr. Monier Williams justified in comparing him,—which he did in one of his Calcutta speeches in the Asiatic Society's rooms,—to the Vedic Aruni.* It must have been about this time that he was elected a fellow of the Royal Society, which was followed a few years after by his being appointed both Director and President thereof,—an honour which fell to the lot of only a select few among Oriental scholars.

THE INDIA HOUSE LIBRARIANSHIP

Professor Wilson resided at Oxford for about three years; but inasmuch as the climate of the place did not agree with his family, and as in August, 1836, shortly after the death of Sir Charles Wilkins, he was appointed his successor in the post of Librarian at the India House,—an office which carried with it the duties of Oriental Visitor at Haileybury,—he removed in that year to a house in London, merely visiting Oxford for his lectures, which only occupied three weeks three times a year. He used to go to the East India College for the Oriental examinations twice a year. He, also, attended regularly at the terminal visitation of the Directors, and always wrote a Report of the result of the Oriental examinations, which was incorporated in the Principal's general report.

* Aruni was a pupil of the great Rishi, Dhauma, and was so very devotedly attached to him that he always tried his level best to bide his biddings, however hard and risky. Once he was directed by his "Guru" to stop an opening in a certain field, but not being able to do so, he laid himself down at the opening in order to prevent water from coming out. By comparing Wilson to Aruni, Mr. Monier Williams meant to say that the Professor was a devoted student of Sanskrit, and spared no pains to promote its study and cultivation.

HIS KNOWLEDGE OF LANGUAGES

The versatility of Wilson's powers was best shewn by the wide range of his acquirements in Indian languages. He knew Sanskrit, Bengali, Persian, Hindusthani, Hindi, Telugu, Tamil and Marathi. Of course, his knowledge of some of these languages was all but scanty, but his tact was so great that he somehow managed to conceal his deficiency. As for his knowledge of Sanskrit, it was of a very high order; and what is very remarkable in a foreigner, he could pronounce it with the ease and accuracy of a true-born Hindu. Bengali, Hindusthani and Persian, also, he had a fair mastery of. He had good knowledge, too, of Telugu, which Madras officials were required to learn in lieu of Persian. But with all his scholarship he fell considerably short of the old Haileybury Professor, Mr. Francis Johnson, than whom a better Oriental scholar has not existed.

HIS WORKS

Professor Wilson's literary works are so many that a bare list of them would fill several pages of an ordinary book. Some of these works were written while he was in India; but most of them issued from his fertile pen after he had returned to England on being appointed Boden Professor of Sanskrit at Oxford. Of the books which were written in this country there was one which proved exceptionally useful to Europeans who were then learning Sanskrit. This was his Sanskrit-English Dictionary, which first appeared in 1819. A second edition was brought out in the very year the author was appointed Boden Professor. By this excellent lexicon Wilson laid the earliest European Sanskritists under a deep debt of gratitude, so much so that without the aid of such a guide they would have hesitated to venture on the thorny field of Sanskrit learning.

Another useful work of Wilson's is his well-known treatise on the Religious Sects of the Hindus. This gives a more or less detailed account of Hindus of different religious persuasions, and forms, as it were, a companion volume to Colebrooke's valuable essay on the Religious

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ceremonies of the Hindus. Though the work is not all that could be wished, still it contains a mine of information which is not accessible to the ordinary run of writers on the religions of the world, and if the learned author of the religions of antiquity could get hold of this important work he might have added considerably to the account which he has been able to give of the Hindu religion. It is noticeable that Professor Wilson has laid under an immense debt of gratitude the excellent Bengali writer, Babu Akshoy Kumar Datta, who largely drew upon his work in the preparation of his *Upasaka Sampradaya*,—a work upon which his fame as a Bengali writer principally rests, and which is justly regarded as a classic of a very high order in the whole range of Bengali literature. It is true that Wilson's work contains some errors and inaccuracies, but they were almost inevitable and fairly excusable in a foreigner. With all its defects and shortcomings Wilson's "Religious Sects of the Hindus" is a valuable contribution to Hindu religion and theology.

Wilson's translation of the *Rig Veda* is another work for which he is deservedly famous. It is a very creditable performance and appears to have done yeoman's service to those subsequent Sanskritists who made their attempts in the same direction. The learned Professor had commenced to translate that great work before he left India. In the last letter which he wrote to Mr. E. B. Cowell in India, he stated that he had finished the rough draft of the translation; but it is very much to be regretted that he did not live to publish the whole of it. The publication commenced in 1850, and had advanced only barely half when in 1860 he died. The work was taken in hand by Dr. Ballantyne, his successor in the Library of the India Office; but his failing health prevented him from carrying the remainder through the press. In fact, he had been able to do only a little when in the early part of 1864 he departed this world. Dr. Goldstucker, so well known to fame as a deep Sanskrit scholar, had just undertaken to finish the volume, when finding Mr. E. B. Cowell returning from India he made over the unfinished thing to him, who partly in consequence of the interest which he took in Vaidic studies, and partly because he was an old pupil of the Professor, took up the work with great pleasure and in right good earnest.

The translation of the Rig Veda was the last literary work undertaken by Wilson. It had greatly occupied his thoughts, and he had set his heart on its completion. His translation was mainly based on the very excellent commentary of *Sayana*, a very able and erudite Pundit of Southern India. This commentator, as Professor Cowell justly observes, stands to the Veda as Eustathius does to the Homeric poems. Professor Wilson has with his usual candour said that were it not for Sayana's commentary, he could not have finished that most ancient and most difficult of Sanskrit works. As it is, Wilson's translation of the Rig Veda is a splendid performance and has secured for him a high place among Orientalists.

Wilson's essays, which Dr. R. Rost brought out in three big volumes, testify to the variety of his knowledge. They are a very rich storehouse of useful information and are very largely read and highly valued. But his *Hindu Theatre* is a more useful work in one respect, consisting, as it does, of translations of most of the Sanskrit dramas, and places him in addition to his other merits among poets worthy of the name. Indeed, Professor Wilson was a wonderful man, and there have been very few, indeed, who would bear to be compared with him in the domain of Oriental learning.

ILLNESS AND DEATH

Professor Wilson had been suffering from stone for years. As the disease could hardly be cured without operation, one would have wished that he had submitted to it in time; but for some reason or other, it was deferred till after he had completed the Psalmist's cycle of three-score and ten. Unhappily, at that time there had been no successful application of the science of antiseptic surgery to the saving of life in such cases; and, as a matter of fact, the operation, done as it was late in life, did him more harm than good. The Professor died on the 18th March, 1860.

Iranian Influence on Moslem Literature

A REVIEW BY

MUHAMMAD NAIMUR RAHMAN, M.A.

THIS publication* is noteworthy as it is the first book relating to Arabic studies that has been translated from Russian into English by an Indian gentleman. It throws considerable light on the relative study of Zoroastrian and Moslem literature. The book is not a big one, and would thus be able to attract the attention of every one interested in Oriental studies. The translation from Prof. Inostranzev, the well-known Russian Orientalist constitutes only seven chapters of medium length occupying about ninety-two pages in all, while the rest of the pages of the book are taken up by eight Appendices from Arabic and German sources. The book is originally based on the Arabian historians and geographers of established reputation in Literature and has been further enlarged and supported by references to celebrated Orientalists of the West. The total aspect of the book and its material is brief, but doubtlessly valuable. The Appendices are historical and bibliographical in nature, and some of them consist of translations from Marquarts, Noldeke, etc. They will certainly be found helpful in furtherance of such studies in Arabic as relate to Zoroastrianism and Persia.

The book will be welcomed by the Zoroastrians as well as the Moslems as it brings them together closer and closer by removing all the doubts that the former covers about the latter. But it remains a strange fact, no doubt, that the Moslems too, though building on the same old civilisation of the Parsis in Persia, have now forgotten what they really owed to them. There has unfortunately been a strange, unintelligible and very often latent feelings of distrust with each of the parties for the other. The Parsis have up to this day been regarding Arabic Literature as something antagonistic in form and spirit to their ideas and ideals. The present book, fraught as it is with references to Arabic and Persian books of recognised worth and value, proves conclusively that all such beliefs, reciprocal or one-sided, are quite baseless, and shows the Moslem in his Arabic Literature as not only an impartial dealer with Zoroastrians but also a whole-hearted sympathiser with it. A number of Arabic books of unquestionable authority give accounts of the Persian antiquities and show what important parts the Zoroastrians played in the preservation of them for the abler and more sympathetic hands of the Arabian writers who are full of praise and appreciation for them. The Shubiyyah party of the Arabian litterature during the Renaissance period of Arabic and Islamic Literature were the chief promoters of learning, and as great "exponents of literature they concentrated their activity in the cultured centre of the Khalifate at Baghdad and other cities, and being familiar with Persia played an important part in the development of Moslem culture of the middle Ages.... They turned only to the Parsi circles for material, ...Enthusiastic partisans of the Persian element, these circles turned to the glories of Persia principally of the Sasanian past." We are rightly and clearly informed that "the share in these operations of the Persians themselves, was not considerable." The long established idea of the emigration of the Persians from Persia to India based on the religious prejudice of the Moslems will, we are sure, no more haunt the brains. Not to speak of the Moslems' grudge and prejudice against the Zoroastrians they go so far in their impartiality for it that they stand forth as its defenders against the attacks of some of the irreligious Zoroastrians themselves. Surely this speaks volumes in favour of the Moslem spirit of toleration. It is a pity that the study of Arabic literature has not yet been adopted by the Parsis through their old ideas of prejudice. We hope that this book will usher in a new era in the literary activities of the Parsis and they will begin to take a greater and whole-hearted interest in Arabic and Persian Literature, and by thus reconciling the two interests would succeed in implanting love and friendship with the exclusion of all thoughts of grudge and distrust, that are equally harmful and detrimental to the interests of both the parties.

* IRANIAN INFLUENCE ON MOSLEM LITERATURE, PART I. Translated from the Russian of M. Inostranzev, with supplementary appendices from Arabic sources, by G. K. Nariman; pp. 8 and 205 Bombay, D. B. Taraporevala Sons & Co. Rs. 4.

INDIAN FINANCE: 1914-18

BY

MR. ROBERT W. BROCK,

Assistant Editor of "Capital."

THE instinct that fastens upon sound finance as the mainspring of competent government is rooted in common sense and practical experience. The Finance Member can make or mar. Without his moral support and practical aid his colleagues in control of great administrative departments (Education, Agriculture, etc.), may have vaulting ambitions but their actual achievement will be circumscribed. This governing power of finance, and of its official representatives, is well understood; hence the attempts in some quarters to lay upon Sir William Meyer responsibility for military and other deficiencies in the early British campaigns in Mesopotamia. A circumstance less generally realised is the limitations the Finance Member himself is subject to.

Governments, it has been aptly said, are paupers. Their own resources, in other words, are *nil*. An apparent exception is railway property. The Government of India has recently derived enormous profits from this source. But even railways are financed originally from loans and taxation. And taxation, however urgent the need, has, in this country, always been subject to severe limitations. As is well-known, considerations partly political and partly economic induced the Government of India in the pre-war period to maintain taxation at the lowest possible level compatible with the barest administrative efficiency. Now, that policy may, or may not, have been inspired by sound principles. I am not concerned to discuss that point. I can understand the attitude being taken up that the Government of India's financial programme was too cautious; but that a cautious policy was actually followed will not be denied.

Thus the Government of India refused to finance universal primary education and other schemes of social amelioration and advancement and they followed this cautious policy despite strong advocacy of bolder action by recognised exponents of indigenous opinion. My object in emphasising this point will appear later, and I would merely add here that this line was pursued notwithstanding the fact that any expenditure incurred would have been devoted wholly to the social and economic benefit of the people of the country.

I now wish to establish another point. This is the heavy outlay that was constantly incurred in attaining military efficiency, with the result that when the day of trial came for this Empire and its Allies, the armies despatched from this country,—trained, equipped and financed by its servants over long years of patient preparation—were able to tender vital aid. I am dealing in this brief note mainly with war finance and I would venture to suggest, that in reckoning this country's financial contribution for war purposes, this high and costly standard of military efficiency must be accorded fuller acknowledgment than from many critics of this country's "war effort" it can yet be said to have received.

Mr. Webb of Karachi in criticising the recent budget makes a great point of the fact that India is the richest division of the British Empire outside the United Kingdom. I will not stay to contest this fallacious assertion: but I would like to point out to the Karachi publicist another distinguishing feature of the country whose military and economic aid to the Allied cause he is so constantly depreciating. I refer to the notorious fact that outside the United Kingdom, India was the only British Dominion that August 1914 found fully prepared for conflict. Apparently with the Karachi writer all this preparedness counts for nothing. Canada was not prepared. Australia was not prepared. New Zealand was not prepared. South Africa was not prepared. There was no strong regular military force in either of these four Dominions. But India, as we know, was fully prepared, and, thanks to Lord Hardinge, who thus rendered such conspicuous service, her striking power was used at the right time and in the right way. The effective contribution of this country to Imperial defence therefore did not begin, as with the above-mentioned Dominions, in 1914. It began long previous and involved high and prolonged military expenditure which cannot fairly be excluded from any fair estimate of this country's war finance.

The croaker at Karachi reminds one of the famous estimate of critics by Byron:—

> A man must serve his time to ev'ry trade,
> Save censure, critics all are ready made;
> Take hackneyed jokes from Miller, got by rote,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

With just enough of learning to misquote;
A mind well-skilled to find or forge a fault,
A turn for punning—call it Attic salt—
Fear not to lie—'twill seem a lucky hit;
Shrink not from blasphemy—'twill pass for wit;
Care not for feeling, pass your proper jest—
And stand a critic, hated, yet caress'd.

I would venture to counsel Mr. Webb to obtain, and publish, the figure of the comparative military outlay of this country, and of the self-governing dominions, from loans and taxation, prior to 1914. India was "ready" because she had paid to be "ready" and paid heavily. When the other Dominions, with the possible exception of Australia, were lavishing all available funds primarily on economic development and social reform, this country, under British leadership, was acting upon the policy of military efficiency first—all other national interests second. Yet in face of this high degree of self-sacrifice, Mr. Webb has the extraordinary effrontery to depreciate this country's effort. This is sheer political slander—no less.

Slander,
Whose edge is sharper than the sword; whose tongue,
But venoms all the worms of Nile; whose breath
Rides on the posting winds, and doth belie
All corners of the world: kings, queens, and states,
Maids, matrons, nay the secrets of the grave
This viperous slander enters.

The merit of any aid or gift is generally considered to be proportioned by the means of the giver. It is asserted—and I give the story for whatever it may be worth—that when the question arose in the Viceroy's Executive Council of this country taking over part of the British war debt, Lord Chelmsford intimated that he would be guided in his final decision mainly by the stand taken by the exponent in his Cabinet of Indian opinion, viz., Sir Sankaran Nair. The ex-High-Court Judge, it is said, after two sleepless nights, indicated to his colleagues his view that the resources of India should be pledged—to uphold the Empire's honour and integrity—to an extent without limit. The Finance Member, with closer regard for practical possibilities, demanded definite figures and the final offer decided upon, as every body now knows, was £100,000,000 which may or may not represent the final contribution.

When Mr. Webb urges heavy war taxation he forgets that military efficiency in the narrow sense of the term, as is increasingly recognised, is not the exclusive basis or shield of national integrity which also requires pursuit of economic development and political tranquillity. Nor, again, are funds handled by Government our only financial contribution to military efficiency. Funds are required also to maintain industry and, quite apart from Government outlay, to finance the manufacture of munitions and establish essential industries. Nor is it wise policy to press for the last rupee. This country, it must be remembered, is poor. High prices are pressing hard upon many sections of the population, and, in any event, the standard of living is extraordinarily low. Very little has been done towards its education and not too much towards its economic development. Its enlightenment is therefore limited and its resources small. The wonder is, with its restricted opportunities, that it has accomplished, not so little, but so much.

I would venture, at this point, to set down a suggestion. The British Government has recently issued its War Book describing its total achievement. The Government of India, taking 1914-18 as its period of survey, and, including finance, munitions, military forces, etc., would be wise to follow suit.

Sir William Meyer, taking the financial side of the Government of India's achievement, began boldly and continued to act courageously throughout. He has, in his last financial statement, recounted his earlier ambitions. It may be said of the present Finance Member that in his financial career, aspiration and achievement have kept perfect step and marched constantly in close comradeship. I need not here recount the features of his first and only peace budget, though it is worth recalling, to the minds of those who have girded at his apparent initial timidity in issuing war loans, that the first rupee loan floated during his period of office was the largest that had been issued for some years—if, indeed, it was not the largest on record. Did this indicate timidity? The retiring Finance Member's strongest ambitions when assuming office were to give full rein to economic development especially through the agency of railway and irrigation extensions, and, in his initial budget, he made unprecedently heavy provision for these latter schemes.

Then came war and temporary economic chaos, and one hears it frequently nowadays—nobody suggested it at the time—made a reproach against the Finance Member that he did not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

instantly impose heavy taxation and issue unlimited loans. The public memory is notoriously short, or otherwise, we may be sure, such pointless criticisms would receive short shrift. When trade was disorganised, when the economic outlook was so extraordinarily doubtful, when popular opinion was unsettled, when post-office savings deposits were being hastily withdrawn and Government currency notes hurriedly cashed; when all this was happening, and when, in addition, the political outlook was so puzzlingly uncertain, this was certainly not the time to impose extra taxation, and, with equal certainty, it was not the time to launch big loans.

We are all now very confident concerning war loans and know that large invesments therein can be depended upon. But what was the financial situation in 1915? The boom in trade, it must be remembered, had not then begun. The Government of India was, indeed, so uncertain,—and, as events proved, so justifiably uncertain—of the success of its first war-period loan, that it took the precaution to have it under-written by the Presidency banks and these institutions, I believe, took up large blocks of the security. As I have noted on another occasion, there have, as regards Indian war finance, been roughly three periods of more or less equal duration:—The first year, when Government were forced to pay out money through post office savings banks and encashment of notes, etc.; the second, the period of the conversion loan, when less loan money was raised from investors than Government asked for; and the third period, the big war loan period, when, in consequence of accumulated funds due to high prices for economic products, reduction of imports, heavy Government outlay and abnormal expansion of currency, investors indicated readiness to lend much more money to Government than anybody, official or non-official, had in the least expected. If the war loan of 1917 succeeded so brilliantly, it was largely because Government was borrowing back its own payments. A similar high investment would not have occurred two years previous, nor will it be repeated in periods of peace.

Then again, as I have pointed in my money market articles in *Capital*, Mr. Webb contends there has been undue inflation of currency and puts such inflation forward as contributory to high prices. I assume this refers to exports only; I will therefore put imports aside. The three chief products of Bengal for commercial purposes—apart from local foodstuffs—are jute, tea and coal, and prices have risen in each case but not due to inflation of currency but simply to ordinary commercial causes, as transport difficulties, increased demand, etc., wherein currency inflation plays not the smallest part. Again, take wheat, Karachi's leading export, a trade Mr. Webb may really know something about. The shortage of wheat is world-wide, the direct consquence is high prices. An equally convincing case could be made out in regard to other prominent products.

As to Government not raising funds—in war taxation, loans, treasury bills, etc.,—their indentation, upon rupee resources can have fallen little short of £100,000,000, viz., an increase of revenue, under all heads, of fully 100 per cent and with another big war loan due shortly, when perhaps even last year's investment will be exceeded, cause for complaint is hard to find. Again, where is the excess of currency? How can higher priced products, an enormous official outlay, etc., be financed without increased currency?

The war loan results achieved during Sir William Meyer's period of office have been unexpectedly brilliant. The biggest rupee loan raised before 1915 was five or six crores. The amount raised last year exceeded 50 crores. But this achievement occurred in 1917. What had intervened since 1915 to make this enormous investment practicable?

I would say chiefly two things. The Government of India had incurred abnormal outlay involving very large payments for purchases effected on behalf of the British Government. Moreover, strong demands came from abroad for local products at practically any price demanded. The result was an extraordinary accession of prosperity. The Government of India, meantime, was financing itself from its reserves, and thus giving the country time—upon the one hand—to recover its economic equilibrium, and—upon the other—to strengthen and multiply its financial resources.

Formerly India was in the habit of borrowing large amounts from London, and it naturally took some little time to re-adjust this position, and to pay off certain debts outstanding when war arrived; and that he accomplished this, before launching his great war loan, is proof authentic of Sir William Meyer's resource and ingenuity. I will indicate why this was the soundest policy to pursue. There were large temporary debts due on London account, and to have left these unredeemed would have been inconsistent. But, unfortunately for the Finance Member's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reputation with certain classes of publicists, all this occurred more or less out of the public arena, that is to say, out of the lime-light. It therefore earned little public appreciation. It was, indeed, alluded to in the financial statements but, as, I believe, has been Sir William Meyer's experience, financial statements are rarely studied and still less frequently are they thoroughly understood. The action taken was nevertheless exceedingly helpful because it improved the British Government's borrowing powers, viz., by releasing fresh money for re-investment in Home war scrip.

Another fact often forgotten is that to have launched the Indian war loan before investors were ready, and before the commercial and financial situation had fully recovered, would have been fatal and would have reduced the chances of success of any subsequent issue even in circumstances inherently more favourable.

Full credit is also due to Sir William Meyer for the fiscal and financial arrangements that accompanied his war loan. When the Finance Member asked sanction of the Home Government to impose increased taxation upon imported piecegoods (without levelling up the excise duty) for the purpose of devoting the revenue derived therefrom to purely domestic purposes, his scheme was promptly "turned down." When, however, he offered to devote the proceeds of the proposed new taxation as part payment of interest on the war gift of £100,000,000 he met with deserved success. The obvious merit of this arrangement was that it removed an old standing political grievance. Bombay, whose prosperity is "wrapped up" in cotton goods, was especially grateful and congratulatory and it can be confidently asserted that this politically opportune *bundobust*, by strengthening public confidence in the slow moving British sense of justice, secured support for the loan that would otherwise not have been forthcoming or at least would have been certainly less enthusiastic and effective.

It is true that the shock of Lancashire opposition to this measure nearly toppled over the Lloyd George's War Government and caused other political complications, but that, as the Americans say, is "another story," and concerns British domestic politics pure and simple. What is clear is that this long-sought concession has now been conceded, and, without gravely aggravating the political situation in this country, cannot be modified or cancelled. The opposition of Lancashire was extraordinarily strong but it was defeated by the circumstances of the political situation that alone enabled the British Government to bring the scheme forward. In peace time success would have been impossible. It is to be counted unto the Finance Member for grace that he has put this problem behind us. A Finance Member of the pre-war days succeeding in effecting this reform would have been hailed as establishing a new fiscal epoch but Sir William Meyer took it "in his stride." The position really is that developments are occurring so rapidly that we risk losing our sense of perspective. We are, I fear, too near recent financial and fiscal changes to grasp their full significance.

There have been strident complaints of shortage of funds for financing trade and it may be frankly conceded that with demand for local produce so strong, and prices so high, provision of adequate currency has been often difficult. In this connection two contradictory criticisms are offered for public consumption. One is that currency is inadequate—thus establishing that the Finance Member has been too timid and unenterprising—and the other is that currency has been inflated, indicating quite unmistakably that the Finance Member has been too bold and has created more currency than contemporary circumstances fully warrant. To the suggestion that currency is inadequate and that the Government of India should have foreseen the need of and made provision for fuller supplies, the answer is twofold:—(1) that present demands for currency are mainly contingent upon outlays incurred on behalf of the Home Government who alone could fully foresee what dimensions this outlay would attain; (2) that purchasing operations as regards silver are conducted by the India Office which is in intimate and continuous contact with the primary spending authority,—and not by the Government of India which can only urge, not actually effect purchases.

Then as regards inflation. This, as I have pointed out before, is non-existent, or, if existent, occurs only to a very small extent. The demand for currency, it need hardly be said, is variable; it expands with increase of commercial prosperity and economic productivity. The great expansion of commercial and industrial profits in the last two years is common knowledge; and further currency, even apart from exigencies of official finance, is the natural accompaniment of such conditions.

More goods are being produced, higher prices are being received, and higher prices are paid in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

many instances for goods purchased. To this extent, expansion of currency is the consequence, not the cause, of high prices. Then there are purely temporary causes accounting for increased demands for currency. These causes centre chiefly around current restrictions upon imports. Of these, the best example concerns piecegoods. Normally, imported piecegoods are consumed in enormous quantities. What happens is evident. Upon the one hand, money is paid to agriculturists for produce, either gold or rupees; and on the other, imports like piecegoods, which in normal circumstances bring these millions of rupees back into circulation ready for use in other directions, are either so reduced in quantity or priced so highly (or both) that consumption is curtailed, and circulation of coin is consequently impeded. An analogy would be trucks on a railway which go in one direction but never return, involving constant manufacture of new trucks. The rupees are monetary railway trucks, which go out from the Government Financial station, but (in present conditions) rarely return. Meanwhile, war outlay continues, and, in the absence of old rupees or notes, must be financed with new rupees and new notes.

One effect and object of the war loans is to bring back part of Government's enormous outlay for use over again. New silver for coinage can now be purchased only at prices which threaten to force further rises in the sterling exchange. Consequently the Government of India is anxious to secure as many notes and rupees on loan account as investors can spare. It is not questioned that inflation of currency forces up prices.

One feature of recent new currency that is bound to attract attention is that it has consisted almost exclusively of silver coins and notes. I need not recall the enormous imports of bullion and sovereigns that occurred in the years immediately prior to the outbreak of war and the increasing extent to which gold coin was passing into circulation in certain parts of the country. The suspension or restriction of gold imports except on Government account has led to complications in more than one direction but that the Government of India favours taking the earliest opportunity of extending the circulation of gold coin can be inferred from its action and success in persuading the British Treasury to start local minting of sovereigns and half-sovereigns—an experiment that will give our currency policy an entirely new bias. The Chamberlain Commission, it will be recalled, was not flatly against the establishment of an Indian gold mint but considered it should be left entirely to local sentiment. The Commission formulated the chief arguments which have been adduced in favour of gold coinage in the following terms:—

1. That gold is a more convenient and portable medium of circulation than the rupee.

(2) That a gold currency is a necessary step toward what may be regarded as the ideal currency, viz., paper backed by gold in reserve.

(3) That some prestige attaches to the possession of a gold currency whereas silver circulation is the mark of less progressive peoples.

(4) That a large amount of gold in circulation is a strong, and, in the view of some people, the only adequate support for exchange.

(5) That the constant mintage of fresh supplies of fresh rupees is objectionable, and would be obviated by an increasing circulation of sovereigns.

(6) That until India has a gold currency in active circulation, India will continue to possess an artificial and managed circulation.

(7) That India should be encouraged to absorb gold in order to protect the world in general from a further rise of prices due to the greatly increased production of gold.

To what extent some of these reasons favouring circulation of gold coin retain their old force is, I may be permitted to think, open to question but,—the mint having been established—the only trustworthy guide in the new and complex currency situation now existent is practical experience and what lessons this will teach us we cannot guess. One or two comments may be inserted here concerning the anxieties created by the enormous expansion in rupee currency. Here there are two points. The first is (*a*) that fresh currency has been due largely to the financial and commercial conditions created by higher prices and (*b*) that high prices are likely to continue. Their level will be lower than at present, but will, it is confidently predicted, undoubtedly be higher than the pre-war figures. Then there is another fact. When peace returns, this country will find itself on a permanently higher level of general prosperity and economic productivity, and will, therefore, require more currency than previously to finance its industries and trade. Incidentally, we may possibly see some contraction in note circulation whose expansion is due partly to absence of gold coin but upon this point we can but wait and see.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Two facts, then, are clear. First, that Sir William Meyer, by various devices, has financed an enormous official outlay, over and above the ordinary Government expenditure. Secondly, that this outlay—thus ingeniously provided for,—is, and has been, and, while it lasts, will continue to be no small factor is in fact the dominating factor in current commercial and industrial prosperity.

To the traditional problem of the financing of trade and the profitable employment of Government revenues; to the problem of the wider establishment and expansion of the currency note circulation; to the solution of our fiscal problems; and to the problem of widening the basis of Government loans, Sir William Meyer has admittedly made contributions of enduring value. No Finance Member in recent years has faced difficulties so numerous or complex, and none, I dare assert, could have faced them with greater courage and patience or solved them with greater ingenuity. This is not of course, to say that, in competent opinion, Sir William Meyer's regime has been free from blunders. But the fairest attitude is to take his policy "by and large." There are, I think, two at least of his achievements that will live in our financial history. He has taken the first step in democratising our paper currency. He has also taken the first step in democratising our official securities. These are important measures even though their fruit will take time to mature. The issue of Treasury Bills is another remarkable innovation. The graduation of the income-tax stands in an almost equally important category and has been accompanied for the first time by the imposition of the super-tax.

I have heard Sir William Meyer described as an auditor, nothing more. I think the foregoing record is more than adequate to refute that gibe, and I believe that history will endorse the verdict upon his lustre of the leading British banker in India, viz., that "Sir William Meyer is, beyond doubt, the ablest Finance Member this country has known since Sir Clinton Dawkins." I give Sir William Meyer the Irish salutation *Slan Leat*.

LOVE AND REST

BY

HUSAIN ALI MIRZA

First Lancers, Hyderabad, Deccan.

O sleep! why art thou fled from me
Have I done anything sinful, any wrong?
Tell me live thou only for the pure?
Of heart I am pure, but where does a sinless
[mortal dwell?
To live is to sin, to die is a crime,
O where, O where is the path for me?
Speak; I stand a mystery to me.
Why so restless do I lie?
Is love the only guilt of mine?
To hate is cruel; to love is guilt,
Man can you a third passion divine?
A storm within me rages.
Some elements conflict, some feelings
Rise to seek for feelings like.
Between the ebb and flow of breath
Mortal you toss from heaven to earth,
Earth to heaven.
The heaven and earth clash in me;
One takes me high the other throws down,
Lo! the tide of love heaves my breast,
Divine hope signals from the silvery shore
But now the clouds of despond crowd
All is dark; My image of love floated
Off my mind; Thus life passes on
T'wixt hope and despair, man is never at
[rest.
Is not harmony then in the elements
Of our being? is this perpetual to be the
[internal fight?
Dictate O Goddess! Solve the mystery of
[life,
I hear some undertone speak
In me; "Of discord will come Harmony,
Of storm calm". Magnetic love
Aspires up, Earth draws us down. "Of earth
To earth shall fall, and Divine meet
Divine." Thus shall end the strife; Love on
Love much; Be lost. Losing self Him
You find. Love; Love; and be lost.

AN EPITOME OF JAINISM

A REVIEW BY

MR. M. HIRIYANNA, M.A.

THIS* is an attempt to expound the main principles of an ancient creed which still retains the allegiance of a rich and influential Indian community. Jainism has been described as the Cinderella of Indian religions; for, among them, it was the last to attract the attention of the Western scholar and so suffered from his partiality for his earlier studies, viz., Hinduism and Buddhism. Because of some superficial resemblance, it was even represented for some time as an offshoot of the latter. But of late, thanks chiefly to the labours of scholars like Jacobi, the system has been receiving the recognition due to its antiquity and importance.

The work under review is something more than an exposition of the Jain faith and its terminology. As indicated in the subtitle, it purports to be a historical and comparative study and the authors throughout elucidate their position by bringing it into relation on the one hand with different systems of ancient Indian philosophy and on the other, with European schools of thought like those of Hegel and Spencer. Although there is much that is suggestive here, we cannot say that the treatment is always either clear or correct. The authors, now and then, allow themselves to be carried away by religious zeal and so do scant justice to the systems they criticise. For example, in dealing with the Buddhistic doctrine of the momentariness of all things, they try to make out that Buddhism is, at bottom, a crude faith leading only to a life of inclination. It is hardly necessary to point out how much this distorts the truth, for the ethical excellence of Buddha's teaching is recognised by all. Buddhism yields to no other Indian religion in the determination with which it sets its face against instincts and appetites; and yet the authors of this book state that the only logical result of a belief in it is "a careless surrender to the present" (p. 466). The fact is that they forget the other and equally important doctrine of Buddhism that all is suffering which makes it impossible for a sincere adherent of that religion to turn a sensualist. Again the account of Vedantism given in the preface is open to serious criticism. That the Kshattriya had much to do with the development of the essential Upanishadic doctrines may be true, but to speak of Vedanta as a militant faith is plainly self-contradictory. We should like to refer to one other point, viz., the description of *Jivanmukti* as an *inferior* ideal (p. 605). That, however, is a commonly current misconception for which we need not hold the authors of this work specially responsible. *Jivanmukti*, if we rightly understand the spirit of Indian philosophy, is indeed the highest and the most truly philosophical of all conceptions of deliverance, and may be said to represent a landmark in the history of philosophic thought in India. It is one of the points where Indian philosophy emerges clearly from Indian religion and what was once a mere speculation is thought within the range of practical life. For the goal of existence according to this conception is salvation on this side of death —not the attainment of any mysterious bliss *hereafter*, but the achievement of mental equipoise *here and in this life*, such for instance as is described in glowing terms in the Bhagavad-Gita (ii, 55-72). The conception of *Jivanmukti* belongs to the later Upanishadic period, but it seems to have acquired its full significance in the Epic period whose essential merit it was to have developed the Indian ethical ideal to the fullest extent.

In spite of limitations like those which we have pointed out, the work, taken as a whole, succeeds in convincing the reader of the basal soundness of Jainism. It should also be commended for the attempt it makes to differentiate Jain philosophy from Jain religion. The intermixture of religion and philosophy is a prominent feature of ancient Indian speculation. It has no doubt its own advantages, for religion thereby becomes rationalised and philosophy ceases merely to gratify theoretic curiosity. But, however useful this intermixture may be in life, for purposes of presentation, the two should be separated. Otherwise our philosophy will not appeal to the modern mind with sufficient force and its worth will ever remain underrated. One of the first duties of the student of Indian philosophy is accordingly to turn his attention to an independent exposition of what is strictly philosophical in Indian thought.

The work closes with a description of the art and literature of the Jaini, a knowledge of which is so essential to understand their view of life. There is also a chapter on the Jain places of pilgrimage which—as every one that has visited them will readily admit—may well have for their motto, "cleanliness next to godliness."

THE SAINTS OF MAHARASHTRA

I. NOTE BY THE EDITOR

AMONG the several saints whose lives form the subject of this series,* a most interesting and remarkable group come from Maharashtra. Beginning with Dnyandev, who wrote his famous commentary on the *Bhagavad Gita* in the spoken language of the people, we find a galaxy of saints and prophets whose names have become household words with the people of Maharashtra. The stream continued to flow in full tide for more than four centuries and then it appears to have dried up.

Roughly speaking we may state that the history of this religious revival covers a period of nearly five hundred years, and during this period some fifty saints and prophets flourished in this land, who left their mark upon the country and its people so indelibly as to justify Mahipati in including them in his biographical sketches. A few of these saints were women, a few were Mahomedan converts to Hinduism, nearly half of them were Brahmans, while there were representatives in the other half from among all the other castes, Marathas, kunbis, tailors, gardeners, potters, goldsmiths, repentant prostitutes, and slave girls, even the outcaste Mahars: (Ranade's Rise of the Maratha Power).

Alike in the testimony their lives afford to the qualities of independence and spiritual devotion, alike in the great power and intuition underlying their utterances and in the work of social and religious reformation they carried out, these saints of Maharashtra form a remarkable group.

Among these Maratha saints, more than fifty in number, the lives of five have been chosen as being at once most typical of Maharashtra and as being those who have left most abiding influence on the thought and religion of the Maratha people. Dnyandev (1275-1296), poet and thinker, was the first to raise aloft the banner of the new religion and his intrepid utterances and writings first awoke the national mind. Next came Namdev (1370-1440) whose poems and preachings gave wide currency and popularity to the new-won Vaishnavite faith. His impassioned life and utterances irrevocably connected the old shrine of Pandharpur with the heart and faith of the Maratha people. In the 16th century came Ekanath (1528-1599), poet and resolute philanthropist. He gave in his poems and the *Bhagavat* full form and expression to the new religion of Bhakthi and Bhava. More than his poetry, his life, so full of courage, charity and philanthropic love, demonstrated the victory of those ideas of Brotherhood and Religious and Social Fellowship that were making themselves felt. The 17th century is filled with the lives and doings of the two well-known saints, Tukaram (1608-1649) and Ramdas (1608-1682). Tukaram, born mystic and poet, is however the most endeared and widely-read of the Maratha saints and poets. In his great spiritual earnestness and power, in his poetic depth and sincerity, there are few perhaps that can compare with him, even outside Maharashtra. The other great figure is Ramdas, the statesman-saint, the guru of Sivaji. Combining in himself the ideals at once of a Vaishnavite reformer and a nation-builder, Ramdas stands unique in the annals not only of Maharashtra but of India itself.

The lives of these saints are based upon the poetic biographies written by the Marathi chronicler, Mahipathi who flourished in the latter part of 18th century.

As is the case with all biographies of saints, the popular imagination attributes to these persons wonderful and miraculous powers, notably those of raising the dead to life, healing the sick and feeding the hungry. The stories which are told of the way in which they were helped by supernatural agency in their mission of love may or may not be] accepted in these days of vigilant criticism. As Mr. Lecky has remarked, it is the atmosphere of child-like credulity which predisposes men to require and accept these wonders and miracles as events of ordinary occurrence. The saints and prophets themselves did not claim miraculous powers. They were meek and suffering men who placed their trust in Providence, and their trust was justified beyond their expectations, often-times to their own surprise. The moral interest of these biographies centres, however, not in their miraculous feats, but in their struggles, and in the testimony their lives afforded in vindication of the eternal verities of the moral law and man's higher spiritual life. It is with this aspect of their life that we are more immediately concerned in the sequel, and we hope to show that in this respect the work they accomplished was priceless and blessed beyond all comparison.

The religion of these saints has been thus beautifully described by the late Ranade.

There is one point, however, in which the reforming saints and prophets in this country differed essentially from those who were working in the same cause elsewhere, the contemporary Protestant reformers in Europe

From the Vedic times downwards, the *Aryan* gods have been gods of love and of brightness, of sweetness, and of light. There were, of course, terrible gods also, such as Varun and Rudra who inspired awe and filled the mind with terror. But the national tendency was to dwell with affection on and contemplate chiefly the bright side of divine Providence, unlike the Shemitic idea which dwelt upon the terrific manifestation of a distant god whose glory could not be seen save through a cloud, a severe chastiser of human frailties, and a judge who punished more frequently than He rewarded, and even when He rewarded kept the worshipper always in awe and trembling. This conception lies at the root of all Shemitic religions, and it is to the credit of Christianity that it attempted and partly succeeded in bridging the gulf by securing the intervention of God incarnate in the flesh, as Jesus Christ, who suffered for mankind, and atoned for their sins. This intervention was never found necessary in the *Aryan* religions of Greece or Rome or of India. God with us has always been regarded more as a father and a mother, a brother and a friend, than a judge and a chastiser and a ruler. Not that He does not judge, or rule, but He judges, rules and chastises with the love of a father or mother, ever ready to receive the repentant prodigal son back into his arms. The orthodox Brahminical conception does not bring out this feature of a kindly Providence so prominently as it is found to be realised in the teachings and life's experiences of our saints and prophets. They are emphatic in their assertions that they were able to see their God, and hear His words, and walked and talked with Him, and held intercourse with Him. In their higher moments they, no doubt, describe Him as One Who did not speak, but their most normal condition of mind was one of satisfaction when they realised His presence as we realise the presence of sensible things. The *yogis* and the *vedantis* only talk in their waking dreams of being one with God, but Namdev and Tukaram, Ekanath and Dnyandev, were not content with this distant and difficult union, which did not last during all the moments of their conscious life, and compared their own happiness in such daily intercourse with God as being above all the attainments of *yoga* and *Vedant*. We may believe the miracles ascribed to these saints or disbelieve them, but we cannot disbelieve their emphatic statements on this point. All the love that in Christian lands circles round the life and death of Christ Jesus has been in India freely poured upon the intense realisation of the every-day presence of the Supreme God in the heart in a way more convincing than eyes or ears or the sense of touch can realise.

As a consequence of this conception of God's relations with man, the supreme efficacy of devotional love (*Bhakti*) over all other methods of attaining to His knowledge became the cardinal creed of these *Vaishnav* sects. There is not a life in all these sketches drawn by Mahipati in which *Bhakti* and Faith (*Bhâwa*) are not emphasized as being far superior in virtue to all other forms of worship, such as the performance of rites and ceremonies of external worship, pilgrimages and ablutions, self-mortifications and fasts, learning and contemplation. . . . . Namdev cried while removing the bark of a tree, because he thought he saw blood coming out from the stroke of his axe, and he struck himself with the axe to see how he felt, and realise what the tree might feel. Shaik Mahomed, being sent by his father to practise the butcher's trade, first cut his own finger with his knife to see how the animal would feel, and the pain he felt drove him to forswear his trade, and retire from the world in which such pain had to be inflicted for earning one's livelihood. Tukaram felt that there must be something wrong about him, when, on seeing him, the sparrows left the field he was sent to watch, though he did not intend to disturb them. This intense spirituality and absolute surrender of self may sound somewhat unreal to men not brought up in the atmosphere these saints breathed. But there can be no doubt about the fact, and there can also be no doubt that the national ideal of spiritual excellence has been shaped by by these models.

We may quote at the end the general estimate of their work given by Ranade.

The religious movement, commencing with Dnyandev who lived in the fifteenth century, can be traced to the end of the last century as a steady growth in spiritual virtues. It gave us a literature of considerable value in the vernacular language of the country. It modified the strictness of the old spirit of caste exclusiveness. It raised the *Sudra* classes to a position of spiritual power and social importance, almost equal to that of the Brahmans. It gave sanctity to the family relations, and raised the status of woman. It made the nation more humane, at the same time more prone to hold together by mutual toleration. It suggested and partly carried out a plan of reconciliation with the Mahomedans. It subordinated the importance of rites and ceremonies, and of pilgrimages and fasts, and of learning and contemplation, to the higher excellence of worship by means of love and faith. It checked the excesses of polytheism. It tended in all these ways to raise the nation generally to a higher level of capacity both of thought and action, and prepared it, in a way no other nation in India was prepared to take the lead in re-establishing a united native power in the place of foreign domination. These appear to us to be the principal features of the religion of Maharashtra, which Saint Ramadas had in view when he advised Shivaji's son to follow in his father's footsteps, and propagate this faith, at once tolerant and catholic, deeply spiritual and yet not iconoclastic.

Saints of India Series

This is a new series of short sketches dealing with the lives of the most eminent saints that have risen in India. These lives are all based on the original account and biographies to be found in the several Indian languages. Each book also contains a special account of the peculiar religious doctrines which each saint taught. A unique feature of these sketches consists in the numerous and choice quotations from the poems and utterances of these saints. Each volume has a fine frontispiece.

DNYANESHWAR	EKANATH	SRI RAMAKRISHNA
NAMDEV	RAMDAS	VIVEKANANDA
KABIR	TUKARAM	SWAMI RAM TIRATH
CHAITANYA	DAYANAND	NANAK
	NANDA	GURU GOVIND

II. SHRI DNYANESHWAR*

BY MR. D. V. ATHALYE, B.A.

"What the little firefly is beside the brightness of the sun, what a grain of sand is beside the vastness of Mount Meru, so is the life of householder when compared with that of a *sanyasin*." So said Swami Vivekananda on one occasion. So also thought Vithal Pant, the father of Saint Dnyaneshwar. A Brahman by birth and a *Kulkarni* by profession, all the love of a devoted wife could not reconcile him to a worldly life. Before marriage he had been on a long pilgrimage, visiting every shrine in Guzerat and Maharashtra. Ever since his childhood he was a devotee of Shri Vithal (or Vithoba) of Pandharpur in the District of Sholapur. It is possible that this seed of devotion was well-watered in his travels and though, for a time, he settled down to married life, yet it was not long before he repented. He longed to go to Benares and to become a *sanyasin*. But he was childless and besides, there was that difficulty—the permission of his wife. How was that permission to be got? Great as is our respect for the yellow robes, still the aspiring monk is allowed to pursue his ambition only if his wife allows him to leave her. What woman would cheerfully consent to bury her own happiness?

But the mind of Vithal Pant was unalterably fixed. He would be a *sanyasin* at all costs. Soon after his marriage he lost his parents and was, at the request of his father-in-law, living at the latter's house at *Alandi*.† One day, he left his wife and all her people and went to Benares. There, he sought and found the house of the Swami Ramananda, a celebrated *sanyasin*. "Have you taken your wife's permission?" asked Ramananda. "But I have no wife, no child," boldly replied Vithal Pant. Believing in his words, Ramananda gave him the yellow robes and allowed him to study under his care.

But this episode, instead of ending here, had a melancholy course to run. The unsuspecting Ramananda became very fond of Vithal-Pant, now Chaitanyashram, and soon made him his chief disciple. One day he asked Vithal-Pant (so we shall continue to call him, in spite of his temporary change of life and habit) to look after the *math* and its inmates and accompanied by a few disciples went southward on a long pilgrimage to Rameshwar. Being himself a Mahratta Brahman, he chose the western route, visiting on his way sacred towns and rivers. It was impossible for him to avoid *Alandi*, then one of the principal centres of orthodox learning. Vithal Pant must have foreseen his guru's prospective visit to *Alandi* and that is, perhaps, why he did not accompany him. But the gods were determined to act prejudicially to him. At *Alandi* Ramananda had, as usual, taken residence at the village temple, where, in the evening, he was saluted by a lady, the picture of grief and anxiety, looking older in appearance than she was in years. That woman was the disconsolate wife of Vithal Pant. Ramananda blessed her with the words "mayest thou have a son." The blessing was quite customary and had nothing curious about it. But thinking of her 'runaway' husband she could not repress a rather ironical smile at the benediction, though she did not utter a single word. Surprised at her conduct Ramananda asked her what she meant. In the conversation that followed, it transpired that her husband had, even against her permission and before she had any issue, renounced the world and had taken *sanyasa* at Benares. The mind of Ramananda became more uneasy when after full investigation he found out that the husband of the woman was no other than his favourite disciple Vithal Pant. Now, further journey was at an end. He determined to set things right. So, taking the wife Rukmini and her people with him back he went to Benares. Surprised at the early and unexpected visit of his master Vithal Pant asked what had happened. With voice choked with rage, the master said "I had been to *Alandi*, you see," and then asked almost ferociously "Have you any explanations

* Condensed considerably from a sketch prepared for the "Saints of India Series," published by G. A. Natesan & Co., Madras. Price As. Four.

to make?" Disconcerted more by the word "*Alandi*" than even by the question, the disciple fell to the ground, made a clean breast of everything and begged his guru's pardon. He would, he said, do anything to please his master. "Then," said Ramananda, "take your wife and go back to *Alandi* and live the life of a householder." No doubt, it was a critical moment and must sorely have tried the devotion of Vithal Pant for his master. He did not like what he was directed to do; but disobedience being out of the question, he quietly took the hand of his wife and sped back to his village about 1261 A.D. a householder again.

Cruelly disappointed in his spiritual dreams, Vithal Pant returned to *Alandi*—there to find another, perhaps keener disappointment awaiting him. He was boycotted. His friends avoided him; the rest persecuted him. He had no friends but hunger and destitution. He had no hope except from the Faith that in him lay. And yet this harassed, persecuted man had not one word of blame, of censure for his enemies! Gentle, meek, and uniformly forgiving, he blessed those that cursed him and went on, in spite of fatigue and privations, chanting the name of the Lord!

In 1273 A. D., however, the tedium of his life was broken. In that year his wife bore him a son, later named Nivrittinath, literally 'The Lord of Renunciation.' Two years later was born Dnyanadev, "The God of Knowledge," the subject of this short sketch. After him Vithal Pant had two children,—one son and the other a daughter. They were named Sopanadev and Mukta Bai 'The Liberated.' The joy, which the parents felt at the birth of these children, was not unalloyed. They had that hard battle to fight, the fight with poverty. And in that trying duel, the more spiritual the soldier, the fewer chances he has of success. Starvation was not new to them. The neglect of their friends and the cruel and almost vindictive persecution of their villagers, had made them pretty familiar with it. What was worse was the consciousness that the children would have to inherit ostracism with the possibility that the happiness of their life might be blasted. That was as iron to the soul of the fond parents.

But whatever happiness the ostracised family derived from one another's company was soon to end. An event occurred which shows to what extent the perverse obstinacy of blind orthodoxy can go. The ceremony of wearing the sacred thread is of extreme importance in the life of a Brahmin boy. In fact, real Brahminhood dates from that ceremony. Every one, therefore, can understand how anxious Vithal Pant and his wife must have been to get that ceremony, Upanayana of Nivrithinath and Dnyaneshwar, now ten and eight years old respectively, performed. They hoped that time and their own forbearance had appeased the anger of their villagers and that no further difficulty on the point would be raised. They, therefore, broached the subject before the leading luminaries of their neighbourhood, hard-hearted, though scarcely hard-headed Shastris, who constituted themselves as the sole repositories of religious wisdom. But they were in no mood to grant justice or even mercy. For a *sanyasin* returing to the second *Ashram*, they thought, there was but one punishment. The sin was monstrous and the sentence death. Believing (without reason) that their own death would make the path of their children smooth and their thread-ceremony possible, Vithalpant and his wife once more saluted those Brahmins, trusted their children to the care of God, walked straight to Allahabad and there in the holy confluence of the three rivers, ended by one plunge their life and what was more bitter still, their suffering.

So ends the sad chapter in the history of Vithal Pant's life. Now begins the brilliant career of his children. As serene and cheerful as ever they discussed what the next step should be. Nivrithinath perhaps heartily sick of the dogmatism of the leading Brahmins of *Alandi*, was for no submission. "What is that thread-ceremony to me?" he cried, "I am holiness incarnate!" But the hero of our present sketch, born as he was to lead the people instead of defying them, thought conciliation to be the best course.

Digitized by Arya Samaj Foundation Chennai and eGangotri

An appeal was made to the *Pandits* of *Paithan* who at first refused to admit this brotherhood into the fold of Brahmanism, but being amazed at the miracle which Dnyaneshwar wrought by making a buffalo recite verses from the *Rig Veda*, they, in terror and reverence, yielded and gave the necessary permit which enabled Nivrithinath and Dnyaneshwar to have their thread-ceremony performed. But the putting on of the sacred thread was not with them the beginning of study; rather was it the beginning of their life's work—religious revival. At the feet of their father they had drunk deep of spiritual learning. Nivrithinath when a stripling of seven had come across a great sage, Shri-Gaininath at Tryambakeshwar near Nasik, who, struck with the attainments of the lad, initiated him into the mysteries of *yoga*. Dnyaneshwar his junior by two years, became his disciple and throughout his short life referred to his elder brother as his spiritual master, at the touch of whose blessing-hand he had penetrated the 'unknown.' But he was not satisfied with his own spiritual freedom. He had love infinite for his ignorant brothers and sisters in Maharashtra, and ever since his childhood, his mind was busy thinking as to the best way he should help them. In those days, Maharashtra was ruled by the Yadav kings of Deogiri, better known by the subsequent name Daulatabad. The tide of Moslem conquest that had deluged the northern part of India, was soon (1294 A.D.) to reach Deccan and to shatter the already waning power of the Yadav kings. Twenty-one years (1273) before the invasion of Allauddin, Ramdeo Rao, the then king of Deogiri had headed a strong movement in the Deccan to rebuild the dilapidated temple of *Vithoba* at *Pandharpur*. What the encouragement of the king and the devotion of the people did, Dnyaneshwar saw and he resolved to avail himself of the awakening religious consciousness of the people. Already a band of enthusiastic admirers had gathered round him. To train them properly in the science of Realization, he wrote in 1290 at Nevasa (District Ahmednagar) the Bhavartha-Dipika—that celebrated commentary on the *Gita*, which is deservedly considered as the *Magnum opus* of his brilliant career and he has delivered the message of Lord Krishna in a work that will last as long as the Marathi language.

It is impossible to describe the supreme beauty of this book, except in language which, to those who have not read it, may appear hyperbolical. Never have the dry bones of the Vedanta been clothed in a richer manner.

When the work was finished, his master and brother Nivrithidev said to Dnyaneshwar "we have had a good treat. But now let us have something original"; at which Dnyaneshwar composed the Amritanubhav 'The taste of Nectar' at ten successive sittings. The book reveals the same grasp of the subject but being more difficult and less rhetorical is not as popular as the first.

Space forbids us from describing at great length the service of these saints and prophets to their language and literature; and yet it is impossible to pass over it in silence. It can safely be said that if there is any force, rhythm or power of expression in the Marathi language, that is entirely due to these saints and prophets who, when Marathi was neglected everywhere, took this famished orphan and nursed it with all the love at their command. The language really stood in need of protectors. It did not find favour with the Pandit who was too full of Sanskrit; and from the 14th century onward it ceased to be the official language. Discarded by Prince and Pandit, by Court and Camp, it sought shelter at the feet of these saints. It is their writings which gave Marathi a dignity which hitherto it lacked.

The appearance of these two books considerably enhanced the high reputation Dnyaneshwar had attained. And yet, not content with the success his mission had achieved he started ostensibly for a long prilgrimage no doubt, but really to carry the truths of the Vedanta to the remotest parts of his country. He was accompanied by his brothers and sister, by numerous friends and many disciples. The very fact that the party included such men as the goldsmith Narhari, the potter Gora and the gardener Samvta—names respected to this day by even orthodox Brahmans—shows the extent of the awakening,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

At Pandharpur, the party was joined by Namdev, the son of a tailor, than whom the God Vithal had no more fervent devotee. To him, Vithoba was not the stable, stone image that He is to the ordinary *Bhakta*. Namdev played and talked with Him, was free to love and in moments of petulance and anger, to chide the God, whose banner is even now carried by more than a million people in Maharashtra. It is unnecessary to follow the saintly group, visiting shrine after shrine, bathing in sacred rivers, blessing the weak, convincing the doubting, themselves alternately lost in mute ecstacy and eloquent song. The task of preaching *Bhakti* and knowledge to the vast concourse of people who greeted them wherever they wended their way, was generally entrusted to *Namdev*, whose power of waking up the latent fire of Bhakti in the hearts of his hearers was unrivalled. Sometimes it was Dnyaneshwar who addressed them or Gora the potter and *Visobakhechar*. It was a triumphal tour.

After his return from the pilgrimage, Dnyaneshwar and his brothers with their youngest sister, led an even course of life at *Alandi*. They never married; they never worked for their livelihood. They had only one occupation in life—Service of God. If they saved society, that was solely because they wanted to serve God through society. To elevate the depressed and to console the miserable were the basic elements of their religion.

"Whom the gods love die young" says the proverb and in this case the gods were but too anxious for the return of one of their own company. So on 25th October, 1296, two years after Allaudin's invasion of the Deccan, Dnyaneshwar closed his brilliant career by entering into eternal *Samadhi* amidst the subdued sobs of his own loving sister brothers, disciples and friends. He was barely twenty-two. Before the first anniversary of his death, his sister and brothers followed him, too unwilling to live in the void caused by their brother's death.

So ends the story of Dnyaneshwar's life. The history of his inner struggles,—if there were any—of his mental and spiritual development is hopelessly lost to us. What remains is a series of bare facts, happily well authenticated, and a succession of miracles whose account, proceeding though it does from contemporary writers, is, in these days of rationalism, often rejected. To my mind the greatest miracle which this boy-saint wrought was the immortal book which he composed when barely fifteen. There he stands, before the mind's eye of his reader, in the temple at *Nevasa*, the light of knowledge radiating from his countenance, holding the audience bound by the spell of his eloquent words. To me, however, the picture is far less appealing than the other, in which, the saint, as yet undiscovered, begged from door to door returning not railing for railing but love for hatred, compassion for cruelty and nobility for mean conduct. The children of the ostracised *Vithalpant* became the religious leaders of their time. The beardless begging boy is the spiritual light of six centuries. He conquered Maharashtra and made it prostrate before the throne of *Vithoba*. From his time *Pandharpur* became the Benares of the Marathas. At a time when religion was in the hands of Pandits and a sealed book to the people, he spread broadcast the truths of the *Vedas*. And what a love for his people! Himself a great yogin and a follower of the great Shankaracharya, for them he discarded, like Vivekanandà, the bliss of *Samadhi* and the stimulating silence of the cave and worked for and amongst them. Personally partial to jnana only, he preached *Bhakti* and sanctioned *karman*. He opened their heart and kindled their spirit; and though the political complications of the next two centuries put a temporary check on the religious revival, yet with the coming of *Ekanath*, it rose with a rebound, extended to the remotest corners of Maharashtra and made religion first a rallying sound and then the war-cry of the people. The religious revival made the subsequent movement against the Muslim conquerors possible; and though the credit of building *Swaraj* must be given to Shivaji and his followers, yet the contribution of the leading saints and prophets towards the development of the idea of nationality must never be overlooked. For the patriotism of those times was based not on economics but on religion.

III. SHRI EKANATH

BY MR. D. V. ATHALYE, B.A.

THE ancient city of Pratishthan, later known by the name Paithan enjoyed during the middle ages a wide reputation for its piety and scholarship. At the time we are writing about—the middle of the fifteenth century—there lived at Paithan a Brahman named Bhanudas. He was a great devotee of the God Vithoba of Pandharpur. It is said that the great King Krishna Rai (1430—1452) of Vijayanagar had come once to Pandharpur on pilgrimage. So pleased was he with the beauty of the image of Vithoba that he took it away to his capital to the mortification of all the devout *Bhaktas*. It was Bhanudas who boldly went after the King to Vijayanagar and there at dead of night entered the royal palace and embraced his favourite God! Vithoba presented him with His diamond necklace and promised that He would go to Pandharpur with his devotee. When, on the next day, the necklace was found in the possession of Bhanudas, the King at once sent him to the scaffold but the scaffold was miraculously turned into a beautiful tree, at which Krishna Rai begged pardon of Bhanudas and allowed him to take the image of Vithoba to Pandharpur. It was this Bhanudas who was the great-grandfather of Ekanath. Bhanudas had a son named Chakrapani whose son Surya Narayan was Ekanath's father. Ekanath was born about 1528. The exact date of his birth is not known. Soon after his birth he lost both his father and his mother and was brought up by Chakrapani. He was never a boy in habit and temperament. He spent days and months, not in childish plays and amusements but in going to the banks of the river Godavari, collecting curious-looking stones there and worshipping them as Siva. While the rest of his mates would play the horse with a stick, he, disdaining that game, would, with a staff on his shoulder, play at being a *Haridas* (lit. Servant of Hari), a religious preacher. He was never cross, and was always obedient and uniformly cheerful, so people were naturally drawn towards him and experienced a kind of pleasure in his company. He was a studious boy, quick at figures, and, seeing his sharp memory and understanding, his grandfather performed his *Upanayana* (ceremony of putting on the sacred thread) at the tender age of six. And then, all the craving for worship, for ceremonies, for devotion that was reflected in worshipping stones and playing at being a Haridas welled up into an earnest study of the Vedas, into close and attentive hearing of the lectures of religious preachers. The modest and charming way in which he asked difficult points in Vedanta won the hearts of learned men but often they had to admit their own incapacity to explain his doubts; then he would go to a temple of Siva and there remain absorbed in contemplation for hours. Nobody knew what plans he revolved in his mind in the solitude of that temple. Nobody—least of all his grandfather and grandmother—was prepared to find him give a slip one morning, and leave friends and relations in sorrow and surprise, never to be heard of for the next twelve years.

The voice which Ekanath heard in the temple advised him to go to Daulatabad and take his spiritual lessons at the feet of Janardanswami, chief officer on the fort. Had Ekanath consulted the opinions of well-informed persons he would not have taken a different course. Janardanswami was noted far and wide as being one of the greatest householder saints of his time. Born in 1504 of an humble but pious Brahmin family he started his career at a time when the Brahmans were in high favour with the Muslim rulers of the celebrated Bahamani Kingdom (1327–1526 A.D.). His talents were conspicuous, character reliable, and bravery admirable. He was at once an accountant, a soldier and a capable executive officer. But these qualities, bright as they were, were only the background of his wonderful spirituality. In the duplicity and intrigues of the court of Malik Ahmed, his unwavering probity was everywhere respected; and it is said that out of regard for his worship of *Shri Dattatreya* all the offices in the city and fort of Daulatabad were closed on Thursdays. Such was the man whom Ekanath was directed to join; and after days of travelling, he stood before the house of Janardanswami, footsore, and thoroughly exhausted. At the

sight of Ekanath, the Swami remembered how that same form had appeared to him in his meditation that morning. With heart alternating between hope and fear, Ekanath told who he was and what took him thither. The Swami replied in suitable terms and promised to do everything he could for a boy of such promise and earnestness.

To make his heart sublime, to purify his mind and develop spiritual faculties he followed the time-honoured course viz., personal attendance on, and service of, his Guru. Ekanath derived great benefit by living with Janardanswami. Occasionally, the Swami would send Ekanath to a neighbouring hill in order to practise solitary and austere *tapasya*. He would now and again put Ekanath to the test and see how far his disciple had advanced. Sometimes again, it was after the lamps were put out and the night far advanced that he would discourse with Ekanath on the subject of the realisation of God. Again and again would Ekanath ask him "Revered Sir, how shall I realise God?" and the answer to the question was to Ekanath's mind indefinitely postponed. On one occasion Ekanath sat up far into the night, for hours occupied in finding out a mistake of one pie in the official accounts which he kept for his Guru. Again and again he turned his eyes over the never-ending pages of the account-books and still no trace of the slip. "Shall I this once fail in my duty and incur the Swami's displeasure?" he thought. But there was no time for such thoughts. So with heart heavy and eyes wet he trimmed his lamp and plunged himself into the ocean of figures. At last the mistake was found and in ecstasy Ekanath clapped his hands and laughed loudly. When he turned back it was to find his Guru standing at his back, the picture of kindness and dignity. Ekanath in silence fell at his feet. "Now my son," the Swami said, "you know the way to realisation. Can you not turn the same concentration Godward and discover this whole mistake of Life?" "To be sure I will," said Ekanath and from that day redoubled his exertions and practised the severest forms of penance in a solitary corner of the fortress.

Several striking episodes of devotion revealed the sterling worth of Ekanath and they at last induced the Swami to rend the last film of ignorance from the mind of his disciple. So on a bright Thursday morning he asked Ekanath to accompany him to a favourite and solitary place of contemplation just a couple of miles away from his residence. Ekanath instinctively knew that *the* moment had come and so with heart beating with wild hope and joy he followed the Swami to the beautiful grove.

"Well, my boy, stand here for sometime. Know that this is the crowning day of your life; and don't you be afraid of whatever form you might see Lord Dattatreya coming in." No sooner had his back turned than Ekanath saw a Mahomedan friar, tall and dark, his form clothed in a fresh hide reeking of stench; he was followed by an ugly and terrible bitch with eyes streaming with blood like those of the fabled Furies. Ekanath gave a start but instantly remembering the caution of his Guru became his former self again. The Swami and his visitor began to converse on diverse subjects till at last the Swami called Ekanath and presenting him to the "*Malanga*"* ordered him to milch the bitch. Ekanath did as was directed and before the "*Malanga*" disappeared Ekanath had the singular good fortune of seeing him transformed into that familiar form of Dattatreya which he had pictured to his mind so often. And who should the bitch be, but that celebrated *Kama-dhenu*, the desire-fulfilling cow? Lord Dattatreya blessed Ekanath, prophesied his future greatness and foretold that he would write a commentary on the 11th Chapter of the *Bhagvat Puran*.

From this time onward Ekanath could, at will, see the saintly form of the Son of Atri. We have it on the authority of Ekanath himself that the Lord Dattatreya lent him aid and

* The word in the chronicles is "Malanga" which according to the dictionary means "a Mahomedan friar professing extreme poverty and leading an austere life partly in monasteries and partly itinerent." But more probably it means a 'Dhor' or a man belonging to that low caste which deals in the hide of cattle, etc.

encouragement while writing his works and that the Lord had with His own protecting hand shielded him from danger.

Now that Ekanath had attained the acme of his ambition, it was time for him to leave the residence of his Guru and go back either to his own city or repair to any region which his fancy chose. But he showed no desire of doing anything of the kind. With the same joyful, peaceful, unruffled devotion he served his Guru and lived with him. He would gladly have remained with the Swami till the end of life. But Janardanswami knew that Ekanath had a mission in life and, to further prepare him for it, he asked him to go on a round of pilgrimage, visiting sacred cities, rivers and shrines. At this Ekanath was all tears. Which shrine or river, said he, was more sacred than those revered feet which he had been worshipping? No, he would not leave his Guru under any circumstances. It was only when the Swami promised to accompany Ekanath for some time that the latter consented. They left Daulatabad and went to *Panchabati* near Nasik, far-famed in the Ramayan as having been sanctified by the residence of Rama. From *Panchabati*, they went to *Tryambakeshwar* (20 miles from Nasik), the place whence the river Godavari starts its course and one of the twelve places in the Deccan having a temple of Siva which is said to be the work of no mortal. To Ekanath and his Guru, it was rendered even holier by the fact that the great *Nivrithideva*, the elder brother of Dnyaneshwar had attained spiritual wisdom there. They lived there for sometime and then the Swami intimated his wish to return to Deogad. "Go thou, my son," said he, "and in spirit I shall accompany you wherever you are. On your way you will meet persons of all sorts, persons high and low, rich and poor, saintly and wicked. Remember you are not to display your spiritual power to anybody. My blessings with you always!"

Ekanath's pilgrimage in Upper India was a great eye-opener to him inasmuch as it brought to his mind vividly the destructive work wrought by the Moslem invaders wherever they went. It widened his intellectual vision, deepened his sympathies, strengthened his faith and ingrained in him the ambition of directing in proper channel the religious enthusiasm of his country. So when after many months he returned to *Paithan* it must have been with the fixed purpose of taking up the work for which he was born. To add to this the message which Janardhanswami, his old Guru, sent to him about this time expressly required him to become a householder. The itinerent tendency was still strong in him and when he went to Paithan it was not to his own house that he walked straight but put up in the temple of Siva, where the voice of God had, years before, enjoined him to go to Deogad. As was his wont, he went round the village in the evening a-begging. It was impossible for even his dearest friends of childhood to recognize him, so completely was he transformed in age, dress, features and everything. But his old grandfather who for the last twelve years had been fondly expecting Ekanath's return and who tried to discover the features of Ekanath in every stray traveller and *bairagi* instantly recognised him. He threw his arms round the neck of Ekanath and wept long and bitterly. It is hard to say how much of grief and how much of joy there was in his feelings. "Now, my son," he said, "you must never forsake me." "But, father, shall I not complete my pilgrimage and go to South-India shrines?" "No, you may not," persisted the old man. "The autumn of old age has well nigh made my leaf of life ready to drop down. Stay, stay with me, if only till I die. Besides, here is something for you." With these words he placed a carefully-kept note before Ekanath who instantly recognising the writing to be Janardhanswami's first held it over his head and then read it through. Ekanath made up his mind. He would, to obey his Guru, be a householder and side by side continue his religious and literary work. In pursuance of this plan he got himself married and settled in his old house at Paithan.

When Ekanath returned to Paithan, he was about twenty-five years of age. From that time till 1599, the year of his death, he lived mostly at Paithan, dividing his time between spiritual meditation and prayer on the one hand and religious lectures, discourses and composi-

tions on the other. In the life of saint Dnyaneshwar we have seen how wide-spread the literary instinct of the men and women of the religious revival in Maharashtra was. They not only sought spiritual knowledge and inspiration, but no sooner did they have it than at once they rushed into literary composition in order to impart it to others. When we see how powerful this impulse for communication was, we need not wonder that Ekanath wrote some books. On the contrary we are surprised to find that, excepting his commentary on what is called the *chattus-sloki Bhagvat* (four verses in the Bhagavat Puran summarizing the conclusions of the Vedanta and of the philosophy of life) he wrote nothing for more than twelve years since his return to Paithan. The simplicity and unassuming modesty of his nature might perhaps be responsible for this. Whatever that be, we might well suppose that he was not idle. He has told us how "Blessed is this *Kali* age, in spite of its wickedness because we can attain salvation simply by singing the glory of Hari. All castes, all creeds, assemble together and praise the Lord according to their knowledge and faith. Your sex or caste does not count. It matters not whether you are a Sudra or a woman. Have Bhakti, sing the glory of Hari and you can attain Heaven. Even the Vedas are miserly because they are open to the first three castes only. But this *Kirtan* is the privilege of the lowest and meanest person. It will deepen your faith and strengthen your spirit. Even the happiness of *Mukti* sinks into insignificance before the ecstacy of *kirtan*. It entails neither the hardships of yoga nor the rigourous tedium of sacrifices. It is the highest worship." This *kirtan*, public and private, was his only occupation; his voice was musical and his presence commanding, and whenever he gave religious lectures with the accompaniment of music, thousands of people eagerly gathered in his courtyard. The theme differed with the occasion. Now it was the glory of Shri Rama and Krishna, the most favourite Avatars of Hindu Mythology; sometimes it was the life of a great Bhakta that was placed before the audience. Whatever the theme, the burden of the song was the same viz., the insistence on the observance of the *Bhagvat* faith. It was the *Bhagvat Dharma* which, before him, Dnyaneshwar, Namdev and others had preached to the people and it was the *Bhagavat Dharma* which Ekanath also preached to his contemporaries.

The *Bhagvat Dharma* of old, as modified in the religious revival we are speaking about, was inseparably associated with the worship of Vithoba of Pandharpur. It is remarkable how without any prestige of antiquity, mythology or Puranic description, this God came to be so widely worshipped in Maharashtra as to induce Dynaneshwar and Ekanath to accept the traditional identity between Him and Lord Krishna. They knew that without the backing of some learned and philosophical literary works this worship of Vithoba was likely to be short lived and confined only to a very small class of people. They therefore availed themselves of the tide of the national sentiment which they tried to strengthen by allying it with the ancient philosophy as found in the *Gita* and the *Bhagvat Purana* and this was more necessary because the worshippers of Vithoba were ignorant and heedless of Sanskrit which contains all the treasures of Hindu philosophy. It was this literary backing of Dnyaneshwar and Ekanath coupled with other causes that we have no time to recount here that has still kept the "cult" living while other sterner, and in their days, stronger cults have languished.

Another feature of this school was the holding up of *Bhakti* over all other forms of *Sadhanas*.

So, leaving the "drill" of *Karma-kanda* to dotards and fanatics and the flights of metaphysics to philosophers, these men went straight to the tree of *Bhakti* and tasted of its nectar-like fruit to their hearts' content; and here also we might find the traces of that peculiar method which for want of a better name we shall call "Indian." It rejects nothing. Whatever forms, rituals, ceremonies they found in their times, these men (Dnyaneshwar, Ekanath and other leaders of the revival) kept in tact. They pulled down nothing. They have not one word of condem-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nation for even that part of our ritual which is meaningless. They, however, glorified *Bhakti* to such an extent that from its peaks everything else appeared small and contemptible.

These and other causes made the movement an essentially democratic one. The bigots will be bigots always. Ekanath has told us what they thought of him :—

"Look at this Ekanath, the disciple of *Janardanswami*. He cares neither for marks, signs, figures and secret symbols,' nor for our old ceremonies and practices. He chants the name of Hari and by some mysterious force is deceiving the people. Should he not at least give some *mantra* to those who seek wisdom from him—mantra given in secrecy and kept with mystery ?"

But this mystery about religion was exactly what Ekanath and others tried to remove.

It is not strange that a man who saw God in every form, human or animal, and who had been specially trained in this spiritual quality by his Guru should himself have occasionally set aside the restrictions of caste. It is said that on one day at high noon Ekanath was going to bathe in the waters of the Godavari when he saw a Mahar child stumbling and falling in the dust. Ekanath at once ran to the spot, picked up that child and himself took it to the house of its mother. On another occasion he nursed a Mahar prisoner recently let off from jail and on the verge of physical wreck. Another story tells us how one day when the food for *shraddha* was being cooked in his kitchen, some Mahars passing by the house smelt it and whispered among themselves "How happy would it be if we ever get such nice food to eat." Ekanath who overheard the remark at once called them and not minding the inevitable wrath of those Brahmins who were invited to perform the *shraddha*, served the Mahars with the dainty food. These and like other stories conclusively prove how deeply ingrained in his mind was that principle of equality which is the *sine qua non* of true spirituality. Says he :—

"The true *Bhakta* regards each object in universe as the image of God. It is true that the Vedas say 'Never see the face of a man who has strayed away from his proper *karman*.' But this commandment is only for the first few stages. We require a lamp only when it is dark. But when the sun of divine knowledge rises there is no necessity for seeking aid from this petty lamp of the *Vedas*. A man who regards the most enlightened Brahman as being filled with the same God who dwells in the body of the lowliest of the lowly, is a true *Bhakta*. The same element of lustre only in different proportions is found in the sun and the firefly. From the ant to the creator, everything, living or dead, is the image of God. Look at the tree which gives with the same impartiality its shade, fruit and flowers to the man who has watered it as well as to him who wishes to fell it down. Such should be a *Bhakta* in his dealings with others. Equality is the highest spiritual quality."

On his return to Paithan his time was divided between reading, contemplation and preaching; and those who were specially attracted towards Ekanath and who daily drank of spiritual wisdom at his feet requested him one day to write something which would be permanent. It was at their request that he took the text of the 11th chapter of the *Bhagvat Puran* for exposition and commentary. He completed the first five chapters and then went, (at the request of a disciple, it is said,) to Benares to convince some opponents of his of the worth of the book.

From the Pandits he had a tremendous opposition, yet by his patience and his superior wisdom he was soon able to disarm opposition and even those who came to scoff remained to praise. In the end the Pandits of Benares gave royal honour to his book by placing it on an elephant and carrying it in procession throughout that sacred city. At the earnest request of many of the pandits, Ekanath remained at Benares for more than two years, finished his commentary on the *Bhagvat Puran*, and started writing and finished a small but very beautiful poem called the "Swayamvar of Rukhmini." The latter is a composition running into about 1,700 verses but his commentary on the *Bhagvat* is a big work containing 20,000 verses.

Ekanath's life at Benares was an eye-opener to the Pandits in more ways than one. For the first time in their lives perhaps, they were awakened to the sense of the inferiority of mere book-learning when pitted against *Bhakti*; and when brought face to face with Ekanath they must have hung their heads at the consciousness of their own petty and jealous minds and admired that serene tranquillity which as Cowper says is the noblest fruit of a man's faith in God. What a contrast between their minds bubbling with ideas of self, of honour, of fame, of opponents vanquished and followers made, and the mind of Ekanath which no gross thought could tarnish and which like the bright rays of the sun might touch the earth but would never catch any filth therefrom!

Having established his prestige at Benares Ekanath returned to his own province and with his outlook widened again took in hand the task of religious revival which he was interrupted in, by his visit to Benares. Till now he had confined himself to his own circle at Paithan; now it was that Ekanath conceived the idea of bringing under his influence the worshippers of God Vithoba. He went to Pandharpur where his worth was at once recognised and thus brought him many followers. At Pandharpur and other places he had marked the respect that was shown to the memory of Dnyaneshwar. But unhappily very few people had the text of Dnyaneshwar's commentary with them. Ekanath got copied the original or at any rate a very old and considerably authentic text of Dnyaneshwari and distributed those copies to the remotest corners of Maharashtra.

The smoothness of Ekanath's domestic life was later on disturbed by the conduct and attitude of his son Hari who was in many respects quite the opposite of his father. With the impulsive waywardness of youth he would often find fault with his father for having destroyed the prestige and dignity of the Vedanta by compositions in Marathi. He also disliked the unconventional ways of his father, and, being a proud and unbending champion of orthodoxy, resented his father's behaviour on more occasions than one. At last the son was provoked beyond endurance and left his home in disgust. But Ekanath who had a mind to bring his son round followed him to Benares and after repeated importunities brought him back to Paithan. He had however to stipulate that the work of expounding the Vedanta would be entrusted to his son. But when the son found that his lectures, however learned, drew only scores of people while the audience of Ekanath were to be counted by the thousand, he was quickly disillusioned.

And now came the time when Ekanath had to leave his mortal body. His message was delivered and his life-work done; and though he was amusing himself with writing the story of Rama, he felt that the call from above had come. He told his friends and followers accordingly. "But, Sir," said they, "have you not your Ramayan to complete yet? We remember how you postponed by eleven days the time of the death of Krishnadas the poet? Will you mind performing the same feat again?" Ekanath replied that he had no such intention; he had undertaken the work at the order of Sree Rama Himself. Now if He the God willed that it should remain incomplete, surely he (Ekanath) had no business to bring it to an end. Again and again his friends pressed him. At last Ekanath said "why do you trouble me like that? If it is God's will that the work should be finished, then even this boy will do the work." The people were surprised to see Ekanath pointing to a boy of fifteen, not very remarkable for his intelligence. They did not know what to say. Ekanath noted their incredulous looks, called up the boy and bade him go on; and at once the boy delivered the text of one chapter without pause or hesitation. We have neither time, nor space nor the necessary imagination to describe the tenderness, the love and the sorrow in which on the 6th day of the dark half of Falguna, 1521 Shalivahan (1599 A.D.) the populace of Paithan followed Ekanath to the river Godavari. The sky rang with the loud and ecstatic *Bhajan*. After it was over, Ekanath took off his clothes and entered the stream. Some say he never returned; others hold that after an invigorating bath, he came out of the water and with his eyes shut and mind concentrated, entered with the wings of meditation into eternal Samadhi.

IV. NAMDEV

BY MR. K. V. RAMASWAMI, B.A., B.L.

NAMDEV'S BIRTH AND PARENTAGE

NAMDEV came of a family belonging to the tailor caste. His ancestors originally lived at Narasivamani, situated near Karhad, Satara district, now known as Bhaya-Narasingpur or Kolem-Narasingpur. His parents, Dama Set and Gona Bai, however, left Narasivamani and emigrated to Pandharpur where the saint-poet was born. Dama Set led a religious life at Pandharpur maintaining himself and his family by tailoring and a little trade in clothes. Legend tells us that Namdev was not "born" but "found" by Dama Set floating in a stream, by the grace of Vittal. Be the legend as it may, Dama Set and Gona Bai brought up the child with great affection and love.

Even as a child, Namdev seems to have been of a devout and spiritual turn of mind. An interesting and curious legend is told which runs thus. Dama Set used every day to visit the shrine of Vittoba and worship him with fruits or rice or the like materials of worship. Once Dama Set being absent at a neighbouring village on business, Gona Bai gave the materials of worship to Namdev and asked him to go and offer them to Vittal. Namdev went, and, placing the food before the image, prayed in true child-like faith, that Vittoba do eat the same. Finding the image silent, the child-worshipper burst into tears. At last we are told, the child's simple faith and devotion were so compelling that the Deity, in order to please him, actually ate the offering.

MARRIAGE AND FAMILY LIFE

As Namdev grew into youth, his parents got him married to a maiden of their caste named Rajai. He seems to have lived lovingly with her and two children were born to them a son and a daughter. Though married and father of a family, Namdev grew more and more unworldly and ascetic in disposition. Ever visiting the shrine or attending religious assemblies, or exercising himself in song and devout exercises, he rarely crossed the threshold of his house. His parents often sought after him and entreated him to give up his devotions and pursue the family trade. They were themselves, they said, growing old and could not work. But neither their entreaties nor even their helpless and aged condition could turn the thoughts of Namdev. Full of reverence and affection for his parents, kind to all beings even to a fault, he could not find it in his mind to engage in any secular task, but went and spent himself in devotion and spiritual exercises in the shrine of Vittoba. Namdev's disregard and neglect seem to have brought poverty and discord into his household, though perhaps they were never so acute as we read in the life of that other great mystic, Tukaram, the doleful sage of Dehu.

Once, we are told, the aged Gona Bai, stung by her son's neglect of the household and the consequent poverty, repaired to the shrine of Vittoba, and, there standing before His image, charged Him thus: "My son whose upbringing cost me so much trouble and anxiety is now a slave of Thee. He lives for ever in Thy Temple; he has neglected his trade; his parents, wife and child he has ruined. You have enticed him away from world and honour. My family is in ruin. Is this Thy vaunted Divine Mercy? Standing on Thy brick pedestal, O God of Illusion, Thou causest a tragedy to be enacted in every home!" Vittoba, the legend continues, secretly put on the guise of a merchant and went and deposited some money and treasure in the house of Namdev, before Gona Bai returned home from the temple. Namdev, as might be expected, on arriving home, took hold of the treasure and swifty distributed it among Brahmans and mendicants.

The chief occupation of Namdev during these days consisted in celebrating what are called *bhajans* and *sankirtans*, chantings of prayer and song. Putting on the *tulsi* garland, cymbal in hand, the tailor-youth would go and stand in the courtyard of the Vittoba shrine and long dance and sing. Or when the temple festivals came and pilgrims poured in, the devout youth forgetful of all, even food, would join in their chantings and songs and pass his time in high spiritual revel.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Ere long he began to compose songs, and young friends and mystics began to gather round him attracted by his devotion and his songs. His virtues too, his great tenderness, his affection for all, should have endeared him to many. But in that mediæval age, the songs and ecstatic doings of this untutored youth seemed to have struck the minds of the elders and the orthodox with a certain spiritual *naivete* and daring. A remarkable anecdote is told of how, once when Namdev was seated in the midst of an assembly of devotees, a saintly potter, by name Gora, tapping him on the head, said that he was *kaccha* (half-baked), hinting thereby that he should, in order to perfect his religion, sit at the feet of some guru and learn. Namdev sought after a *guru* and found one in Vishoba Khesar, an ascetic dwelling in the shrine at Mallikarjun.

NAMDEV AND VISHOBA KHESAR

A great change seems to have come over Namdev's life and religious attitude after his initiation and discipleship under Vishoba Khesar. In one of his songs, Namdev tells us that he obtained his knowledge of the True and Living God from the Khesar, and by his influence was led beyond idolatry and the worship of stocks and stones.

NAMDEV'S PILGRIMAGES

The next important episode in the life of Namdev is his pilgrimage to the various shrines and holy places of Northern India and Deccan. Namdev's pilgrimage extended as far as Hastinapur and Badrikashram in the north.

NAMDEV'S LATTER LIFE

His discipleship under Vishoba Khesar and his pilgrimage apart, there are no other important episodes recorded in the life of Namdev as written by Mahipathi.

In the poetic biography of Namdev written by Mahipathi, a number of most lovable mystics and saints appear who all seem to have lived in the time of Namdev and on terms of spiritual comradeship with him. How many of these saints, or which of them were really contemporary, we have no means of judging apart from the writings of Mahipathi himself. But their lives and character and the part they play in the life of Namdev are in themselves so interesting and full of beauty that we cannot pass over them in silence.

JANI

Jani, child-poet and mystic, was the offspring of some poor parents. Once the latter coming on pilgrimage to Pandharpur with their daughter, the young girl, barely seven years old, moved by some strange devotion and mystic love at the sight of Vittoba, chose to remain in His city. The parents urged her long to follow them back to their home but she refused and was left at Pandharpur. The little girl all alone lived in the city, a houseless devotee worshipping Vittoba. One day she fell under the notice of Namdev, and the saint, struck with the girl's precocious God-love and courage, took her to his home and giving her unto the hands of Gona Bai bade her look after the girl and nourish her. Gona Bai, with a true mother's heart, took the stranger-girl into her household, set her to some household work and cherished her lovingly. The little girl-devotee, we read, lived happily in Namdev's house, partaking in his *bhajans* and songs and assisting in the household work. Jani, true devotion's child, was also a poetess. Small beautiful songs of hers, telling of God and His Love, are still current and highly popular throughout the Deccan. They are sung by the Marathi woman as she draws water from the village-well or sits at the grinding-stone, and by the hillman tending the flock on the hills. Poet and devotee of Vittoba as she was, Jani never gave up her place in Namdev's household, and it was from out of her common life, a life of toil and service, that she sang forth her rapturous lyrics of love and devotion. Of Jani's latter life, of how it ended, we know no more than in the case of the lives of many another mystic and devotee. She lived perhaps for a long time under the kind protection and spiritual fellowship of Namdev, and, after a life of household toil and religious devotion, closed her days in the city of Vittoba.

RAKHA

Another character that figures in the life of Namdev is the pious and ascetic Rakha. In an age of gentle and pious souls, Rakha was the most pious and gentle. He was by birth a potter

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and lived in the city of Pandharpur with his wife named Banga and a daughter. Once he had made a number of new pots and kept them for baking. A cat laid its young in one of them. Rakha, unconscious of the same, took down all the pots and placed them in the fire to be baked. A little time hence the mother cat came, and, missing its young, loudly began to scream. Rakha was seized with great fear and remorse, and, with a perturbed heart, prayed and vowed to God that he would abjure the world and become an ascetic, if only the little cats be saved. So saying, Rakha kept praying to God till the fires went out, and, then taking out one pot after another, he found, to his devout astonishment, the little cats uninjured and in life, in one of the pots. Beside themselves with joy, the gentle Rakha and his wife prepared to fulfil their vow. They gave away to the poor all they had, and, with nothing but the clothes they wore on their person, they embarked on a life of asceticism. They took not to begging but daily went and gathered the wood and the twigs in the forest and, selling them for a price, maintained themselves. We are told that the ascetic Rakha, while daily gathering the fallen twigs and pieces of wood, would touch them not—such was the intense purity of his mind—where they lay in groups, fearing lest some other hand had gathered them for its use.

NAMDEV'S CHARACTER

In the many anecdotes and incidents of Namdev's life already narrated, we may gather some idea of the great sincerity and faith and the exquisite tenderness of heart and gentility of mind of the Maratha poet. Some more anecdotes are told in his biography which reveal the same beautiful characteristics. Once, on an *Ekadashi* day when the pilgrims were preparing their food in open places round Pandharpur, a dog came on the scene and began to carry away the food they had prepared for their dinner. The pilgrims took some sticks and pursued it, when the dog entered the house of Namdev, and, seeing some newly-prepared articles of food, put out its mouth. Namdev, friend to all beings, at once took the cakes, and, smearing them with ghee, gave them to the dog. No act of kindness could be greater. It is said that Vittoba himself had assumed this guise of a dog to test the heart of his devotees. Another anecdote is told which is, if at all, more touching and beautiful in its tenderness. Once, Namdev's mother being ill, she asked her son to go and bring her some herbs. Namdev took a blade and went out to bring them. As he, however, stood and cut the plants, the sight of the falling juice brought profound tears into his eyes. Suddenly turning the blade on to his own leg, he made a cut there to see how he himself felt it and taking out a piece of flesh applied it to the sundered plant to help it to revive. As the late Ranade said, "this intense spirituality may sound somewhat unreal to men not brought up in the atmosphere these saints breathed. But there can be no doubt about the fact and there can also be no doubt that the national ideal of spiritual excellence has been shaped by these models. It may be that a stronger backbone and more resisting power are needed in the times in which we live, but in an account of the saints and prophets as they flourished more than two hundred years ago, we cannot afford to interpolate our own wants and wishes."

NAMDEV'S CLOSING DAYS AND DEATH

His devotions apart, Namdev seems to have spent his time largely in preaching and in composing songs. More than three to four thousands of poems bearing his name have come down to us. Most of these poems, as is the case with the poems of the other great poets of this movement, should have been composed extempore in the course of the *bhajans* and *sankirtans*. That Namdev constantly figured in such *bhajans* and congregational meetings is certain. But Mahipathi has left us no detailed descriptions of his daily preachings and *bhajans*; of the eagerness and ecstasy and love that would have swelled Namdev's utterances or of the vast crowds at Pandhari and elsewhere that would have gathered to hear him. In the lives of Ekanath, Tukaram and Ramdas written by the same poet, we have vivid descriptions of some of the most memorable *bhajans* and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

meetings they held, of the very men and women who attended them and of the great wave of enthusiasm and religious ecstasy into which they swept whole assemblies of devotees and pilgrims. Perhaps removed by a very long period from the time when Mahipathi came to write the pious lives, the tradition that had gathered round the life and doings of Namdev had faded in parts, while the enthusiasm and the love that attended on the lives of the more recent saints were more fresh in the memory of the people and found their way into the biographies. Be it as it may, Namdev's life could not have been a whit less full of love and devotion and pure ecstasy and charity than that of the 16th and 17th century saints. Living to a pretty good age, some seventy years, Namdev breathed his last at the very door of his loved temple of Vittoba at Pandharpur. The first step leading to the door of the Vittoba temple at Pandharpur is named after him—a fitting memorial to a saint who helped to lead the souls of men on to the feet of God.

NAMDEV'S RELIGION AND POETRY

Namdev, like Tukaram, was more a poet and a mystic than a preacher or the spokesman of any creed. If we may believe the story of his initiation under Vishoba Khesar who was probably a non-idolater and a monist, Namdev should have learnt something of religious theory and philosophy under him. Such as it was, it would have gone to give strength and clearness to Namdev's faith and vision. Namdev's poems, however, little reveal any philosophic theory or speculation. They are, above all, poems of great Devotion and God-love.

The preciousness of the message of Namdev, as that of Tukaram, consists in the fact that it utters with simple sincerity a cry of the heart for God and points out to man the need of God's Grace. As Ranade says, "the charm of Namdev and Tukaram lies in their appeal to the heart and in the subjective truth of the experiences felt by them in common with all who are religious by nature." Again and again there breaks out in these two singers the authentic call of man's unquenchable desire, "O! that I knew where I might find Him." The abundance and intensity of these expressions of desire and love cannot be adequately realised except by a study of those poems themselves. There are in their poems also notes of praise and God-attainment and eager moods of beatitude and peace. The great governing ideas of these mystics are, however, derived from the current Vaishnavite faith.

Few poems in Marathi, except perhaps some of Tukaram, can match the following in their intense spiritual yearning and their cry for God's grace.

Why dost Thou leave me suffering ?
O haste and come, my God and King.
I die unless Thou succour bring.
O haste and come, my God and King.
To help me is a trifling thing.
Yet Thou must haste, my God and King.
O come : (How Nama's clamours ring).
O haste and come, my God and King.
Another is more beautiful :—

O God, my cry comes up to Thee,
How sad a cry is it!
What is this tragic destiny
That Fate for me has writ?

Wherefore, O Hrisikes, dost Thou
So lightly pass me by?
To whom, to whom but to Thee now
Can I lift up my cry ?

As chiming anklets sweetly ring,
So rings Thy name abroad ;
To human spirits hungering
Thou givest peace with God.

Thou on Thy shoulders carrying
All the world's load of care,
To Thee 'tis such a little thing
Thy trouble too to bear!

Ah, Pandurang, Thy hand withhold,
My mother dear Thou art.
My Nama, waxing very bold,
Casts him upon Thy heart.

TOPICS FROM PERIODICALS

CHRISTIAN FORGIVENESS *vs.* KARMA

Sister Rhoda contributes to the current number of *The East and the West*; the missionary journal issued by the S P. G. explains the doctrine of atonement in the Christian faith which has been so deplorably misrepresented and misunderstood and points certain so-called grave defects in the theory of *Karma*. The doctrine of atonement has been understood in two senses; (1) that man had incurred a debt to a relentless God who exacted the payment in full, but without much regard as to who paid it (this is a survival from Rabbinical theology); (2) that the payment was made to Satan to redeem mankind which is equivalent to saying that Christ recognised the right of Satan to hold mankind in bondage; this strongly savours of Mithraic dualism. But it is unfortunate that one or the other meaning has often been attributed to Christianity even by Christian teachers. The real meaning of atonement is twofold: on man's past repentance, on God's forgiveness. Repentance begins with a genuine sorrow for sin, not remorse for consequences, nor shame at exposure, but a genuine sorrow for sin itself. The forgiveness with which God meets repentance looks both backward and forward. God removes the guilt of the past and also grants a fresh infusion of divine strength with which to renew the victorious struggle for the future. The gnostic doctrine of salvation is obliged to fall back upon the other doctrine of reincarnation; in other words, there is no salvation provided for man; he must work it out for himself through an unlimited series of incarnations. It has thus no scheme of salvation to offer and the term 'Saviour' it has merely borrowed from Christianity. The same criticism applies to the world-teachers on Bodhisattvas of Theosophy.

The writer then points out certain grave *defects in the theory of karma*. The doctrine of *karma*, he says, is wholly alien from the idea of sacrifice.

It offers no help to struggling humanity. The law of *karma* is utterly pitiless and mechanical in its operation. There is no escaping the fruits of *karma*.

It reduces to a minimum the scope for free-will in man and regards him almost as a machine, obliged to follow out in the future the sequence of actions initiated in the past, utterly regardless of any change of will he may have experienced in the meantime.

It does nothing towards solving the problem of human inequality, but merely pushes it further back and so deludes the unwary with a semblance of a solution.

It makes human progress to consist in a process of emptying and destroying, not of fulfilling. All *karma*, whether good or bad, must be worked out, and as long as any remains of any kind there is no release from re-birth: the way of escape is therefore to abandon action, and as action is the fruit of desire, desire too must be abandoned.

DEMOCRACY IN VEDIC CIVILISATION

Dr. Biswa Nath Mukherjee, writing in the *Vedic Magazine* for February 1918 describes some aspects of Vedic polity which can be understood only in the real spirit of the Vedic Mantras. The Hindus enjoyed a fully equipped self-government in those days. It was a belief that God himself was the creator and organiser of men and so it was regarded that the king was only a temporary order-carrier of *that Universal Ruler*. The king was selected in the congregational assembly of all the subjects of a particular place, both literate and illiterate, rich and poor and high and low castes. The people's voice was the strongest thing in the country, and they could make or mar the fortunes of a king who had to pay every regard for the opinion, rights and voice of the common masses. There was also a council system of government, the chairman and the councillors being elected in the same way as the king, and taking solemn oaths and pledges of good government. The Vedic system of administration was not of a patriarchal nature. Kingship was not hereditary, the king was unanimously selected by the common masses.

"The administration of the Aryan kings Harish Chandra, Raghu and Daleep, Shantanu and Dashmi Gita were highly democratic. While being rulers of special merits, they were completely under the guidance of their own subjects. Strictly speaking, their councils were the chief instrument for ruling the country. Who will deny that if the people's voice was not a predominating factor in ancient India, a king of world-wide reputation as Raja Harish Chandra would not have been compelled to abdicate his throne and give it to the care of one of his ordinary subjects Maharshi Vishwamitra, who himself again had no wish to rule and had to give the charge over to the responsible members of the Imperial Councils?"

INDIA'S DUTY

The February number of *The Hindustan Review* contains an article by Mr. V. B. Metta in which he points out that to perceive real greatness and to value it according to its grade indicate true culture and that we, as a nation, have it as a duty to exalt those living Indians who are communing with the Infinite and creating the future soil of India above those who are working for the mentally and materially necessary. Two men, of the few people who are pointing out the new way to Truth and Beauty, are Sir Rabindranath Tagore and Sir Jagadish Chandra Bose.

"Sir Rabindra Nath Tagore has a peculiar significance for the Indians of to-day because he has succeeded in harmonising the emotions and imagination of the West with those which we have inherited from our ancestors without losing his national identity or stooping to mere imitations. He shows in his works how the East can absorb the Romanticism of the West without sacrificing its eternal Ideality and without degenerating into theatricality or superficial sentimentality. The old Indian literature dealt with the relation of Man to the Infinite. The new Indian literature brings in two new links in the chain which unites the individual to the cosmos, *viz.*, the Nation and Humanity. * * * So he goes further, boldly despising the Time-Spirit which is all for 'Nationalism,' and speaks to his compatriots and other human beings somewhat in the following manner :—'O man! create the circle of Race or Nationality, but do not be enslaved by it. Let thy spirit go out of it, and wander about for its benefit in the vaster circle of Humanity, which too, however, must not enslave it.' He thus unites the mysticism of the East with the humanism of the West, eschewing at the same time the unsocial asceticism of the former and the gross materialism of the latter.

Sir Jagadish Chandra Bose is the ideal scientist of the Future. Although trained under European masters, he has retained his soul while pursuing Science, which is a great achievement for any scientist in these days of cheap Agnosticism and cheaper Atheism. How was he able to achieve this?—it might be asked. The answer is, 'He was able to achieve this, because he has inherited and encouraged the spirit of those times when Science and Religion, Philosophy and Poetry, were not severely separated into water-tight compartments in India, as they are in Western countries to-day, but formed a Beautiful Whole, attracting like a lamp men-moths towards itself.'"

HINDU CONCEPTION OF PATRIOTISM

Prof. Radhakumud Mookerji, M.A., PH.D., P.R.S., in the course of an interesting article in the *Commonweal* on the patriotic note in Sanscrit literature says :—

"The first feature noted by the *Atharva Veda* poet is the primary one of the physical, territorial extent of the country, which is the basis of all life. The very expansion of the people, the growth of their numbers and the expansion of their colonisation depend upon that primary gift of a wide stretch of territory in point of which India is one of the most fortunate and best endowed countries of the world; and so this preliminary formative factor of her national life is expressed in the prayer:

'Let the country make for us wide room; let the country be spread out for us, be prosperous for us,

On whom our forefathers formerly spread themselves upon the brown, black, red, all-formed fixed soil of which the inhabitants stand, unharassed unsmitten and unwounded.'"

There is again the well-known passage in the *Rig Veda* which defines the boundary line of the Aryan civilization in that period and deifies the rivers of the Punjab which were the cradle at once of culture and commerce.

"O, ye Ganga, Yamuna, Saraswati, Satadru and Parusni, receive ye my prayers. O, ye Marutbridha joined by the Asikni, Vitasta and Arjikiya joined by the Susoma, hear ye my prayers."

Here patriotism itself is elevated and refined into religion. To think of the mother-country, to adore her as the visible giver of all good becomes a religious duty; the fatherland is allotted its rightful place in the nation's daily prayers, the fatherland of which the most important manifestation is constituted by the river systems. The *Atharva Veda* takes up this earlier note of the *Rig Veda* and devotes to the same theme quite a number of verses:

"On whom the circulating waters flow the same, day and night, without failure—let that land of many streams yield us milk; then let her sprinkle us with splendour.

Let cleansed waters flow for our body."

There were hills, forests, fields and seasons, and treasures and gold and birds, beasts, the wealth of mine and horses and then to the wealth of heroes and heroines:

"On whom the people of old formerly spread themselves; on whom the gods overcame the Asuras."

URDU LANGUAGE AND CULTURE

In the March number of *East and West*, Mr. Asaf Ali traces the development of Urdu from its origin and studies it from a non-linguistic and purely cultural point of view. On the one hand there is a tendency to import into Urdu as much of Persian as can conveniently be done without displacing the Urdu verbs and current idioms. There are those who desire to purge Urdu of Arabic and Persian influences to steep it in Sanskrit and finally to change its script from the prevalent Persian to Devanagari. The controversy is at present of a more or less political and religious nature. To-day Urdu stands for a specific culture; it is the resultant of the impact of several types of Asiatic civilisations and is the meeting ground of the Tartan, the Arab, the Persian and the Aryan. As early as the time of the Tughlaqs, Muhammadan authors and poets of note had commenced assimilating the language of the people, the earliest traces of which we find in Amir Khushru's imperishable works. His language was not Urdu, but it was the precursor and parent of Urdu. Wali is accepted to be the first poet of Urdu, its Chaucer. Wali's language had ceased to be Hindi, but enriched by Persian vocabulary, Persian diction and Persianised ideas, assumed the earliest form of known Urdu. Persian being the Court language, it was cultivated with great assiduity by all and Urdu, the spoken language of the people, could not resist the inflow of its influence. Voluntarily or not, the adoption of the Persian script certainly perpetuated the new-born language. "The Hindi civilisation, reduced as it had been, to a picturesque simplicity, a superb elegance and a tranquil poetry, all pensive and lyrical, reposeful and genuine, furnished the graceful background, on which the refined Persian, the graceful Arabic and the valiant Turkish influences blended together to form the beautiful culture which distinguishes all the Urdu-speaking people, from the rest of the world."

During the last one hundred years the language has arrived at sturdy manhood. Ghalil's Urdu poetry marks a very prominent cleavage between the current Urdu and the highly Persianised style to which he gave currency. Nasir of Agra almost overplussed Urdu with Hindi and wrote in the language of the people. The prose works in Urdu literature are chiefly romantic, religious and historical. Fiction and journalism have been strongly in evidence for over half a century and philosophical works, works of travel, biographies and travels are also copious. Dramas are not lacking, but good and unblemished dramatic works are conspicuous works. A very exceptionable style of writing has recently come into existence and although not in favour, is secretly admired. Delhi may or may not have been the actual birth place of Urdu but it certainly became its congenial nursery and all the first great authors and poets of Urdu were born there; the supreme masters of Urdu, Mir Hasan and Mir Taqi are both of Delhi. Urdu, as a symbol of specific culture, represents the *ne plus ultra* of oriental refinement.

OUR AIMS—AN ANGLO-INDIAN VIEW

Sir Francis Younghusband, writing in the February issue of the *Nineteenth Century and After* welcomes the announcement by Government that ultimate self-government to be gained by successive stages is the goal of British policy in India. He says that the Indian *nation* will always include the British among the multitudinous communities of which it is composed. As the goal is approached, the power and number of the Anglo-Indians must decrease, but it is for the unofficial and ex-official Anglo-Indian to see from this time forward that his influence increases. The British, in the course of their 300 years' connection with India, have, as it were, grown into the fabric of the country, identified themselves with its fortunes and become a part of the Indian people, as any other race which has immigrated from outside. Individuals come and go from England, but the British community remains; it is the *cohesive element which keeps the fabric together and is the stimulus which initiates progress.*

He maintains further that the British element must increase in numbers and influence in the future. More of them will come to India after the war, as merchants, planters, engineers, etc., and so the British community will increase in numbers. Improved communications will also contribute to this result. The British community *will demand its own proper share in the Government of the country and will not allow itself to be pushed aside on one side and ignored.*

India needs more of men of the type of Julian Grenfell who adored India, loved the life there, the sport and the beauty of the Taj and the vale of Kashmir. For men of such vitality who combine practical capacity with culture and varied interest, India offers the widest opportunities. *The British public must sternly discourage campaigns of opprobrium upon their representatives in India* and must give all possible support to the British in India, if this aim is to be a success.

NATIONAL EDUCATION

Principal Paranjpye, writing in the pages of the *Servant of India* subjects the National Education scheme to a severe examination. He condemns the spirit of antagonism to the present system of University Education.

"The present system of education is said to have been invented for the single purpose of providing clerks for Government. Any good results that may have arisen out of it are said to have come in spite of the system. We are afraid that this is going too far. For a rational estimate we must take into account the good results as well as the evil, and every reasonable man will be constrained to say that the former vastly preponderate. Even this present feeling of nationality is the direct result of our present system of education. Did the Madrasi, the Bengali, the Maratha and the Sindhi even do lip-service to the idea that they are all children of the same soil and their interests are mainly identical, sixty years ago? Had it not been for our English education, Mrs. Besant would not have obtained her position in India as the President of the Congress and Mr. Tilak might have been either a soldier of fortune or the founder of a religious sect. The present system has its defects, no doubt, and attempts should be made to improve it; but it would not be desirable to do away with it root and branch, even if it were possible."

National Education in England, says Principal Paranjype, has always meant the education of every child in the country and has generally been regarded as the duty of the Government.

"The late Mr. Gokhale's advocacy of free and compulsory primary education was in this sense directed to secure National Education in India, and so also his followers who try to make Government alive to its responsibilities in this matter may be said to be workers in the cause of National Education. Such a system of universal education cannot be achieved by any private agency, however energetic, though we have a vast respect for the energy of Mrs. Besant and her co-workers. It has got to be done through the agency of Government and Government alone. Private agencies can at the best be only supplementary to Government, stepping in to make new experiments, to fill in occasional gaps and to make Government realise its duties."

The writer contends that the idea of substituting Indian for European agency which is one of the principal items in the cult of National education is no new invention.

"Many Indian witnesses at the last Public Services Commission—and at the one before the last—advocated this view; and the evidence given by the writer of this article asking for a thorough Indianisation of the educational services created some stir four years ago. As Mr. Arundale admits in his manifesto, the Deccan Education Society, the D.A.V. College, the C. H. College and several other bodies have been making private efforts to show that such a thorough Indianisation will not lead to a disaster."

The writer then turns to a discussion of the question of the medium of instruction. Curiously enough he says on this subject extremes meet. The enemies of Indian progress are at one with the advocates of National Education. Still Principal Paranjpye urges that vernaculars should be the medium of instruction in high schools but he holds:

"The question of the medium in Colleges is not so very urgent, as by the time a boy goes there he should have acquired such command over English that the medium would be a minor matter there. It should not be forgotten that English is necessary for India's progress and that no vernacular can take its place in the Indian political, social and intellectual world."

About religious education, the writer has very pronounced views. He believes the attempt has failed in the C. H. College, Benares, and says that it will only create more complications without any corresponding benefits:—

"Whatever the merits of religious education may be, it has nothing in common with anything national. Religion in the accepted popular sense of the term has been mainly an anti-national force in India. There is nothing so efficacious in rousing the most potent anti-national feelings as the introduction of the religious element. Mrs. Besant herself had a good deal to do with Hindu-Moslem claims in our public life. The Jain, the Lingayat, the Christian, the Jew and others are also putting in their separatist claims. The lines of cleavage in India are religious and sectarian. The problem before some Indian leaders is how to efface these lines of cleavage. Nothing would please our enemies better than to see this propaganda attain the utmost success. Is it wise to play into their hands?"

In his second article Principal Paranjpye offers some constructive suggestions. He asks at the very outset:—

"Leaving aside for the moment the well-known dictum that every country has the Government it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

deserves and that therefore a Government, however foreign in its personnel, best represents the nation for the moment, we shall ask our friends whether they are not at present also engaged in a political campaign to make the Government of the country also national, whether, in spite of temporary set-backs and particular incidents in the struggle, the main line of progress is not absolutely assured and whether, in the course of twenty years or so which would be required to allow even the most successful educational campaign to make its results felt, our Government is not bound to be almost completely responsible."

Government should not abdicate the right of educating the people and it is sheer waste of time and money and energy to work a private agency, however wholesome such agencies may be as supplementing the work of the Government.

"But there must be a general policy underlying the educational system, leaving private agencies to make new experiments and supplement the gaps that must necessarily remain in the case of such a vast machine as Government. To say that we are going to have a private educational system would be as ridiculous as to say that because there are occasionally hard cases of mismanagement in the administration of the irrigation works in the country we should straightway do away with a Government system of irrigation and start a complete private system of irrigation works in the country. If we have faults to find with the Government system we should agitate to get these removed."

After detailing the risks of private agencies in education the writer urges that we should work to complete and better the existing system of university education to suit our requirements.

"This we regard as the proper statesmanlike way of setting about the solution of the university problem in India. If we merely sulk and have nothing to do with the existing organisations, instead of improving them we shall only harm ourselves."

Then there is the difficulty of finding students who expect no Government careers.

"The only real directions in which the leaders of the National Education movement can move with profit are technological institutes, perhaps commerce colleges and schools, possibly a medical school or college and, we must add, theological seminaries. If they start Arts Colleges, not many students will join them unless they are guaranteed some careers after they complete their course. Even private firms, with their managers bred up under the old system, will probably prefer a man with a certificate of known value than make experiments with another with problematical attainments."

The writer concludes with a warning:—

"Our firm belief is that education of every kind is in the main the duty of Government as the keeping up of the police and military forces is. It cannot abandon it. No private body can adequately undertake it, though occasionally it can organise bands of volunteers for a sudden emergency or filling up gaps.

"Are we prepared to collect funds by means of our volunteers if Government to-morrow tells us that it is going to close all schools, colleges and other institutions and to discontinue all expense on education if you don't like the present system and, to be fair, to remit the corresponding share of taxation? Those who wish to pose as leaders in educational matters should cease to talk in an irresponsible manner and be sane and practical in any campaign that they undertake."

INDIA AND THE DOMINIONS

The December number of the *Round Table* contains the following interesting sentences on the subject of the future relations between India and the dominions:—

It is beginning to dawn upon many of us that to this vexed question of our 'right' to share in Imperial questions there is a previous question. Are we in these dominions yet fitted for Imperial rule? Are we prepared, are we in any true sense ready, to take up our share of the "White Man's Burden"? Can the dominions, for example, fairly claim at present to take any part in ruling the great dependencies? That question almost answers itself. Our only outward and visible effort in this direction so far has been in the passing of stringent anti-Asiatic legislation! Of the effect of that legislation on India we have had a recent and timely reminder from a casual visitor to these dominions. Sir Henry Richards, Chief Justice of the United Provinces of Agra and Oudh, gave a brief address to the New Zealand Club at Wellington on June 12, 1917. In the course of his remarks Sir Henry Richards made it very clear to his hearers (amongst whom were two Ministers of Crown) that educated Indians had most decided objections to any Imperial constitution in which the colonies were to be given any voice in Indian matters.

SOCIAL SCIENCE FOR SCHOOLS

In a recent number of *The School World*, Mr. E. B. Cumberland writes about the value of social science lessons to boys in schools. The position of social science as a course of university study has been gradually improving, and already many enthusiastic workers have extended and made solid the foundations of the science and built upon them a substantial superstructure. In the universities of America, a professorial chair for the teaching of sociology is taken for granted, and outside the universities social activities of public importance have been studied very largely with the view of gaining more exact knowledge concerning them.

Instruction on the lines of the Psychologists' Memorandum can be given to boys of about 15 years of age, with a certainty of its being listened to with evident interest, since it tells them facts that they can understand.

"The distinction between the character, or equipment, of the individual's mind built up for him in the remote past by Nature, and the additional equipment, with its modification of Nature's contribution, which he must acquire for, and through the medium of, the associated life of men, shows a boy that for a full participation in the duties and privileges of social life he must further educate himself until he has accomplished his individual transformation from what he was at birth into a rational and responsible human being. He sees that the serviceable foundations of his daily behaviour are laid for him not merely by kindly and beneficent efforts coming from outside, but also by himself through the exercise of his power of will. He learns, too, that man's task, since he entered upon a life in association with his fellows, has been to strengthen and extend that association until it includes all members of the human family inspired with mutual goodwill; while the initial equipment Nature has provided him with for the task is, unless a vague gregarious instinct or consciousness of kind is included, limited to the parental instinct, which makes for binding ties only between kith and kin. Whatever further equipment he needs must issue from the social life he builds up".

A boy who realises all this reads with admiration of, and pride and hope in, the race he belongs to, the story he finds in history of how man the world over has striven with many stumbles to lead his fellows to live together in larger communities, with a corresponding increase of co-operative strength, until one, in which the British boy is specially interested, has been formed which amounts to an aggregation of five hundred million human units.

History, and Geography even more than History, has been bringing social science more in touch with schools. Those teachers who are shy of social science, but who welcome civics, can put into the latter as much of the former as they approve.

THE WASTE OF MENTAL POWER

The Rt. Hon. Sir George Reid, formerly High Commissioner for Australia, writing in the February issue of the *Mysore Economic Journal* impresses the great fact that it is the duty of mankind to prevent mental waste. There is a great waste of mental power going on for which injudicious methods of selecting teachers, and preparing teachers and teaching children are largely responsible. A more prominent place for Psychology in the examinations for primary school teachers and in the systems of primary education should be given first; since the study of the mental nature in one shape or another lies at the root of the education of every child, especially every child mentally efficient. The child's mind must be made as eager to learn as to play games, and must be made full of an insatiable spirit of inquiry and love of knowledge. The older people must not look upon work as a curse and must devote some part of their leisure time to the higher objects of mental culture. It is really in these that the purer, stronger pleasures are to be found and with them new life and strength for the drudgery of every-day life. If the mind be viewed as a mere machine for earning wages, there is still a tremendous waste of mental power. Another source of mental waste is the altogether absurd views which prevail cencerning work, both in the classes above and the classes below. More education of the right sort and more culture will, perhaps, gradually lessen the tendency to look on industrial work in itself as a badge of social inferiority. Lack of concentration is one of the chief sources of mental waste. If one does not bring one's mental power in downright earnest upon everything that one does, one misses the most valuable of all mental habits. Another source of untold waste is lack of ambition; and still another is lack of courage. And the battles which may lead to the grandest victories are the wars against our lower selves.

MISSIONARY PROGRESS IN INDIA

The January number of the *International Review of Missions* contains a fairly exhaustive summary of all the important features in missions and their life in India during the past year. The South India Educational Council of Missions presented a report dealing with vocational training in both urban and rural areas. The Young Men's Christian Association and a number of missions are giving much attention to the development of co-operative banks. The Indian Christian community joined in the protest against the system of indentured labour and some of the leading missionaries in India took part in public meetings on that subject. The rapidly-growing national consciousness is manifesting itself in the Indian Church and creating problems for which a solution must be found. In the Church Missionary Society, in the S. P. G. Telugu Mission, in the Anglican Church and among the Baptists, developments in self-government are in rapid progress The third All-India Conference of Indian Christians was held in December 1916 and dealt, among other questions, with technical and industrial training, and marriage and divorce laws as they affect Indian Christians. Evangelistic work has been actively carried forward and is not only adding to membership of the Indian Church but developing powers of service and leadership. Among the outstanding features of the work may be mentioned, the careful and widespread preparation of workers, the emphasis laid on the service of each individual in working and praying for other individuals, the adoption of Indian methods of work and the active participation of Indian women.

The mass movements towards Christianity continue and constitute at once the highest encouragement and the most pressing problem of the Indian situation. Attention is being directed to find the best methods of education and Bible teaching in village areas and there is a growing sense of the value of co-operative movements along economic and social lines. Comity among missions was finally approved at the meeting of the National Missionary Council in October 1916 and the missionary survey of India is making progress and will complete the survey of the Madras Province by the end of the present year. There is in active preparation, a clean and full statement of the problems of missionary literature in India, showing the literature that is needed, what classes of tracts, books, newspapers and periodicals are required and what is the urgency.

THE OUTLOOK IN INDIA

A writer in the *New Statesman* remarks in a recent issue that it may be confidently affirmed that the time has gone by in India for the older Anglo-Indian intransigence, and that it is perfectly well understood that the Viceroy and the Home Government are prepared to move a long way in the direction of provincial autonomy. The position as regards the Indian National Congress, has in the past few months, developed in a way that has greatly disturbed the European community and has caused some perturbation among the moderate Indian leaders. The conversion of the official world to the idea of responsible government is so emphatically a Congress victory, that the occasion would seem to demand above all else a united constitutional party and the most trustworthy leadership.

The following remark is very suggestive:

"There may, indeed, be some positive advantage in having an extreme section of the opposition at work as a counterfoil to the Maximalist section of the Nationalists; and, as a matter of fact, the European Associations of Calcutta and Madras, by their recent agitation, ostensibly provoked by the release of Mrs. Besant, have stimulated the large and influential middle party to attempt the admirable task of seeking a possible basis of agreement between Indians and Anglo-Indians. The Indian reform party stands by the self-government proposals worked out by the executives of the National Congress and the Moslem League, which provide for a large immediate extension of the elective element in the legislative councils, local autonomy and provincial executives responsible to the councils. The European community urge that representative institutions without an instructed electorate must be disastrous, and they insist that the only kind of reform at present desirable or attainable is the improvement of local self-government within the existing constitutional system. Clearly, if these two positions are maintained, racial conflict is inevitable. Common ground must somehow be discovered, and it is such common ground that is indicated by the proposals of the Joint Conference of Indian and European moderates".

WHAT INDIA WANTS: AUTONOMY WITHIN THE EMPIRE.—An appeal to the British Democracy. By G. A. Natesan, Editor of the *Indian Review*. Foolscap 8vo. 160 pages. As 8. To Subscribers of *I.R.*, As. 6.

ART AND HUMAN EXPRESSION

Mr. Edgar. H. Wilkins, writing in the April number of *The Theosophist* describes and classifies the various arts, the different modes of artistic expression, their relation to each other and to the essential nature of Art as having two factors in it viz, the emotion-ideas expressed and the purely sensuous beauty of the expression. Emotion-idea is the essence of Art and sensuous beauty is the essence of its expression. Art is a mode of expression representing emotion in human life and has the direct object of giving pleasure.

In Music, the beauty of sound and rhythm is the predominant element, the enjoyment derived through the sense of hearing, being quite distinct from and usually without any intelligent understanding of the ideas which music represents. In prose literature, the novel for instance, we have an art in which the idea, the meaning is the all-important element, and beauty of expression is necessarily subordinate to it. In painting, we have the two elements about equally prominent, the beauty of form and colour and the beauty of the idea expressed by them. In artistic expression, we use the different human faculties singly and in various combination and it is according to the faculty or combination of faculties used in each case, that we name it poetry, drama, music, painting, etc. Art is one, as is human life; but the arts are many, according as human life expresses itself through different and distinct organs of expression.

"The value of prose literature is the emotion value of the particular phase of human life presented, here the beauty of form is entirely dependent upon the beauty of the idea of which it is the expression. The essential truth of literature and its value as an art lies in its trueness to life, in the accuracy with which its emotion pictures, represent phases of the emotion consciousness of the nation or race by which the literature was produced."

Oratory is less an art and more a science or craft, as it deals with present problems and actual facts of life and has not as its primary object, the giving of pleasure by the arousing of emotion. Here we see the mingling of the elements of art and craft. Drama is the highest art of all, in that it comes nearest to actual life, and uses all the powers and forms of human expression.

Music, as an art has greater freedom and expressive power in two respects, viz., the subsidiary and unessential part taken by the fixed mechanical record, and the place taken by each musician in combining his own individuality with that of the composer in giving expression to the composer's work. Drawing and etching are the same art as painting but without the colour element. Sculpture models the form in three dimensions, instead of in two and has the greater expressive power, in being subject to an infinite variation of view-point. Landscape painting has certainly reference to emotion. In pottery, vases, ornaments, etc., the emotional element is not as prominent as in the case of music, and is eclipsed by the beauty of form. Architecture is a craft beautified by art and is the embodiment of human emotion in building. It brings in emotion and expresses it in the style, proportion and ornaments of the building. Dancing and Callisthenic is another method of expressing emotion.

The writer concludes thus:

"I do not claim to have given an exhaustive account of the arts, but have endeavoured to show how they are related to Art in its essence, and the reason of their differentiation; that each art is not something *sui generis*, incapable of analysis and classification, but is, as it were, a ray of the sun, an expression of Art itself. So also I have suggested that Art is not something *sui generis*, but is an expression of one aspect of the Triplicity of conscious Life; and that it does not exist only in a separate compartment of its own, but enters, in some degree, into every detail of life, inseparable from the two other aspects, Science and Craft, of this Triplicity. ". . . In all things the Unity in Trinity and the Trinity in Unity are to be worshipped."

NATIONAL EDUCATION

In opening the National Education week festivities at the Gokhale Hall, Madras, on April 8, Mrs. Besant read the following messages :—

I. SIR RABINDRANATH TAGORE

The lamp is trimmed,
Comrades, bring your own fire to light it.
For the call comes again to you to join the star pilgrims
crossing the dark to the shrine of sunrise.
The day was when you went forth in your glad adventure of light
and the star of hope thrilled in the sky and kissed your banner.
But as the dark deepened you fell behind in the march
and slept with your lights gone out,
while your dreams grew discordant
like the ominous cries of night birds.
Yet though it is dark, and the wind in the forest
is like the wails of lost souls
has not the breath of that prayer already touched your foreheads
which comes from the past echoing from age to age :
"Lead me to Light from the dark, from death to Everlasting Life"?
Sleepers, arise from your stupor of dim desolation
and know once more that you are the children of Light.

II. MR. M. K. GANDHI

If people can be made to understand what is truly National Education and to cultivate a taste for it, the Government schools will be empty; and there will be no return thereto until the character of education in Government institutions is so radically altered as to accord with National ideals.

III. SIR RASH BEHARI GHOSE, M.A., D.L., C.I.E.

I feel satisfied that the Government system of education does not and cannot fulfil all our needs and it is necessary to supplement it by providing technical, scientific, commercial and agricultural education which our Society is seeking to do. More than that: if general education in its several stages, primary, secondary and collegiate, is to achieve all that is expected of it, it ought to be carried on on National lines and under National control. This is what the National Council of Education has been seeking to do, and this is also aimed at by the Society for the Promotion of National Education.

IV. MR. BAL GANGADHAR TILAK

Good citizenship is the civic goal of the members of a Nation generally; and in this respect the older generation is naturally the best guardian of the interests of the younger one. In the language of Wordsworth, "the child is father of the man." If we therefore want our younger generation to attain to the status of full citizenship, we must educate them according to that ideal. In other words: "A Nation that has not taken its education in its own hands cannot soon rise in literary, social or political importance," and it was this ideal that prompted myself and my colleagues in 1880 to start an independent private English school and, soon afterwards, an Arts College in Poona. Another attempt was also made in the Maharashtra later on in 1907.

V. MRS. ANNIE BESANT

What must our National Education be? It must be controlled by Indians, shaped by Indians, carried on by Indians. It must hold up Indian ideals of devotion, wisdom and morality, and must be permeated by the Indian religious spirit rather than fed on the letter of the creeds. That spirit is spacious, tolerant, all-embracing and recognises that man goes to God along many roads and that all the Prophets come from Him.

National Education must live in an atmosphere of proud and glowing patriotism, and this atmosphere must be kept sweet, fresh and bracing by the study of Indian literature, Indian history, Indian triumphs in science, in art, in politics, in war, in colonisation, in manufactures, in trade, in commerce. The Arthashastra must be studied as well as the Dharmashastra, science and politics as well as religion.

National Education must not be separated from the Homes of the Nation. The ideals, the interests, the principles, the emotions of the one must be those of the other. For the Nation is built out of families, and the present opposition between the Home and the School must cease. The teachers in school and college must work in harmony with the teachers in the Home.

National Education must meet the National temperament at every point and develop the National character. India is not to become a lesser—nor even a greater—England, but to evolve into a mightier India. British ideals are good for Britain, but it is India's ideals that are good for India.—*New India.*

UTTERANCES OF THE DAY.

THE LATE MR. GOKHALE

I. SIR WILLIAM MEYER

Sir William Meyer, in inviting His Excellency the Viceroy to unveil a marble bust of Mr. Gokhale in the Imperial Legislative Council at Delhi on March 22, said : " My Lord, this bust of our late comrade, Mr. Gopal Krishna Gokhale, has been subscribed for by the European members of your Legislative Council. Our Indian colleagues had presented to the Council the busts of two eminent European officials, the late Sir John Jenkins and Sir Guy Fleetwood Wilson, and we Europeans thought that it would be a very fitting return that we should similarly present the bust of a man whom I can describe without exaggeration as the most able and distinguished Indian who has sat in the Viceroy's Legislative Council. I hope the bust will meet with the satisfaction of those who knew our late friend, and I may say that it has been carried out by an Indian sculptor, Mr. G. K. Mhatre. I will not delay Your Excellency much longer, but I should like to say a few words as regards Mr. Gokhale. He was a born leader of men, and while holding fast to the principles he had marked out for himself, he had the true statesman's instinct in grasping what was immediately practicable. He could be, when occasion required, a very shrewd and keen critic, but he only criticised when he thought criticism called for, and when he had fully studied the case on which he spoke. Nor did he confine himself to mere negative criticism, for his was a mind which was fertile in constructive propositions, and his great mental qualities were buttressed by very fine characteristics—single-mindednees of purpose and transparent sincerity, the complete devotion of his life to the public weal, the magnetism that wins and keeps friends, and the habit, so easy to preach but so difficult to practise, of making full allowance for the different standpoints of those from whom he might differ. It is indeed tragic that a man so endowed should have been snatched from India at this time of travail and transition, when she so sorely needed his clear and wise guidance. We can now only cherish his memory and his example, and I hope, that this bust may help to recall him not merely to those who knew him in the flesh but to the Indian politicians of the future. I now ask you, my Lord, on behalf of those who have subscribed for the bust, to put the seal on our purpose by unveiling it."

II. H. E. THE VICEROY

H. E. the Viceroy, in unveiling the bust, said : " In discharging the task which falls to my lot to-day I labour under the grave disadvantage of never having met Mr. Gokhale, and an appreciation of any man without that insight which can only be given by personal acquaintance or friendship must, to say the least, be very imperfect. I would not, however, on this account have foregone the privilege of taking part in these proceedings, which testify to the very high esteem in which Mr. Gokhale was held not only by his own countrymen but also by all who came into contact with him. You may remember that Matthew Arnold wrote of one who saw life steadily and saw it whole. That for most of us, if not for all of us, can only be an approximation, and greatness among men, to my mind, in a large measure depends upon their approximation to that ideal. So many of us cannot see the wood for the trees, so many of us in the midst of the dust of affairs have our vision blurred and indistinct ; and so it comes about that when we at rare intervals in our life light upon a man with a wide vision and with a clear outlook we greet him as one placed above his fellows. I venture to think that Mr. Gokhale's claim to our esteem, apart from his personal qualities with regard to which I cannot speak, lies in his approximation to that ideal of which the poet spoke :

> " Lives of great men all remind us
> We can make our life sublime ;
> And departing leave behind us
> Foot-prints on the sands of time."

If this be true the sense of our loss of such a man at such a time as the present must be borne in upon us. Such men are rare, and when they pass away before they have reaped the full harvest of their promise we doubly mourn their loss. Mr. Gokhale has, however, left behind him a name and a memory which should not be without its lesson for us all. I unveil, then, his bust to-day, not only as a memorial of our appreciation of his worth, but as a lasting reminder to us who pass by, of the qualities which go to make a man great among his fellows.

THE NIZAM'S FRESH CONTRIBUTION

His Exalted Highness the Nizam has despatched to H. E. the Viceroy the following telegram :— "I have read in the papers the Prime Minister's message to Your Excellency and your reply thereto. As an old and faithful ally of the British Government I am prepared now as in the past to render every assistance according to the means of my Government. Meanwhile I offer one hundred thousand pounds sterling to help in the war."

EDUCATION IN TRAVANCORE

One-seventh of the total expenditure in the State of Travancore is on education. The amount allocated for the coming year is 23 lakhs, which is two lakhs more than in any previous year.

THE CHIEF OF SANGLI

The Chief of Sangli, one of the Southern Mahratta States, has announced his intention of the early establishment of village panchayats throughout his State.

CO-OPERATIVE SOCIETIES IN BARODA

In Baroda there are 323 Co-operative Credit Societies with a membership of 10,620. The working capital is nearly a million rupees and the net profit about Rs. 40,000.

RECRUITS FROM MANDA

The Raja Bahadur of Manda announces the following concessions to those who join the army from his estate :—For combatants (1) in cash a sum of Rs. 100 to every recruit at the time of recruitment ; (2) if a tenant, rent will be reduced by half ; (3) every recruit will also be given two bighas of land free of rent ; (4) if not a tenant, four bighas of land, free of rent, will be given to the recruit. For non-combatants and labourers (1) in cash a sum of Rs. 70 to every recruit at the time of recruitment ; (2) if a tenant, rent will be reduced by one-fourth ; (3) one bigha of land free of rent will be given ; (4) if not a tenant, the recruit will be given two bighas of land free of rent.

COCHIN ADMINISTRATION

The revenue of Cochin is about five million rupees. Primary education is well provided for in the State. Recently the system of nomination to municipalities was replaced by that of election. The panchayats are strongly established and look after the roads, tanks and wells in villages. They are authorised to open schools in rural areas as well as to exercise certain judicial powers. The appointment of members to the panchayats on an elective basis is being considered.

GWALIOR INDUSTRIES

Remarkable industrial developments at Gwalior were disclosed at the first annual meeting of the Gwalior State Trust, Ltd, at Gwalior on the 18th March. His Highness the Maharaja presided. The proceedings showed the many industrial ventures that have been recently developed in the State.

Paper mills under the managing agency of Messrs. Balmer, Lawrie and Company of Calcutta in co-operation with the Bengal Paper Company, Limited, had been started in the State and were now working night and day at a profit.

A Gwalior Agricultural Company is being formed to take over some fifteen to twenty thousand acres of well-selected land for farming operations on a large scale. This company will work in co-operation with the Premier Oil Company of India, Limited. A company has been formed to take over motor repairs. A Gwalior Motor Service Company has also been formed. Plans have been prepared under the advice of Professor Stanley Jevons for the laying out of an industrial city at Gwalior. A factory has also been designed for manufacturing roofing tiles for which, it seems, suitable clay has been found in the State.

EDUCATION IN BHAVNAGAR

A Zenana Boarding School has been opened in the Bhavnagar State under the supervision of Her Highness the Maharani Sahab. It appears that the first girls' school in the whole of the Province of Kathiawar was established in Bhavnagar as early as 1857, and the girls' schools in the State now number 25, giving instruction to about 3,700 girls. The zenana school has been well-equipped with all the modern requirements, arrangements also being made to satisfy the requirements of the purdah system. An Indian lady superintendent has been appointed. The Dewan of the State announced at the opening function of the institution a donation of Rs. 8,000 to the school, the interest of which was to be spent by Their Highnesses in scholarships.

BIKANER'S GIFT

On the centenary of the conclusion of first treaty between the British Government and the Bikaner State, H. H. the Maharaja of Bikaner has generously offered the King-Emperor three lakhs including one lakh from his privy purse for any war purpose or war charity. The gift has been graciously accepted by His Imperial Majesty.

INDIAN COOLIES IN RANGOON

The question of housing Madras and Calcutta coolies in Rangoon, while awaiting steamers, caused a debate at the Rangoon Municipality on April 9, all the speakers except the President urging that as these coolies were birds of passage of no pecuniary benefit to Rangoon, the cost of providing accommodation for them should be defrayed by the shipping company or the Port Commissioners or as the Hon'ble Mr. E. F. Goodliffe termed it, the paternal government. The municipality was asked as the result of the Government House Conference and as an urgent measure to construct a shelter, cook house, and latrines for 2,000 coolies. The shelter was estimated to cost Rs. 15,000 and was to be made of dunny and bamboo with earth flooring. Mr. Goodliffe's proposition was carried that the Local Government be asked to consider the request of the Port Commissioners to utilise the two godowns at the Brooking Wharf for this purpose, the Port Commissioners having previously stated inability to grant this. An alternative proposition was also carried to construct the shelter suggested on the clear understanding that the municipality should not pay the cost.

ASSISTED EMIGRATION

The proposed system of assisted emigation of labour from India, observes an up-country contemporary, has been condemned by educated Indians all over the country. Men like Mr. Gandhi, Mr. Andrews and Mr. Polak who can speak with authority on the subject have expressed their disapproval of the system in no uncertain words. As the *Bombay Chronicle* says, the strongest case against the system is that emigration of Indian labour at all is uncalled for in the existing and future industrial interests of the country. The need is not for foreign but internal emigration. In a communication to the Government on the subject of assisted emigration the Bengal Chamber of Commerce brings out this point very forcibly. The Chamber says:—

"Several important industries of the country are experiencing acute labour difficulty, for instance, the coal industry: the Government has recently thought fit to restrict the output and despatch of second and third class collieries with a view to improve the labour supply of first-class collieries. This industry alone can with advantage employ 40 to 50 thousand people more. The tea industry also experiences difficulty in labour supply. The coal and tea industries admit of vast developments and the two together could give profitable employment to the labour that was being emigrated year after year before the war broke out. The committee hope that with Government encouragement several important industries will be soon established and developed in this country, which will require a large amount of labour.

"Under these circumstances," adds the Chamber in their letter, "it would be inexpedient for the Government to allow emigration of labour from India. The emigration policy has as one of its objects to make provision for a comfortable living for the surplus population of India. But the object has not been attained, nay the result has proved a serious economic, social and moral danger to India and to its people."

INDIAN LABOUR IN CEYLON

"Indian opinion," observes the *National Monthly of Ceylon*, "has been recently expressing itself in no uncertain terms regarding the conditions of Indian labour in Ceylon. There has been a continual discussion in the daily press on the subject for some time and the feeling is growing that the whole question of labour in Ceylon ought to be reconsidered and settled on a basis different from what now exists and with due regard to the interests of the labourer and of the nation. The position and wages of the estate labourer are not certainly enviable, and there seems to be something desperately unfair in that while the shareholders of estates enjoy fat dividends the labourers should be living in dire poverty and want."

INDIANS IN SOUTH AFRICA

Over the unfortunate new railway regulation which marks off the Indian as an undesirable, to be shut out of railway carriages except such compartments as may be reserved for the purpose, a great deal of commotion has arisen in South Africa. The fire in our countrymen there has been stirred; the spirit of passive resistance, which blazed forth under unbearable conditions, will, we fear, come to life again over this disgraceful demonstration of colour pride in South Africa. . . . The Indian is to be denied the privilege of travelling first or second class even if he pays for it. On the same principle in the tramcar also there is an Indian portion to which alone the Indian can have access—he is liable to be thrown down from a running tramcar should he cause the least inconvenience to any European —*Indian Patriot.*

GANDHI AND THE MILL HANDS

Writing to the press under date March 27, regarding his recent vow of starvation, Mr. Gandhi explains:—

"When over a month ago I reached Bombay I was told that Ahmedabad millhands had threatened a strike and violence if the bonus that was given to them during the plague was withdrawn. I was asked to intervene and I consented.

Owing to the plague, the men were getting as much as 70 per cent bonus since August last. An attempt to recall that bonus had resulted in grave dissatisfaction among the labourers. When it was almost too late the millowners offered in the place of the plague bonus and for the sake of the high prices a rise of 20 per cent. The labourers were unsatisfied."

Messrs. Shankerlal Banker, V. J. Patel and Mr. Gandhi were appointed arbitrators on behalf of the labourers and they came to the conclusion "that 35 per cent increase was fair and at a huge meeting announced 35 per cent for the millhands' acceptance. Be it noted that the plague bonus amounted to 70 per cent of their wages and they had declared their intention of accepting not less than 50 per cent as high prices increase. They were now called upon to accept the mean,—(the fixing of the mean was quite an accident) between the millowners' 20 per cent and their own 50 per cent. After some grumbling the meeting accepted the 35 per cent increase, it always being understood that they would recognise at the same time the principle of arbitration whenever the millowners did so."

"But the millhands had grown weary of the twenty-two days' struggle, "were preparing to go to work and accept 20 per cent increase and were taunting us (I think very properly) that it was very well for us who had motors at our disposal and plenty of food, to attend their meetings and advise staunchness even unto death. * * *

"I felt that it was a sacred moment for me, my faith was on the anvil, and I had no hesitation in rising and declaring to the men that a breach of their vow so solemnly taken was unendurable by me and that I would not take any food until they had the 35 per cent increase given or until they had fallen.

"Before I took the vow I knew that there were serious defects about it. For me, to take such a vow in order to affect in any shape or form the decision of the millowners would be a cowardly injustice done to them and I would prove myself unfit for the friendship which I had the privilege of enjoying with some of them. I knew that I ran the risk of being misunderstood. I could not prevent my fast from affecting their decision. That knowledge, moreover, put a responsibility on me which I was ill able to bear. From now I disabled myself from gaining concessions for the men which ordinarily in a struggle such as this I would be entirely justified in securing. I put the defects of my vow in one scale and the merits of it in the other. There are hardly any acts of human beings which are free from all taint. Mine, I knew, was exceptionally tainted; but better the ignominy of having unworthily compromised by my vow the position and independence of the millowners than that it should be said by posterity that 10,000 men had suddenly broken a vow which they had for over twenty days solemnly taken and repeated in the name of God."

INDIA'S OILSEEDS

"The great value of India's trade in oilseeds," observes the *Bulletin* of the Imperial Institute, "is not generally realised, in spite of the fact that the production in India is probably well over 5,000,000 tons in quantity and £50,000,000 in value per annum. The exports of oilseeds from India in 1913-14 amounted to nearly 1,600,000, tons, value at approximately £17,000,000. To this there must be added an export of about 3,250,000 gallons of oil, valued at nearly £400,000, and an export of nearly 200,000 tons of oilcake, worth about £1,000,000. The annual value of the export trade of India in oilseeds and their products may, therefore, be placed at about £18,500,000, taking 1913-14 as an average year.

PROTECTION FOR INDIA

Professor Alfred Marshall in the course of a letter to a Madras writer on Economics says that he once intended to write a book on Indian Economics dealing with the need and opportunities of some of the chief industries of India, but he has not been able to complete it. Referring to the question of the adoption of a protective policy after the war, he observes:—"But I do not think that protection is suitable for any country of Western Europe. I do not think it has helped Germany now, nor America in the last sixty years. I should prefer other aid to weak industries even in India but, if no other aid were possible, then I should welcome 'temporary' protection in 'urgent' cases."

AGRICULTURAL INDUSTRIES

The Director of Agriculture and the Director of Public Instruction, Ceylon, visited Calicut lately in connection with industrial and economic enquiries. It would appear that as a consequence of the export of copra and oil from Ceylon being prohibited the Ceylon Government are considering starting soap and candle-making.

SUGAR-CANE

In the rural economy of many parts of India sugar-cane, observes a contemporary, occupies an important place. The area under this crop during 1916-17 was 2,414,000 acres as against 2,391,000 acres in the preceding year, and the total production of sugar (mostly raw sugar) was estimated at 2,626,000 tons. As the demand of sugar for total consumption is in excess of the total quantity produced, India has to import a large quantity of it.

AGRICULTURE AS A PROFESSION

It is very doubtful, observes the *Commonweal*, whether even one or two per cent of the hundreds of young men, coming from villages, are aware of the magnificent opportunity they have in Agriculture. A young man can easily earn there far more than a clerk's post will bring him in the cities where the cost of living is far higher. Without any considerable capital, it is not difficult to raise the produce of ordinary agricultural lands by 50 per cent, if only he will closely study the latest improvements. A careful observation of existing conditions, and the possibilities of raising better crops, of using better seeds, or of securing the most paying manures, will surely enable an educated young man to earn more in agriculture than an average graduate obtains in the much-prized Secretariat.

INDIGO CROP OF 1917-18

The final general memorandum on the Indigo crop of 1917-18 issued by the Department of Statistics, India, shows the total area is estimated at 690,600 acres which is 10 per cent below the finally revised acreage (770,000) of last year.

The total yield of dye is estimated at 87,800 cwts., as against 95,700 cwts., the finally revised estimate of last year, or a decrease of 8 per cent.

The season has not been altogether favourable. Heavy rainfall and floods adversely affected the crop in Bihar and Orissa, and in parts of the United Provinces. In Sind the crop suffered from low inundation in the beginning of the season.

AGRICULTURE: THE ROAD TO WEALTH

The greatest talk before us, says the *Times of India*, is the increase of the national wealth. The shortest path to that goal is to develop Indian agriculture. After the war there will be intense competition for markets for all kinds of manufactured goods. All the manufacturing nations have enormously increased their capacity for outturn. On the other hand, the demand for all sorts of produce will far exceed the supply. Whilst on the one hand the world's manufacturing power has immensely increased, on the other hand the world's supply of produce has immensely decreased. Some of the best agricultural land has been overrun ; all the agricultural lands in Europe have declined in fertility; and Russia, for instance, will be distracted from production to anarchy for as far ahead as we can see. The world will be bound to come to those countries which have produce to sell, and to pay the high prices which will be demanded. India has a surplus; if her agriculture is properly developed that surplus can be largely increased. Agriculture being the largest industry in India, it stands to reason that any improvement in that agriculture is bound to react more quickly on the general level of prosperity than any development of manufacturing industry, important as that is.

FRUITS IN THE N. W. F. PROVINCE.

The following is from the Annual Report of the Peshawar Agricultural Station at Tarnab in the North-West Frontier Province for the year ended June 30, 1917:—The latest Tarnab peaches and plums have entirely satisfied the fruit growers, the dealers and consumers. On account of its fruitfulness and good quality, the early apricot that was described in last year's report again deserves special mention. A really delicious melting pear fruited at the farm. It may become even more important than the *batang* in the Peshawar market during September. Several of the Mediterranean olives that were planted in 1912 yielded over 15 lbs. of fruit, and two trees bore over 20 lbs. Oranges that were imported in 1912 fruited very well, and several of the trees ripened 200 beautiful oranges. The persimmons continue to bear freely. Some carob seedlings (*cratonia siliqua*), only 5 years of age, gave a crop of small beans. The carob and the commercial olive must eventually become common trees in the N. W. F. Province. Walnuts and almonds also promise to do well in certain parts of the Peshawar District.

Democracy after the War.—By I. A. Hobson George Allen & Unwin, Ld., London.

In this little book Mr. Hobson draws attention to the extraordinary conversion of the British constitution "for the duration of the war" from a practical democracy to an autocracy, pure and simple.

> The State restricts and regulates our use of food and drink . . and removes the constitutional guarantees of civil liberty. Military and civil authorities may, and do, arrest, deport and imprison men and women without formulating charges or bringing them to trial. The security of *Habeas Corpus* and of trial by jury in open court, in accordance with rules of law, has been abrogated for whole classes of alleged offenders, and in many instances the onus of proving innocence has been thrown on the arrested person . . . Not only the spirit but the very forms of popular self-government have suffered violation, and a self-appointed triumvirate, speaking through a vocal instrument, a War Cabinet, has usurped all the real powers of Government.

Two reflections arise from this undoubtedly accurate summary of the invasions of civil and political liberty in Great Britain. The first is that for success in war the State must be ruled by a dictator. The second is that as compared with our fellow-citizens in Great Britain we in India are singularly fortunate.

With many of Mr. Hobson's deductions we are unable to agree. But it is true that a taste for powers very often develops ; and that there is a real danger that when the war is over "the steel trap will not automatically open." We, therefore, welcome Mr. Hobson's note of warning, and trust that the British democracy will keep their eyes open, and see to it that the rights they have gladly surrendered in the hour of the Empire's danger are loyally restored to them when the danger is past.

Elements of Indian Mercantile Law. By S. R. Davar, Bar-at-Law, College of Commerce, Bombay.

We have much pleasure in welcoming the above publication which, so far as we know, is the first of its kind. It fully justifies its scope and the object which its learned author intends that it should serve, viz., to furnish students of commerce and accountancy as well as the business-man and the professional accountant with a hand-book in which the various branches of the Mercantile Law of India are dealt with. The name of the author is a sufficient guarantee for its thoroughness and comprehensiveness and we find that it succinctly deals with all the branches of mercantile law, viz., in general contracts, agency partnership, insurance, shipping, etc. The book is written in the form of a treatise giving general discussions of the principles underlying the various heads of law in a simple and easy style with copious illustrations and references to the current statutes and the leading case law wherever necessary and, so far as we had occasion to look into the book, we found the statement of the law to be precise and accurate. We consider that not only a business man but every citizen ought to have a copy of the book in his shelf as a *vade-mecum*; the book also contains a useful appendix giving the full text of the principal statutes, the Contract Act and the Companies Act.

Rig-Veda Samhita—Part 1.—Sanskrit Introduction: By Umeschandra Vidyaratna, Published by Asutosh Das, Calcutta.

This is the first volume of an independent interpretation of the Rig Veda projected by an old pandit of Bengal. The work when completed will contain, in addition to a Sanskrit commentary, a Bengali as well as an English translation. The Pandit is not in agreement with any of the existing interpretations of the Veda—whether old like those of Yaska and Sayana or new like those of Roth and Ludwig. The author believes, for instance, that the original home of the Aryans was in Mongolia, that from there they first came to India and then migrated westwards to Europe. He also tries to maintain, at this stage of philological development, that Sanskrit was the parent speech from which the various Indo-European languages are descended. These examples show very well the novelty of his views, and one will not be far wrong in saying that the value of the projected work will be little more than what belongs to a mere curiosity of literature.

BOOKS RECEIVED

MORNINGS WITH ZOROASTER. By Ruby. Published by Maneck Pithawalla. 3, Arsenal Road, Poona.

SACRIFICE AND OTHER PLAYS. By Sir Rabindranath Tagore, Macmillan & Co, London.

DIARY OF THE MONTH

March 24. Sir John Anderson, Governor of Ceylon, died to-day.

March 25. The Bombay Chamber of Commerce held its annual meeting to-day.

March 26. Sir S. P. Sinha formally opened a Social Service Exhibition in Calcutta, Mr. W. R. Gourlay, Private Secretary to the Governor, presiding.

March 27. H. H. the Begum of Bhopal has offered Rs. 30,000 for purchasing aeroplanes for the War.

March 28. Sir William Meyer's speech in Calcutta on the New War Loan.

The Gurukula anniversary at Hardwar.

March 29. The fifth session of the All-Orissa Students' Conference was held at Cuttack.

Mr. Gandhi presided at the Hindi Conference at Indore.

March 30. The All-India Kankubjya Conference met to-day at Cawnpore, the Hon. Pundit Gokaranath Misra presiding.

Bengal Provincial Conference assembled at Chinsura, the Hon. Mr. A. C. Datta presiding.

March 31. The Hindi Sammelan concluded its sittings to-day after passing some resolutions for advancing Hindi as a *lingua franca*.

April 1. A special committee of the Calcutta Corporation submitted its report on the Primary Education Bill.

April 2. The Sind Provincial Conference at Karachi passed Resolutions *re* release of the internees and advocating Congress League Scheme.

April 3. Lord Ronaldshay presided over a public meeting in Calcutta to do honour to the memory of the late Sir Madhab Chandra Ghose.

April 4. It is announced that Sir Hugh Clifford succeeds Sir John Anderson as Governor of Ceylon.

The Home Government refuses passport to Mr. Tilak and party to proceed to England.

April 5. H. E. the Viceroy allows Mr. Tilak and party to proceed as far as the Cape and then to England pending Home Governments' orders.

April 6. Sir P. S. Sivaswami Ayyar accepts Vice-Chancellorship of the Hindu University.

Mr. Rahimtoola Currimbhoy Ibrahim has been elected President of the Bombay Municipal Corporation for the current year.

April 7. Opening of the National Education week in Madras by the Hon. Mr. Justice Sadasiva Ayyar.

April 8. Public meeting in Bombay with the Hon. Mr. M. A. Jinnah presiding, protests against the cancellation of Mr. Tilak's passports.

April 9. The Premier's speech demanding extreme National sacrifice to win the war.

April 10. A public meeting of the citizens of Calcutta was held this evening with reference to the Premier's appeal to India. Resolutions urging people to enlist and the Government to declare a general amnesty to political prisoners and detenues were passed.

April 11. Loss of Givenchy; troops withdrawn from Armentieres.

German capture of Kharkoff.

April 12. The Colonial Secretary, Colombo, informed Mr. Tilak and party that the War Cabinet has finally decided to stop the deputation.

April 13. Sir Douglas Haig has issued a stirring appeal to the troops.

Severe fighting in Flanders.

April 14. Loss of Baillaul and German advance.

Bombardment of Paris.

Allied success at Hangard.

April 15. H. E. Lord Ronaldshay opened the Calcutta Branch of the Tata Industrial Bank.

General Foch has been appointed Generalissimo of the Allied armies in France.

April 16. A press *communique* is issued prohibiting Home Rule and Congress League deputations to England.

April 17. Mr. Gandhi has issued a *communique* to the Kaira landholders advising them to stick to their vow of Passive Resistance.

Fall of Wytschaete.

April 18. British retirement from Ypres.

Loss of Meteran.

Lloyd George's speech in the House of Commons on Ireland and Man Power Bill.

April 19. Bombay Co-operative Conference met to-day with the Hon. Sallubhai Samaldas in the chair.

A cable announces that General Von Bernhardi commands the German army now operating in Ypres.

Literary

MAXMULLER ON INDIA

A *Contemporary* recalls the following remarks of the late Professor Maxmuller about India :—

"If I were to look over the whole world to find out the country most richly endowed with all the wealth, power, and beauty that Nature can bestow—in some parts a very Paradise on earth—I should point to India. If I were asked under what sky, the human mind has most fully developed some of its choicest gifts, has most deeply pondered on the greatest problems of life, and has found solutions of some of them which will deserve the attention even of those who have studied Plato and Kant, I should point to India. And if I were to ask myself from what literature we, here in Europe, we who have been nurtured almost exclusively on the thoughts of Greeks and Romans, and of one Semitic race the Jewish, may draw that corrective which is most wanted in order to make our inner life more perfect, more comprehensive, more universal, in fact more truly human—a life not for this life only, but a transfigured and eternal life—again I should point to India. Whatever sphere of the human mind you select for your special study, whether it be language, or religion, or mythology, or philosophy; whether it be laws or customs, primitive art or primitive science, everywhere you have to go to India, whether you like it or not, because some of the most valuable and most instructive materials in the history of man are treasured up in India and in India only."

THE POET'S IDEAL

How well these lines fit in with the character of Mr. M. K. Gandhi :—

Some may follow Truth from dawn to dark
As a child follows by his mother's hand,
Knowing no fear, rejoicing all the way ;
And unto some her face is as a star
Set through an avenue of thorns and fires,
And waving branches black without a leaf ;
And still It draws them though the feet must bleed,
Though garments must be rent, and eyes be scorched :
* * * * * * *
It is not day but night, and oftentimes
A night of clouds wherein the stars are lost.
And such are some of those who speak and live,
And wait, and work, though blunted of desire,
And know that their true life is hid with God.

NEWSPAPERS AND GOVERNMENT

In reply to a question in the Imperial Legislative Council, at one of its recent meetings the Government of India laid on the table a statement showing the names and number of copies of Indian and Anglo-Indian journals subscribed for in the several departments of the Government of India. The following are the figures: The *Pioneer* 44 copies ; the *Times of India* 29 ; the *Statesman* 27 ; the *Civil and Military Gazette* 26 ; the *Capital* 18 ; the *Englishman* and the *Madras Mail* 13 copies each. Of the Indian newspapers the *Bengalee* heads the list with 11 copies.

DEMOCRATIC NOTE IN LITERATURE.

A writer in a *Contemporary* points out :—

"It is curious to hear how some people talk of the democratic principle as if it were a quite modern and rather sudden growth—a spirit of common brotherhood that has been called into being, by the exigencies of the war. Most of us, of course, know better, but that there should be any who do not show in what sort of a paradise a few of us have been living. The democratic spirit has been an undertone in our national life and literature, steadily broadening and gathering force all down the centuries. You may catch sounds of it in Chaucer, a fuller music of it in his contemporary, Langland, and from then onwards, to Browning, Tennyson and the poets of our own day. There is scarcely a poet of importance who does not more or less reveal his consciousness of the brotherhood of man and the vanity and folly of those social distinctions and that system of government which, for no personal merit, places some human creatures gloriously on the heights, and for no personal reason, condemns other human creatures to live and die in utter darkness. And these actual or potential democrats are by no means all plebians ; you find your aristocratic poets, where they have a sense of justice and chivarly, passionately taking their stand on the weaker side—whether it is the courtly Sir John Gascoigne in the sixteenth century, or Shelley and Byron in the nineteenth. It is the same with the prose writers. There are as true and trenchant things said for democracy in good Sir Thomas More's 'Utopia' as in the books of such moderns as Ruskin, Carlyle, Dickens, Mark Rutherford, Mr. H. G. Wells, or Mr. G. B. Shaw. With the making of so many anthologies, I have wondered why nobody compiles an anthology tracing this growth and triumph in our literature of the democratic faith. It is one of the few anthologies that ought to be done.

Educational

ASSAM SCHOLARSHIPS

The Chief Commissioner of Assam in 1913 sanctioned as a temporary measure for a period of five years an award of forty-six special college scholarships of ten rupees a month to indigent members of the Mahomedan and backward communities of Assam. The term of these scholarships has expired and after reconsideration of the claims of the communities it has been decided to renew the scholarships for a further period of five years.

MUSLIMS AND ILLITERACY

The Muhammadans in Bengal number 24 millions—about half the population—but only 5 per cent of them are literate, while only 60,000 have any knowledge of English. The number of Muhammadan children receiving education is strongly low in the higher schools, the percentage being 50 in primary schools, 34 in middle schools, 20 in high schools, 9 in colleges and 7 in professional colleges.

EDUCATION IN CEYLON

During 1916-17 more than three hundred schools, observes the *National Monthly of Ceylon*, admitted Pulayas and Pariahs for the first time, without any opposition. A few years ago when the Pulayas were first admitted to a school there were serious riots. The number of Pariahs in the schools has increased from 900 to 4,500 in the last five years, and of Pulayas from 3,000 to 10,000.

LANGUAGE AND CITIZENSHIP

It seems to many observers, says the *Times*, a profound mistake to make English and the expression of thought in English the basal necessity of an educational system which aims at the rearing of free Indian citizens capable of exercising an intelligent vote. To relegate citizenship to those who can think in a foreign language is to make education a means rather than an end. It would be an attempt to manipulate the soul of India in the interests of a very nebulous political theory.

THE SHIAH COLLEGE

Replying to the address of welcome from the trustees of the Shiah College, Lucknow, on April 6, Sir Harcourt Butler said that the funds they had collected were insufficient for the purpose. It behoved them to see that their college should be such as to take its place worthily in any university for Oudh that might be established.

MRS. SAROJINI NAIDU ON WOMEN'S EDUCATION

Speaking at Jullunder, Mrs. Sarojini Naidu said: "Your Vice-Principal Lajjavati has revealed a sad tale that in the Punjab, even this day, there is still a large element of prejudice and bigotry against female education. In the Deccan I used to look forward with hope and eagerness unsurpassed to the day when I would visit your beautiful Vidyalaya and the Province which appeared to me a place of pilgrimage from its distance and fame. It is a sad surprise to me, therefore, to learn that there are people here, who adversely criticise the work of a noble and national institution like yours. The narrow-minded people say that the education of women is to be condemned, because it makes them bold. Brothers, have you forgotten the heroic stories and the scriptures of your own Motherland? It was the privilege of India to possess women who were bolder and braver than men. Yes, even to-day the need is that we the women of India should be bold and go to Yama, Savitri-like and beg of him a new life for Mother India. I say if you condemn boldness, the lack of dependence in women, what do your homages to Chand Bibi and Ahalya Bai signify? You demand political rights, you say you are fit enough to manage things for yourself. Pray do not forget a lame person can but walk slowly, a one-eyed man sees only on one side, and that a carriage with one wheel cannot move properly."

THE SADLER COMMISSION

There is a significant passage in that part of Dr. Sarbadhicary's Convocation Address which deals with the Sadler Commission. It runs as follows:

"In forwarding to the University, the notification appointing the Commission, the Education Department expressed a hope that the University would give the Commission all necessary facilities. There has been no other communication between the University and the Government regarding the Commission or its work. Nor had the University any communication from the Commission save with regard to information required from time to time. The University has furnished the Commission with all the required information and facilities, but has not shared responsibility in the framing of its questions or the determination of its programme or procedure of work. Nor have any questions been addressed to the University. A certain amount of detachment has thus been imposed. Whatever be the reason actuating this, the University has loyally respected this imposition and awaits a better ordering of things."

Legal

JUSTICE MUTHUSAMI AIYAR

In the course of his reminiscences of the Madras Bench Mr. Eardley Norton writes in the *Looker-on* :—

Muthusami Aiyar was the first Indian Judge to sit on the Madras High Court. A Brahmana born of humble parents, he started life on the very lowest rung of the ladder, I believe on seven rupees a month, till by his own sheer ability he worked his way to the High Court and there died in harness. Sir Alexander Arbuthnot and my father contributed their share to his elevation and Muthusami more than justified them both. Very dark in complexion, he wore no collar, his bands were tied round his ebony throat, and a white and gold turban shone on his head, a diaphanous white dhoti fluttered round his loins, no shoes or stockings disfigured his feet and the round Smartha wafer beckoned amiably between his brows. Always calm, impartial, analytical, he had no favourites at the Bar, and Mylapore and Triplicane were not divided into hostile sects each seeking his favour and his patronage. Muthusami was a born Judge. Many Judges don the stolen garments of a King's Counsel in the Bench but leave their consciences, and sometimes their manners, at home with their butlers. Muthusami carried his conscience into Court and was visibly influenced by it. An erudite Hindu lawyer, there was no field of legal literature in which he was not expert and at home. You had to be on guard when arguing before him. His favourite trick—we all have our own little idiosyncrasies and we all fondle our own little peccadillos—was to propound some terrible and unanswerable A.B.C. conundrum and with his chin resting on his hands to ask you mildly, with the air of a Jesuit Father going to evensong, what would be your answer to such a condition of affairs. If you hesitated, he dug another conundrum into you, his bare toes all the time twitching convulsively in public view.

Those toes fascinated me. I could follow the trend of their owner's intellectual vacillations by their comprehensive expansion and retraction. One motion was accepted as indicative of the end of all things. When the big toe of Muthusami's right foot leaned over and clutched its neighbour, argument was at an end and judgment ready. You knew from the viciousness of the embrace which way it would be. A mere temporary touch was not unfavourable. A long, firm, passionate cling meant defeat.

To great intellectual powers Muthusami united indomitable hard work and an innate modesty of character and temperament which made him the most distinguished individual in any gathering of officials. He carried his simplicity to such an extent that when he received a C. I. E. he really believed it was an honour. He was used as the brake-horse of the Bench. Each new judicial colt was harnessed to him and he pulled the neophyte round dangerous corners, forced him to trot instead of gallop in the straight and never knew he was shaping all the while the lives of future knights. But the work killed him and he died as he had lived a gentleman at his post. In the New High Court, at the broad junction of four passages, his marble likeness on a marble chair, wisdom on his front and integrity in every feature Muthusami Aiyar sits pointing the way to the younger generation of Indian lawyers and smiling on me when I pay my pilgrimage to his shrine the warm and winning welcome with which, first for my father's sake and later, I am proud to believe, for my own he greeted my arrival to dear old, sleepy, parochial Madras where two generations of ancestors bid me go in and win my spurs.

LIBERTY OF THE PRESS

At the Sind Provincial Conference, held at Karachi on the 30th March, Mr. Murlidhar Jeramdas Panjabi, the President, in the course of his address referred to the harsh and unjustifiable manner in which the Press Act was being worked by the executive authorities. After giving recent instances of press security being demanded and of the futility of appeals lodged in the High Courts against executive decisions he remarked :—" It is a well-known maxim of law that every one is to be presumed innocent until guilt is proved. But in the operation of the Press Act the two important words, 'innocent' and 'guilt,' have changed places and the maxim has been reversed. Not only is this true, but the most intolerable feature of the Act is that it is sometimes applied not, as was originally intended, to suppress sedition and disloyalty, but legitimate criticism of men and measures of a kind that is unpalatable to executive officials. It is to be hoped that the Government of India is taking note of the complaints constantly made in the press and on the platform regarding the unjustifiable manner in which the Act is worked and will either repeal the Act or modify it on popular lines."

Medical

TRAVELLING DISPENSARIES

In the course of the budget debate in the Bombay Legislative Council this year, the Hon. Mr. Kamath moved a resolution recommending that the provision for opening new dispensaries contained in the Financial Statement be increased by Rs. 20,000 for the establishment of travelling dispensaries in selected rural areas of the Presidency and that a corresponding reduction be made under the head of "Irrigation." Of course the usual grant of Rs. 30,000 for new dispensaries was increased in this year's budget to Rs. 60,000; but even this amount is not sufficient to carry medical relief to the doors of the rural population: The inadequacy of the progress made during the last three years is observable in the fact that only 20 dispensaries have been newly opened, of which 12 were in the districts. The Surgeon-General requisitioned the aid of "experience," and stated that a fixed dispensary in an unhealthy district was often better than a travelling one; but it is difficult for one to be convinced of the soundness of this "expert opinion" particularly as the Surgeon-General himself added that the idea was not a new one, and that there were 15 travelling dispensaries doing malarial work before the war. Another argument of the head of the Medical department was the paucity of assistant surgeons in War time who could be placed in charge of the dispensaries and another official plea was that it was useless to vote money when no assistant surgeons were available. But observes the *Commonweal* we heartily agree with the suggestions of Mr. Kamath, that the services of retired sub-assistant surgeons could be easily requisitioned for the purpose. We are, however, glad the Surgeon-General assured the Council that he was going to bring a proposal before a committee of the Council in connection with the question, and on the strength of this assurance the resolution was withdrawn. In any case the paucity of assistant surgeons cannot be a reasonable plea against the extension of the system of travelling dispensaries over a greater area.

X RAYS FOR ARMY HOSPITALS

It has been decided to provide an operating theatre and X ray block for all hospitals for British and Indian troops, where such accommodation may be authorised, on an improved scale which is set out in an army instruction.

SIR SANKARAN NAIR ON AYURVEDA.

The Hon. Sir C. Sankaran Nair presided at the 29th Annual Meeting of the Ayurvedic and Unani Tibbi, Madras. In the course of his speech he said:—

Laymen were apt to look askance at the present day division of medicine into "systems." Knowledge and fact are not the special property of any one sect, any one race, and any one country. They belong to the world. The votaries of science were building up a great body of doctrine. They were day by day extracting secrets from nature that promised incalculable benefit to mankind. The echoes of their labours reached even those who were not directly concerned in the advancement of science. One of the results was that they all demanded and expected much more of their physicians than they formerly did. "Some of us," he said, "even have the temerity to criticize our physicians and wonder how much of the treatment to which we are submitted has a scientific basis. We are no longer content to look upon you as the high priests of a system of mysteries. Such healthy scepticism was likely to grow and increase and in the future there would be no room for practitioners of systems of medicine who were unwilling to absorb the facts of "systems" other than their own. They should remember always that doctrines and theories were made to explain facts. Theories might have to go or be modified to the facts, but facts could not be explained away. They must be all firmly imbued with such ideas, for otherwise they would acknowledge their unworthiness to be called disciples of the great founders of their systems." The greater their knowledge of the teaching of science, the greater will be their reverence for the philosophers of old who in spite of "means so limited and tools so rude accomplished so much." What would they not have done with opportunities such as the 20th century offered to those present.

He further continued: "It connot be gainsaid that the medicine of the future will be more concerned with the prevention of disease than its cure, and I am very pleased to learn that hygiene is a compulsory subject for all your students. If in that hygiene course you obtain a good working knowledge of how the chief diseases that afflict India are conveyed and spread and how to live so as to avoid contagion, you will be equipped to play a part in the noble task of spreading the gospel of health to all parts of India and carry light and happiness to some of the darkest corners of the land."

Science

THE AUTOMOBILE

The *Scientific American* writes that during the twenty-two years since the introduction of automobiles in America about five and a half million automobiles of all types are in use throughout the world, four and a quarter million, or 77 per cent. are within the borders of the United States. The automobile industry, we learn, is now the third largest, and it is not one likely to dwindle down. The writer thinks that one of the after-effects of the War will be the stimulation of motor travel and motor transportation.

The extensive, varied and highly successful employment of all types of automobiles by all the military forces involved, and in every part of the world where fighting has taken place or where troops have been mobilised, has paved the way for a similar widespread use in commercial activities.

Food shortage is bringing into requisition a large number of agricultural tractors. There were 39,000 constructed in the U.S.A. during 1916; 50,000 in 1917, and this year a still greater demand, but owing to scarcity of materials, labour shortage, shipping conditions, etc., the demand is likely to outweigh the supply. And then there is the future of the aircraft, which it is impossible to forecast. Difficulties as regards motor fuel will occur of course, but they will doubtless be met, when the exigencies of the time absolutely demand. Looking backward one cannot but marvel at the revolution in our lives that has been caused by the coming of the automobile, and we sometimes wonder how the world managed to get on without them.

THE 24 CENTIMETRE GUN

We learn that Paris has been shelled by the 24 centimetre gun. The only new contribution to exact knowledge regarding its attributes, observes the *Statesman*, relates to the highest point of its trajectory, an easily calculable phenomenon, given length of base—seventy miles from gun emplacement to point of impact of the shell—and the angle of descent. The height—23 miles, or 121,440 feet—is enormous, comparing as it does with the 5,400 feet to which a rifle or machine-gun bullet will rise and the 12,000 or 13,000 feet which is the maximum height obtainable with the ordinary field gun. The height is suggestive of howitzer rather than gun mechanism, although the drawback of the howitzer has always been its comparative shortness of range—only nine miles in the case of the 16¾inch "Bertha." Expert opinion appears to preponderate in favour of the theory of a gigantic explosive charge, possibly of a very slow exploding quality, as compared with the theory of fresh momentum supplied to the projectile *en route*. To the last-named, kinetic and dynamic principles appear to offer almost insuperable obstacles. If a huge propulsive charge be the explanation, the new German monster will be classed by history as but one more German folly comparable with the Hindenburg statue, the Zeppelin, and the mystery ship which enjoyed a brief butterfly existence off the Flemish coast.

ONE WHEEL TRACTORS

With a view to eliminating the possibility of minor collisions which so often take place in narrow and restricted thoroughfares, and to enable a vechicle to be readily extricated from congested areas, a one-wheel tractor of a simple design has been brought out, which seems to meet with much favour. The outstanding feature of the tractor is implied by its name. It has only one wheel which is steered through conventional-type gearing. The power unit is an engine with a bore and stroke of $3\frac{3}{4}$ ins. by $5\frac{1}{8}$ ins., respectively. High-tension magneto is used for ignition and the cooling water is carried in a tank which has a 56-gallon capacity. It is so disposed as to counterbalance the weight of the engine. The drive from the engine is transmitted through a clutch to a three-speed gear-box. There are the usual two brakes, the service brake being carried on the cross shaft and is externally operated, while the emergency brake is internally placed. Stability is given to the tractor by attaching the rearwardly-extending main frame to the front axle of the wagon. The weight is balanced on the single wheel, so that the wagon axle is not overloaded; it simply gives support to the tractor. The attachment to a wagon need not be permanent.—*Mysore Economic Journal.*

NEW BATTERY FOR ELECTRIC POCKET LAMPS

A dry battery for electric pocket lamps has been invented by a citizen of Zurich, Switzerland, according to a recent Consular Report. It is said to be cheaper, better, and of simpler construction than those now in use. Instead of a single block battery, it consists of three separate and distinct elements which are placed side by side in the metal lamp case. The chief improvement is the possibility of substitution for a single element in case the battery is out of order. In the event of the battery becoming defective, the voltage of each element is tested to ascertain which one is useless, and it may then be replaced by a single new element.

Personal

GENERAL FOCH

General Foch has been appointed to command the forces of the Allies on the Western front where the War is now raging with tremendous fury. Born at Metz and educated at the Ecole Polytechnique, the General is now 66 years. In the early days of the war he took part in the operations in Lorraine, and General Joffre was quick to recognise his merit for the command of the newly-formed ninth Army was given to him on August, 20. In that capacity General Foch took up his head-quarters at Doullens, north of Amiens, and assumed the direction of the forces arrayed between Dunkirk and Compiegne. Later, at the time of the battle of the Marne, General Foch was in command of an army who had the honour of throwing back the Prussian Guard into the marshes of St. Gonds. By this feat and by his general conduct of operations he had a leading part in the winning of the battle of the Marne. It was he who later commanded the group of the Armies of the North, and he was in command of two offensives, in Artois in 1915 and on the Somme in 1916. At the end of the latter year General Foch was replaced by General Franchet d'Esperey, and he was subsequently employed on various missions, notably in France and Italy. Later he was sent to replace General Petain at the War Office, as Chief of the General Staff of the Army. Lord French and Sir Douglas Haig had repeatedly acknowledged his help and valuable co-operation in terms which left no room for doubt.

In person General Foch is slim and bears his 66 years with ease and grace. His grey-blue eyes give a singularly-striking impression of a man whose life has been devoted to translating philosophy into terms of the casualty list. His speech betrays the mathematician. It is precise and logical. Its rapidity betrays the man of action. Such is the man who now controls the Allied forces on the Western front.

The latest cable announces that General Foch is appointed Generalissimo of all Allied armies in France The respective Governments have given General Foch the widest powers in order that he may act and his actions will not be questioned, thus an absolutely united Anglo-Franco-American army is constituted.

THE LATE J. N. FRASER

Education in India has suffered a great loss by the sad death of Professor Nelson Fraser which occurred at Bombay on the 12th March after a short illness. "There was certainly no educationist official or layman, in this country," wrote the *Times of India* in its obituary notice, "who possessed so minute and extensive a knowledge of the various systems of education practised throughout the world, and few who had the capacity to estimate and value their relative merits. Professor Fraser applied this knowledge to the problems of education in India, the country in whose service he had whole-heartedly devoted twenty of the best years of his working life, with a burning desire to forward the cause of education in this country."

Mr. Fraser was one of the oldest contributors to the *Indian Review*. He was long editing the *Indian Education* and it is sad to think that we shall miss his sprightly articles on educational topics in many an Indian Journal.

THE LATE SIR JOHN ANDERSON

The death of Sir John Anderson, Governor of Ceylon on the morning of March 24 has caused intense grief all over Ceylon. He had been Governor of the Island since 1916. Previous to his arrival in the Island he was for five years Permanent Under-Secretary for the Colonies and still earlier (from 1904-11) he had for a long period been Governor of the Straits Settlements. Sir John Anderson was born in Aberdeenshire in 1858 and was a graduate of Aberdeen University. He accompanied the Prince of Wales (now King George) on his colonial tour.

King George called on hearing the news of Sir John's death :—"I have received with heartfelt regret the news of the death of Sir John Anderson and am sure that the people of Ceylon will join with me in mourning the loss of their distinguished Governor whom I knew and held in the highest regard for many years."

The following is from the Secretary of State for the Colonies : "Regret your telegram of the 24th March announcing the death of Sir John Anderson whose distinguished service to the Colonial Office and to the British Empire during nearly 40 years have always commanded the highest appreciation of my predecessors and myself. Please convey my keen sympathy to his relatives in Ceylon."

Political

THE HOME RULE DEPUTATION

It is regrettable that the Home Rule Deputation headed by Mr. B. G. Tilak should have been stopped by orders of the War Office while the party had gone so far as Colombo. The deputation had been subjected to a great deal of unnecessary vexations by a series of contradictory orders. While we have reason to be thankful to the Viceroy for his kindly though fruitless intervention the tone of the following *communique* from Simla, under date 16th April, is very much resented :

" The question of passports for Home Rule and Congress delegates came again before the Cabinet to-day. The Cabinet have reaffirmed the decision that, in the existing circumstances, none of the Home Rule delegates can be allowed to proceed to this country. It is considered by His Majesty's Government that the journey on which these persons have embarked was uncalled for and the purpose of it lacking in any sufficient justification. It was proposed by those persons, at a period when the Secretary of State himself was in India for the purpose of ascertaining the views of every section of the community, when his conclusions were still unknown and had not yet been submitted to His Majesty's Government, to come to England in the avowed role of agitators, to start an uncompromising propaganda in favour of a Home Rule of their own. Such a proceeding at any time would be improper. Under the existing circumstances, when the country is waging a great war and is confronted with a crisis of the greatest magnitude which calls for a supreme concentration of national effort and so far as is possible, the suspension of purely political agitation and platform controversy in whatever interest, it is one in which the Government could not acquiesce. Further the generous intentions of His Majesty's Government which have already been demonstrated by the pronouncement of the Secretary of State in Parliament and his visit to India would be seriously compromised and might be fatally impaired, if an attempt were made before, or at the very moment when they were considering his report, to force their hands by a premature and possibly harmful propaganda. It is with regret that His Majesty's Government are compelled to give this harmful decision but they have no alternative."

INDIAN MESSENGER IN ENGLAND

Mr. Joseph Baptista writes to Mr. Kelkar, regarding the representation of the National Congress at the Nottingham Labour Conference :—

"I am told India received a magnificent and unparalleled ovation in the person of Mr. Polak. Many present who met me in my political perigrinations regretted that I was not the messenger. It would have made "a world of difference" said several. I believe this is correct—not on account of any personal merit, but simply because I am an Indian. Englishmen believe in Indians representing India, and they are certainly far more impressed by Indians advocating their cause even though they may not possess the ability or the influence of some of our staunch friends among Englishmen."

MR. CHESTERTON ON NATIONALITY

Mr. Gilbert K. Chesterton says in one of his charming essays :—

" I am quite certain Ireland is a nation ; I am quite certain that nationality is the key to Ireland. I am quite certain that all our failures in Ireland arose from the fact that we would not, in spirit, treat it as a nation. It would be difficult to find even among the innumerable examples that exist a stronger example of the immensely superior importance of sentiment to what is called practicality than this case of the two sister nations."

EXODUS TO THE HILLS

The questionof the summer migration of officials to the hills has been thoroughly discussed throughout India and it has become one of the few subjects on which independent Indian and European opinions are in perfect agreement. Referring to the Hon'ble Mr. V. J. Patel's resolution in the Bombay Legislative Council, " Ditcher" writes in *Capital* :—

"Mr. Patel attacked the subject with such force of argument as to compel the official apologists to take refuge in a miserable *petitio principi*. Mr. Curtis must have blushed at himself when he put forward the plea that unless the Mahabaleshwar trip were allowed, good men in England would not come to Bombay as Governors. My sainted aunt!

"The only party that supports the exodus is the official and this is done against the will of the entire country, but this defiance of public opinion cannot continue long."

General

MR. GANDHI AND THE KAIRA DISTRESS

In the course of a letter to the press Mr. Gandhi wrote on March 29 :—

"In the district of Kaira the crops for the year 1917-18 have, by common admission, proved a partial failure. Under the Revenue Rules, if the crops are under four annas the cultivators are entitled to full suspension of the revenue assessment for the year, if the crops are under six annas, but over four annas, half the amount of assessment is suspended. So far as I am aware, the Government have been pleased to grant full suspension with regard to one village out of nearly 600, and half suspension in the case of over 104 villages. It is claimed on behalf of the ryots that the suspension is not at all adequate to the actuality. The Government contend that in the vast majority of villages crops have been over six annas. The only question, therefore, at issue is, whether the crops have been under four annas or six annas, as the case may be or over the latter figure.

* * *

"It is known to the public that the Hon. Mr. G. K. Parekh and Mr. V. J. Patel, invited and assisted by the Gujarat Sabha, carried on investigations, as also Messrs. Deodhar, Joshi, and Thakkar of the "Servants of India Society." Their investigation was necessarily preliminary and brief and therefore confined to few villages only. But the result of their enquiry went to show that the crops in the majority of cases were under four annas. As their investigation not being extensive enough, was capable of being challenged, as it was challenged, I undertook a full enquiry with the assistance of over 20 capable, experienced and impartial men of influence and status. I personally visited over 30 villages and met as many men in the villages as I could, inspected in these villages most of the fields belonging to them, and after a searching cross-examination of the villagers came to the conclusion that their crops were under four annas. As to the *Rabi* crops and the still standing *Kharif* crops, I was able, by the evidence of my own eyes, to check the statements of the agriculturists. The methods employed by my co-workers were exactly the same. In this manner nearly four hundred villages were examined, and with but a few exceptions, crops were found to be under four annas, and only in three cases they were found to be over six annas."

Since this letter was penned things have taken a rather serious turn, the Government having decided on their own course. Mr. Gandhi thereupon has advised passive resistance, and we read: "Mr. Gandhi and his associates are touring in the interior of the affected district encouraging and heartening the agriculturists to keep their oath. Some 2,000 agriculturists have signed the pledge refusing to pay land revenue. Creditable reports go to show that the enthusiasm of the farmers is increasing though many have lost a good deal in the struggle. In his addresses to passive resisters Mr. Gandhi is exhorting them to maintain civility to Government officials and eternal faith in the justice of their struggle which was for preserving their rights."

Meanwhile the Commissioner of the Division has addressed the landholders, and agriculturists pointing out "the folly and danger some of them were running in by refusing payment of land revenue on the advice of Mr. Gandhi and his friends." He said that in the current season after the fullest enquiry and consideration of all objections and petitions brought forward by Mr. Gandhi and others, officers of the Government passed final orders regarding revenue suspensions that may be justly and reasonably allowed, and those orders must be accepted as final.* * * * To those who were under a pledge or vow not to pay revenue, he urged that it was no shame to break the vow made without proper consideration. Continuing, the Commissioner said "your advisers had been going about freely without any hindrance, making speeches and lectures, but there had been no interference with them because their activities and their advice, bad as it is in most cases, is based upon ignorance, misconception and misunderstanding. If, after full notice and information and warning, you allow yourselves to be misled by this mistaken advice you yourselves will be responsible for the consequences."

Following this Mr. Gandhi has issued another *communique* in which he points out in answer to the threat held out by the Commissioner : —

"The War cannot be permitted to give license to officials to exact obedience to their orders, even though the raiyats may consider them to be unreasonable and unjust.

I venture to suggest that the Commissioner's attitude constitutes a peril far graver than the German peril, and I am serving the Empire in trying to deliver it from this peril from within."

THE INDIAN REVIEW

A MONTHLY PERIODICAL DEVOTED TO THE DISCUSSION OF ALL TOPICS OF INTEREST.

EDITED BY MR. G. A. NATESAN.

Vol. XX. JULY, 1919 No. 7.

THE REFORM BILL

BY MR. G. A. NATESAN

WHEN the controversy on the Montagu-Chelmsford Report was at its height, I ventured to observe :—

"The authors deserve the thanks of the country for the honest and sincere attempt they have made to start India on the road to responsible government. I feel that when the storm and dust of controversy is over, even the few adverse critics of the Report will give Mr. Montagu a place among the small band of noble Britishers who have laboured for the good of India."

After reading the full text of the Bill, the Memorandum and Mr. Montagu's great speech in the House of Commons on the occasion of its Second Reading, I feel convinced more than ever that India's confidence in Mr. Montagu was rightly placed. Despite the defects and the shortcomings of the Bill now before Parliament, few will venture to deny that it is a genuine attempt to embody the main principles enunciated in the Montagu-Chelmsford Report.

THE DEPUTATIONS AND THE BILL.

As no other satisfactory alternative scheme could now be considered, the only course open is to accept *diarchy* as the basic principle of the Bill and try to suggest modifications which will improve and widen its scope. It is a matter for great satisfaction that the endeavours of the Moderate Deputation headed by Messrs. Surendranath Bannerjee, Sastri and others are now directed towards this end. We are glad that in their efforts they are supported by Mrs. Besant and by the Hon. Mr. Yakub Hassan who represents the Muslim League. It is a great pity that the Congress Deputation, disregarding even the advice of Mr. Tilak, is persisting in advocating the resolutions of the Delhi Congress, when everybody knows that the older and more experienced Congressmen have disapproved of them as they cut at the root of the Scheme of the Joint Report. It is deeply to be deplored that the Congress Deputation headed by men like Mr. V. P. Madhava Rao should make unity among the Deputations impossible, when such a fearless and doughty champion as Sir C. Sankaran Nair himself has in his historic Minute of Dissent accepted the principles of the Scheme and contented himself with suggesting some important modifications "strictly consistent with its principles."

THE CENTRAL GOVERNMENT.

Viewing the Bill from that standpoint, it would still be idle to disguise the fact that all sections of politicians feel keenly that it contains no provision for any reform in regard to the Central Government. Even a cursory perusal of their criticisms will show that there is complete unanimity of opinion that the reforms proposed in regard to the Government of India are of the feeblest and of the most unsatisfactory character.

As Sir Dinshaw Wacha and his colleagues have pointed out in their very able and telling Memorandum on the Joint Scheme, the Reforms of the Government of India are altogether based on a wrong formula for which there is no justification in the terms of the announcement of August 20. The distinguished authors of the Report have given absolutely no valid reason as to why "the Government of India *must* remain *wholly* responsible to Parliament," and why even the *beginnings* of responsible Government in the Government of India should be withheld.

It is entirely wrong in principle and is bound to lead to rigidity and unprogressiveness at the centre of the body politic, which would react on the freedom, elasticity and growth of provincial administrations.

THE COUNCIL OF STATE.

Opinion is fairly unanimous that the Council of State must go. It is justly regarded as "a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

discredited device," and second chambers have, on the whole, been far from successful, and there is an apprehension that it may "lead to heat, irritation and bad blood, imperilling the constitution itself." It has evidently been conceived as "an antidote to the elective majority in the Legislative Assembly," and "to serve as a screen, thin though it be, to cover the continuance of the present system of Government." If this ill-fated second chamber is to remain at all, the elected element in it should be strengthened, and it should be shorn of some at least of the powers proposed to be conferred on it.

Without entering into a detailed examination of the various provisions of the Bill, we would draw attention to what is generally considered as some of its objectionable features which it should be the endeavour of the Joint Committee to remove. We refer, for instance, to the extraordinary provision forbidding the Legislatures in India to repeal or alter any rules under the Act, to the restrictions imposed on the power of the purse, the powers vested in the Governor to block the progress of a Bill, to the invidious provisions in regard to the salary and status of the Ministers and to the somewhat wide powers given to the Governor-General in regard to certification.

CONTROL OF THE PURSE.

While we are glad that many of the reactionary proposals of the Government of India have not been embodied in the Bill we consider it a matter for regret that Mr. Montagu has, in the important question of financial arrangements, not stuck resolutely to his original proposal of one joint purse but has left it open to the Joint Committee to consider the highly retrograde suggestion of the Government of India for separate purses. The proposal of the Government of India has been unanimously condemned, and as Sir Sivaswami Aiyar with his experience as Indian Member of the Madras Executive Council has rightly pointed out in his Memorandum prepared for the Madras Liberal League:—

> The separate purse system proposed by the Government of India will have the pernicious effect of dividing the house into two hostile camps each unmindful of the just claims of the other and anxious to aggrandise and benefit itself by extravagant expenditure. While the joint discussion and settlement of the budget by the entire Government will have an educative effect in promoting a better understanding of the needs of all subjects by the different members of the Government and a spirit of compromise, the system proposed by the Government of India will have the deplorable effect of creating a feeling of antagonism between the interests of the reserved and transferred departments and will imperil the sucess of the Reform Scheme.

But the mischief will not stop here. As Sir Sankaran Nair has observed in his Minute of Dissent, the cumulative effect of the Government of India's financial suggestions will be "to place the Minister and the Legislative Council in relation to transferred departments not only in a position of no real responsibility but virtually in subordination to the Executive Councils." The adoption of the proposal of the separate purse would certainly be a "negation of responsibility," and altogether opposed to the spirit of the Declaration of the 20th August.

FISCAL AUTONOMY.

There is intense disappointment too at the omission of a definite pronouncement with regard to Fiscal Autonomy. It is the thing on which the entire country has been keen for years. It is the absence of it that has caused Indian interests often to be victimised to propitiate other vested interests. The Hon. Sir Fazulbhoy Currimbhoy voices the general feeling of the country when he says:

> Consistent with Imperial interests, it should be possible to formulate a scheme of scientific tariffs dictated by the interests of India. I cannot help thinking that if a radical change of policy had been outlined in regard to fiscal matters, the disappointment of the public at certain features of the scheme in the reform should not have been so keenly felt.

It would be well to remember the warning of Sir James Brunyate that "the Reform Scheme will, to a large extent, be offered to India in vain if that question is not disposed of as nearly simultaneously as may be practicable."

GRAND COMMITTEES.

We regret to find that in the Bill under discussion the provision in regard to the constitution of Grand Committees is still retained. It has been condemned by every shade of Indian opinion. The Grand Committee is evidently created to serve as a check on the popular Assembly, "and is in itself therefore an undesirable institution." According to the proposal it is to consist of 40 to 50 per cent. of the whole Council and that means that a large number of elected members are to be excluded from it—a procedure which is bound to be resented. The purpose of the Grand Committee could very well be attained by adopting the suggestion of the Bombay Government then presided over by Lord Willingdon that in the reserved sphere of legislation the votes of 40 per cent. of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

members present may be deemed sufficient to carry a measure through the Council. Furthermore, as pointed out by Sir Sankaran Nair, the safeguard of the Imperial Legislative Council for all affirmative legislation and the powers of veto possessed by the Governor and the Viceroy to negative any act which is passed by the local Legislative Council and the power of Ordinance for urgent occasions would be amply sufficient.

THE PUBLIC SERVICES.

We feel bound to take exception to the proposal in the Bill that the main rights and duties of the services in India should be reduced to statutory form. The proper course would be to leave the Governments in India, acting with their legislatures to regulate their own services. And as a well-informed Indian publicist has pointed out in the columns of *India* 'it is an anamoly that a great Government should be compelled to conduct its administration with the aid of services regulated and recruited and safe-guarded by outside authority. Such a position is incompatible with the very idea of authority." The correct view of the position has been thus stated by Prof. A. B. Keith in his able Memorandum affixed to the Report of the Committee on the Home Administration of Indian affairs :—

As regards the public services of India, I am strongly of opinion that there are grave constitutional objections to regulating their conditions of service by an Imperial Act or by regulations made under it, thus withdrawing from the legislatures of India the control of legislation regarding these services. Moreover it is essential in the interest of decentralisation that, as far as possible, the Secretary of State should abandon detailed control of the conditions of service of officers in India, and that changes in the existing conditions should be subjected to the criticism of the legislatures under safeguards against unjust treatment of members already in the services. The proposal to compel the Secretary of State in Council to create a Public Service Commission, and to assign to it such functions as he thinks fit regarding the public services in India, appears to me to be wholly incompatible with the fundamental principles of the reform scheme, and the proposal to provide by Imperial Act that no office may be added to, or may be withdrawn from, the public service, and that the emoluments of any post may not be varied without the concurrence of a finance authority designated by rules made by the Secretary of State in Council is, I think, an injudicious attempt to establish by legislation which cannot be varied by local legislation a principle of undoubted value, but one which cannot properly be given a place in an Imperial Act.

SPECIAL INTERESTS.

We must also strike a note of warning against any attempt to make any provisions in the Bill on the "theory of divided interest." As Mr. Gandhi pointed out :—

One cannot help noticing an unfortunate suspicion of our intentions regarding the purely British as distinguished from the purely Indian interests. Hence, there is to be seen in the scheme elaborate reservations on behalf of these interests. I think that more than anything else it is necessary to have an honest, frank and straightforward understanding about these interests and for me personally this is of much greater importance than any legislative feat that British talent alone or a combination of British and Indian talent may be capable of performing. I would certainly, in as courteous terms as possible, but equally emphatic, say that these interests will be held subservient to those of India as a whole and that therefore they are certainly in jeopardy in so far as they may be inconsistent with the general advance of India.

Indians very rightly claim that where the interests of India and England conflict the interests of India should not be subordinated to those of England ; and Britishers should not forget what John Bright was never tired of repeating that the good of England must come through the channels of the good of India.

In the past it has been our melancholy experience that many a great scheme nobly planned has been shorn of its beneficence at the hands of the bureaucracy by the narrow and petti-fogging spirit in which they have been interpreted and worked ; Parliament cannot be too careful in providing safeguards against "the hazards of bureaucratic jealousy." The Pronouncement of August 20 has justly been regarded by the educated classes in India as a pledge binding the Imperial Government in regard to its future relations with India. Mr. Curtis rightly warned the British public when he said, "Our danger lies in pledges being so framed that mere delay and failure to take the necessary steps forth-with will expose us to a charge of breach of faith."

Hence the insistence by politicians of all classes and creeds that adequate assurance should be given that full responsible government shall be established in India within a reasonable period.

Indian Reforms : The Govt. of India Bill, 1919.— With the full text of the Bill, the Memorandum, Mr. Montagu's Speech and Sir Sankaran Nair's Minutes ; Summaries of Southborough Committee's Reports, Government of India's despatches and connected papers.

THE REFORM PROPOSALS

A SYMPOSIUM.

H. H. The Maharaja of Bikaner.

With respect to the proposed constitutional reforms it would be superfluous for me to speak of the well-known and whole-hearted sympathy of Mr. Montagu and Lord Sinha with whom it was a very great pleasure to be once again associated and whose devotion to duty and loyalty and patriotism for India require no testimony from me. I, however, had several opportunities of discussing these reforms with Mr. Lloyd George and I had the pleasure of listening to Mr. Montagu's fine speech in the House of Commons during the second reading of the Bill. Although we shall probably encounter a certain amount of opposition to the reforms in certain quarters in England, it is my confident belief that the Bill will go through under the able leadership of Mr. Montagu and with the support of His Majesty's Government. (*From an interview published in the 'Times of India'*).

Sir Prafulla Chandra Ray.

It is difficult to form an adequate idea of the Bill from the skeleton supplied by the Government of India. It is a matter for congratulation however, that some of the retrograde and reactionary proposals of the Government of India have not been accepted by Mr. Montagu. The most unsatisfactory feature of the Bill is that the Governor has been given almost unlimited power of certification even in matters of transferred subjects, as this is likely to curtail the power and responsibility of the Legislative Assembly. I welcome, however, the provision that not less than 70 per cent. of members will be elected and this I believe, will afford an excellent ground for the training of the electoral colleges. The ring of earnestness and sincerity in Mr. Montagu's speech in introducing the Bill in the House of Commons prompts me to hope that some at any rate of the objectionable features of the Bill will be eliminated when it becomes law.—*From the 'Bengalee.'*

The Hon. Mr. Surendranath Bannerjea

We are anxious that the Reform Bill should not be delayed in its passage through Parliament. The educated community of India desire that their views should be placed in the fullest possible manner before the joint committee which will probably be constituted in a few days.

There are two or three points to which I desire to call special attention. In the first place, there should not be any deviation in a reactionary direction from the joint scheme as formulated by Lord Chelmsford and Mr. Montagu; and, secondly, there should be some measure of responsibility in the Central Government. The message of August 20, 1917, makes responsible government the end and aim of British rule in India, to be attained by progressive stages of realisation. The scheme provides for such realisation in the provincial governments, but not at all in the Central Government, which will continue to be entirely bureaucratic as at present.

The Government of India in their last despatch make recommendations which amount to a whittling down of the scheme in some essential matters. For instance, with regard to the Budget control by the Legislative Council in the provinces, the recommendations of the Legislative Councils will not be binding, as proposed under the joint report. This report made them obligatory upon the Government, except when the Governor in the interests of public peace and tranquillity considers it necessary to modify a resolution.

The control of the Budget is the crux of the matter, and educated India will deeply regret any departure from this important recommendation in the joint report, which was in 1918 supported by the entire Executive Council of the Government of India and the Council of the Secretary of State for India.

A good deal has been said about the impracticability of diarchy, which has been recommended in the joint report and finds a place in the Bill. Five provincial Governments are against it. Many things in practical politics seem at first to be impracticable, which, however, when put to the actual test are quite good in practice. For instance, the South African Union was considered to be an impracticability. It is, on the whole, working satisfactorily enough. How can there be the gradual introduction of responsible Government in the provinces without diarchy, without certain branches of administration being made over to popular Ministers who, though appointed by the Governor, would be responsible to the Legislative Council? Being placed in charge of distinct departments of the administration, with responsibility to the Legislative Council, they would acquire a training, and the diarchy is only a transitional arrangement which is to be replaced by full measure of provincial autonomy when the Commission to be appointed has pronounced it to be a success.

In truth we have a disguised form of diarchy even now under the present unified administrative system. There are members in charge of distinct departments which sometimes overlap one another, and there is no friction of any kind, and there will be none in the dual system, because the Governor will be the head of the whole administration and he will be in a position to co-ordinate the different sections of the administration and he will be at the head of the whole administration under the dual control system.

A great deal has been said in England against reform on the ground of our caste differences. The whole theory is grotesquely magnified. Caste differences you have in England also, although perhaps in a less stereotyped form. These differences are rapidly disappearing and, as Mr. Montagu said in his speech, democratic customs are engendered and stimulated by democratic institutions.

They say the great body of our people are illiterate, but in the words of the late Sir George Birdwood, than whom there has not been a greater authority on Indian matters, the Indian peasant is the inheritor of the cultured traditions of his race, extending over thousands of years, and he is, generally speaking, as capable as any other peasantry in the world. [*From an interview published in "The Observer"*].

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sir P. S. Sivaswami Aiyar.

Diarchy.

In view of the fact that the dualism of the executive is the basic principle of the Joint Report and the Bill and the difficulty of framing any scheme which will provide for real responsibility, short of complete provincial autonomy, there is nothing to be gained by pointing out the defects inherent in the principle of a dual executive, which are admitted by the authors of the Joint Report themselves. Public attention must, therefore, be devoted to the improvement of the scheme in other respects without attacking the very foundation of the whole scheme. . . .

Transferred Subjects.

If there is any subject which satisfies the tests for transfer proposed in paragraph 238 of the Joint Report, it is Education. There is no ground for the assumption of the Government of India that the development and improvement of education would be too heavy a burden for ministers alone to bear. In view of the admitted failure of the policy of Government in the past and in the interests of a well-ordered and symmetrical development of education in all spheres, it is absolutely necessary to transfer the whole of education to popular control. The proposal of the Government of India to transfer primary education alone and to treat secondary, collegiate and technical education as a reserved subject is likely to lead to a conflict of interests between these branches of education and to a lopsided development of one branch or the other at the expense of the other. Education is far more likely to advance under the impetus of popular control than under official guidance. . . .

The development of industries is another subject which has been cut out of the transferred list by the Government of India. The total inadequacy of the existing departments of industries, the lack of expert staff and definite lines of work, the scanty progress achieved by the departments of industries under official guidance and the indifference of the Government till the war to the necessity for making India a self-contained country as far as possible in industrial matters are all reasons in favour of transferring the subject to popular control. The argument based on absence of industrial experience can be used just as much against official control as against ministerial. Whatever expert advice it will be possible for the official part of Government to secure can and will be also utilised by the ministry. . . .

There is no sufficient reason for not including the subject of land revenues among the transferred subjects. The assumption that the masses would suffer, if questions of land revenue were left to be handled by the ministry, is totally baseless. Notwithstanding the defects in the existing system of representation in the provincial legislative councils, the interest of the masses and the backward classes have been zealously looked after by the elected members of the legislative councils.

Separate Purse Condemned.

The allocation of provincial funds between the reserved and transferred subjects is left, under the Bill, to be determined in accordance with rules to be made under the Act, The Joint Report contemplated a single coffer for the entire Government and a single Budget to be framed by the Executive Government as a whole. The amounts to be allocated to the two halves of the Government would be the subject of annual settlement by the Executive Government and the question of new taxation was to be decided by the Governor and the ministers. These proposals have been severely criticised by the Government of India in their Despatch of the 5th March and they recommend a system of separate purse for the reserved and transferred departments. It is unfortunate that the Bill should have left this question open instead of rejecting the proposal of the Government of India and adhering to the scheme outlined in the Joint Report. The proposals of the Government of India have been condemned by the public in no uncertain voice throughout the country. . . . .

The separate purse system proposed by the Government of India will have the pernicious effect of dividing the house into two hostile camps each unmindful of the just claims of the other and anxious to aggrandise and benefit itself by extravagant expenditure. While the joint discussion and settlement of the budget by the entire government will have an educative effect in promoting a better understanding of the needs of all subjects by the different members of the Government and a spirit of compromise, the system proposed by the Government of India will have the deplorable effect of creating a feeling of antagonism between the interests of the reserved and transferred departments and will imperil the success of the Reform Scheme. The official half of the Government will be under a constant temptation to work up their expenditure to the full limits of their available resources even though the needs of their subjects do not expand at anything like the same rate as those of the transferred subjects. Far from being an evil the annual settlement of the allocation will have the advantage of apportioning the supply of funds to the precise needs of the year instead of allowing funds to be provided for a series of years either in excess of or below the actual wants. If the funds provided are in excess there will be a temptation to dissipate them to avoid their falling into the hands of the other half of the government. If the funds are deficient, either the needs of the departments affected must be starved or recourse must be had for fresh taxation. The advantage claimed on behalf of the separate purse system that it offers an incentive to either half of the government to develop its own resources, carries its own condemnation. It is obvious that the development contemplated is mainly by means of taxation. The proposal simply means that the people will be liable to be fleeced by two rival sets of tax gatherers each anxious to swell its own coffers. The proposal will defeat the third principle enunciated by the Government of India that during the transitional period the people must be protected from unjustifiable finance burdens. As observed by the Government of India themselves the success of any scheme of reform must depend upon the spirit in which it is worked by the persons who participate in the work of government. We have no right to assume that they will be unreasonable and introduce safeguards for all conceivable dead-locks on this assumption. . . . . .

Resumption of Transferred Subjects.

In paragraph 102 of their despatch of the 5th March, the Government of India suggest, that in the event of the ministers not yielding to the wishes of the Governor and the legislature supporting the ministers, the Governor must be empowered to assume the control of the administration of the transferred subjects concerned, until the causes of difference disappear. They propose also that if he is unable to find a complaisant minister within six months, he should move the Secretary of State for revoking the transfer of the portfolio. These proposals are of a highly retrograde character and it is not clear whether they are intended to be adopted or not in the Bill. Reference is made in the proviso to clause 1, sub-clause (2) to rules for the revocation of the transfer of any subject with the sanction of the Secretary of State in Council. The existence of such powers of resumption and revocation of transfer will be a Damocles' sword over the heads of ministers to enforce compliance with the wishes of the official half of the Government and will be detrimental to the growth of a sense of responsibility in the ministers and the legislature. The remedy proposed in paragraph 260 of the Joint Report that the question of further transfer or revocation of transfer should be considered at the end of 5 years and again at the time of the periodic commissions, is an ample safeguard against maladministration. . . .

Governor-General's Executive Council.

It is necessary that the Indian element in the Executive Council should be equal in number to the official and European element and this equality should be secured, either by amending clause 21 or by some pledge by the Secretary of State. The tendency of the head of the Government is often to side with the majority. If the Indian element in the Council is in a minority, there is a danger of their views not obtaining sufficient consideration. If the Indian and the non-Indian element are equally balanced, the Governor-General would be obliged to give his mind to the question and feel the responsibility of an arbiter between the divergent views of the Indian and non-Indian elements. In this view, the addition of one more Indian member in the Executive Council proposed by the Government of India will be insufficient and unsatisfactory.

Transfer of Responsibility by the Government.

It is to be regretted that no attempt has been made to transfer any part of the administration in the Government of India to popular control. The subjects of Education and Sanitation, of Commerce and Industries would be eminently suitable for such transfer, as being the subjects which stand most in need of development under the quickening impulse of popular control. In any event, the subjects of the Customs and Tariffs at least should be left to the control of the Legislative Assembly, as a step towards the fiscal autonomy, which it is necessary that India should enjoy in the same manner as the self-governing Dominions of His Majesty. [*Condensed considerably from a lengthy Memorandum on the Bill prepared for the Madras Liberal League.*]

An Indian Publicist.

Restrictions on the Indian Legislatures.

Turn now to some of the important details of the Bill which seem open to exception. Clause 30 forbids the Legislatures in India to repeal or alter any rules under the Act. It is an extraordinary provision. The Secretary of State in Council makes some rules, the Governor-General in Council makes others. The arrangement is proper to start with. But is it proper to withhold from autonomous Legislatures the power to amend them subsequently? Natural growth is impossible so long as external authority is requisite, not to sanction, but even to initiate change. For every small improvement in the rules which experience may prove desirable, it is highly inconvenient to wait till it should please the Secretary of State in Council or the Governor-General in Council to effect it. Of course no one will dispute that in respect of some rules of great constitutional importance the sanction of superior authority must be made a condition precedent. To separate that category is easy. For the rest the Legislatures concerned should be endowed with competency subject, if necessary, to the sanction of the Governor or the Governor-General, as the case may be, but not to that of the Governor in Council or the Governor-General in Council. When the Dominions got their start, some had power given them to incorporate territories and some to establish Upper Houses, when they thought fit. There is such a thing as excessive and intolerable rigidity. We do not overlook clause 9 (7); but it relates only to standing orders governing the procedure of the Councils.

Power of the Purse.

The next great objection is to the restriction on the power of the purse. To an Englishman unacquainted with Indian affairs the first idea of a constitution would be the right of the people to control taxation and expenditure. In the Colonies representative institutions had the power of the purse before the beginnings of responsible government were thought of. It is quite time India had this rudimentary right of a free people. Diarchy involves a certain definite limitation on the power of the purse. The Joint Report of Lord Chelmsford and Mr. Montagu hit the limitation with a fair degree of accuracy. The Bill, however, in sub-clause (2) (*b*) of Clause 9, proposes to give the Governor power to authorise expenditure not allowed by the Legislative Council if he considers it necessary "for the carrying on of any department." This power extends to the transferred functions as well as the reserved. We cannot reconcile ourselves to such a drastic limitation of the financial control of the Legislature over the departments entrusted expressly to it. Mistakes as regards the transferred subjects the elected leaders of the people must have the liberty to make and rectify. Where they are so serious as to interfere with "the safety or tranquillity" of provinces they will fall with the reserved group, and if they do not, the sub-clause in question contains a sufficient safeguard.

Sub-clause (2) (c) of the same clause excludes an undefined portion of the expenditure from the purview of the Council. The contribution to the Central Government and the interest on public debt will be the most important items in this category. But it is also usual to make permanent provision, not dependent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on the annual vote of the Legislature, for the salaries of high officers appointed directly by the Crown. These would be the head of the Government, the Auditor-General, the Executive Councillors, and the High Court Judges. We trust the list will not be allowed to go further in the rules that may be made for the purpose under this Bill.

Governor's Power to block Bills.

Sub-clause (5) invests the Governor with power to block the progress of a Bill, clause, or amendment after certifying that it affects the interests of a specified reserved subject. Now the power to block legislation is new to the Indian constitution. The non-official majority may, under existing rules, refuse leave to introduce a Bill; but if that majority is agreeable and lets a Bill go through, the head of the Government can only refuse his assent to it at the end. Why is it necessary to invent this extraordinary power to interfere with the Legislature? Let it be noted that this power is not applicable where the legislation proposed concerns exclusively a reserved subject or a transferred subject; it is to be exercised only in the case of "mixed" subjects. The anomaly cannot be justified except on ingenious grounds.

Salary and Status of the Minister.

Exception has been taken by every section of Indian opinion to the suggestion that the salary of the Minister should be determined in future by the Governor or other authority. In fact Indians are extremely sensitive on the question of the comparative status of the Executive Councillor and the Minister. If anything, the advantage and precedence should belong, in their judgment, to the latter. It is almost unpardonable ignorance or disregard of the feeling of those directly concerned to persist in the discrimination, see 3 (1). We fail to see any object in the provision. Indians will watch with the utmost jealousy any inequalities or disparities that may lie in the instrument of instructions to Governors. Let us hope that the draftsman of the instrument will remember this fact when drawing it up.

The Central Government.

In the forefront of our observations on the Government of India part of the Bill must be placed the view that some of its functions must be "transferred" to the legislature and entrusted to a Minister responsible to it. On this point all the deputations from India are agreed. They are convinced that it does not violate the Declaration of August, 1917, in the letter or in the spirit, but goes against one of the limitations laid down by the authors of the Joint Report without adequate grounds. We have not the space required for a full treatment of the subject; it has been argued at length in the Indian Press. It is complained that the whole matter of the popularisation of the Central Government is not only put off indefinitely but evaded even in the statement of the scope of the periodical commission for recommending further steps. The Bill does not meet this complaint at all, see 28 (2). The language used here and in 28 (2) is by no means satisfactory: responsible government is spoken of only in connexion with the provinces, not in connexion with the Centra Government. The point must be cleared up beyond doubt or controversy.

Indians in the Executive Council.

There is something in the argument that racial distinctions should not be made, if they could be avoided, in the terms of a statute. The one-half proportion, unanimously desired by the progressive Indian opinion, in the Executive Council of the Viceroy, will therefore have to be pressed when the rules come to be considered.

Governor-General's Power of Certification.

Strong exception must be taken to the very wide language of clause 20 (*a*). It deals with the power of Governor-General-in-Council to take away certain clauses of legislation from the scope of the Legislative Assembly and by certificate bring them within the sole jurisdiction of the Council of State. A law required for the safety and tranquillity of the country or any part thereof is fit matter for such treatment. But why should the same treatment be allowed to every law which may be essential "for the interests of British India or any part thereof"? We can hardly conceive of a law which will not come within the description. The Legislative Assembly could be made to die of inanition, if the Governor-General were so minded. The Joint Report used the words "good government," and people in India criticised even these as too comprehensive. What could have induced the draftsman to adopt the indefensibly wide language of the Bill?

As regards emergency legislation, for which the same certification procedure is provided in 20 (*a*), let it be remembered that the Governor-General now has power to make ordinances which are valid for six months. The proposed Council of State legislation is therefore superfluous. If it be thought that the interests of the people would be better safeguarded by having emergency legislation discussed in the Council of State, which includes a certain number of elected representatives, than by having it passed as an ordinance by the Governor-General—a position which certainly is correct—then the ordinance power must be abolished. Where the emergency is of a nature that touches peace and tranquillity, the case is covered by the earlier part of the clause. Where the matter involved is public money or a taxation proposal, it is proper to let the Executive take action first and then seek the ratification, in due course, of the Legislature. We are unable for this reason to support the provision in question for emergency legislation. On the whole, then, it seems sufficient to restrict the Governor-General's power of certification to cases where the peace and tranquillity of British India or of any part thereof are involved.

The Services.

The next point is the question of the Indian Civil Service and other Imperial services. The rule-making power, it is proposed in 24 (2), may be transferred to the Governments in India by the Secretary of State within prescribed limits. This is satisfactory, so far as it goes. We trust, however, the aim will be to leave the Governments in India, acting with their legislatures, to regulate their own services. It is an anomaly that a great Government should be compelled to conduct its administration with the aid of services regulated and recruited and safeguarded by outside authority. Such a position is incompatible with the very idea of authority. The inheritance of the early days of the Company, however, cannot be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

worked off in a day. It is noteworthy that the subject of pensions is dealt with by itself in 24 (3), that the rules regarding them can be varied or added to only by the Secretary of State, and that it is not proposed to authorise him to devolve any part of this power on the Governor-General in Council. It is not easy to explain this discrimination; under safeguards, which could be provided without much ingenuity, the rules as to pensions should likewise be made alterable by the India Government.

Public Service Commission.

The purposes for which a Public Service Commission is to be appointed permanently by clause 26 are not clearly stated. In para 55 of the Despatch of the Government of India dated March 5, one of the purposes is stated to be the protection of the Service from political influence and the difficulties arising from Ministers' control. We realise the need and note with satisfaction that the Commissioners will be appointed and controlled by the Secretary of State. As in the United Kingdom, these Public Service Commissioners should conduct public examinations of two or three grades and regulate admission to employment under Government without the suspicion of partiality or bias. It is to be hoped that this consummation is definitely contemplated. Otherwise jobbery might establish itself firmly and bring inefficiency and corruption in its train. No greater calamity could be imagined.—*India*

Mrs Annie Besant.

We insist on the necessity for some measure of responsibility being introduced into the Central Government as indeed is implied in the claim for fiscal autonomy. Without this the announcement of August 20, 1917, is truncated, for provincial responsibility even if complete, is not secure with autocracy in the centre; all our worst evils, coercive legislation, arbitrary interference with liberty, supersession of Indian interests, injustice in customs, excise duties, and the like, come wholly from the Central Government, and as the Hon. Mr. Srinivasa Shastri pointed out, autocracy there renders the liberties granted in the provinces of small avail.

Personally, I believe that Mr. Montagu sees the great ideal which has fired the heart of many of us, the commonwealth of free nations, the greatest servant of humanity. I believe that he is honestly striving to open the way to that freedom of India which shall be the glory of unborn generations, and the glory also of the England whom we have loved as the pioneer of liberty, who has placed in his willing hand the appropriate and splendid task of leading a mighty nation out of the house of bondage into the Promised Land.—"*Daily Chronicle.*"

THE SOUTH AFRICAN INDIANS

BY

MR. G. A. NATESAN

A CABLE from South Africa brings the news that the British Indians in the Transvaal are taking the vow of passive resistance as a protest against the recent Asiatic Land and Trading Amendment Bill reported to have been passed by the Parliament of the Union of South Africa. This measure contravenes the Smuts-Gandhi agreement of 1914 and is an iniquitous attempt to deprive Indians lawfully resident there, of their vested interests. In the words of Mr. Gandhi, it "virtually deprives the Indians of the Transvaal from holding fixed property even as share-holders of companies or as mortgagees. This they have hitherto successfully and legally done. It further deprives them of the right of obtaining new trade licences throughout the Transvaal. This means that the Indian settlers, if they are not now efficiently protected, will be reduced to the status of menial servants no matter what their capacity might be. It was bad enough to restrict so as almost to prohibit fresh immigrants; it is intolerable to confiscate the economic and natural rights of legally admitted immigrants and their descendents." When an attempt is thus made to confiscate their rights, it is by no means surprising that the Transvaal Indians should resort to passive resistance. We trust the Imperial Government will take early steps to prevent the legislation from taking effect and thus avert an agitation which is bound to grow more and more not only among the Indian residents of South Africa but in their mother country as well. It is the good fortune of the South African Indians that Mr. Gandhi is now in India to advocate their cause and that he has been able to enlist the sympathy of H. E. the Viceroy to obtain for them the elementary rights of citizenship and the barest justice which is denied to them purely on account of racial and economic jealousy. It is a matter for satisfaction that the campaign against Asiatics in the Transvaal is confined mainly to the inferior white traders while some of the better class of their community recognise the justice of the claims of the Indians. The attitude of hostility to the Indian settlers in the Transvaal on the part of some of the white population, if not checked at the outset, will gravely imperil the growth of the true spirit of comradeship which has been promoted by the war that has just closed.

The Menace of "Welfare Work" in Industry.

BY

MR. G. BROMLEY OXNAM.

THERE is a distinct social menace in the welfare work now carried on by large industrial establishments in India, judging from the experience of similar welfare work and its results in America. The writer has had occasion during the last six months to visit many large industrial concerns in India and to discuss social questions with a number of progressive leaders. Welfare work has been pointed to with pride by industrial managers, and seems to have the welcome sanction of social students. It may be well therefore to consider some of the reasons why American labour is fundamentally opposed to welfare work as such.

It is quite true that many socially-minded employers and factory owners are sincere in their attempt to help the worker. It is likewise true that a larger percentage of owners introduce welfare work because it pays, and not a few "far-sighted" managers look upon it as "strike insurance." Schools, playgrounds, baths, hospitals, libraries, entertainments, and the like, are of course valuable to the employee, and at their inception no doubt are of real social worth. But welfare work must not be judged by the results achieved in a year. It must be judged by its results over a term of year. Such results are available from American experience.

First, *welfare work is a menace because it tends to blind our eyes to the basic fact that it is democracy and justice that are needed in industry, and not charity.* The very fact that welfare work exists is a virtual acknowledgment of the indictment that the industrial order as it stands denies the worker certain privileges in life that are rightfully his. The owner, however, does not see this. He feels that he is giving the employee something, and that it is his privilege to revoke the gifts on certain conditions. But education, recreation, health, freedom, justice, and much more, are fundamental rights of men, and giving or refusing them ought not to be left to the discretion of an employer. Furthermore, it is said that the employer pays for welfare work. Actually, the employee pays. He has largely produced the wealth all along, but by some inexplicable method he receives but a small portion of the wealth he produces in the form of wages, the employer of course fixing the wage. Since then the worker has certain rights, which the very fact of welfare work proves he has been denied, since he pays for the privileges handed down, it is unwise socially to speak of welfare work as beneficience. It is a left-handed acknowledgment of rights denied to workmen, at once a social menace and a denial of democracy, confusing the issue which is in reality a question of justice or injustice.

Second, *welfare work is a menace because it tends to become a weapon in the hands of the employers.* In America large employers bought great tracts of land and erected model dwellings. The schemes were lauded to the skies in the capitalist press. But what actually happened was this: A little later when the workers saw profits ascending at a dizzy rate and wages remaining practically stationary with food prices soaring, they decided to organize and strike for higher wages. Upon hearing of their organization, the owners ordered every family off the company property and out of the houses. Married men hesitated before they would endanger their families, the attempt to strike was thwarted, and the men were forced to return to the same unfair conditions. The much advocated model dwelling for industrial workers in India, may become a real weapon to employers when India steps into the next stage of industrial development, namely that of collective bargaining.

Third, *it is a menace because it tends to retard the organization of the workers,* the only sure method of securing permanent justice in our present economic order. In practically every concern where the writer found welfare work in India, there was found a very firm refusal on the part of the employer to allow the employee to organize. The employer seemed to feel that welfare work would keep the worker a docile being, easily controlled. This control is necessary to keep the worker from gaining power to successfully demand a larger share of the wealth he actually produces. While visiting one of the outstanding welfare factories of India, it was pointed out that welfare directors were not allowed to talk over matters of organization with the workers, that the employees were not allowed to assemble together, that wages were little higher than the average, and that twelve hours was the regular day's work. If welfare work is too often "strike insurance," as a leading Indian social worker who is in close touch with it, declared it was, it most certainly is a menace to industrial development, if we think of industrial

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

development in terms of democracy and life, instead of in terms of feudalism and profit.

Fourth, *welfare work is a menace because of the fact that certain privileges given the workers by private corporations has a tendency to slow up the demand for the community provision of such privileges.* "Why," say the tax-payers, "do we need a community playground when the corporation has one?" But these are community duties, and should be carried on by the people, with the final word as to their use and purpose in the hands of the people. In America, some corporations went so far as to build churches for their employees and employed the preacher. He was warned not to preach anything that would stir up the workers, and in some cases, when this warning was ignored, the pastor found himself looking for another church. Community needs must be met by the community under a real social control. Industrial despotism is as bad as political despotism.

Fifth, *welfare work has proven a weapon to slow up the demand for industrial democracy, even in its simpler forms of collective bargaining.* Political democracy has won its battle in the minds of thinking men. Government must be of the people, by the people, and for the people. Industrial democracy, wherein industry shall be of the people, by the people, and for the people, is on the horizon. It is a travesty in these days of democratic preaching to think of actual needs being handed down by private corporations with the power in hand to revoke them if they so desire. All the advantages are held up before the worker and he is told that if he strikes or expresses himself as a component and essential factor in the production of wealth, he will lose his pension, his home, his child's education, his job. Why has American labour so strongly opposed welfare work? Because it has proven a menace to the development of the labour movement. Labour demands its fair share of the product of industry under the present system, and states it will do its welfare work in the home or pay taxes and have the community do it. When industrial democracy arrives, the very phrase "welfare work" will be a misnomer, since it is a frank violation of the fundamental principles of democracy, for its posits on the one hand a benevolent overlord and on the other a recipient serf.

Of course it may be urged that communities in India cannot take over these duties at present. This may or may not be true. But in choosing welfare work as a real advance in the interests of the industrial worker, it may prove worth while to note the experience of America. The West has made many fatal errors in its industrial development. It does not desire to pass on its mistakes, but rather to share its experience so that the emerging New India may be a land where the principles of justice, of brotherhood and love are pregnant forces in the industrial, political and social life.

LORD BRYCE ON THE WAR AND AFTER.

BY MR. S. RATNASWAMI M.A.,
Professor of History, Pachiappa's College, Madras.

LORD BRYCE is one of the small band of Victorian statesmen still left to us. He is one of the few living representatives of that race of scholar-statesmen which flourished in the Victorian era but has become almost extinct now. In this respect Lord Morley and Lord Bryce, colleagues in more than one Cabinet stand together. But unlike Lord Morley, intellectual and Quaker though he is, Lord Bryce took the national side at the moment of the supreme crisis which has settled the political fate of the "bold Cobdenite." Having taken the national attitude in the war, Lord Bryce, occupying no official position, has seen his influence grow. At home, no great Commission or Report during the war was authoritative without his name, and, abroad among neutrals his utterances on the war have been listened to with an attention which would have been denied to the official spokesmen of England. Hence this collection* of Lord Bryce's *Essays and Addresses in War Time* has a peculiar value and interest.

These Essays and Addresses are concerned with (1) the justification of England's position in the war (2) an analysis of German political philosophy (3) the bearings of the principle of nationality on the war and the problems after the war. Now, the causes that led England into the war form a more-than-twice-told tale. There is nothing new that we learn from Lord Bryce's statement. All the

* *Essays and Addresses in War Time* by James Bryce (Viscount Bryce), Macmillan & Co.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Essays dealing with this theme were written before the publication of Prince Lichnowsky's famous Memorandum. No statement against the German case could be more damning than that. But although there is nothing new, yet all of it is stated with such moderation, such a grip of the essential facts, natural to a historian who has also been an administrator, and with such a desire to be fair to the other side, that Lord Bryce's defence of England's policy must carry conviction even to the lazy cynic who thinks that the best way to decide between two parties in an issue is to decide against both.

In his analysis of the political theory and practice of the German state also Lord Bryce says only, albeit with his own distinctive *flair*, what has been said times without number during the war. But the curious thing about this English condemnation of the Prussian philosophy of the state is that it came a great deal too late. It was only when England was at war with Germany that English writers began to criticise and condemn Prussia and Trietschke. Till then they were the intellectual fashion in England, a fashion to which Lord Bryce also succumbed as in his references to modern Prussia in the "Holy Roman Empire." The German successes of 1870 made representative intellectuals like Morley and Meredith bow the knee to Baal. There was only one man in England before the war who believed that the Prussian danger "was the greatest danger that remained to be encountered by the Anglo Saxon race." But then Lord Acton was hardly a representative Englishman. However that may be, Lord Bryce's dispassionate condemnation of the German theory of the state is sufficient *lustrum* for the English admiration of Politics made in Germany which was so fashionable in the days before the war.

The Essay on the "Principle of Nationality" contains a clear account of the essential elements of nationality and ought to prove useful to those who wish to thread their way through the maze of questions that are clamouring for settlement. The break-down of the Central Empires has allowed a number of nations with a claim to statehood to spring up, of whom the man in the street had never heard, Croats, Slovaks, Slovenes, Letts, Lithuanians, Ruthenians and so forth. Lord Bryce recognises that the principle of nationality cannot be applied *ad libitum*. If every little people, whatever its political antecedents or aptitudes, is to be made into a state, then Europe would have its hand full—it would not only have to make national states, but it would have to keep them. But we do not find in the essay any recognition of the fact that in Bohemia, Hungary, and other non-German parts of the Central Empires there is a considerable German fringe, and that this German fringe constitutes a powerful element in any Hungarian or Czecho-Slav state that may be created, and that these German settlers monopolise the industry and commerce of these countries. The creation of an independent Hungary, Czecho Slavonia, Jugo-Slavia will not put a term to the problems of Central and Eastern Europe.

Lord Bryce as a Jurist and pacific statesman would like the coming of an era of perpetual and universal peace, and he entertained the idea of a "League of Nations to enforce Peace" even as early as the first months of the war. He bases his belief in the success of a scheme to enforce international peace on the case with which national peace or the King's peace as it is called in the British Empire is enforced. Just as "law and order have been established within every civilised country" so, he argues, ought law and order to be established between nations and states. It is astonishing how such a learned historian and practical statesman as Lord Bryce could have made use of this false analogy. Are nations as equal to each other as individuals in a state, do they share the same aspirations, benefit by the same policy, acknowledge the same culture and civilisation as do individuals in a state? Not till nations have been ground down to something like the position of Individuals in a state, can the analogy between nations and Individuals, between International Peace and National Peace be pressed with any profit to political thought. Lord Bryce however makes a good point in this essay when he acknowledges that "it is idle to construct a system of international law without Force behind it." And this Force he finds "in a Combination of Nations, a League for securing Peace, able to make its will to Peace prevail against the will to violence of bellicose nations." But who is to judge between the League of Peace and the bellicose nations? Or have the members of the League of Peace received a charter of perpetual grace which has washed them clean of the original sin of nations?

These questions are the best kind of compliment one can pay to Lord Bryce's writings. This book like his other works testifies to his great historical knowledge, his political sobriety and that *justesse* of outlook which is the finest flower of scholarship.

SANKAR'S VEDANTA

BY

LALA KANNOOMAL, M.A.

IT may be said without exaggeration that Sankar's philosophy has been misunderstood to a great extent—more especially by the English educated men. The fault does not lie with Sankar but with the readers who have not taken pains enough to study his philosophy in the original. Sankar's vedanta is an idealism in a sense not understood by Western philosophy. The idealistic philosophy of the West considers mind to be a reality and the world outside to be a projection of the mind. The contrast there is between the mind and the world. Having taken mind to be a reality, Western philosophy strives to prove that the world outside is only its projection, and goes to the length of asserting that there is no objective world. The mountains, the rivers, the land sceneries, the forests, the palaces and the thousand and one phenomena that confront us in the outside world, dissolve when philosophically examined, into a multitude of ideas, whose abiding place is the mind. Berkley says there is no heat in the fire but in the mind within us; there is no smell, there is no taste, there is no sound, there is no visible object outside us. The existence of the world consists in the perceptions that reside in our mind. Hume goes even a step higher and does not believe in the doctrine of necessity—the law of causation. All the primary and secondary qualities of matter have been placed into the mind, and what appears to an ordinary man, a physical object has been reduced to a mere illusion—a figment of imagination, in which only the uninitiated believe.

English educated men have interpreted Sankar's idealism in this light. The doctrine of Maya is an ample *raison-de-tre* for this interpretation. They try to show that Sankar considers this world to be a mere illusion—as having no existence outside the mind. They seem to understand that just as the ultra-idealist of the West considers the objective world to be a mere projection of the mind, having no reality in itself, so Sanker also assigns no reality *i.e.*, the objective existence to the phenomena of the world. But this is not Sankar's point of view. He believes in the outside existence of things as contrasted with the ideas of the mind, and in fact, advances a series of arguments in favour of the realistic world. His commentary on the second chapter of the Vedant Shutras may be referred to in this connection. It was the Buddhistic philosophers who did not believe in the outside world just like Western idealistic philosophers. They were called Vyganvadees. Sankar took up cudgels against them and knocked down their position with the sledge hammer blows of his arguments. Although Sankar takes up a bold position in favour of the realistic world, he is not a realistic philosopher in the sense in which these words are generally understood. He is the idealistic of the ultra-idealistic philosophers. His idealism does not recognise mind to be real in opposition to the external world. To him the whole external and internal world is unreal. The only reality which Sankar believes in, a is Atma—the under-lying principle of all consciousness, existence and bliss. Every thing else is unreal. The whole psychological apparatus is unreal. According to the Hindu philosophy, the psychological apparatus consist of Buddhi—the principle of understanding, manasa—the principle of all perception, memory etc., and Jnan Indryas—the organs of sense, Karma Indryas—the organs of action and the five-fold Pranas—the principle of breathing. All these pyschological factors constitute what is called in Vedanta, Suksham Sharir—the subtle body which, in contact with the Atma which is passive, is man's soul or ego for all practical purposes. It is this soul—the Jiva which migrates from birth to birth and assumes responsibility for all moral actions. Sankar does not recognize even this Jiva, to be real as compared with the real Atma that is eternally behind it.

Sankar's idealism begins with this subtlest Jiva and ends with the grossest particle of matter. To him all these internal and external phenomena are unreal, but his unreality is not an illusion. It means phenomenal existence in opposition to the real existence which he assigns only to the Atma.

Just as mind and its phenomena exist in their own unreality, so do the objective world and its multifarious appearances. Both these unrealities are common only in so far as they are not of the nature of the reality of the Atma but are different from each other in as much as they are two separate existences. Western idealism asserts that the objective world is unreal and the subjective world is real. Sankar says both the worlds are unreal—only the Atma is real. Western idealism does not recognise the separate existence of the objective world—it having arisen out of the mind, Sankar recognizes its separate existence opposed to the existence of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

subjective world. From Sankar's point of view, the unreality is of two kinds—the unreality of the mind and the unreality of the objective world. Both have their separate existences which do not dissolve into one. Sankar calls the unreality of the mind and the world by the name of Maya, which is indescribable, being both existence and non-existence—existence from the point of view of the worldly phenomena which exist to all practical purposes, and non-existence from the stand-point of the Atma which really exists impervious to all changes to which the external and internal phenomena are subject. As far as the sweep of the chain of cause and effect goes there is Maya—that is phenomenal reality, which, if looked at from the point of view of the eternal and absolute reality of the Atma, is an illusion—a figment of the imagination, but looked at from the worldly point of view, is solid reality not to be brushed aside. People have asked for the cause of the Maya. The answer has always been ambiguous, simply for the reason that all causes are included in the Maya. The law of causation does not go beyond the periphery of the Maya and to ask for the origin of the Maya is to beg the question. Such a question is absurd.

Another question is whether the Maya is eternal. The answer is that the Maya is the world, and is eternal in the same sense as the world is. It has also been questioned that since the existence of the Maya has been recognized by the Vedant, is it not relevant to say that instead of there being only one—Reality as the Vedant declare there are two realities—one the Atma which is als called Brahm, and the other, the Maya which i real for all practical purposes. The answer to this question is that there is only one Reality, the absolute Reality which is Brahm, the other is unreality not reality; so there are not two entities, but only One, and that One is Brahm or Atma.

Sankar's Brahm or Atma is the ultimate principle of existence, consciousness and bliss which pervades the whole creation and without which there is no creation. While it is not of the form of any created object, it is the main basis on which the existence of every created object depends. It is the fount of light, the source of knowledge, the origin of consciousness, the Matrix of all existence, the fountain head of all happiness. There is nothing that it is not; there is nothing that it is. It is beyond all expression, it is beyond all thinking, it is beyond all that appears. Bram is the *neplusultra* of all knowledge, the last rockbed of existence, the infinite fount of joy. While severely one it appears as manifold as the creation. While really absolute it appears split up into as varied objects as the universe contains. There is nothing higher than it; there is nothing nobler than it; there is nothing more real than it. The aim of the Vedant philosophy is not to reach but to become Brahm, by throwing off veils of the nescience that cover it.

EDUCATION IN INDIA

BY

MR. P. A. SUBRAHMANIA IYER, B.A., L.T.

ONE rises from a perusal of Mr. Sharp's reports on Education in India with mingled feelings. Statistics go to show, what would perhaps strike one as very satisfactory at first sight, that during the years 1912—18 the expenditure on education has increased by many lakhs of rupees, the number of schools by thousands and the number of scholars by the million, and yet the distressing fact remains that even now only 3·22 per cent. of the population is under instruction as against 17 38 per cent. in Scotland and 16 52 per cent. in England and Wales. One cannot hide from oneself the depressing thought that, things going on as at present, there is perhaps no chance in the near or distant future of a literate India in the sense of a literate America or Europe. The very large mass of children yet to be brought into schools, the huge sums of money that will have to be spent and the apparent disinclination of the Government to launch on any bold measures of educational reform—these tend to confirm our fears. One looks in vain in the reports for any helpful suggestion as to how this serious problem has to be faced and solved.

Mr. Sharp draws, of course, pointed reference to the top-heaviness of Indian education by comparing the percentage of pupils and students in Secondary Schools and Colleges in this country to the total population with the corresponding percentages in other important countries of the world and comes to the conclusion that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"while the lower classes in India are largely illiterate, the middle class is, at least numerically, educated to a pitch equal to that attained in countries whose Social and economic condition is more highly developed..... .....The middle class find that higher education pays and loudly make known their wants. The lower classes though no longer hostile are lukewarm and seldom calmour for a type of instruction which brings no immediate and tangible reward."

This statement would imply that the middle classes have not been particularly anxious to advance the interests of mass education and that the lower classes do not care much for it. The fact, however, is that private agencies in India, drawn mostly from the middle class, have done good work in the matter of elementary education, for, according to Mr. Sharp himself, out of a total of 1,24,000 primary Schools in this country as many as 86,900 are under private management and 14,000 of these receive no aid whatever from Government. Again, if the lower classes do not clamour for education, it only shows that they are human and are in no way different from, or superior to, the corresponding classes in other countries of the world. The history of education in all the civilized countries of the world points to the apathy and indifference of the masses to all popular education, and if they realize the good of it at all, it is only after they have been forced through it at first. Even now in spite of so many years of universal education in England and in spite also of the demands of the representatives of labour that the age of compulsion must be raised, do we not hear of large numbers of the labouring classes complaining that the new Education Act with all its guarantees against financial loss to the families of the adolescent acts as a great hardship and inflicts a heavy strain on the parent by depriving him of the wages of his adolescent children?

It is indeed high time that the Government did something very substantial to remove the charge so often levelled against them of want of interest in the matter of the general enlightenment of the masses in this country. When a responsible member of Government like Sir Sankaran Nair who must be trusted carefully to weigh his words before giving public expression to them puts it on record that

'it is the universal belief, and there is little doubt that facts unfortunately tend to support it, that Primary English education for the masses and higher education for the middle classes are discouraged for political reasons,'

the Government must rub their eyes and look about themselves indeed! The unfortunate thing is that the Government themselves have to admit the indictment although they may not be willing to admit the validity of the grounds on which such indictment is based. The Resolution of the Government of India of 1913 'indicated as an aim the *doubling* of the number of Primary Schools and pupils in the not distant future,' but such an advance has not yet been made.

"The number of Children undergoing elementary instruction is now 6,748,101, which is equivalent to 2·8 per cent. of the population, being 4·5 per cent. of the male and ·95 per cent. of the female population. Discouraging as these figures are, they are still more so when it is remembered that 90 per cent. of the children are congregated in the lower primary classes." [Sharp.] "Higher education in India runs in a literary groove and the development of special Vocational Schools is far behind-hand." [Sharp.] "The greatest deterrant (to the expansion of industrial education) is the slow growth of industries and the shyness of capital in supporting them. Were industrial employment assured, students would readily come forward and technological institutions would fill and multiply." [Sharp.] There has been 'no regular financial programme for educational expenditure' in the past. [Sharp's Quinquennial report.—Page 16.)

The critic naturally asks, why all this? What has been Amiss that the Government should have blundered so? Surely, it is not for want of experience in tackling educational problems such as those they are confronted with in this country. The course of elementary education in England has run on much the same lines as here. Neither can it be said that India is a country with no educational traditions of its own where it is difficult to get education spread. If within less than a generation the backward Philippinos have been made literate, surely education in India cannot be an insuperable problem except perhaps for the will to action on the part of the Government. Nor can it be laid at the door of the people that they are unwilling to co-operate with the Government in the matter, for according to the latest returns, out of a total expenditure of Rs. 1,128 lakhs on education in India private funds contributed. 514 lakhs or 45·5 per cent., whereas in 1915 out of a total expenditure of 7,850 lakhs of dollars, private funds contributed only 375 lakhs or 4·8 per cent.

It is indeed pathetic—the confession of the Government of India that their educational policy 'has at times been lacking in foresight and perspective,' and that they 'admit the errors of the past, and ask for time to repair them.' One would have thought under such circumstances they would be willing to transfer the whole of education to the charge of Indian Ministers in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the new era to be inaugurated and leave *to them* the task of repairing the admitted errors of the past. This indeed seems to have been the view urged by the committee that considered the question in 1917, from whose report the Government of India quote the following:

"At first sight this abandonment of control, by the central or provincial government of a department so vitally fundamental to a National Scheme of education, would appear to be fraught with grave dangers. Nor are all these wholly illusory. It is quite possible, even probable, that at first efficiency will be sacsificed to other considerations and that the popularly elected body will vote money for the less essential objects and neglect the provision for training and inspection. But unless an opportunity for mistakes is given, nothing will be learned. Experience will, we believe beget greater wisdom, and that in no long time once it is realized that education is the business of the people, then the people will see to it that the elected representatives procure them efficient teachers in their Schools. Again it is only thus that education can become really national, and if the demand arises, as we believe it will arise, an elected Council of this kind will be able to raise money for education from sources that never could be tapped by a Government of the existing official type."

And yet the Government of India think there is a 'compelling case for retaining Secondary and University education in the hands of the official and more experienced half of the provincial governments.' And if one looks into their reasons for the recommendations, one has to confess that at the back of their mind there lurks the fear that if transferred to the Ministers education may spread in a manner disconcerting to their views of guardianship and rule. The only answer to people holding such a fear is that contained in the words of a Governor-General of India in the middle of the 19th Century:

"Similar objections have been urged against our attempting to promote the education of our native subjects, but how unworthy it would be of a liberal Government to give weight to such objections! . . . . . All that rulers can do is to merit dominion by promoting the happiness of those under them. If we perform our duty in this respect, the gratitude of India and the admiration of the world will accompany our name through all ages, whatever may be the revolutions of futurity."

Dr. Slater on "South Indian Villages"*

BY

MR. K. M. PANIKKAR, B.A., (OXON).

IT was one of the standing complaints of Indian educationists that subjects which had purely an Indian interest, however vital for the development of Indian Nationality and the progress of Indian culture, find no adequate place in the caricula of our universities. Till very recently this was undoubtedly true. Indian history was a secondary subject and no proper facilities existed anywhere in India for an intensive study of it. Indian economics were *tabu* as far as the University authorities were concerned and they even went to the extent of forcing down our throats the absolutely inapplicable principles of a system of national economics which the peculiar conditions of England had given rise to. The university authorities seemed to have forgotten the very existence of economic phenomena in India, apart of course from the principles of Free trade, imperial preference, excise duty and the rest.

With the growth of Indian influence in the Universities all these have changed and new tendencies have asserted themselves separate chairs for Indian economics have been established and students have been encouraged to study economic principles in relation to the main facts around them. The result has been that during the last few years we have an increasing mass of accurate information about the economic conditions of rural India. Such a collection of statistics and information is absolutely invaluable both for a proper understanding of Indian life and for the gradual development of a school of scientific Indian economics. Real India is rural India and therefore it is in relation to agricultural conditions that we in India have to study economics.

The essential preliminary to the establishment of a proper system of national economics for India is the scientific collection of facts with regard to the life land and labour of the people who live in the non-urban areas. Without a vast amount of authenticated facts on this matter with regard to every part of India, nothing in the nature of an Indian school of economics is possible. Thus the first stages of Indian activity in economic study is bound to be an intensive survey of local facts, in fact a fragmentation of the main

* *Some South Indian Villages* By Dr. Gilbert Slater Prof. of Economics, Madras University; Published by the Oxford University Press 1918.

Digitized by Arya Samaj Foundation Chennai and eGangotri

field of economics. This principle has been well recognised of late in India and the last two years have seen such notable contributions as Dr. Harold to Otauns's "Land and Labour in a Deccan village" Juck's "Economic Life of a Bengal District," Prof. Mukherjea's "Foundation of Indian economics" and more important than these to us in Southern India Dr. Gilbert Slater's book on "Some South Indian Villages."

The work under review is a collection of essays by selected students on the economic life of their native villages. The essays are written after a pattern supplied by Dr. Slater in which sufficient care is taken to bring out the main facts. For this purpose he prepared a question at once elaborate and comprehensive dealing with all the phases of the economic life of the village. This gives the work a certain uniformity and arrangement which are most useful for purposes of reference. In a work like this meant as ground work for further study, arrangement of facts is almost everything. One who is for instance studying the system of wages in South India has now only to turn to the sections dealing with it in these Essays, and has not got to wade through the whole book before they come across their necessary bits of information. We congratulate Dr. Slater on the plan and arrangement of the work.

It is when we come to the conclusions drawn by Dr. Slater that we feel bound to dissent. Dr. Slater shows a fatal facility to draw conclusions based on insufficient grounds. Thus he asserts on the basis of his experience of a few villages that Indian labour is extraordinarily inefficient, and estimates that one day's work by a British agricultural labour is roughly equal to a week's work by an Indian ryot (P. 17). We may be permitted to observe that Dr. Slater's experience is too slight and the bases of his observation too meagre to justify any such wild assertion. Dr. Slater may be a thoroughly sound authority on English agricultural economics and he may even be credited with some knowledge inevitably superficial of the working of some South Indian Villages. To make such a wild and sweeping assertion as that a day's work by a British agricultural labourer is equal to a week's work by an Indian ryot without in any way indicating the grounds on which he takes his stand or the process of thought by which he came by that conclusion, is only to take away from such a book as the one under Review its essentially scientific character and give to it the appearance of a prejudiced Anglo-Indian production.

But after all to the really scientific students such rash statements, which are by no means rare either in the introduction or in the conclusion do not count for much. We are not concerned as to what Dr. Slater thinks or what opinion he holds of Indian labour on Indian Village. The value of the book to the student lies in the fact that in these essays we have for the first time the true picture of South Indian Villages set in correct economic perspective. We may not agree with Dr. Slater either that "low wages, low efficiency and high abstinence form the ground plan of the pattern" or that "social and religious conditions and customs contribute to such a state." But the facts of economic life are there reproduced with accuracy and colouring and the intelligent reader need not necessarily take Dr. Slater either as a guide or as an interpreter.

Sensitive Plants.

"Sir Jagadis Bose, of the Presidency College, Calcutta, announces that he has discovered that plants receive and respond to the long ether waves used in wireless signalling."—(*Reuter.*)

The lilies in the garden,
  The daisies in the corn.
They know all men's secrets
  As soon as they are born.
If you would learn the history
  Of the European Powers,
Don't go to the newspapers.
  Go to the flowers.

The Rose has sent an answer
  To many an S. O. S.;
The Olive got the Peace-news
  An age before the Press;
The Cactus knew the temper
  Of the Great Four in a week;
And the private views of Parliament
  Filter through the Leek.

The lilies in the garden,
  The daisies in the corn.
They knew all men's secrets
  Before the men were born
They didn't come through wireless,
  But through still stranger powers:
The universal secrets
  In the keeping of the flowers.

Mr. Montagu on the Government of India Bill

THE Rt. Hon. Mr. E. S. Montagu, Secretary of State for India, in moving the Second Reading of the Government of India Bill in the House of Commons on the 5th June, said :—

I beg to move :—

"That the Bill be now read a second time."

The House having now somewhat approximated, but by no means reached its ordinary aspect on Indian Debates, I rise to discharge the highly important task, a task of which I fully realise the responsibility, of asking this House, on behalf of His Majesty's Government, to read a second time the Bill which has been printed and circulated. I desire to avoid going into details upon this necessarily complicated and technical measure. I have flooded the House, in response to requests, and in order to give information to it as far as I possibly could, with a series of elaborate documents, and these will obviate, because I will assume that the House has mastered these documents, a large amount of technical disquisition.

Answering Criticisms

But in view of certain criticisms I want once again to repeat the origin of this Bill. When I took office two years ago much work leading up to the preparation of a Bill of this kind had already been done. Despatches containing schemes for reform had passed between the Government of India and my predecessor, and out of their proposals and his criticisms of them had emerged this principle, that to my predecessor no reform of the Government of India would be acceptable which did not involve the transfer of responsibility from these Houses to the people of India. I took up the work where the Chancellor of the Exchequer left it, and the pronouncement of the 20th August followed, a part of which was that my acceptance of the Viceroy's invitation to proceed to India had been authorised by His Majesty's Government. No sooner was that pronouncement made than I appointed a very important India Office Committee, presided over by Sir William Duke, an ex-Lieutenant-Governor of Bengal, a member of my Council and an Indian Civil Servant—I repeat all his qualifications because it is suggested in some quarters that this Bill arose spontaneously in the minds of the Viceroy and myself without previous inquiry or consideration, under the influence of Mr. Lionel Curtis. I have never yet been able to understand that you approach the merits of any discussion by vain efforts to approximate to its authorship. I do not even now understand that India or the Empire owes anything more or anything less than a great debt of gratitude to the patriotic and devoted services Mr. Curtis has given to the consideration of this problem. But this Committee, presided over by Sir William Duke, sat at the India Office from the 20th August until I left for India, accompanied by Sir William Duke, Lord Donoughmore, and Mr. Charles Roberts, on the 20th of October. We held repeated conferences in the enforced leisure of a long sea voyage, and discussed the problem almost daily on board-ship up to the time when we reached India, where we were joined by Mr. Bhupendra Nath Basu and Sir William Vincent, a member of the Viceroy's Executive Council. Spontaneously, as a necessary consequences of all these deliberations, as a necessary consequence of the terms of the pronouncement of the 20th August, and as a necessary and inevitable consequence of an unprejudiced study of the question, we reached the conclusion upon which this Bill is based, a conclusion reached after listening to innumerable deputations, after six months of Conference with non-officials and officials, after continuous discussion with the Government in the provinces, and at Delhi with the heads of all the local Governments. From the time I returned to London, a new India Office Committee, presided over by Mr. Charles Roberts, and containing a large number of those Civil servants who have taken part in this discussion, and whose services I have had the privilege to command, have sat upon and discussed all the criticisms that have reached us on the Bill. Sir William Duke, Sir James Brunyate and Sir Thomas Holderness were members. Sir James Meston, the present Finance Member of the Government of India, was home last year and helped in the deliberations of this Committee. In recent months it has been assisted by Sir Frank Sly, Mr. Feetham, Mr. Stephenson, and Mr. Maddiman.

The Drafting of the Bill.

This Committee has been concerned in drafting the Bill, and in considering all despatches and telegrams and criticisms upon the scheme originally proposed.

After this prolonged discussion and deliberation of almost exactly two years in extent, I now ask with some confidence for the Second Reading of the Bill, which I do not hesitate to say has been as carefully prepared and considered in all its aspects as it is possible to consider a measure of this kind.

A General Agreement.

I ask for the Second Reading of the Bill to-day for two reasons. First of all there is so much general agreement on all sides in India and here as to its provisions, so much general agreement and such important points of difference on methods side by side, that I do not believe there is any way of getting on until we examine the details of the measure in a Committee representing Parliament. Second Reading points, as I think I shall show, are points on which there is general agreement, both in India and here. There are very important differences—differences which I do not wish to minimise—as to methods, and you will never get to a discussion of those methods infinitely technical, until you have a small body constituted which will take evidence and consider the alternative merits or demerits of the different plans. It is our intention, if the House gives a Second Reading to this measure to-day, to ask that it should be referred to a Joint Committee of both Houses, and that Joint Committee should consider all the questions that are involved. I cannot emphasise too strongly that it is the Government's wish that that Committee should discuss the matter not only from the point of view of detailed examination, but from the point of view of the examination of alternative methods. Let it have free scope. Let the House appoint a Committee to go into the whole question, and, as I have said before, so recently as a fortnight ago, although I believe from the bottom of my heart that you dare not and ought not to do less than we propose in this Bill, I shall be glad, and the Government will be glad, to take the advice of the Committee on any alternative method which really and actually promises at least as much.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A Vast Problem.

I would only add one thing. We have so many responsibilities in this House, so many important questions needing consideration, that perhaps India looms quite smally to many Members; but this problem to 315,000,000 of people eagerly awaiting, so far as they are politically educated, the decision of this House—to India this subject is all-important. Let no man join in this Debate, let no man accept the incalculably responsible task of helping—and we want help, it is a difficult enough problem to require help—of helping on the Committee unless he is prepared to go there constructively, and not destructively, to help on as perfect a plan as can be devised, and not with the intention to delay or thwart legislation, which, in my mind, and in the minds of the House, I hope, it is absolutely essential to carry out.

An Impatient India.

The second reason why I would urge the assistance of the House in the passage of the Second Reading to-day is the impatience—I think the legitimate impatience—with which India is waiting a start upon the policy enuniciated now two years ago. That policy was announced, and this Bill was drawn up with a view to meeting existing conditions in India. Believe me, my experience of India, my experience of the Government of India now extending over something like six years' of office, make me confident that there is no more fallacious platitude, no more obvious fallacy than that which is on the lips of so many critics of Indian affairs,—that it is a country which never changes, a country which undergoes none of the emotions which other countries experience. One old Indian friend of mine, who has been engaged upon public affairs in this country, who has been absent from his own fourteen months only, and who returned to it the other day, told me when last I saw him that he thought politically it was a different place to fourteen months ago. The War, the causes of the War, the objects of the War, the speeches of those who conducted the political aspects of the War have had their effect from one end of India to the other, and have even reached, as the documents which I published themselves show the Government of Madras.

The Pronouncement of August 20th.

The pronouncement of the 20th August promised that substantial steps in the direction of responsible Government should be taken as soon as possible. There is no use for pronouncements that are not fulfilled; there is no use for pronouncements which take geological epochs to fulfil. Doubts are already beginning to appear. It is suggested already—unworthily suggested, wickedly suggested, but still suggested—that we made the announcement and declared the intention of His Majesty's Government in order to secure loyalty from the Indian peoples during the War, and that now we have achieved victory we are not going on with our purpose. I only mention that to show that, in my opinion, as in the opinion of the Governor of Bombay, delay, inexcusable delay, unnecessary delay, would be fatal to our purpose. For that reason after two years' consideration of this problem I venture to suggest to the House that I have shown no undue haste in bringing this Bill before the House of Commons. First it used to be said, "Oh, you must not introduce the Bill until the opinions of the local Governments have been published and we have had an opportunity of reading them." I promised the opinions of the local Governments, and the opinions of the local Governments have been published in accordance with that promise. To a very large extent they are irrelevant, because, despite the letters which have been published and the arguments they have used in them, they have produced, at a subsequent date, an alternative plan, about which I shall have something to say later on. But they are published. Now, when they are published, comes the new argument, "You are hurrying on the Second Reading of the Bill, when we have not had time to read the papers." So, first you say, "Do not take the Bill because we want the papers." Then, when the papers do appear, you say, "Give us time to read the papers." In other words, for the man who does not want to do something, the day on which you ask him to do something is always the wrong day.

Two White Papers.

I have published also, in order to avoid discussion to day, two White Papers. One White paper explains, as clearly and as concisely as I could do it, the actual effect of the Clauses of the Bill. The other White Paper shows what the existing Government of India Act, passed in 1915, will look like if these Amendments are made in it, for this Bill has been drafted with a view to automatic consolidation and the Government of India Act, 1915, embraces a very large number of Statutes. It is suggested that when this Bill has been passed by the Houses of Parliament it shall be automatically included in the existing Act, and will itself disappear as a separate Act. In order to see the effect of that process—the best form of legislation, I venture to think, when you have a previous Statute—I have published and circulated a copy. That, I hope, will avoid the necessity at this stage of going into details. A few more words I must say as to the form of the Bill. In the first place, it may be said—it has been said—that we propose to rely so much on rules and regulations under the Bill that the Bill itself is only a skeleton. I need not remind the House that there are many precedents for that procedure, in fact, in almost every Statute referring to the Government of India, I think that procedure has been adopted. But I would also remind the House that deliberately, of intention, in accordance with the terms of the pronouncement of the 20th August, this Bill does not pretend to give to India a Constitution that will endure. It is transitional; it is a bridge between Government by the agents of Parliament and Government by the representatives of the peoples of India. It must be in such a form that it shall be not static, but fluid—that alterations can be made in it from time to time, and that you should not form a rigid Constitution by Statute which could not be altered except by trespassing at intervals upon the over—burdened and over-mortgaged time of this House. Therefore we have resorted to the plan of precedent, of asking that details shall be accomplished by rules. Let me hasten to add that this is one of the points upon which I approach this problem with an open mind. If there is anything in which it is suggested should be done by rule which the House would prefer to be done by Statute, let us by all means, in the Committee stage, incorporate it in the Statute, although,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

let us try at the same time to avoid rigidity, which I believe, would be fatal to our purpose. I would add also that it is not our intention to prevent the control by Parliament of these rules and regulations. The Bill provides that they shall be submitted to both Houses. The principle which it is intended to embody in these rules it is intended should be submitted to the Joint Committee which it is proposed to be set up, and the policy of the rules, if not the actual wording of the rules, will therefore be carefully considered at the same time as the Bill itself. I regard that as essential. It has always been said that the Morley-Minto Report was largely by the rules made under it. I am not at the moment prepared to argue whether or not that is so, but I want on this occasion to avoid any possibility of that charge being levelled. Therefore I hope that Parliament will not lose control of the Bill until the policy which is to be embodied in the rules has also been laid down by Parliament.

The Bill

I come now to the Bill itself. What I would like to do, if I may, is to start afresh and try to take the House with me, if I can and if it is not too ambitious a project, in realising that if you start from the place where the authors of this Bill started, the form of the Bill and the recommendations of the Bill are inevitable. Where did we start? We started with the pronouncement of the 20th August, 1917. I propose to ask: Is there any body who questions to-day the policy of that pronouncement? It is no use accepting it unless you mean it; it is no use meaning it unless you act upon it; and it is no use acting upon it unless your actions are in conformity with it. Therefore I take it that Parliament, or at any rate this House, will agree that the policy of the pronouncement of the 20th August must be the basis of our discussion—the progressive realisation of responsible government, progressive realisation by degress, by stages, by steps—and those steps must at the outset be substantial. That pronouncement was made in order to achieve what I believe is the only logical, the only possible, the only acceptable meaning of Empire and Democracy, namely, an opportunity to all nations flying the Imperial flag to control their own destinies. [An Hon. Member: "Nations!"] I will come to nations in a moment. I will beg no question. The Hon. Member raises the question of nations. Whether it be a nation or not, we have promised to India the progressive realisation of responsible government. We have promised to India and given to India a representation like that of the Dominions on our Imperial Conference. India is to be an original member of the League of Nations. Therefore I say, whatever difficulties there may be in your path your Imperial task is to overcome those difficulties and to help India on the path, of nationality, however much you may recognise—and I propose to ask the House to consider them—the difficulties which lie in the path.

Supposing for a moment there are those who consider that Empire has justified itself when you give to a country satisfactory law and order, adequate peace, decent institutions, and a certain measure of prosperity under the defence that you have provided; supposing, in other words, there are people who believe that you have fulfilled your mission when you have run the country as an estate, and not as a country at all; even then, approaching it from the other point, there are large proposals in this Bill which command assent from them. There are the proposals for devolution, the proposals for decentralisation. I have heard no critic in these two years who has not told me that it is absolutely essential to get greater freedom for the Government of India from the India Office. I have hardly met a critic who has not told me that it is absolutely essential for the local Governments to get more freedom from the Government of India. I think that is agreed. I do not think that anybody questions that, from the point of view of administrative convenience, if on no higher grounds, Government by dispatch, with all its cumbrous machinery, all its necessarily delaying methods, all the difficulties attending, upon considering, and reconsidering plans and projects over thousands of miles of land and thousands of miles of sea, all that ought to be got rid of. I ask Parliament to assent to this proposition, that you cannot get rid of it unless you substitute something else for it. Now and to-day you cannot have a government more bureaucratic and less dependent upon Parliament, without being dependent upon, anything else, than you have at present. The only possible substitute for government by dispatch is government by vote. The only possible way of really achieving devolution and making the unit, when you have chosen the unit, responsible for the management of its own affairs, is to make the Government of that unit responsible to the representatives of the people. If you simply say, "Let us have an irresponsible Government in a province, and let the Government of India not interfere and the Secretary of State not interfere, and Parliament not interfere, you have a policy which is merely the enthronement of bureaucracy and the very negation of the progressive realisation of responsible government.

Unit of Government

Therefore, I go a step further. In order to realise responsible government, and in order to get devolution, upon which there is general agreement, you must gradually get rid of Government by the agents of Parliament and replace it by Government by the agents of the representatives of the peoples of India. In other words, you have to choose your unit of Government, and you have got in that unit to create an electorate which will control the Government. What is the unit that you are chosing to be? Some people would say, let us be content with the unit of the local Government area—the Parish Council (I am not using terms of art, but terms which have significance for this country), the county council, the rural district council, the municipalities—in other words, that you should give responsible Self-Government in the area of local Government. That is already being done under the terms of the Joint Report, but that is not enough, for two reasons. The first is this: The policy of complete local Self-Government was adopted by Lord Ripon in 1883, and we are now proceeding to carry it out, after a delay of something like thirty-five years. It is not enough to answer the new conditions arising out of the world War by fulfilling a promise made thirty-five years ago, and therefore that is one reason why you must give something more than local Self-Government. But there is another reason. You are not writing on a clear, clean slate. You are writing, and rightly, in continuation of chapters which have been written before. You are building on foundations that already

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

exist. It is in the province that you must look for your unit, because it is in the provinces that the great educational results of Lord Morley's Reform Bill have been achieved. He made the Legislative Councils representative to some extent of the people, with a very small electorate and practically no powers beyond powers of criticism. But it is the existence of those councils which has awakened the appetite for Self-Government, and have added to the appreciation of Self-Government in India, and it is therefore, to my mind, absolutely inevitable that we should proceed to devote ourselves to taking the Morley-Minto Councils a stage further in their development. Therefore it is to the provinces that we go, and the provinces are beginning to be the units of local patriotism in India. I do not say that as time goes on you will not substantially modify the size and boundaries of your provinces. Some of them are very artificial. But when you do, it should be in conformity with the wishes of the inhabitants of the provinces, and not by executive action.

If I have carried the House with me in the suggestion that the province is the unit in which we shall start a progressive realisation of responsible Government, what are the difficulties that we have to face? They were suggested in the Joint Report. I will emphasise them again. It does India no good purpose to attempt to avoid them, but they are not arguments against our purpose. They are arguments which we must overcome. The difficulties are these. Under the system of education which has been given to India by British rulers, education has not been spread wide. You have a very small fraction of the population highly educated and a very large proportion of the population not educated at all. You have, secondly, great differences of race and religion and great difficulties arising out of the harsh customs and precepts of caste. I cannot help believing that there is no better way of getting over these difficulties than by representative institutions. There is no greater stimulus to education, there is no better way of promoting community of action or of overcoming the acerbities of caste than by setting to the population a common task to do together, to work out the prosperity of their country. Many of those who write on India assure us of the insuperable obstacles presented by caste. It can only be a gradual process to get rid of these harshnesses and acerbities to which I refer. But every step you take in this direction brings you nearer to the day when the population will not suffer as a consequence of differences of caste. It has begun. It is idle to say there is no difference of recent years in the conditions. When you realise the fact that men of all castes find themselves in the same third-class railway carriage, the way in which soldiers write to me that men of all castes mess together, the work which is being done by the members of the higher caste in helping the conditions and devoting themselves to the social problems afforded by the lower castes, you will realise that those problems are on the way to being solved. The other day I came across a case of a co-operative society run by a committee consisting of Brahmanas, non-Brahmanas, caste Hindus, and Panchamas. They met to discuss this movement of co-operation, which has grown enormously in India, under a tree of three levels—the Brahmanas on one terrace, the non-Brahmanas a little lower down, and the Panchamas a little lower still. They discusssed the business of the co-operative society in that way. Do you imagine that that is going to endure? Some one will have a difference with someone else in discussing the management of affairs and will talk to him. There is no better way of promoting democratic customs than by working them through democratic institutions.

Train the Electors.

Despite all these difficulties I therefore say the essence of the problem is to train the electors. I desire to express, on behalf of the Government of India and the India Office, and, I hope, of this House, our appreciation of the excellent work done by Lord Southborough's Committee. An electorate has been formed; that is to say, proposals have been made to put 5,000,000 voters on the register. But you do not form an electorate by that mere process. You have to get them to vote and you have to get them to understand what a vote means. You have to get them to appreciate the results of a vote. There is only one way of doing that, and that is to make the vote of some value. If a man is asked to vote, and then nothing happens as the result of it, nothing that he can see, nothing that he can appreciate, nothing that he can either reward or punish by the transference or maintenance of his vote, you will never train an electorate. Therefore it is a necessary step for the training of an electorate that you must give it power through its representative. If the result of a vote is that a certain person is elected, if he cannot only criticise but get things done, if he can do things, if he can be held responsible for the things he does, then the man who wants to turn him out will soon undertake the task of training the electorate to a realisation of the importance of a vote. And therefore in order to train your electorate, which is the only way in which you can transfer the power from this House and its agents to the people of India, you have to give the electorate which you create men responsible to it to carry out its demands.

If I have carried the House thus far, the next step must be that you have to choose a part of the provincial functions which at the outset you will entrust to the representatives of the people. Anyone who has followed me in what I have said about education, about caste, and about religious differences, will realise that it is not right to entrust them with everything at the same moment. There are some things, such as the maintenance of peace and order—I will take the definition which Lord Chelmsford and I suggested in the Report—things in which mistakes are irretrievable, things in which the electorate at the outset should not be able to enforce its demands, things like Land Revenue, which you should keep from the control of the representatives of the people. Immediately you say that, if there is anyone in the House who has gone so far with me, I do not know whether they realise it, but they have swallowed the awful, terrible, much criticised principle of diarchy.

An Hon. Member: Say "duality."

Mr. Montagu: Duality. I have endeavoured to lead them, as I was led myself, to realise that the only way to achieve our purpose was to reserve for the present, and for the present only, certain functions of government under the control of the agents of this House, and to transfer other functions to the representatives of the people. That is what Mr. Feetham's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Committee proposes to do. That is what the India Office Committee, and that is what the Government of India and ourselves in discussion in India came to the conclusion was inevitable—to separate the functions of government, to transfer some, to reserve others, and to proceed by gradually taking the functions that are at present reserved and transferring them. Having decided that certain functions are to be transferred and that other functions are to be reserved, the question next to be decided is, What is the form of Ministry that you will set up to conduct them? Is it to be one or is it to be two? I submit with great confidence to the House that immediately you try and preserve one Ministry, always acting together and sharing responsibility for all acts, you obscure the lesson of responsibility. Let us take a particular reserved function—say police—and a particular transferred function—say education. You say, "It is our intention that the people shall have their way at once in education. It is our intention that, as far as police is concerned, for the moment those who administer it shall carry out the wishes of the Houses of Parliament as the trustees of the Indian people." If the man in charge of education and the man in charge of Police are both equally members of the same Government, each sharing responsibility for the acts of the other, both equally responsible for police and education, the one or the other may at any moment have to carry out a policy of which he does not approve. The man responsible for this House may have to carry out an educational policy of which he does not approve. The man responsible to the Indian electorate may have to carry out a police policy of which he does not approve. If you separate the two functions, if you separate the Government into two parts, when a man who is responsible for education goes to his constituency, he says "It is quite true that I have carried out a certain education policy. That is quite right. I am answerable for that, and I am prepared to defend it. With regard to police policy I am not responsible. I am there only in a consultative capacity, with no direct responsibility at all. Your only way of modifying the police policy is so to show the House of Commons the excellence of the way in which you have used your educational policy, so that in ten years' time they will transfer to you the police policy too, but at present my responsibility ceases with the transferred subject." By that means, it seems to me, you can make clear, both to the electorate and to the individual who exercises power on behalf of the electorate, the extent of his responsibility, and in no other way. The logical sequence to that form of argument would be that you would have two Governments completely separate in the same area, with separate funds, separate finances, separate Legislatures, separate executive staffs. I would suggest most respectfully to the House that that is impossible, and for this reason. I cannot reiterate too often that the basis of this whole policy is its transitional nature. You want to lead on to something else at the earliest possible moment. If you have two Houses, with two staffs, two purses, the net result would be that the people concerning themselves with transferred subjects would never have anything to say on reserved subjects. But if reserved subjects are to become transferred subjects one day, it is absolutely essential that, during the transitional period, although there is no direct responsibility for them, there should be opportunities of influence and consultation. Therefore, although it seems necessary to separate the responsibility, there ought to be every room that you can possibly have for consultation and joint deliberation on the same policy, and for acting together for the purposes of consultation and deliberation, as the Bill provides, in one Government.

Colonel Wedgwood:—And criticism?

Mr. Montagu:—And criticism. This procedure would be absolutely indefensible if it were not for the fact that it was transitional, and if it were not for the fact that at stated periods it is proposed to hold a Parliamentary inquiry into its working, with a view to further stages. By that means there is a certain method of progress. By that means everything that happens will come under review, and the attitude adopted by each part of the Government to the affairs of the other part will be one of the prime factors in the decision of the Commission that reviews.

I have dealt now with the local governments and the way in which the scheme is evolved. I know it is a very hard thing. I know that it is more than difficult to explain so complicated a procedure, particularly for one who has been saturated for two years past with this sort of argument and discussion. But I have endeavoured as shortly as I possibly could to portray the arguments once again. They are portrayed in the memorandum which I have issued, and the Government of India's dispatch, which have led up to this Bill. I do not think the time has yet come for a similar movement in the Government of India. I think that there we must take the step of one stage only, namely, to make the Legislative Assembly more representative, to give it greater power of influencing and criticising, but not, at this moment, of responsibility; and we must make the Government of India itself more elastic in its composition, less stereotyped, by altering certain of the statutory provisions which govern its executive formation. We must also add to its power of dealing with its own work, because we relieve it of the necessity of controlling a large number of provincial functions. In so far as the Provincial Government has got to defer to its Legislature by Statute, that is to say in transferred subjects, you have a Government which is responsible to the electorate. Therefore there is no necessity to control it by the Government of India, and you get the devolution which the men who want to perfect administration desire. Therefore the Government of India will not be concerned, generally speaking, with transferred subjects, and the Secretary of State will not be concerned with transferred subjects. Therefore, this House will not be concerned with transferred subjects. Therefore, so far as transferred subjects are concerned, we shall have parted with our trusteeship and surrendered it to the representatives of the people of India. There is much more to be done with the Government of India. We have to release it from unnecessary administrative control by the India Office, and for that purpose, incidentally to this Bill, I am awaiting the details of Lord Crewe's Committee's Report, but so far as that is concerned, most of its recommendations, except as regards the composition of the Council, will be administrative and not statutory. At the same time, as was mentioned in the Joint Report, there is very much reason to believe that the secretariat system wants reconsideration and overhauling. I think it is understaffed, and I do not think it is modelled for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the transaction of the complicated business which falls to the office at the present moment. The House will be glad to learn that Sir Hubert Llewellyn Smith, one of the most experienced British Civil Servants, has been good enough to accept my invitation, given to him on behalf of the Government of India, to visit India to consider the secretariat arrangements in the Government of India, and Sir George Lloyd has also invited him to consider those of Bombay.

Colonel Wedgwood: Does that include the staffs of Ministers who deal with transferred subjects, or will they arrange their own staffs?

Mr. Montagu: Ultimately, of course, the Ministers will arrange their own staffs, but I want them at the moment to take over their Departments as going concerns. The question of the secretariat, however, is for the Government of India primarily, and nothing else.

Alternative Schemes.

Before I sit down, there are some very important matters with which I must deal. The first is that of the alternative schemes which have been presented and which have been rejected in this Bill. There is the Congress and Muslim League scheme. I will not detain the House with the details of that. It was prepared before the pronouncement of the 20th August, 1917. It does not attempt to realise responsible government, but it leaves an irremovable executive at the mercy of a legislature which can paralyse it but not direct it. I do not believe that this House will ever agree to set up a constitution in India which will leave an executive, that is not removable, at the mercy of a legislature which cannot control it. Much more formidable is another alternative proposal, which comes from the heads of the majority of the local governments. Although I cordially agree with the Government of India in rejecting this proposal, I hope the House will believe that I do not under-estimate its importance. It is the work of no arm-chair critics. It is the work of the most experienced administrators in India. It is the work of men who are entitled above all others to have their opinions carefully weighed, and, although I believe them to be wrong, and desire to show why I believe them to be wrong, and that we shall have to argue this in Committee, yet it is with no sense of disrespect to them that I challenge their conclusions. It is a powerful array. The Government of Madras had no part or share in the elaboration of this alternative proposal. Yet the Governor of Bengal, Lord Ronaldshay, and the Lieutenant-Governor of Bihar and Orissa, Sir Edward Gait, preferred the scheme of the Bill and the Joint Report. That is the position. But although I do not want to discredit them, I want to suggest that really their views are accidental in this sense, that it must not be assumed that whatever the composition of those Governments and whoever had been their heads, the same results would have ensured. For instance, the Chief Commissioner of Assam prefers the scheme of the majority of local governments. But the late Chief Commissioner of Assam, who left only a few months previously—he came home about a year ago—would have preferred, I know, the scheme of the Joint Report and the Bill. The present Lieutenant-Governor of the United Provinces prefers the alternative scheme of the local governments, but his predecessor would have preferred the scheme of the Joint Report. A great deal depends upon personality.

But although these gentlemen are entitled to give a very weighty opinion, they are not unprejudiced. Where men have grown up under a system they do not like to see it altered. Their proposal is the existing system with another man added to the Executive Council. Nothing much worse than the Morley-Minto scheme—an alleged unity of Government, because one-half of the Government is in their own words "necessarily influenced by the opinions of the Legislative Council," and the other half not. And there is no certainty of control by the legislature because on all subjects, if the Governor certifies it is in the interests of his province, he can override it. It is the same system with just another Indian member added to the Executive Council.

The Place of the Civil Servant.

Let me put it to this House. After all, the Civil Servant in India is not very different from the Civil Servant in this country. Whoever heard of a political reform in any office in this country coming out of the Civil Service. This House is the place for political reform. You will never get it carried out by the Civil Service. As time goes on, that service must carry out the wishes of those who dictate the policy. It must be first in this House, and ultimately in India, that that policy with the Civil Service is to carry out must be dictated to it.

Colonel Yate: Why did you send Sir Llewellyn Smith to make reforms in India? Is he not a Civil Servant?

Mr. Montagu: I am very much obliged to my Hon. and Gallant Friend. His intervention in Debate is always valuable. He has given me the opportunity of pointing my argument. I am using a Civil Servant to advise me on administrative changes as to how the Secretariat can carry out most efficiently the orders and wishes of its political superiors. That is exactly the function of a Civil Servant. And this is what ultimately, when India is a self-governing country, I hope to see the position of the Civil Service. It is quite true that in what I have said about the local governments' alternative plan I have included Lord Willingdon, because, although he is not a Civil Servant, and although he has a plan of his own, he would, I am certain, have preferred the plan of the majority of local governments to the plan of the Bill. But then Lord Willingdon prefers to rely upon those qualities which he possesses, which made him an astonishing success in the Government of Bombay. He brings all the qualities that ensure for him great popularity and all the qualities which made him in this House a successful Whip. He says, in effect, under a Governor such as Lord Willingdon a more elastic arrangement would be far preferable to the arrangement of dyarchy, of the Bill.

Under the scheme as we propose it to this House, if in any province a governor can so influence his advisers and there are governors and governors, and lieutenant-governors and lieutenant-governors—if the circumstances of a particular province make it possible, there is nothing in the Bill which would prevent a governor trying to discharge all the reserved functions as if they were transferred. He can call his Government together and say, "I do not believe much in this dual form of Government. Let us see if we

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cannot get on together. Unless I am driven to it I will use none of the powers given to me under this Bill. We will always consult together. I will do my best to work the scheme in deference to the wishes of the Legislature on all subjects, and I will only use my exceptional powers on reserved subjects if I am compelled to." Perhaps if he is lucky he will get through his term of office without being called upon to use them. Therefore, under my scheme, Lord Willingdon would get all he proposes in his letter. But suppose there is another Governor, who says, "I am not going to consult you. I like the good old way. I believe that good Government, or what I think is good Government, is far better than Self-Government, than the scheme under the Bill. I know what is better for you than you know yourselves." Under the schemes of the Bill, whatever the personality of the Governor, the transferred subjects are guaranteed to the representatives of the people. Under the alternative scheme, under the wide use of certification of the local Government majority, nothing is guaranteed to them at all. The time, I submit, is not one in which you can be content that certain members of your alleged united Government should be "necessarily influenced by the opinions of the Legislative Council." What you want, if you are to launch India upon this road, is that the Government on certain subjects must respond to the wishes of the people. In other words, unless you have that, and more than the local Government suggest, then there is no progressive realisation of responsible Government.

Lastly, I come to the scheme of the Indo-British Association. This is a body which gets very angry when I suggest that it does not intend to carry out the pronouncement of the 20th August in any adequate way, and it has done great harm in India by leading people to suppose that it has more influence on the decisions of Parliament than I hope it is ever likely to have. What are its proposals? "Financial delegation as between the Secretary of State and the Government of India." As a matter of administration, they are in agreement with the Bill and with the Joint Report. But that does not lead to any progressive realisation of responsible Government. "The reorganisation of the India Office intended not only to remedy obsolete procedure, but to obtain more recent knowledge of India." They are in agreement with the Joint Report on a matter of administration. They are suggesting the work on which Lord Crewe's Committee is now engaged. But that does not lead to the progressive realisation of Responsible Government. "Decentralisation in India as between the Government of India and the Provinces in domestic matters and the transformation into a federal system." Once again they are in agreement with the Bill and with the Joint Report. But that in itself does not lead them any nearer to the progressive realisation of Responsible Government. Then there are two points about municipal and local Government and elementary education. These are not constitutional points at all. And then there comes their one controversial and constructive programme. "In every Province place one or two districts in charge of a wholly Indian official staff and extend that, if it proves satisfactory, into a division and finally into a whole Province." That scheme is a scheme of bureaucrats for the consumption of bureaucrats intended for the enthronement of bureaucracy. "Let me, if I am in charge of a Province, be not controlled in any sense by my Legislative Councils." I have got somewhere—I will refer to it if I am challenged—this qualifying statement "that the powers of the Provincial Government are to remain unimpaired." They are not to be interfered with by the Legislative Council or by the Government of India or by the India Office. In other words, the Lord Sydenhams of the future can remain upon their throne, untrammelled by control from above and undismayed by criticism from below. How is that to lead to the progressive realisation of Responsible Government?

Brigadier-General Croft: Was he a successful Governor?

Mr. Montagu: I do not want to express an opinion on that. His record is available. I am not concerned with the authorship. It does not matter who is the author. I am only concerned to test the programme and see whether it fulfils the policy of the progressive realisation of responsible Government. And when I find that the association puts forward a policy which pretends to carry out the pronouncement but which more or less involves bureaucracy, I am entitled to criticise with all the strength in my power. What is the use of ousting a British Civil Servant and replacing him by an Indian Civil Servant? The district officer is the very backbone of the administrative machine. I venture to predict that the Indians themselves would be last to wish to see the complete disappearance of the district officer, but we do no good by establishing an Indian bureaucrat instead of an English bureaucrat. Of the two bureaucrats, having regard to his training, I infinitely prefer at the present moment the English bureaucrat. If that is the best alternative scheme addressed to this House and if we really desire to carry out the pledges made to India then it is far better to carry the Bill as it stands than to pay any attention to this scheme. We shall never get on with all the work that we have got to do in India unless we have settled, as this Bill will settle, the constitutional question and its interminable discussion. I say it "will settle." What I mean is that I hope we shall receive from the Joint Committee an agreed Bill, that all these alternative schemes will be considered in far more detail than is possible this afternoon, and that somehow or other a Statute will pass, as a consequence of the Second Reading this afternoon, which will launch India on the road to complete Self-Government. There is so much other work to do in India that if we can once get a growing constitution for it to win for itself that goal which we have pronounced, we can turn our attention to the spread of education—to the perfection or at least to the improvement of education—we can turn our attention to the development of her great resources and her great industries, we can consider the reorganisation of her defences. But before we can do anything and in order to make these things possible it seems to me to be essential to start her on this road of Self-Government.

I implore this House to show to India to-day that Parliament is receptive of the case for self-government and only seeks an opportunity of completing it by the demonstrable realisation of the success of its stages. There is too much race prejudice in India at the present time. It is beyond this House to correct it. It does not exist only in India; it exists in South Africa too. But Parliament can help to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

correct it in the Constitution. If we hold on to power in India and stand fast to the policy of subordination race friction will continue and ought to continue. If we surrender our trusteeship to the great provinces of India as speedily as they are ready to take it over, then Indians will have something better and more worth doing than fiercely and impotently to criticise those who are at present the agents of Parliament.

Perorations on Indian affairs have a tendency to great similarity; at least the perorations of my speeches on Indian affairs always seem so. I cannot, however—and I say it once again—believe that Parliament is going to afford any obstacle to the partnership of India in the British Empire. We have recently been so sympathetic to the national aspirations of Arabs, of Czecho-Slovaks, or Serbs, of Croats, and of Slovenes. Here is a country desirous of achieving nationality once again, I repeat, an original member of the League of nations, developed under our protecting care, imbued to a greater and greater degree with our political thought. Let us pass this Bill and start it, under the aegis of the British flag, on the road which we ourselves have travelled, despite all the acknowledged difficulties of area, of caste, of religion, of race and of education. If you do that, if you pass this Bill and modify it until it becomes a great Statute, I can say—we can say—as I should like to say with the authority of the House to the peoples of India, "The future and the date upon which you realise the future goal of self-government are with you. You are being given great responsibility to-day, and opportunities of consultation and influence on other matters in which for the present we keep responsibility. You will find in Parliament every desire to help and to complete the task which this Bill attempts, if you devote yourselves to use with wisdom, with self-restraint, with respect for minorities, the great opportunities with which Parliament is entrusting you." That is the message which it seems to me—I say with all deference—this House should send to the Indian peoples to-day, when you are starting to fulfil the pronouncement of the 20th of August. That message cannot be sent unless the House is determined to pass without delay, and with every desire that it should be improved before it is passed, a Statute which means the beginning of self-government, responsible Government, in the Indian Empire.

In replying to the Debate Mr. Montagu spoke as follows:—

By leave of the House, I may say a word in reply to my hon. and gallant Friend (Colonel Wedgwood). Assuming that this House, as nearly every speaker has admitted, has accepted the announcement of 20th August, 1917—never mind if it was obtained in a way to which my hon. and gallant Friend objects—then every single point that has been raised in the Debate, to the whole of which I have listened, is a Committee point. My hon. and gallant Friend the Member for Melton (Colonel Yate) condemned in strong terms the plan which I prefer, which I think essential, just as he prefers that of the local Governments. That is a question which can only be settled by discussion before the Joint Committee, and I give the assurance that this Committee will not only be perfectly free, but I will do my best to supply all evidence that they can possibly want. There are deputations of Indians and Europeans in this country who have arrived specially for this purpose. Sir James Meston, the financial Member of the Government of India, is on his way home to express the views of the Government of India. We shall also have in this country very shortly Sir Michael O'Dwyer and others who represent the views of some of the local Governments who differ from us. We cannot really get on with these matters until this kind of evidence is before the Joint Committee. I never meant to question the great Indian experience of many members of the Indo-British Association. They include among their number a man who stands out as the most eminent of Indian Civil Servants of his time, Sir John Hewett. What I did say was that by their interpretation of the pronouncement of 20th August, 1917, in my opinion they had done great harm by putting before the world a policy which did not accord with that announcement. I do venture to say that I have as much right to rely for advice upon those devoted Civil Servants still in the service who have helped the Governors up to this time as I have to rely on those whose chief claim is that they have ceased to be Civil Servants. Lord Morley is reported to have said:

"It cannot be easy for any man to waken up to new times after a generation of good, honest labour in old times."

This is really what seems to me to be the matter with those to whom I have referred. It is not their experience exactly; it is that they have a natural prejudice for the institution under which they have won their spurs and the gratitude of the whole Empire. As to what my hon. Friend (Mr. N. Maclean) said, he also raises Committee points. There is the question of transferred and reserved subjects. That is a Committee point.

I must add a few final words in replying to other criticisms. I can assure hon. Members—I am surprised that the hon. and gallant Member for Melton fathered the ridiculous story—that there has not been any attempt to prevent the presentation to this House at the earliest possible moment of papers and documents. The dates on which these papers appeared were of vital interest because I wanted to get this Bill forward and, I was pledged not to proceed until I had got the papers. As soon as I could get the papers printed I placed them before the House.

Again, I beseech the House to let us have the Second Reading. I should not, however, be doing my duty if I sat down without a word in reply to the hon. Member for Bishop Auckland, (Mr. Spoor), who is a new comer in Debates on Indian affairs. In the discharge of my duty as the representative of the Government of India and of those public spirited Englishmen who are working to-day in India, I must enter the strongest possible protest against his description of the past and the present in India. We are not exchanging a regime of tyranny at all. We have given to India the best government for one hundred years past and more, which devoted Englishmen in the most selfless task in the history of the world could give to that country. We are engaged now merely on the higher task of substituting for good government self-government. That does not mean any stigma on government methods in the past in India.

SIR SANKARAN NAIR ON THE REFORMS

The following is the minute of dissent by Sir C. Sankaran Nair, to the Government of India's Despatch of March 5, 1919 :—

The policy of His Majesty's Government has been announced to be 'the progressive realization of responsible government in India as an integral part of the British Empire'. Some critics are apparently of opinion that this means the complete, though gradual, transfer of control from Parliament to legislatures in India. The words that India should be 'an integral part of the British Empire' appear to me to forbid such an interpretation. As long as India remains an integral part of the British Empire, the paramountcy of Parliament must be recognized and maintained. Limitations may possibly be placed upon the exercise of the powers of Parliament by practice and well-understood conventions. In fact 'the control of Parliament' may have one meaning in certain colonies and another meaning elsewhere. But the legal right of Parliament at any time to interfere with the Government of India must, for various reasons which it is unnecessary here to enumerate, be beyond doubt. What in my opinion 'responsibility' implies is the subordination of the executive to the legislative council composed of the representatives of the people. For this purpose, it makes no difference whether they are governments nominated by the legislative council or not. The essential point is that they must carry out the will of the legislature in every respect.

The proposals made by my colleagues tend to the diminution of Parliamentary control not for the purpose of transference of such power to the legislative councils of the country, but to the executive governments in India. What the Indians desire is not that Parliament should surrender in favour of the executive governments its power of control, but that it should delegate it to popular assemblies in India when it should think it proper to do so. During the period of transition, Parliament or any authority in England which faithfully represents Parliament might interfere with the exercise of any delegated authority by the legislative assemblies in India at the instance of the executive authorities or otherwise. I do not think that well-informed moderate, Indian opinion will raise any objection to a real intelligent control by Parliament in Indian affairs. So far as I know, they rather invite it. This difference of opinion will be found to explain a great deal of the differences between many of the proposals put forward respectively by the Government of India and by the Congress Party. The India Office, with the Secretary of State as at present constituted, does not faithfully represent Parliament.

Responsible Self-government not Foreign to Genius of People.

2. Another criticism in opposition to this announcement and the steps proposed to be taken under it is, that it is hopeless to introduce into India a Government responsible to the people of the country, as any system of government other than that of absolute monarchy was unknown in India and is entirely foreign and repugnant to the genius of the people. Those who advance this objection apparently ignore the influence of education, environment, association, political evolution, time spirit, etc. Besides as a matter of fact non-monarchical forms of government are not foreign to the genius of the people. I shall confine myself to the testimony of European writers. According to Professor Rhys Davids 'the earliest Buddhist records reveal the survival, side by side with more or less powerful monarchies, of republics with either complete or modified independence'. He also says : 'The administrative and judicial business of the clan was carried out in public assembly at which young and old were alike present in their common Mote Hall at Kapilavastu. A single chief—how and for what period chosen we do not know—was elected an office-bearer, presiding over the sessions, and if no sessions were sitting, over the State. He bore the title of Raja, which must have meant something like the Roman Consul or the Greek Archon'. The Greek writers refer to tribes who dwelt 'in cities in which the democratic form of government prevailed'. (Ancient India, Alexander's Invasion, McCrindle, page 292). There is also a reference to another tribe 'where the form of government was democratic and not regal'. Various other tribes who opposed Alexander are referred to as living under a democratic form of government (see Arrian Anabasis: McCrindle, page 154). Diadoros speaks of Patala as a city 'with a political constitution drawn on the same lines as the Spartan ; for in this community the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

command in war is vested in two hereditary kings of two different houses, while a Council of Elders rules the whole State with paramount authority.'* The latest authority that I know of on the subject is Mr. Havell.† He says: 'The common belief of Europe that Indian monarchy was always an irresponsible and arbitrary despotism is, so far as concerns the pre-Muhammadan period, only one of the many false conceptions of Indian history held by Europeans.' 'It will be a surprise to many readers to discover that the mother of the Western Parliaments had an Aryan relative in India, showing a strong family likeness, before the sixth century B. C. and that her descendants were a great power in the state at the time of the Norman conquest.' (*a*) 'The liberty of the Englishman was wrung from un-willing rulers by bitter struggles and by civil war. India's Aryan constitution was a free gift of the intellectuals to the people; it was designed not in the interests of one class, but to secure for all classes as full a measure of liberty and of spiritual and material possessions as their respective capacities and consideration for the commonweal permitted'. Megasthenes refers to the assemblies in Southern India also controlling and even deposing kings. How long these forms of government subsisted, it is now not easy to say. It certainly prevailed on the West Coast of India among the Nairs at the time of the Portuguese invasion. The Portuguese writer speaks of the 'Parliament' which controlled the Kings (cited in Logan's District Manual of Malabar). The Jirgahs on the North-West of India which, in the British territories now consist of the nominees of the deputy commissioner or commissioner, are the representatives of the old tribal assemblies which settled questions of war and peace and other important questions of government. Across the frontier the Jirgahs still exercise in some places those rights. The political conditions in India were not favourable for the survival of democratic institutions. That the spirit of popular government had not died when the British Government took possession of the country is however clear.

3. It can scarcely be denied that in the ordinary villages a democratic form of government prevailed when the British took possession of the country. 'Neither ancient nor modern history in Europe can show a system of local self-government more scientifically planned, nor one which provided more effective safeguards against abuses, than that which was worked out by Aryan philosophers as the social and political basis of Indo-Aryan religion.'* The Fifth Report of the Select Committee of the House of Commons accurately describes how the village republics had survived invasions, convulsions and monarchy after monarchy. On this question Sleeman's Travels and Max Muller's 'What India can teach us' may be referred to. These village assemblies administered justice—both civil and criminal. The supreme government dealt with them and not with the inhabitants of the villages. They apportioned the revenue or tax among the inhabitants. They owned the public lands, and not the government. They consisted of elected members. We have got the election rules, containing the qualifications, disqualifications etc., in detail of the electors of long long ago preserved in inscriptions.† But they were incompatible with the revenue system of the British Government and with their administration of civil and criminal justice. The old village officials were converted by our government into government servants and became, according to popular view, government tyrants. The village entity was not recognized and in some provinces was destroyed by legislation. The common lands became government lands. The so-called village organizations which are the creation of British legislation or administration bear no resemblance to the ancient assemblies. It is impossible for any one who has even cursorily studied the history of village assemblies to maintain that the spirit of popular government has died out among the people.

4. Every Indian lawyer knows the caste assemblies which settle caste disputes, often involving ownership to properties of great value. The argument from administration of justice also seems to be a conclusive answer to those who maintain absolutism as an essential feature of Indian polity. We now administer the Hindu

* I omit all references to the Vedas, Mahabharata and the other Indian, including Buddhistic, authorities which are all referred to, along with what I have cited above, in two forthcoming works by K. P. Jayaswal and Dr. Bhandarkar respectively which will be shortly issued by the Calcutta University; and some of them also by Pramathanath Banerjea in his 'Public Administration in Ancient India'.

laws of inheritance and certain other laws which are inseparably bound with the law of inheritance. Yet they are not laws which, so far as we know, had the sanction of any sovereign. They were framed by great law-givers, not kings, and those laws were applied by caste or village assemblies to cases of individuals that came up before them. It is not right to say that any system other than that of absolute monarchy is repugnant to Hindu genius.

5. Besides, apart from the ideas and traditions which Indians have inherited with their respective civilizations, they have also imbibed the ideas of representative institutions under British Rule. For the last thirty-five years they have been more or less familiarized with elected or representative municipal boards and district and taluq boards, congresses and conferences. They have been praying for the introduction of representative legislative councils. And there is no form of Government which appeals more to the thoughtful among Indians to-day than a Government where the representatives of the people would sit to decide questions which affect the people.

It is important to note the growth of Indian public opinion on this question in order to judge what measures of reform are needed in the present condition of India and what are likely to satisfy that opinion.

My colleagues have not attached due weight to these considerations and have accordingly proposed various modifications which would make the Reforms Report scheme inconsistent with the announcement of the 20th August and utterly inadequate to meet the needs of the situation. To show this, I shall first state the proposals in the Reforms Report, and before dealing with the modifications proposed by my colleagues, draw attention to the conditions of the problem as they have developed during the last thirty years, which, in my opinion, have not received due consideration.

The Scheme.

The Government in the Provinces.

6. The proposals in the Report may be divided into three broad divisions (i) Certain departments of government, say local self-government, etc., are to be placed under the control of Indian 'Ministers' who will be responsible to legislative councils in the provinces composed of a large majority of members elected by the people and therefore entitled to be called themselves their representatives. Those departments are to be administered by the Minister under the general supervision of the Governor of the Province.

(ii) Other departments, which will consist of what are called 'Reserved' subjects, are to be administered by an Executive Council composed of one official, preferably an English Civilian, and one Indian appointed on the recommendation of the Governor. The Minister and the Legislative Council are to exercise considerable influence in the administration of the 'Reserved' subjects as the entire body, consisting of the Executive Council and the Ministers are to form one united government deliberating jointly in all important matters, though the decisions are to be taken only by the executive authorities in each department; there is to be only one common budget for both, in the settlement of which in cases of differences of opinion between the Minister and the Executive Council, the Governor is to have the deciding voice. The budget so settled may be modified by the Legislative Council in any way they like, subject to the power of the Governor to restore any provision in the budget which he might think it necessary to do in the interests of the 'Reserved' subjects. And finally no taxation in any instance is to be imposed without the consent of the Minister. It will thus be seen that these provisions give the Minister and the Legislative Council considerable influence in the administration of the reserved subjects; and the Executive Council is thus, though indirectly, made amenable to the influence of the Legislative Council in various important respects. In view of what I consider the retrograde proposals which are now being put forward by the Government of India, these proposals about reserved subjects are very important. Periodical enquiries are to be made by Parliamentary Commission for the purpose of removing subjects from the 'Reserved' list into the 'Transferred' list. The success of the Minister and of the Legislative Council in dealing with transferred subjects might not in itself constitute an adequate ground for the transfer of any of the reserved subjects which would ordinarily be of a very different kind. It is only the nature of the advice offered by the Minister and the Council and the influence brought by them to bear upon matters relating to the reserved subjects that would furnish the Commission with satisfactory reasons for their fitness for administering subjects so far withheld from them. These provisions, therefore, as to unity of Government—the influence of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Minister and the legislature over the reserved subjects—form an essential part of the scheme of the Reforms Report. From the Indian point of view, their importance is still greater. The reserved subjects will naturally consist of various and important subjects in which great administrative and other improvements, according to public opinion, are necessary. These provisions will enable the Legislative Councils and the Minister to insist upon the various necessary and beneficial reforms, with the result that if those reforms are not carried out, the Commission of Enquiry will be able to hold the executive council responsible for the short-comings of the administration and will feel justified, accordingly, in transferring the government of those subjects to the Minister and the Legislative Council.

(iii) There is a third class of subjects which are under the control of the Government of India, who are to be responsible only to Parliament. They have no responsibility in any sense to the Legislative Council; but the Indian element is to be materially increased both in the Executive and the Legislative Councils so that they might materially influence the decisions of the Indian Government.

It is also a feature of the Report that the Government of India are to retain within their control as few subjects as possible *i.e.*, those which are necessary for peace, order and good government of the country. Therefore as large a devolution to the provincial governments as is compatible with this obligation of the Government of India is to be carried out. It will be seen that this follows necessarily from one of the main conditions of the problem *i.e.*, that under the existing system reforms are difficult, if not impossible.

Principles of the Scheme Accepted.

7. I accept these principles and also generally the scheme in so far as it refers to the provinces. I shall have to suggest a few modifications but they will be strictly consistent with these principles and, in fact, are only intended to carry them out a little further in their application to the provincial Governments, but as will be shown presently, my colleagues have considerably modified the scheme. According to the scheme as modified by them, there is really no responsibility left so far as the transferred departments are concerned, and so far as reserved departments are concerned the influence of the Minister and the Legislative Councils has been eliminated. The justification for their proposals is the assumption made by them, that those to whom powers would be transferred according to the scheme are an oligarchy who may use them to the detriment of the masses, that the demand for reform emanates only from a small and comparatively insignificant class, that political progress will be accompanied with loss of efficiency and that the administration which has hitherto been conducted according to British standards and ideals will gradually acquire what is called an Indian character. In the reforms report also there are indications that these views may have influenced its authors in restricting the scope of reforms. With reference to this the following facts have to be borne in mind.

History of the Reform Movements.

8. The Indian National Congress was started in the year 1885 to divest the Government of India if possible of its autocratic character and to make it conform to English standards and ideals. For this purpose it was hoped that the representation of grievances to the Indian and the British Government by themselves and by elected members in the Legislative Councils would secure their redress. The first Congress demanded an enquiry into the working of the Indian administration on account of the deterioration of the condition of the people. The second Congress, which met at Calcutta in 1886 and which was really the first Congress composed of delegates from the various parts of India, after passing a resolution of congratulations to Her Majesty, passed the following resolution:—

'That this Congress regards with the deepest sympathy and views with grave apprehension the increasing poverty of vast numbers of the population of India, and (although aware that the Government is not overlooking this matter and is contemplating certain palliatives) desires to record its fixed conviction that the introduction of representative institutions will prove one of the most important practical steps towards the amelioration of the condition of the people.'

It will be observed that representative institutions were demanded in order to deal effectively with the increasing poverty of India. It is also remarkable that many amendments were proposed putting forth palliatives for the poverty of the masses like the permanent settlement, wider employment of Indians, encouragement of indigenous trade, etc., but they were all rejected, and the above-mentioned resolution was carried.

The official report of the third Congress recorded that 'the Indian community despair of obtaining any material alleviation of the misery they see around them, until they can secure a potential voice in the administration.' And it was added:—'It is this conviction, more than

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

anything else, that is giving such an intense earnestness to their efforts in the direction of representation.' Accordingly, when General Booth of the Salvation Army, commending 'to the attention of Congress the claims of the millions of India's starving poor', suggested certain schemes, the seventh Indian National Congress passed a formal resolution that the relief of the millions of half-starving paupers, whose sad condition constitutes the primary *raison d'etre* of the Congress, cannot be secured by any palliatives; and said, 'it is only by modifying the adverse conditions out of which this widespread misery arises, and by raising the moral standard of the people, that any real relief is possible. As regards the first, the Congress programme now embodies all primarily essential reforms; as regards the second, in every province and in every caste, associations, public or private, are working with a yearly increasing earnestness.'

9. Among the reforms which the Congress from that time up to the present have been pressing are compulsory primary education in the interests of the masses, technical education for industrial development, local self-government, mainly in the interests of sanitation, etc., separation of judicial and executive functions for better administration of justice, reform of the land revenue system, abandonment of the theory that land forms the private property of the Crown to be dealt with by the executive at its pleasure and the recognition of national ownership of land by bringing what are called the revenue settlements under the control of representative Legislative Council, a far larger admission of Indians into the public services without racial distinction. These are some of the most important of the reforms which have been put forward.

These and other reforms were pressed upon the attention of Government by Indians whose capacity was undoubted, who subsequently rose high in the Government services and with ability which left nothing to be desired. There was agitation not only on the Congress platform but elsewhere also. Subsequently in the Legislative Councils the elected members continued the process but all this was scarcely of any avail. The result, on the other hand, was a stiffening of the Civil Service opposition to Indian progress mainly on the ground that English ideals are not suited to India. Gokhale said that unanimity in expressions of good-will, various proposals of reform by individuals, general opposition to every particular proposal, indifference, if not refusal, to carry out the clear intentions and orders of the British Nation have characterised the attitude of the Civil Service. The Indian politician who has taken any part in Indian public life or who has any experience of the real Government of the country, came to the conclusion that under the Indian Civil Service who form and carry on the real government, no real progress, which in the present circumstances of the country is indispensable, can be expected. The result on the part of the constitutionalists is a demand for reforms of the character now put forward. The grievances due to the alleged mis-government and the apparent hopelessness of their redress under the existing conditions are responsible for sedition and revolutionary movement; latterly the natural desire for self-government and the forces that have been let loose since the war have reinforced the claim for reform. This general demand had not its origin, as stated in the Reforms Report, solely or mainly in the desire, however natural, of the English educated Indians for an increasing share in the administration or for self-government, though no doubt there were a few advanced thinkers who might have put forward Home Rule even thirty years ago. Reform was at first regarded simply as a means to improved administration according to English ideals and is even now so held by a considerable section. Matters have now, however, assumed a different aspect and the association of Indians in every branch of Government and self-government are regarded as an end in itself and the only panacea for the evils complained of.

The opponents of this movement maintained that the Congress was started by the Bengalees and the Brahmins of South India, and that India as a whole was not with them. The Mahrathas were invited to declare that they had nothing to do with these Bengali and South Indian agitators. We know now the answer. The Mahomedans were warned that the Government might tolerate the agitation carried on by certain classes, but they, the Mahomedans, will not meet with the same tolerant reception. No efforts were spared to inform them that the Congress was hostile to them. The exigencies of controversy alone can now represent the attitude of the Mahomedans as hostile to reforms. Indeed their advanced section asks for reforms more far-reaching than any that the Hindus claim. Anti-Congress politicians were certain that the races like the Sikhs and other Punjabis at least are bound to be opposed to Home Rule. It is doubtful now whether there are stronger adherents to Home Rule than those

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the Punjab. At the last Congress in Delhi it was the determined attitude of the Punjabis that forced the Congress to demand reforms far in excess of those in the Reforms Report. The Non-Brahmans and the depressed classes have awakened to a sense of their political helplessness and to their wretched condition, and no longer content to rely upon the Government which has left them in this condition for the past hundred years, claim a powerful voice, in the determination of their future. It is enough to say that they want half the members of all the Executive Councils, including the Viceroy's, to be Indians, and an elected majority in all the Legislative Councils, without the checks provided by the Grand Committees and State Councils, their interests being adequately protected by what is called communal representation. The demands for a large measure of reform varying from Home Rule to the demands of the depressed classes as stated above have now become general.

After the Mutiny, Sir Sayyed Ahmed pointed out that it was absolute ignorance on the part of the Englishmen of the real condition of the country that was responsible for the Mutiny, and he advocated the appointment of Indian members to the Legislative Councils to give the English rulers information of the needs of the country. The men nominated by the Government proved utterly useless for the purpose. Nomination was found to be an absolute failure. The Congress then claimed a representative element in the Legislative Councils in the hope that if the authorities were kept well-informed by the authorised representatives of the nation, the condition of the masses of the country would be vastly improved. Lord Lansdowne introduced an elected element into the Councils, but there was no real improvement. All their efforts for more than fifteen years proved abortive. They were told that they did not know the conditions of the country themselves; that the officials knew better; and against their strong protests measures were enacted and a line of conduct pursued which led to the growth of sedition in the country. Lord Morley then enlarged the Legislative Councils to provide real representation of the various classes of the people so that the same reproach might no more be levelled that the Councils did not represent the real voice of the nation. He provided for resolutions to be moved in the Council so that the Indians might be able to formulate their views for the consideration of the officials, and the officials might be enabled to give their reasons in reply. He also provided, what is equally important, for the appointment of Indians to the Executive Councils so that they might press acceptance of the popular views upon their colleagues. The experiment has been tried also for a sufficiently long time, only to prove its futility; and not only the Congress and popular leaders of the country but all thinking men in India have come to the conclusion that the existing machinery is insufficient for the peaceful and good governance of the country.

The Reforms Report, therefore, is not only quite right in dwelling upon the political consciousness of the people quickened by the recent events in Europe which demand great political reforms, but it has minimised very much the intensity and volume of that political consciousness. The Report is also quite right in pointing out the growing discontent and the widening gulf between the officials and the non-officials due to the inutility of the Legislative Councils. I think, however, that it has not brought out sufficiently that this is due to the official attitude. I have not thought it necessary to dwell upon the other reasons which have been assigned for reform, that it is extremely difficult, if not impossible, to initiate or to carry out any progressive policy under the present constitution of the governments in India which has been explained in detail in the Report, as this is generally admitted to be the case.

I have referred to the reasons for reform which have been advanced in the Report and they made out a case for a great change, but in the opinion of the political leaders reform is imperative for another reason. It is required in the interests of peace, order and good government, *i. e.*, efficient government according to English ideals. The present system has proved inefficient. The plague disturbances in the Bombay Presidency would not have been allowed to take place under any democratic or popular government. The Tinnevelly riots and the murder of Mr. Ashe in the Madras Presidency were due to the latter's interference with Chidambaram Pillai's effort to improve the lot of the mill-hands and with the Swadeshi Steam Navigation Company. This again would not have been possible under the ordinary conditions of good government. The occurrences in East Bengal which were the immediate cause of seditious and revolutionary movements also would have been practically impossible under a popular government. The Punjab unrest in 1907 had its origin in a legislative measure which was vetoed by the Imperial Government on account of the opposition of the sepoys and the military

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

classes. The bills now before the Legislative Council to deprive a person of the protection of the ordinary courts of law and of the safeguards which, in civilized countries, have been found necessary to protect the innocent, and to place personal liberty, freedom of the press and speech under the control of the executive, is proof of the necessity of radical reform of a system responsible for a situation which has in the opinion of Government rendered such legislation necessary.

The troubles consequent upon the division of society by races, castes and creeds, far from being any impediment in the way of reform calls imperatively for great political reforms; and there is very good reason to believe that if the leaders of the various communities are left to compose the differences themselves such conflicts will be far rarer, if they will not entirely disappear.

Great constitutional reforms are also essential in the interests of the masses of this country. The educated classes have failed in their endeavours to bring about any substantial amelioration in their condition. Not only have the Government not taken the necessary steps, but they have not supported the efforts of the educated classes.

Further, the various reforms that are long overdue also call for a change in the constitution that would render their realization probable. Promises made as regards the admission of Indians into the public services without racial distinctions have not been kept. Reforms in the land revenue administration which are indispensable were promised by the Government and the promise has been withdrawn. The separation of judicial and executive functions was promised by the Government of India. It has not yet been effected. The orders of Lord Ripon and of Lord Morley about local self-government have been practically disregarded. The wishes of the King-Emperor as regards education have not been carried out. Steps necessary for the revival of industries have not been taken. In all these, we have now passed beyond the stage of promise and without actual performance no weight would be given to our declarations.

It is under these conditions that the Congress and the Muslim League and the non-official representatives of the Legislative Council formulated their demands for representative Legislative Councils, for responsible government by the subordination of the executive to such Councils and for a far larger infusion of the Indian element into the Executive Councils so that the latter might not be in a position to entirely disregard the popular demand, and it was in reply to this demand that the British Government have promised self-government by instalments, substantial steps being taken at once to carry out that promise.

Thus, it is not true that the reforms advocated will result in the transference of powers to persons who are not interested in the welfare of the masses; and it is also quite feasible to transfer power to the masses themselves. The demand for reform is universal and such reforms will not result in the application of the British standards and ideals to the Governments in India. With reference to the official view, that they best understand and protect the interests of the masses and that the transfer of power to the educated classes may result to the detriment of the masses, I would draw attention to the recent events in Champeran and Kaira, see appendix (A). They are also instructive for other reasons.

Bearing all this in mind, I proceed to consider the modifications suggested.

Transferred Departments: Control of Services

First, to deal with the 'transferred' subjects, *i. e.*, the subjects which are presumed to be under the control of the Ministers and the Legislative Councils. According to the Reforms Report, though a Governor does not occupy from the outset the position of a purely constitutional Governor, he is to refuse his assent only when the consequence of acquiescence would clearly be serious. I am not sure whether this is accepted by my colleagues (para. 101). If it is not and if they contemplate any further interference on the part of the Governor, I am unable to agree with them. The new proposals which they have made seem to contemplate such interference. I have no doubt it will be admitted that the Ministers and the Councils will not be able to carry on the administration with any fair degree of success unless they have a loyal service or services which in their opinion are competent to carry out the duties which are entrusted to them. Of course at the commencement as rightly pointed out in the Report, to require Ministers to inaugurate their services for their own departments would doom the experiment to failure; and the Reform Report therefore places the machinery of the public service, as it exists to-day, at the disposal of Ministers, adding also that adequate protection must be given to those services. The Government of India now give adequate protection to those services by various provisions to which it is unnecessary here to draw attention. But instead of only placing the public service at the disposal of the Ministers when the new scheme

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is inaugurated, they would go further and would compel the Minister to accept such officials to carry out their policy. The consequence would be that though the Minister may be saddled with an officer, who is so opposed to the opinions of the Minister and of the Legislative Council that he will not loyally carry out the policy determined upon by them, the Minister is to be compelled to retain him although both the Governor and the Minister may want to get rid of him and appoint another person who, they think, would properly carry it out. Thus, for instance, if the Governor and the Minister want to appoint a sanitary expert from England for carrying out certain sanitary arrangements, they are not to have that liberty, but they will be compelled to appoint a man in the ordinary services. Similarly, if the Governor and the Minister wish to appoint an agricultural expert as the head of certain settlement of agricultural operations in preference to the Civil Service officer who will be ordinarily appointed to it under the rules of the service, they are not to have that right, but they will be compelled to accept a person who would in the ordinary course occupy that position.

We have provided that the appointments of these officers can only be made by or with the sanction of the Secretary of State and subject to any rules that may be made by him. I would, therefore, propose that it should be open to a minister to appoint, with the sanction of the Secretary of State, or request the Secretary of State to appoint any person outside the service for any post under him. The intervention of the Secretary of State should be a sufficient safeguard in such cases.

14. This question becomes of very great importance when we regard their relations with the Governor. According to my colleagues, the permanent heads of departments and the secretaries under a minister should have access to the Governor to bring to his notice any case which they consider that the Governor should see. In fact, the secretary or the permanent head of a department would be entitled to appeal to the Governor against any decision of the Minister overruling him. My colleagues also expect that the Governor would direct all cases of particular types and all cases of major importance to be brought to him as a regular practice. The result would naturally be to weaken considerably the position of the minister in relation to his subordinates. In fact, he might be reduced to a figure-head by the Governor and the Secretary. I do not think that this could have been contemplated by the authors of the Reforms Report, and I do not think it right. No secretary or head of a department should have any access to the Governor for this purpose. No one should come between him and the minister. It is one thing for a Governor to tell the member himself that he would like to be consulted on cases of certain type, and it is a very different thing to allow a secretary to bring to him such cases for decision in appeal against a minister.

Legislative Control.

15. There is another drastic change proposed by my colleagues. They are of opinion that if any proposal contained in a bill dealing with transferred subjects affects the peace, tranquillity, etc., of a province, or the interests of a specified reserved subject, the Governor should have a right to refer that bill to a grand committee. In actual practice this might practically eliminate the control of the legislative council over even the transferred subjects, because almost all bills referring to transferred subjects may be brought by a Governor, whose order according to my colleagues should not be open to appeal, under one or other of these conditions. To take a concrete instance: If a minister wishes to introduce any measure dealing with sanitation or education, the Governor might refer it to a grand committee on the ground that its alleged unpopularity might possibly provoke disorder. We may, therefore, assume that the Legislative Council will in law be as impotent in future in transferred departments as hitherto, and as they will be in the reserved departments in future. This is opposed to the Reforms Report and I am unable to accept it.

16. Further my colleagues would give power to the Governor and the Secretary of State in certain events to transfer *all* departments from the minister to the executive council. It will be noticed that the Governor has the power to dissolve the Legislative Council; but even after this if he finds the Legislative councils and all ministers opposed to him, they would give this right of transfer of *every* department from the minister, presuming that the Governor must be right and all the councils wrong. They want this as the only possible safeguard against a deadlock, which might be fatal to the administration of a province, as a deterrent to factious and irresponsible action; this view is based upon a gratuitous assumption that actions of the legislative council and the minister will always be factious and irresponsible when such actions are opposed to the opinion of the Governor.

Striking at the Root of the Reform Scheme.

I do not think it should be in the power of a Governor or the Secretary of State—who will be only his mouthpiece—to strike thus at the root of the reform scheme. This proposal is entirely opposed both to the letter and spirit of the Reform Report, which views such proposals with disfavour; the Report would not give such power over the legislature to any executive government and would allow the same, if at all, only after an open enquiry by an impartial parliamentary commission. If two consecutive legislative councils, composed as they would be under the scheme, come to conclusions directly opposed to that of the Governor, the presumption in my opinion, would be exceedingly strong that the Governor was wrong and their views should be given effect to. To give, in such circumstances, this power is to go against the principles of constitutional government and will be taken as indicative of a spirit incompatible with constitutional government. For any sudden emergencies, there is the power of ordinances, if necessary, by the Viceroy. I would not, therefore, allow this power, more especially when it is proposed to confer upon the Government of India certain powers of interference, the exercise of which would adequately meet all possible contingencies.

17. It is proposed to give the Government of India the power of interference even in the case of transferred subjects for the following purposes:—

(*i*) to safeguard the administration of Government of India subjects;

(*ii*) to secure uniformity of legislation where such legislation is considered desirable in the interest of India or of more than one province;

(*iii*) to safeguard the public services to an extent which will be further determined subsequently;

(*iv*) to decide questions which affect more than one province.

18. Again, my colleagues propose that if the decision taken in the reserved department requires in the opinion of the Governor, certain action in the transferred department which the minister objects to take, the Governor must be armed with the power to issue orders in the transferred department. It makes no difference in this view that the Governor can pass an order in similar circumstance in the reserved department. The result of this will be further to curtail the powers of the minister.

Control of Finances.

19. The new proposal about the allocation of the resources available for the purposes of the executive council and those available for the purposes of ministers completes the subordination of the ministers to the executive council. The main sources of revenues, like the land revenue, in the provinces will be under the control of the executive council while all the departments of expenditure, like education, local self-government including public health and public works, will be under the control of the minister. These are the departments which stand in need of development. In normal circumstances, therefore, the revenue which they require will have to be made good to them by the executive council. This places the ministers practically under the control of the executive council. The minister or ministers will not be able to raise money even by taxation without the consent of the Governor, and, as I have already pointed out, it will almost invariably be the case that the bill is one which the Governor would be entitled to refer to the committee for legislation. According to my colleagues their proposal will give the ministers a direct interest in improving the sources of revenue which are placed in their charge, but the sources of revenue which are capable of expansion will be, according to the proposals, placed, not in their charge but in the charge of the executive council. There will be, therefore, no resources to be developed except perhaps excise revenue which it should not be our policy to regard as a source of growing revenue. Further I do not accept this theory that all inducement must be held out to a department to increase its revenue for its own benefit. My colleagues further state that the official government should not have the power to refuse funds for the work of the popular half of the government, but according to the proposals the minister will never have that power as the final decision for taxation rests with the Governor and not with the minister. I do not accept the view which seems to result from the proposals of my colleagues that we should punish the people of the country for any dereliction of duty on the part of the minister or the executive council.

20. The cumulative effect of all these provisions is to place the minister and the legislative council in relation to transferred departments not only in a position of no real responsibility but virtually in subordination to the executive councils. The scheme, therefore, of my colleagues is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

directly against the Announcement of the 20th August, as it means altogether a negation of responsibility, and should not therefore be accepted. The departments of which the minister will be placed in charge are bound to suffer under the proposed arrangement; and I have shown in my review of the present situation that they are not likely to receive any favourable treatment at the hands of the executive council.

In so far as this part of the scheme is concerned, my criticism, therefore, is that while the policy decided upon by His Majesty's Government requires definite responsibility to be laid upon the ministers for certain acts of the government, the Secretary of State and the Viceroy would allow such responsibility only under the general supervision of the Governor; my colleagues would practically get rid of all such responsibility by converting the minister into a subordinate executive officer, and the real legislative council into a subordinate body—subordinate to the Governor and the executive council, the latter being without any responsibility for the consequences,—though my colleagues in terms disclaim any intention to create an inferior government under the superior provincial Government.

21. I shall now take up the question of 'reserved' subjects. I have already referred to the provisions of the scheme relating to reserved subjects, which show the nature and the influence or power which might be exercised by the minister and legislative councils (see paragraph 6). The subject is so very important that even at the risk of prolixity or repetition I take the liberty of referring to them again for the purpose of explaining the objections that I advance to the proposals which are now being formulated by my colleagues.

According to the Reforms Report, no taxation, when it becomes necessary even in the interests of reserved subjects, can be imposed in a province without the consent of the minister who is supposed to represent the legislative council. The first essential, therefore, of a popular government is thereby secured. Again, the entire budget both for the transferred subjects and for the reserved subjects, is to be settled by the executive government as a whole. The minister has, thus, a powerful voice in the settlement of the budget; he is not a mere outsider tendering advice which may be acted upon or not according to the will of the executive council, because unless he is in a position to justify the budget proposals, even as regards the reserved subjects, he will not either undertake new legislation or be able to persuade the legislative council. At the same time he will not have a controlling voice so far as reserved subjects are concerned, because a final decision is to be taken by the executive council alone. Furthermore, even as to reserved subjects, in cases of any disputes between the minister and the executive council with reference to and provision of the budget, the question has to be decided by the Governor, who is also responsible for transferred subjects and who is to act in view of the fact that taxation, if any, can be undertaken only with the consent of the minister. The influence of the minister, in these circumstances, will act on the reserved subjects in the direction of thrift and retrenchment. Similarly, the minister will have the experience and advice of the members of the executive council with reference to his transferred subjects, and he will have to pay serious regard to that advice in determining the relative proportions to be divided among the transferred and reserved subjects; and the influence of the executive council members will, therefore, be exercised in the direction of thrift and expenditure so far as transferred subjects are concerned. Then, again, this is a very important provision: the entire budget has to be submitted to the legislative council, whose resolutions on the budget will be binding even so far as the reserved subjects are concerned, unless the Governor restores the budget on specific grounds (paragraphs 221, 222, 256 and 257).

The proposals that I have referred to above give the minister and the legislative councils very considerable influence in the most important question of finance and everything that depends on it concerning the reserved subjects. They are satisfactory and based on sound principles. All this influence of power proposed to be bestowed upon them in the Reforms Report will be eliminated if the modifications suggested by my colleagues are accepted.

Modifications Proposed by the Indian Government.

22. They propose to omit the very important provision that the resolutions of the legislative council on the entire budget to be submitted to them will be binding on the government unless the Governor exercises his special right of restoring the provision in the budget on any specific ground. The Government of India now would treat every budget resolution only as a recommendation. To my mind, this is a grave departure from the scheme of the Reforms Report. It is said that a Governor would find himself in a very inconvenient position if he had to over-rule a legislative council, and a continuance of that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

course, if the legislative council persists year after year in carrying a resolution with reference to any particular measure, would be almost impossible. The very object of the provisions is that in the absence of any strong reasons to the contrary, the opinion of the legislative council should prevail : and I think this departure from the scheme outlined in the Reforms Report detract considerably from its value.

Separate Purse.

23. My hon'ble colleagues have followed this up by further modifications which practically get rid of all popular and Indian influence.

Instead of one joint budget and one joint purse for the whole government they will create separate purses for ministers and executive council members, respectively, with the result that the budget for transferred subjects will be settled only by the Governor and the minister, and the budget for reserved subjects will be settled only by the Governor and the other members of the executive council. Taxation for the administration of transferred subjects will be left in the hands of the ministers ; and similarly, taxation for reserved subjects will be left entirely in the hands of the executive council members. The rule that the resolutions are binding, unless disallowed or vetoed by the Governor, is not accepted by them. The council's resolutions are to have effect only as recommendations.

The result of all this is that so far as the reserved subjects are concerned, neither the minister nor the council is to have any real voice in the settlement of the budget. This is avowed to be the real purpose of the new proposals. Real popular influence in the settlement of the budget is, therefore, entirely gone. The minister or popular assembly is not to have the final voice in taxation as the executive council member alone presents the bill for taxation, and if the legislative assembly does not pass it, it will be open to the Governor to get it passed over their heads by grand committees or otherwise. The influence of the minister on reserved subjects in the direction of thrift and expenditure also is removed. I think it substantially reduces the value of the Reforms Scheme. I am, therefore, unable to accept any of these modifications in the original proposals which are now suggested.

24. The advantages of this system are said to be that the ministers as well as the executive council will know what their available resources are, what opening balance will be at their credit and consequently what range of expenditure they may provide for and at what point they must face extra taxation. It will secure to each department the benefit of any improvements which can be expected in the revenue departments. It will, therefore, be an inducement to expand and develop the sources of revenue, as the fruits of their labours will not be shared by the other departments. It is also said that each may also borrow for its own purposes. Assuming that there are administrative conveniences in the separation of revenues, these administrative conveniences should not be allowed to weigh for a moment against the outstanding fact that you thereby get rid of the popular influence altogether on the finances of the reserved departments. To this great objection I find no answer forthcoming except that it is desirable that all the reserved subjects should be removed entirely from the influences of the ministers and of the Legislative Council. I cannot agree to this. On the other side, there is the objection advanced by the Congress that under the arrangement proposed in the Reforms Report the transferred subjects will only get 'the crumbs from the table,' and the unwelcome task of taxation is always imposed upon the minister, even though such taxation might have been necessitated by the needs of the reserved subjects. This argument has been availed of by my colleagues in order to support the scheme of a separate purse. It would be extraordinary if an argument intended to strengthen Indian influence should lead to its elimination. I have already referred to the safeguards provided by the scheme. No taxation can be imposed without the consent of the minister, who can ear-mark the proceeds of taxation. No responsible member of an Executive Council is, therefore, likely to press the claims of the reserved subjects too far, and in particular in view of the enquiry by a commission after a few years ; and even if he does so, the final decision rests with the Governor, who is interested in the administration both of the transferred and of the other subjects. Apart from all this the Legislative Council will review the budget and a responsible Governor has to restore the provision of the budget in favour of the reserved subjects by overruling them. It is impossible, therefore, that the transferred subject will suffer, and I feel strongly that this argument should not weigh in favour of a separate purse, which will operate far more against popular influence than the existing provision. The apprehension expressed by Indian politicians is really due to the phraseology in the report. To remove the same, instead of stating that the supply of the reserved subjects will have priority over that of the transferred subjects. I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

would simply say that the executive government as a whole will apportion the revenue between the transferred and the reserved subjects. If the ministers and the council members do not agree, the Governor has the right to decide. The effect is absolutely the same, as in the scheme the supply for the reserved subjects can be determined only by the Governor if the minister does not agree. The proposal of my colleagues that the consent of the Governor is necessary to taxation is a part of the scheme in the Reforms Report whenever there are differences of opinion. After apportionment of the revenue, the necessity of taxation might be considered, the indispensable condition being that provided for in the Report—that there should be no taxation without the consent of the minister. As to who should introduce the Bill into the Council is a matter which might be left to the Governor. Ordinarily, the member whose department needs the fresh taxation proceeds will no doubt introduce the Bill.

25. I have assumed that there are administrative conveniences in this separation of revenue. It is admitted by my colleagues that the proposals in the Reforms Report have not met with any criticism in India. It will not be right in the circumstances therefore to make any alterations They point out that any substantial increase in reserved expenditure will be at the mercy of the ministers, although ministers may have no responsibility for the consequences of refusing the budget provision, but this is an impossible contingency as in the case of any dispute between the ministers and the executive council the decision is left to the Governor. In order to support their argument they have to assume that the Governor under his exceptional powers might insist on expenditure on reserved subjects being provided for in the budget leaving ministers with inadequate funds for the transferred subjects. We are not warranted in making any such assumption, and if the Governor is inclined to exercise his power in that direction he can do it even otherwise. What is to happen if the Governor under the powers of supervision and control which he has over the minister—powers which my colleagues desire largely increased—were to cut down the funds available for the minister even if they were not wanted for reserved subjects? Such assumptions would render the working of any constitution an impossibility.

Further, the income derived from the sources of revenue which form part of the reserved list will, after providing for the administration of those subjects and of Law, Justice, and Police, leave a large surplus which, with the normal growth of revenue, will be adequate to meet the growing expenditure. I doubt whether any taxation or borrowing for the needs of those departments has been found necessary in the past or will be required in the future The annual discussion my colleagues would avoid by settlement of revenue for a period of time. This will interfere with the legitimate exercise of their power over finance by the Legislative Council; such settlement may lead to taxation and borrowing when otherwise it would be unnecessary, and lead to unnecessary friction and criticism divorced from responsibility. Generally I have to state that my colleagues have, throughout their report, made assumptions which are calculated to show the apparent necessity of a stringent control over the ministers All the difficulties suggested by my colleagues presuppose non-interference under any conditions on the part of the Governor with the minister and an absence of any provision enabling the Governor to decide in cases of dispute between the minister and the members of the Executive Council. It appears to me that the provisions in the Reforms Report scheme form a sufficient answer to all the objections advanced.

My colleagues are also of opinion that one more official, who will be ordinarily a civilian, should be appointed to the Executive Council. In the Report the transference of some of the functions of government to ministers was held to make it 'impossible' to retain an Executive Council of more than two members, one of whom was to be a European and the other an Indian. And this reduction of the European element from two to one was regarded as equivalent to an increase in the Indian element. My hon. colleagues, however, support their proposal on the main ground that the Governor—a new man from England—will be left with only one European adviser as a member of his Council. And it is also said that work can be found for one more member. It does not appeal that the conclusion that was arrived at the time the Report was framed that there will not be sufficient work for three members of the Executive Council is unfounded. Before 1911 there were only two members. At present there are three. A good portion of their work will now be transferred to the ministers. I am satisfied that there is no reason, on the score of the work, for the appointment of one more member. A stronger objection is that involved in the second reason given in the Report. It will materially reduce the relative strength of the Indian element in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Executive Council. An Indian member will have no chance as against two English official members. For consultation and advice, the secretary in the department, who will or may be present, will be available. Neither the *adlati* nor any additional member is required. In reserved subjects, therefore, with the modifications proposed by my colleagues with reference to budget and taxation, this addition of one member will practically get rid of the influence or power accorded to the Indians or representative Councils in the Reforms Report. In the interests of good government, is it advisable or necessary to depart from the scheme?

First, let us take the budget and consider the restrictions on the provincial governments imposed by the general standing orders and the Secretary of State. The sanction of the Secretary of State is required to the appointment of any English officer drawing a certain pay; to create any new post which would ordinarily be filled by gazetted English officer; to create any new post over a certain monthly pay; to give any honorarium exceeding, I believe, a thousand rupees; to make any grant of land except under very special conditions. The right to purchase motor cars was so much abused that now they cannot be purchased for public business without the sanction of the Secretary of State. These are only some of the orders; there are many more of the same kind. All these indicate not only the nature of the restrictions that are imposed upon the provincial governments but also the close supervision which is deemed necessary for the exercise of their powers. There is no reason to think that no such restrictions would be necessary in the future. We propose by these schemes to give the local governments enhanced powers of appointment—powers by which they may appoint officers drawing very high salaries, over even a thousand rupees. We propose now to give them powers to carry out schemes, without reference to the Government of India or of the Secretary of State, which involve lakhs of rupees. If it was necessary for the Government of India or the Secretary of State to exercise this close supervision over the local Governments in the interests of the taxpayer, that supervision can only be relaxed on the ground of increasing popular control. Lord Curzon has remarked, and so also, I believe, almost every administrator who had to consider this question, on the growing tendency in every department to increase the emoluments and to increase the establishments. Far, therefore, from getting rid of the control over the budget by the Legislative Council, it appears to me that the relaxations by the Government of India and the Secretary of State of their power of control, and the additional powers which it is proposed to confer upon the local governments require not only the powers conferred upon the minister and the Legislative Council by the Reforms Report, but additional powers. Restrictions were placed upon the powers of the Government of India in the appointments of Englishmen because it was felt that otherwise the Indians would have no chance at all.

Similarly, take the questions of industrial expansion, the separation of judicial and executive functions, increase of taxation by recurring settlements without the consent of the Legislative Councils. All these are really financial questions, and, under the scheme proposed in the Reforms Report, the popular assembly will have considerable influence in shaping the policy of the Government with reference to all these. The proposals of the Government of India will leave the legislative councils and the minister without any such voice in the settlement of these questions. It is, therefore a considerable departure from the Report. My colleagues, I am afraid, do not realize the strength of the feeling for reform due to questions referring to these matters.* They ignore altogether the very important considerations which arise therefrom. There is no split in the Congress Party or so far as I can see among Indians on the broad lines of policy that should be pursued on the matters above referred to. The addresses presented to the Secretary of State and the Viceroy draw prominent attention to these grievances.

I cannot help thinking, in these circumstances, that if these restrictions are removed we may expect great waste of public funds in the future and great and alarming discontent. I would, therefore, as already stated as against the new proposals of my colleagues, not only support the scheme in the Reforms Report so far as taxation and budget are concerned, but would go a little further in the same direction by enacting that the Governor's power of restoring any provisions in the budget in the interests of the reserved subjects should not be exercised so as to confer any benefits on the services which they would not obtain in the ordinary course, and the Governor should not be allowed without the sanction of the Secretary of State to restore any provisions

* See paragraphs 3 to 12 above.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in the interests of reserved subjects with reference to any matter for which the sanction of the Secretary of State is now required. It should be remembered that in the case of transferred subjects the council has got the powers of removing the minister, and a corresponding power does not exist in the case of the reserved subjects.

Peace and Order.

28. Leaving now the question of the budget, let me take the equally important question of peace and order. If sedition had its origin in Bombay, it would be noticed that this was due to the harsh administration of the plague regulations by a collector, which would have been impossible if the Indian element was powerful in the government of the country. Similarly the course of maladministration by the Government of Eastern Bengal which was responsible for the growth of real Bengal sedition would also have been practically difficult. Under the law which we have recently passed and under certain regulations which were passed at the commencement of the last century to meet certain exceptional classes of cases, it would be open to an executive Government in a province to deprive a man of his liberty and of his freedom of speech without the orders of the magistrate or any other judicial tribunal. The press may also be deprived of its freedom by executive action, the ordinary courts being deprived of their jurisdiction. The Governor of a province has the power of depriving a person who attacks him of his liberty of person and of his property without affording him a public opportunity of proving his allegations before the ordinary tribunals of the country. Under this law no Indian paper would venture to indulge in criticisms distasteful to the head of a province. Any agitation against the civil service or bureaucratic form of government would scarcely be possible under the civilian head of a province. The Home Rule agitation, or in fact any constitutional agitation may be suppressed without the interference of a judicial tribunal solely at the instance of an executive government. In these circumstances, it seems to me to be imperative that the Indian element and the popular element should be powerful in the Government of a province. Otherwise we will certainly perpetuate all those evils due to the inutility of the Councils which, as forcibly pointed out in the Report, are responsible for the widening gulf between officials and non-officials.

Grand Committees.

29. It is proposed to constitute grand committees out of the members of the legislative councils in order to legislate on 'reserved' subjects when the Governor considers such legislation 'is essential to the discharge of his responsibility for the peace or tranquillity of the province, or any part thereof or for the discharge of his responsibility for the reserved subjects.' So far as the 'reserved' subjects are concerned, it is said that such exceptional means of legislation are required on account of the poverty, ignorance and helplessness of the great majority of the population, who cannot for the reason be left to the mercies of a legislative council who will not adequately protect their interests. Further it is said that the masses themselves will not take any part in political life, and therefore all such questions concerning the revenue, those arising from the relations of the landlord and tenant must be retained by the executive government. It is also said that such power is necessary in order to defend British commercial interests and other questions concerning industries, etc. All questions that arise between classes and creeds also should not be left to the ordinary legislative councils. I have pointed out already that it may well be doubted whether in the interests of the good government of the country such exceptional powers are necessary. Our electorates are becoming wider; all kinds of interests and views divergent among themselves are going to be represented; and if in these circumstances, the government cannot secure any majority, the probabilities of their being in error are great. The grand committee as constituted is obviously intended as a check on a popular assembly, and is in itself therefore an undesirable institution. It creates an undesirable antagonism between a local executive and a local legislative council, and if there are other means of attaining the same object in view it is undesirable to retain it. I think the safeguard of the Imperial Legislative Council for all affirmative legislation and the powers of veto possessed by the Governor and the Viceroy to negative any Act which is passed by the local legislative council, and the power of ordinance for urgent occasions would be amply sufficient. This would secure a careful consideration of a measure rejected by the local legislative council before its introduction into the Imperial Legislative Council.

The objections to legislation by the Government of India are stated in paragraph 248 of the Reform Report. The first objection advanced is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that such legislation will strike at the root principle of provincial autonomy, according to which the provincial governments must be autonomous in their own legislative field. Provincial autonomy was promised by Lord Hardinge's Delhi Despatch of 1911 for the purpose of increasing popular control. We, therefore, do not want the so-called provincial autonomy if it is intended thereby to increase the power of the executive government over the legislative council. On the other hand it is a principle recognised by the Reform Report that the control now exercised by the Government of India and by the Secretary of State over subordinate governments can be relaxed only in proportion to increasing popular control. It is quite right, therefore, that where a provincial legislative council has passed a measure, the Imperial Government or the Secretary of State should interfere as little as possible; but that the local executive government should be able to get passed through a grand committee a measure which has been rejected by the Legislative Council goes against all these principles. There is, in that case no question of real provincial autonomy. It must be borne in mind that the grand committee though technically a part of the legislature is brought into existence and will always be utilized to register the decrees of the Executive Government and may, therefore, be regarded as its agent for enacting measures rejected by the Legislative Council. The provincial government becomes independent both of the Provincial Legislative Council and of the Imperial Government; whereas, the proposal I put forward retains the power of the Imperial Government, for it can hardly be doubted that legislation by a grand committee will practically put an end to legislation in the Imperial Council

The other objection that is advanced that the Government of India would be very reluctant to undertake responsibility by legislation is, in my opinion, rather a recommendation than an objection as a Legislative Council should be over-ruled only in very exceptional cases. The Government of India cannot be accused 'of ignorance of local condition' as they will be acting only on the advice of the local Governments and after full consideration of, the discussions in the local Legislative Council.

Disregard of provincial wishes is a common factor whether the legislation is by the local Executive Government or by the Imperial Legislative Council. The Imperial Government in such a case would be an arbitrator between the local Executive Government and its Legislative Council. The 'ungrateful' task has to be undertaken by somebody, and it is much better that it should be undertaken by a Government far removed from local excitement. The reason that such legislation is unpopular and controversial is only an argument for subjecting it to examination by a government which is not subject to local temptations of prestige, power and increased revenue. The Imperial Government will be able to attach due weight to the circumstances that may be urged by the local Government and the arguments which induced the local Legislative Council to reject the measure. I also disagree with the proposal to reduce the elected element in the grand committee.

We are all agreed that the heads of provinces should in future, be Governors instead of Lieutenant-Governors (paragraph 218), but my colleagues are of opinion that the existing practice of appointing only civilians in accordance with the rule which requires twelve years' service in India for a Lieutenant-Governorship must be or will be followed for a long time to come. I regret I cannot share in this view. The primary consideration that should weigh with the Secretary of State in making the appointment is the fitness of the person to carry out the duties not, as hitherto, of an autocratic head of a province but of a constitutional ruler. The civil service generally have shown their hostility to the proposed reforms. They have expressed their strong opinion of the unfitness of Indians to hold high appointments or to carry out the duties which will devolve upon them as Parliamentary leaders. There will be many persons therefore among them who are not likely to work in harmony with Indians or to view with sympathy their political progress, which must curtail the privileges hitherto enjoyed by their own service. The Secretary of State should certainly, therefore, take the question into consideration when he makes the appointment. 'It may indeed be questioned whether the life spent in the Indian civil service is calculated, except in rare cases to stimulate that part of political talent which consists in the study and guidance of political opinion, or in the framing of the large legislative proposals which are from time to time needed in actively thinking political communities.'*

This fact also will have to be borne in mind. Those civilians who are in sympathy with Indian progress or who can be trusted to work smoothly with the political machinery of the future under the altered conditions and who are not prejudiced by

* Mr. H. A. L. Fisher: "The Empire and the Future."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the feelings of hostility to the proposed reforms evinced by many of them may be appointed as heads of provinces. I do not think, therefore, that the confident expression of opinion by my colleagues as to the continuance of the practice hitherto existing is justified.

31. The same question arises with reference to the qualifications of a member of the executive council. It is intended, according to the Reform Report, that one member should be an Indian and the other an official with qualifications of 12 years' service under the Crown which is now required by law. I do not understand the Report to lay down that this should be retained as a statutory qualification, though no doubt in practice the qualification will be insisted upon. At present the appointment is in practice limited to the civil service. One can easily conceive cases where a Governor might require the presence in his executive council of a person of outstanding abilities in some particular line either in India or in England. There is no reason why the Secretary of State should be debarred from nominating him. My colleagues are of opinion that there must be a statutory provision that one member should be an Indian and that the other should have the existing qualification. I doubt whether this is necessary.

32. The only other point which I have to notice has reference to the right of a legislative council to make rules for its own conduct of business. Every council ought to have such a right, and no reasons have been shown why we should insist upon the consent of the president. The rights and privileges of a president or of a vice-president, in so far as they do not refer to the ordinary conduct of business, should not of course be interferred with.

The Government of India.

33. The first question has reference to responsible government. I recognise that it has been laid down in the Report that there should be no responsibility in the Government of India as in provincial governments, that is to say that there should be no Indian minister responsible to the legislature. This can be defended only on the ground that many of the departments of administration have been transferred to the provincial government and that those retained by the Government of India are far too important to be handed over to responsible Indian Ministers before the experiments have justified themselves in the provinces. These, of course, are subjects which concern peace and order and the good government of the country, foreign states, Army and Navy, and also questions in which the interests of England or her people are greatly involved. There are, however, questions which only concern the internal administration of the country and which have been recognized as fit for transfer to a minister and the legislative council. In all those cases, therefore, in which the Government of India retain a right to interfere with the transferred subjects, there should be no objection to introducing responsibility in the central government. Indeed responsible government seems to be necessary in order to carry out the principles indicated in the Report. It is proposed to allow powers of interference to the Government of India in the transferred departments of the provinces, for instance, to secure uniformity of legislation where such legislation is considered desirable in the interests of India or of more than one province. It is also desired to retain in the Government of India power to decide questions which affect more than one province. *Ex-hypothesi*, these are subjects which ordinarily should be dealt with by ministers in accordance with the will of the local legislature; and if it is proposed to remove these from the legislative council for reasons which have nothing to do with their capacity to deal with questions of that character, it is but reasonable that in the Government of India also the decision of such questions should be left to the legislature and an Indian minister. If necessary an Indian member of the executive council may be an Indian minister for this purpose. Supposing there are certain subjects which are not now transferred for temporary reasons, and of which we contemplate transference in the course of three or four years, I cannot see any reason why in such cases also responsible government should not be introduced so far as such subjects are concerned. Responsible government in the provinces demands responsible government in the Government of India in the same subjects, as otherwise provincial responsibility will be diluted.

The Council of State.

34. The next important question refers to the Council of State. I have very strong objections to the power given to the executive government to pass laws through the Council of State without a previous discussion in the legislative assembly. The Governor-General can exercise his power of issuing ordinances which will operate for six months. If any discussion is necessary, he can introduce the Bill into the legislative council to ascertain the popular view. If it is a matter in which the Governor-General in Council has made up his mind, then, of course a discussion is useless

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and unnecessary and an ordinance can at once be issued. Now with reference to the Council of State itself.

A Council of State as a second chamber representing interests not properly represented in the Imperial Assembly, I understand, and I raise no objection to it. A Council of State for the purpose of securing delay and for greater deliberation of subjects also might be necessary and I would not raise any objection to such a council either. But this Council of State is constituted for neither of these purposes. Its avowed purpose is to carry out the will of the executive Government when they cannot carry it out on account of the opposition of the legislative assembly. It is, in fact, an unreal council. Rather than constitute such a council, it is much better to lay on the executive council itself directly the obligation to pass the law. It will not then be exercised so frequently as it would now be with a State Council to give the measure that it passes an unreal appearance of popular support. It will belittle the importance of the legislative assembly and thus create an antagonism between it and the State Council and the executive government.

There is another serious objection. It is undesirable to give the executive council unrestricted freedom of action in matters in which popular opinion is decidedly against it. Disastrous consequences have attended such freedom of action; and as long as the Executive Government have that power of action, they are bound in the discharge of their responsibility to act upon it if they take a view contrary to that of the legislature. Again, there are great questions of administrative reform which should be carried out and which have not been carried out on account of the opposition of the bureaucracy due to their apprehension of loss of prestige, etc. I have referred to many of them already. There can be little doubt that a Council of State would check reforms as in the past in all these directions. I think, therefore, that the Council of State as constituted will prove an obstruction. At the same time, I recognise that in the Reforms Report it has been laid down that in matters referred to above, there should be no responsibility to the legislature. A *via media* appears to be to direct that in all cases Bills should first be submitted to the legislative assembly; and on their failure to pass such Bills, all the papers should be laid before the House of Commons to whom the Select Committee would no doubt submit their report; and it is only after such sanction is obtained that further step should be taken to proceed with the measure, either by the Executive Council or the Council of State.

Two further courses have been suggested: to confine the Governor-General's or Viceroy's power of certification to certain definite subjects or to curtail the power of certification to those Bills which have not been rejected by a certain percentage of the members of the Legislative Council.

I am clearly of opinion that the power of the Council of State, if it is not to be dropped, should be curtailed.

Budget

It is now proposed to delegate larger powers to the Government of India. It is obvious that if hitherto the interference of the Secretary of State has been necessary in the interests of the Indian taxpayer, and that it has been necessary will appear from the various orders which restrict the Government of India's power of expenditure —then the Secretary of State should be allowed to forego the exercise of his own power only with the development of popular control; otherwise, there is no justification. That the powers hitherto exercised by the Secretary of State were necessary in the interests of the taxpayer will appear from an examination of the instances in which such power has been exercised. It will also appear from a consideration of the rules themselves and the occasions and the reasons which led to the passing of such rules. It appears to me therefore that all resolutions on the budget by the Legislative Assembly should be given effect to in all those instances in which it would not now be within the competence of the Government of India to incur any outlay without the sanction of the Secretary of State; at any rate, if full effect is not to be given to it, the power to over-rule the Legislative Council in that respect should not be given to the Executive Government in India but should rest only with the Secretary of State.

I do not agree with my colleagues in discarding the provision about appointing members of the assembly to positions analogous to that of Parliamentary Under Secretaries or the Standing Committees. At present, or under the new scheme, there is no means of non-official members acquiring that knowledge which can be acquired only by holding an office. The knowledge of Indians in the public services will not be available to non-officials for criticism of Government proposals. The ministers will have intimate knowledge only of the transferred departments and that also only in the provinces. These Under-Secretary-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ships and Standing Committees will enable the non-officials to acquire that information which they would otherwise lack. In the earlier stages of discussion, it was generally admitted that these would form a good training ground for future administrators. It is undesirable, therefore, to drop them.

In the Imperial Council also, as in the provincial councils, I think it should be left to the council to frame their own rules.

37. If there is any demand in which the associations who have addressed the Secretary of State and the Viceroy and all classes are unanimous it is in the request they make that half the members of the Executive Councils, both provincial and Imperial, should be Indians. The Congress and the Moslem League as well as the Sikhs and the non-Brahmin classes of Madras want it. The reasons are obvious. Every body feels that without the infusion of an adequate Indian element into the executive councils, the reforms that are essential for the better government of the country will not be carried out. Again, there are various questions, particularly those affecting finance that are settled by the Government of India and by the Secretary of State in consultation with one another which require a strong Indian element in the executive council. In all those questions, without adequate Indian influence the Government of India will easily yield to the Secretary of State. Various influences will act upon the Government of India which require adequate Indian influence to counteract them. Indian influence is also required to prevent the executive government of India from being unduly autocratic or unsympathetic towards popular movements. I would, therefore, propose the addition of one more Indian member to the two members proposed by the Government of India. If this is not accepted, I would suggest the appointment of an Indian minister to exercise the Government of India control over the transferred departments in the provinces. He may be called in for consultation but not for decision.

C. SANKARAN NAIR.

Delhi, 5th March 1919.

Lord Willingdon on "Unitary Government"

Soon after the publication of the Montagu-Chelmsford Report, the Government of India addressed a circular letter to the Provincial Governments for an expression of their views on Indian Constitutional Reforms. The Local Governments accordingly submitted their opinions, some separately and others in groups. The Lieutenant-Governors of the United Provinces, Punjab and Burma and the Chief Commissioners of the Central Provinces and Assam submitted an alternative scheme to that of the Joint Report. The Governor of Bengal and the Lieutenant-Governor of Bihar and Orissa while preferring the general plan of the scheme propounded in the Joint Report "to any other scheme which has been devised" suggested a more cautious advance on constitutional experiments. Sir George Lloyd, who had just then assumed the Governorship of Bombay rightly urged "that time is a factor of vital importance in the consideration of the whole question of reform." "I am convinced," wrote His Excellency, "that delay is a greater danger even than an imperfect scheme and that those of us on whom must fall the heavy burden of putting reform schemes into actual operation, will be better able to work an imperfect scheme with the good-will and confidence of all concerned than to operate a more perfect scheme—if one can be devised—when confidence and good-will has been broken and alienated by disappointment and delay." But it was reserved for the Government of Madras to indulge in a wholly destructive criticism. Their memoranda on the reform proposals are on the whole the most reactionary of all the documents bearing on the subject—an unenviable distinction to be sure! But the Government of Bombay under Lord Willingdon offered a welcome contrast. His Excellency's sympathetic attitude towards Indian aspirations and his marked interest in political reform for India make his criticism altogether invaluable. It will be seen that Lord Willingdon's scheme, though differing in procedure from that of the Joint Report is conceived in the generous spirit characteristic of him. In fact even those who are not for his scheme and who whole-heartedly subscribe to the scheme of the Joint Report will read His Excellency's criticism with the care it deserves. And as Mr. Montagu has already stated that it will be within the province of the Joint Committee not only to recommend modifications in his own scheme but also to consider the relative merits of diarchy and "unitary executive" there is no doubt our readers will read with interest Lord Willingdon's suggestive contribution to the literature on the reforms. [*Ed. I.R.*]

WHILE this Government is anxious to support as far as possible the main principles of the scheme they find it necessary to point out certain defects.

The question of administrative and legislative devolution is dealt with in paragraphs 212 and 213, and upon these subjects this Government has only two suggestions to offer. First, in the opinion of this Government, the demarcation of the Imperial and Provincial spheres, both legislative and administrative, should be effected by statute and not by any species of constitutional practice. As regards legislation in particular it would, in practice, be inconvenient that the powers of the Provincial and Imperial legislatures should not be clearly and unmistakably defined, and it is further important that that definition should be a statutory definition in order to avoid any possible doubt as to the competency of the respective legislatures and to escape the possibility of legislation by one body encroaching on the sphere of the other body. In the second place I am to suggest that although the question of the relaxation of the control of the Government of India in the administrative sphere can be dealt with at any time, and need not therefore necessarily be decided now, yet in the opinion of this Government some relaxation will undoubtedly be necessary in view of the greater powers which it is proposed to give not only to the Provincial Governments but also to the Provincial Legislative Council. The Governor-in-Council is inclined to doubt whether it is correct to say that a general relaxation of the control of the Government of India would be opposed by Indian opinion, as is suggested in paragraph 213 of the report. The Governor-in-Council has reason to believe that the contrary is the case. It is, however, unnecessary to enter into the details of this question, as it is one that can be dealt with independently of the proposed reforms.

The next matter which calls for discussion is the Provincial Executive, which is dealt with in paragraphs 214 to 224. On this most important and difficult question the Governor-in-Council, I am to say, regrets that he is unable to accept the proposed scheme of Government as one which is likely to work satisfactorily in practice. The Governor-in-Council is aware that the proposal is intended to meet a period of transition only. But it is not possible to say with any approach to certainty how long this period of transition is likely to last, and it is therefore not easy to accept for an indefinite period a scheme which is open to serious objection. That such a scheme as is proposed could not be accepted as permanent is recognised in paragraphs 233 and 354 of the reports. But whatever the transition period may be, the work of administration has to be continued, and in the opinion of this Government it is unsafe to accept a form of Executive which is admittedly open to serious criticisms merely because it furnishes a convenient stop-gap. This Government, I am to say, fully appreciate the ingenuity of the proposed solution, and the advantages which it offers in theory in the way of future development on settled lines. But administration is a practical business. It is proposed to substitute for a form of Government which, whatever its defects, is well tried and has in the working produced results which are far from negligible, a machinery which is wholly untried and which is, it is believed, without precedent in the history of the world. Therefore, I am to say that the Governor in Council considers that the burden of establishing the practicability of the new form of Government lies very heavily upon those who advocate it. I am further to point out that criticism directed against the existing form of Government or the development of that form which is found in paragraph 217 of the report is open to the obvious answer that the form of Government criticised is at least, one which can be seen at work, while no such answer is possible to any criticism of the new scheme. Further, when it is admitted, as in paragraph 217 of the report, that an extension of the existing form of government would not have been unfavourably received in India, it is surely not unfair to argue that the merits and the validity of the new proposal should be established by those who advocate it beyond all reasonable criticism. Also it is, as every practical man must admit, difficult if not impossible to forecast what difficulties may arise in the working of machinery so novel and so complicated, and therefore it is impossible to feel that such criticism as is attempted can be exhaustive. Of the existing form of government we know the best and the worst, but of that which is proposed the virtues and defects can only be conjectured. On these general grounds, the Governor in Council is most reluctant to make a leap in the dark which the proposal implies. He prefers most strongly to adhere to that which is known and can be trusted and to proceed upon that basis rather than to risk a doubtful experiment. He considers that the new scheme is obnoxious to criticisms which are at least as cogent

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as those which can be suggested against a development of the Executive Government upon the present lines and therefore the burden has not been discharged by those who are endeavouring to substitute the new scheme for the old.

In addition to these general considerations, there are certain special criticisms which the Governor in Council wishes to offer for the consideration of the Government of India. What he finds it impossible to accept is the proposed division of the Executive Government into two portions. He regards it as a fundamental principle that the responsibility of the Executive Government, or Cabinet, or whatever it may be styled, shall be one and undivided. He considers that the suggested division of functions contains the seeds of friction which will, in all probability, lead to a complete deadlock, and he doubts whether it is in fact possible to divide the functions of government in the manner proposed. Yet, such a division is essential for the successful working of the scheme. It is proposed that the subjects with which Executive Government have to deal should be divided into two portions known as the reserved and the transferred subjects. The report seems to assume that it will be easy to classify the functions in question and allot them to councillors on the one hand or Ministers on the other, in accordance with a pre-conceived plan. It is necessary to point out that this presupposes that each Member of Council under existing conditions exercises independent control as regards the subjects allotted to his charge. This, however, is not the case. Apart from cases in which it is necessary to obtain financial sanction, which will be dealt with hereafter, the whole theory of Government by Council postulates that in all cases other than those of secondary importance, the orders of two members of council will be obtained. It is in fact this feature of Government by council which renders it in the eyes of the Indian public distinctly preferable to that by a single Head. So long as the public feel that orders in all matters of importance receive the concurrence of at least two Members of the Government, particularly if one of those Members is an Indian, they feel confident that questions or issues will have been considered in all their aspects, and that justice will be done to all concerned.

It appears, however, to be assumed that it will be possible to divide the functions of government into two separate compartments, with reference to one of which the Councillors will act and the Ministers will advise, and with reference to the other the Ministers will act and the Councillors will advise, and it is assumed that the number of cases in which their functions will overlap will be comparatively few in number and such as can be easily settled in the event of the difference of opinion by reference to His Excellency the Governor. But is it possible to demarcate the various functions of government into two distinct spheres, and to lay down that questions arising in one sphere shall be dealt with by one part of the Government and those arising in the other sphere by another part? A reference to the records of Government will show that there is scarcely a question of importance which comes up for discussion and settlement in any one of the departments of Government which does not require to be weighed carefully in the light of considerations which form the province of another department of Government. The primary duty of the Government as a whole is to preserve peace and order, to protect the weak against the strong, and to see that in the disposal of all questions coming before them the conflicting interests of the many different classes affected receive due attention. And it follows from this that practically all proposals of importance put forward by the Minister in charge of any of the departments suggested for transfer in Illustrative List No. 11 appended to the Report will involve a reference to the authorities in charge of the reserved departments. It is more correct to say that, so far from questions on which the functions of the two portions of the government overlap being few in number as is implied in paragraph 221 of the report, there are few, if any, subjects on which they do not overlap. Consequently the theory that, in the case of a transferred subject in charge of a Minister, it will be possible to dispense with reference to departments of Government concerned with the control of reserved subjects is very largely without foundation.

It is undesirable to burden this letter with detail. But a reference to one question which is at present attracting the attention of this Government will show that this statement is fully justified. Take, for instance, the question of introducing free and compulsory education. At first sight it would seem to be impossible that this question should impinge to any material extent on the functions of those departments which are intended to be reserved for the Executive Council. It would seem to be in its nature so entirely educational that, except in so far as financial provision is required, no other department would have to be consulted. But, as the discussions in Council have shown, there are a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

number of points in which other departments are concerned. In the first place it is clear that the introduction of compulsary education must, if experience in England is any guide, be accompanied by a large increase in the number of prosecutions of parents for not sending their children to school. It is possible that the enforcement of this policy in manufacturing areas, where the children earn good wages in the mills, might lead to discontent on the part of the mill-hands and consequent disturbance. The matter must therefore be considered from the police point of view. Secondly, the disposal of this large number of prosecutions might involve a great strain on the magistracy. This would have to be considered from the point of view of the judicial department. Thirdly, the compulsory attendance of children at schools in rural areas, particularly at harvest time, might reduce the supply of labour in areas where that supply is inadequate, and render it impossible to gather the crops as they ripen. This might seriously affect the ability of the ryot to pay his assessment, and would therefore have to be brought to the notice of the revenue department. Such instances are by no means rare. It cannot, in the opinion of the Governor-in-Council, be too clearly recognised that the functions of government must remain under one authority, and that any attempt to divide them on stereotyped lines can only result in confusion.

I have dealt so far with the impossibility of allocating responsibility for separate subjects to individual members of the Government, due to the necessity for considering government as a whole. I am now to consider how far it is possible to impose complete responsibility on the Ministers and at the same time secure an uniform standard of financial control throughout the whole Government. In this connection I am to express a feeling of disappointment at the somewhat inadequate method in which this question has been dealt with in the report. The matter is discussed in paragraphs 221 and 256, and the assumption underlying those paragraphs appears to be that the ordinary procedure will be that the Council and the Ministers combined are to frame a budget which will thereafter be presented to the Legislative Council. In framing this budget as well as in passing it through the Council the Governor-in-Council will be entitled to demand that adequate provision shall be made for reserved subjects. When this is secured, and when the whole budget has been passed by the Legislative Council, the Ministers in charge of the transferred subjects will apparently be at liberty to expend the lump budget grants placed at their disposal without control or check other than the somewhat shadowy veto of His Excellency the Governor. It is apparently contemplated that some friction may arise when these budget grants are fixed, but that as soon as the budget is settled, the possibilities of conflict between the Councillors on the one hand and the Ministers on the other will disappear. Each will have their own grants and the Ministers will be responsible to the Council (or to their constituents it is not clear which) for the manner in which they spend them.

It is difficult to believe that this is seriously intended. At the present moment, as is well known, all proposals put forward by various departments of Government have to be referred to the Financial Department for sanction. The latter department decides, in the light of standing orders issued by the Secretary of State, whether from a financial point of view they are expedient and whether they are within the powers of the Provincial Government to deal with, or whether they must be referred to higher authority for sanction. In other words, the Financial Department of the provincial Government, like the Treasury in England, is invested with the superintendence and control of all expenditure up to the time when it is made: the fact that there is budget provision merely indicates the acceptance by the finance department of the probability that the expenditure will be necessary but it does not imply actual sanction to its being made. Is it intended that when subjects are transferred to the control of the Ministers that the present system should continue?

The question is one of very great importance. In the English Cabinet the Finance Department, in other words the Treasury, under the control of the Chancellor of the Exchequer, who is of course a member of the Ministry, is charged with the superintendence of all revenue and expenditure. The position of the Treasury "may be regarded as one of perpetual conflict with servants of the State who want more pay than the Treasury thinks they are worth, with the departments of Government which want more money than the Treasury is prepared to ask for from the Parliament and Government, with the House of Commons, which contests the amount demanded and the mode in which it is proposed to be raised, and with the taxpayer." When the new constitution is established, and the Ministers in charge of transferred subjects appointed, who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

is to perform the duty assigned to the Treasury in England? Is the Finance Department to be concerned with the transferred subjects or not? If the answer to this question is Yes, it is clear that the head of Finance Department, who is *ex-hypothesi* a Councillor, must control the method in which grants made for transferred subjects are expended. He must therefore become responsible along with the Ministers and responsible to a very marked extent. Thus the theory that the Ministers and Ministers alone are responsible to the Legislature becomes untenable.

If the head of the Finance Department is not to exercise any control, then it will be necessary to set up another finance department under the control of the Ministers whose duty will be to superintend the expenditure of grants made for transferred subjects. In the latter case there will inevitably be different financial standards for different departments under the same Government, and this must eventually lead to friction, waste, and maladministration. The result is that it is impossible in the opinion of this Government to contend that the proposals of the report will achieve their object, namely, delegation of responsibility to the Ministers. The essential indivisibility of the functions of government and the necessity recognised in all governments throughout the world of maintaining the unity of financial control at once renders this impracticable.

But there is still one feature more which in the opinion of this Government calls for serious criticism. It is proposed that the Ministers shall, if they require revenues beyond those allotted to them, after the provision of funds for reserved subjects, be at liberty to propose taxation for which they and they only shall be responsible. Now it seems to this Government that where taxation is concerned it is quite impossible to say that the Ministers shall be responsible and the Councillors shall not. The public would most certainly hold the whole Government responsible, so that there too the proposal in the report to transfer responsibility by compartments would prove a failure.

The odium of new taxation should rest upon those whose policy has made that taxation necessary. But this will not inevitably be the case under the proposed scheme. It is not improbable that the demands of the reserved subjects may compel the Governor-in-Council to allocate so large a portion of the available funds to those subjects as to leave no sufficient surplus for the administration and development of the transferred subjects. The power to impose fresh taxation is vested in the Ministers alone, and they may be compelled to appeal to the Legislative Council to impose fresh burdens on the public to meet expenditure which is not required by any policy of theirs. This would place the Ministers in a false position, and inevitably give rise to undesirable friction. On this ground also it appears expedient that proposals for fresh taxation should emanate from the whole Government.

Finally, it is proposed that the Minister who is first appointed should be on his trial for a period of training, and at the end of this period his constituents should decide whether or not his policy has been such as to justify them in re-electing him to the Legislative Council. Now it is hardly necessary to observe that the electorates throughout this Presidency must be ignorant, and it will be necessary, if they are to arrive at a fair estimate of the virtues or defects of the retiring Minister, that they shall have a clear idea of what he has done. He may act on his own responsibility or in concert with another Minister, or as one of the entire Government, or against his will under the control of the Governor. I am to urge that it would be impossible for the public to distinguish between these cases. It will be difficult even for a highly educated person such as a collector to distinguish between the authorities responsible for the various orders which may reach him. It would be impossible for the ordinary agriculturist voter to know that the order directing him to vaccinate his child comes from the Minister whom he returns to Council because the latter is concerned with sanitation, and that another order under the Police Act directing him to attend a roll call every day comes from an Executive Councillor with whose continuance in office he has nothing to do. The difficulties inherent in the introduction of an electoral system in rural areas in this Presidency are already considerable. It will be impossible to expect from the voters, 80 per cent. of whom will be illiterate, more than general ideas on the subject of what they consider right or wrong in the actions of their representatives. If before judging the latter they are expected to possess the knowledge of a correct classification, which at the present moment is not possessed by anyone who has not a close acquaintance with the work of the secretariat, it is obvious that their votes cannot be given intelligently, and that the theory that the Ministers will be responsible to their constituents is in practice an illusion.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I am further to point out that the convention insisted on in paragraphs 221 and 222 that the two portions of the Government should form, not two Governments but one Government, and that the decision should be loyally defended by the entire Government is likely to lead to difficulties more serious than appear to be recognised in those paragraphs. It is possible, it is even probable, that occasions will arise when the decision of that part of the Government which is responsible for the reserved subjects will not meet with the approval of the Ministers, and it is equally probable that the decisions of the Ministers with reference to the transferred subjects may not be approved by the members of the Executive Council. In such cases it would be extremely difficult for the Government to act as a whole in the face of the public. Where all the members of Government have a voice in the decision of any matter, as in the form of executive advocated by this Government, any member can fairly subordinate his own views to the decision of the whole body of which he is a member. He has had his say in the matter, he has recorded his vote, and if the decision goes against him, as a member of the Government he is perfectly entitled to uphold the decision of the majority. But here it is proposed that the Minister or member of the Executive Council, as the case may be, should support a decision of which he heartily disapproves and as to which he has had no deciding voice. In the form of government advocated by the Governor-in-Council the decisions are, in reality, the decisions of the whole Government and can be defended as such. In the opinion of the Governor-in-Council this is a most serious objection, which it is difficult to accept even for a period of transition.

I am now to invite attention to the formidable list of duties which the new scheme will impose upon the Governor. It will be for him to decide *inter alia* (*a*) who should be selected as Minister or Ministers (paragraph 218), (*b*) whether the allotments for reserved subjects should be insisted on or not (paragraph 254), (*c*) whether a subject belongs to the reserved or transferred sphere (paragraph 221), and to decide in cases where a subject trenches on both spheres, (*d*) whether legislation should be certified or not (paragraphs 252 and 253), (*e*) whether a Bill should be assented to or returned for consideration (paragraph 254), and (*f*) whether the proposals made by a Minister as to a transferred subject shall be vetoed (paragraph 219). The majority of these duties are imposed upon the Governor owing to the suggested division of the two spheres of Government, and in the opinion of this Government the burden, in practice, will be intolerable. Every one of these decisions may give occasion for friction between the Governor and the Minister, or possibly between the Governor and the Legislative Council. An occasion for political agitation may arise out of all or any of these matters. The last duty in particular will impose upon the Governor the necessity of keeping a close and constant watch on every order issued in the transferred sphere.

It may be objected that it is proposed to issue for the guidance of the Governor an instrument of instructions such as is contemplated in paragraph 219. Without the text of the proposed instrument it is difficult to criticise in detail, but the Governor-in-Council is of opinion that it is impracticable to provide in such an instrument instructions which can be exhaustive, having regard to the diversity of the difficulties which can be foreseen, and when allowance is made for the unforeseen difficulties, the impracticability of the proposal is even more obvious. If the instrument is not exhaustive it ceases to be of much value. In the nature of things it cannot be exhaustive, and it will merely serve to fetter the discretion of the Governor in circumstances which cannot have been anticipated when it was drafted. If, therefore, the control of the Governor is to be the ultimate safeguard, as it will be in many matters under the proposed scheme, there should be no endeavour to fetter that control in the manner proposed. The above remarks, I am to say, contain the main criticisms which the Governor-in-Council offers for consideration with reference to this portion of the subject, but he would again insist that it is beyond human sagacity to forecast with accuracy the manner in which such machinery as this will work. There may be other and more serious difficulties which have not been foreseen and which time alone can bring to light.

The Governor-in-Council has so far set out what appears to him to be the principal objections to the form of Executive Government proposed in the report. I am now to set out the main lines of the alternative which he advocates as being suitable to the conditions of this Presidency.

I.—The executive should consist of five members including the Governor. There should be four members of Council of whom three should be Indians. Of these three, two should be chosen from among the elected members of the Legislative Council. The Governor should have power to appoint a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fifth Member of Council at his discretion should necessity arise.

II.—There should be a largely increased Legislative Council with a substantial elected majority of about four-fifths.

III.—There should be no division of subjects either in the Executive Government or for the purposes of the Legislative Council.

IV.—There should be standing committees, both financial and for the other departments of administration.

V.—Resolutions of the Legislative Council on matters of administration should be recommendatory only.

VI.—The budget for the year should be prepared by the Executive Government and presented to the Legislative Council not later than January in each year after consideration by the Financial Standing Committee. All items in the budget, both on the income and the expenditure side, should be discussed and passed by the Legislative Council with such alterations as they may deem necessary. The Governor will have a right of veto as a result of the exercise of which the original estimate shall be reinstated.

VII.—Legislation by the Legislative Council should also be subject to the veto of the Governor in cases in which he considers the peace, order and the safety of the State is at stake.

VIII.—As regards Government Bills reference is invited to the proposal explained in paragraph 25.

With regard to the proposal to give the Governor discretion to appoint a fifth Member of Council I am to point out that the considerations set out in paragraph 266 of the report, as to the burden of work imposed upon the members in charge of the departments of the Imperial Government, apply with equal force to the case of the Provincial Governments. The increased size of the Legislative Council and the creation of standing committees will entail a great strain on the members of Government. That strain is already heavy and may well become impossible to endure in the near future. No doubt the scheme comprises the addition of one Member of Council but it is quite possible to conceive that a time may come when even this increased executive will be unable to cope with the increase in work. Therefore it is provided that the Governor should have discretionary power to appoint a fifth member.

I am now to set out the advantages of this proposal. In the first place it leaves Government free to act together on all subjects and to present an united face to the outside world. Secondly, it avoids the complications inseparable from an attempt to divide the functions of Government. Thirdly, the system of financial control is simple and efficient. The budget will be discussed and passed by the Legislative Council, and their resolutions will be binding in all cases except when His Excellency the Governor considers that peace, order, and the safety of the State require the exercise of his veto. Fourthly, the Legislative Council, which has a largely increased elective majority, is placed in the position in which it can demonstrate during this period of training its fitness to exercise still greater powers. Fifthly, the individual members of this Council will enjoy the same opportunities as the report affords them of association with the Executive Government on advisory committees, and of dealing at first hand with important questions connected with the budget and the various administrative departments.

It has been suggested that a scheme of this nature is defective in that there is no direct responsibility on the part of the Legislative Council, and that this will encourage members to indul e in an increasing extent in irresponsible criticism. To this the Governor in Council entirely demurs. He contends that the proposal connotes full devolution of responsibility on every member of the Legislative Council as regards the whole sphere of administration, whereas the proposal in the report imposes responsibility on the Legislative Council through the Minister or Ministers as regards the transferred subjects only. The veto of the Governor is common to both.

I am to urge strongly for the consideration of the Government of India that the training imparted in this way will be far more effective than any which can be secured by the scheme put forward in the report. The advisory committees will be able to study the various questions placed for their consideration from all points of view. There will be no artificial barriers placed between the various classes of subjects, and there will be one single financial controlling authority. It may be anticipated that occasions will seldom arise for the exercise of the Governor's veto.*

TOPICS FROM PERIODICALS

Islam and the World's Thought.

Mr. Zia-ud-din Ahmad Barni, writing in the May number of *The Theosophist* points out that catholicity is Islam's first contribution to the world thought. A Mussulman makes no distinction between one prophet and another, so far as his prophethood is concerned, and further does not limit salvation to the so called Mussulmans alone, but to all who are rightdoers. Again Islam is the greatest democratic force the world has ever known. The differences of caste and colour vanish away into its "ever-widening thought and action" Islam has no submerged classes or untouchables as they are called. Conversion to Islam carries with it enfranchisement; and Islam retains up till now something at least of that practical democracy which its founder had preached and practised in the olden days. Though Mussulmans frequently preached war and extermination of non-Muslims, the spirit of intolerance was quite at variance with Islamic principles which are characterised by catholicity of spirit and broad-minded toleration.

Its greatest contribution is the encouragement which it has given to Science and Art. The Prophet taught on the score of education, "go in quest of knowledge even into China. Seek knowledge from the cradle to the grave. The acquisition of knowledge is a duty incumbent on every Muslim, male or female." Again he says: "The ink of the scholar is more valuable than the blood of the martyr." The Arabs under Moawiyah collected the sciences of the Greeks and showed great interest in them, and under the Abbassids learning reached its highest pitch. Spain under the Ommayyads made much progress in all branches of knowledge. Mussulmans made the first telescope and built observatories in many places; they evolved an altogether new architecture and taught scientific agriculture and they developed the Greek system of medicine. In India the Mussulman Emperors built like giants and finished like jewellers.

Another great contribution of Islam is that it has placed great ideals and glorious traditions before the world in general and Muslims in particular. A Mussulman is to build his character on these. The men of Islam have always rushed joyously to martyrdom and have an exceptionally firm trust in God and His will. Above all Islam never despairs and will again begin to mould the souls of men and light in their hearts, a simple faith in God and a love for service.

The Indian Budget for 1919—20.

The Journal of the Indian Economic Society for March 1919 includes an article by Mr. C. S. Deoli on the merits or otherwise of Sir James Meston's first Budget.

The peculiar features of 1918-19 are that the current revenue and expenditure have departed widely from the Budget estimates presented in March 1918. Sir James Meston remarks: "After the strain and artificial conditions of recent years it is not easy to speculate how far the rebound will go or what directions it will take and the only thing that is certain is that we must incur a large expenditure to recover the ground which has been lost in a period of severe economy."

It is high time that the system of voting supplies for different services is introduced in India. The ways and means problem involves a double process (1) that of finding funds sufficient to meet the probable calls on them and (2) that of our resource which means the process of distributing the cash balance between the paying centres including the Home Treasury. In India the problem of resource is the chief difficulty. In 1919-20 the Government hopes that this problem will not recur in the acute form recently experienced, as they propose to undertake a large capital outlay on Railways which will utilise the large resources we possess in London. It is rather unnatural that the most important financial centre should be outside its limits.

The main currency question is the *managed* rupee which stabilises the gold price of the rupee for purposes of foreign exchange.

The Provincial Revenues are taken at close £37 millions and the expenditure a little over 38½ millions, the deficit being met by drafts on their large accumulated balances. There is no ship-building programme and Government has devoted an extraordinary large sum to the Railway Capital Programme, the present milage of which is enough to go on.

It is a matter of satisfaction that Local Governments have been informed to incur more expenditure on (1) The extension of education in directions where it has been specially hampered by war economies (2) The development of Industries (3) The repair of actual damage to public institutions and services and (4) Capital outlay on the development of forests, agricultural experiments and the like.

The Expansion of Europe.

Mr. W. R. Shepherd explains in the March issue of the *Political Science Quarterly* the interaction of European and non-European in the development of modern civilisation during the past five hundred years. The vast field of action which the European has made his own comprises two distinct areas; (1) that inhabited by aboriginal folk having little or no civilisation at all and (2) that occupied by certain peoples of Asia who had attained much earlier than the Europeans themselves a high degree of civilisation, which is in some respects quite superior to even the European. Through a reciprocal rubbing away of their rougher points of contact, the two great divisions of mankind have become conscious in ever increasing measure of the duty of laying aside narrow-mindedness and the overvaluation of self, the duty also of bearing forth to humanity at large their gradually awakening mutuality of esteem.

The diffusion of European civilisation itself is subject to a double limitation. Firstly, viewing the breadth and depth of its application, the process has little more than begun. Secondly, even the most hopeful of enthusiasts for European culture can hardly expect that the various types of Asiatic civilisation will eventually become transformed into European or fail to perceive that European culture itself must be more and more influenced by Asiatic ideas and institutions. From their mutual contact, a universal civilisation will not be the outcome. European relations to backward countries are regarded partly from the standpoint of a more or less evident imperialism and partly from that of the *white man's burden*—the former inherited from the period before the 19th century and the latter a product of subsequent growth. Just as the one suggests exploitation, the other conveys the idea of the duty of importing the blessings of the European civilisation, both implying contempt for an assumed inferior.

The history of European colonisation should not be confounded with that of the expansion of Europe. Expansion includes colonisation and vastly more. It is the interpenetration of Europeans and non-Europeans all the world over in all departments of human activity. Two concepts are inherent in its interpretation. One is that dependencies, other than mere seaports and restricted hinterlands, are the germs of new societies and new nations. In this first concept there are two sides. The Europeans in the dependencies have the natural environment of the locality into which they have transplanted themselves. The environment for the native peoples is that artificially established for them by Europeans. This mutuality of environmental operation works in two ways. The second concept is that whatever Europeans have done overseas and overland beyond their own frontiers forms an essential part of the history of their particular nations. It reveals both the impress made on the civilisation of Europe by what the Europeans carry back from their distant ventures and the manner in which this undergoes a change amid new conditions of existence.

As a historical concept European expansion involves two movements, the outgoing and the incoming. Operating in each movement are two interacting factors, the one that has been given and the one that has been received.

The transit of European ideas and institutions and the reaction on European life and thought may both be considered from several standpoints. U.S.A. is engaged in the work of European expansion on its own account; while Japan plays an important part in the expansion of Europe, though in a mediate sense; and the latter is both the product of the expansion of Europe and an intermediary for its extension to China.

The whole topic, in its manifold aspects needs a great historian.

Women and Co-operation.

In the June number of the "Hindustan Review" Mr. K. S. Abhyankar contributes an article on "Woman and Co-operation." The subject is a very interesting one, and the writer in dealing with it traces directly what part woman has played in the field of co-operation. As a customer it is for woman to understand "the differences between pure goods made under fair conditions and cheap and nasty articles produced under quite other conditions. If the local store is stocked with, let us say, the soaps, cocoas and jams of private firms, instead of the soaps, cocoas and jams produced by the wholesale, it is chiefly because customers will have it so." Women can understand, the writer says, if they discriminate rightly that their interests as social beings lie in the spread of the co operative movement.

Then he discusses at length the history of the co-operative movement in England, Scotland and Ireland. In western countries, women are not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

only house keepers, but purchasers as well. He describes the movement in England as "a self-governing organisation of women, who work through co-operation for the welfare of the people, seeking freedom for their own progress and the equal fellowship of men and women in the home, the store, the workshop, and the state." He pays a glowing tribute to Mrs. Acland, the first secretary of the Guild, to whose efforts are attributed the success of the movement. To-day in England women are share-holders, members of educational committees, delegates to co-operative congresses and what not. All questions affecting women's social and political life are discussed at various conferences. Then he treats about the history of the movement in Scotland and Ireland. The work done in Ireland is supplemented by an organisation called "The United Irish Women." Mr. C. W. Russel is a great believer in woman's co-operative movement. "Women" says he, "however they may err as individuals are concerned collectively far more than men about the character and well-being of a race." Elsewhere Russel says "we cannot build up a rural civilization in Ireland without the aid of Irish women. It will help life little if we have methods of the twentieth century in the fields and those of the fifth century in the home."

The war has done incalculable service to the woman's cause by providing opportunities for her to distinguish herself in various walks of life.

The unit of co-operation is the home. The sense of corporate social existence is a thing which deserves to be brought home to the minds of Indian women; as they have not yet realized the possibilities of the co-operative movement. "Development needs freedom" is a favourite maxim as much of pedagogy as of politics. Nor is the truth of less force when applied to women. We can never exaggerate the fruits of emancipating her from the prison of the home, to play a part in social existence. Her present sense of perpetual dependence on others must vanish in the matter of co-operation. The writer advises us that co-operation on the part of women is all the more necessary since "an interesting development of the day is the breaking up of the joint family and the migrating to cities by small families." This is indeed wholesome, considering the benefits which would derive from a joint family without involving any serious disadvantage. But what about the "immemorial" social restrictions on womanhood? Will "man" play the better part by heaving out a path for womankind?

The English Public Schools

Mr. Alec Vaugh, writes in the March number of *The English Review* about the necessity for reform of public school education. The public school is not a jerry built affair that can be overturned and rebuilt in a few weeks; it has grown up round certain unconscious but clearly marked traits in the English temperament. It conforms to the character of the nation and any sudden attempt to rebuild it is bound to defeat its own purposes. A slow modification of attitude and method is the only way to effect any considerable reform. But the difficulties are very great. Schoolmasters are doing all they can to foster the conspiracy of silence woven round all save the most superficial activities of the school-world.

The truth is that the boy goes to the public school fresh and interested in his work; and for the first term that freshness lasts. The next term sees a slight falling-off. No one inspires the boy to take any interest in his work, athletic success is that which counts; and for athletic success he strives; he works at his play and plays at his work. With the exceptional scholar the situation is distinctly worse. He is trained like a *Prize Pomeranian*, fed with scholarship, leaves the tricks of the business and lives in a world of *digamma* and *enclitics*. From his class are drawn schoolmasters and Government officials. The public school provides no outlet for a boy's emotional nature. Only in rare instances does it touch his soul side. In its wider and humaner sense the spiritual life is starved. And the only remedy lies in finding for each boy some inner interest that will appeal to him as strongly as athletics.

The relations between the headmaster and the parents are very difficult. The public school system is competitive; and it is dangerous for any school to get a reputation of unorthodoxy. All that the Governors appear to want is a flourishing commercial concern and they put the headmaster there to give it to them. It is necessary that a system so conservative and competitive should be remedied. The only way to reform is through a patient modification of the existing system. Schoolmasters at present persist in their attitude of denial and self-complacency; and parents do not realise the facts that boys do not work at school, they are taught very little, that spiritual and intellectual life does not exist for them and that for want of something better they have made a god of games.

Welfare Work in Factories

Mrs. R. M. Grey, writing in the April number of *The Social Service Quarterly*, says that the out-standing fact established about welfare work by the War is that it pays and that America discovered this fact even before the War. Welfare work is not a drain and is actually a source of income. Many nobler motives have driven philanthropic work, but none is more cogent or of more universal application.

Welfare work supplies conditions under which all workers can do their best. They naturally divide themselves into conditions inside and outside the workshops. Under the first heading, workers should work only so long as their work is productive and they should have rest intervals sufficient to maintain their strength and interest at its maximum and sufficient food to produce the same result. Sanitary arrangements should be such as to encourage a high standard of personal cleanliness. Medical attendance must be available and must ensure that the helplessness of childhood is not abused and the next generation allowed to suffer.

Of all evils the out-standing one in India is excessive hours. Only men's appalling ignorance and callousness of everything outside their own lives could tolerate the present state of affairs. It does not strike the well-nourished, well-housed, well-amused rich man, who finds himself quite fagged at the end of a six hours day, that there is something dreadful in the expectation that mill labourers, men, women, and too often children also, shall rise in the dark (because hooters are forbidden), stagger half asleep to the mill gates, snatch a little more sleep on the stones outside the gate, toil at a monotonous task from daylight to dark, with one short recognised interval for food, and several short unrecognised intervals for sleep or tobacco. They declare that the labourer is only working at half pressure all the time, that he has all sorts of ways of saving himself, that manual work is quite different from brain work; which is just another way of saying that he is human. And since he is human, the Indian workman will respond to the same treatment as other human beings. If his hours are shortened, he will feel fitter and will unconsciously or consciously work harder. Already in the few experiments that have been made in Cawnpore and elsewhere in reducing hours, it has been found that there was no decrease in output, but on the contrary a slight increase. It is quite certain that the very first thing Indian welfare workers will fasten on, as the cause of inefficiency of the workers, and of consequent loss to employers, will be excessive hours.

It is difficult for the welfare worker to confine himself or herself to indoor conditions only. In India, the illiteracy of the mill labourers is a great hindrance to welfare work. It is difficult to get men to take part in that most efficacious of all means of improving their status—the co-operative movement, if they are too illiterate to keep their own books. In some places, above all in Bombay, the housing conditions are such as to nullify any efforts that could be made to improve the physique of the men during working hours. Only when these three main evils, excessive hours, illiteracy, and bad housing conditions have been drastically reformed, will the welfare worker begin to get a real chance to make the life of the factory employees healthy and happy.

[In this connection the reader may be referred to an article on the "Menace of welfare work" published in this issue.—Ed. *I.R.*]

Co-operation in the Missionary Field.

In an article in the March number of *The International Review of Missions* Mr. J. H. Oldham describes certain aspects of missionary work in which a successful solution can be found only by common consultation and united action on the part of the various missionary societies. The first aspect is that of allowing all missionaries of all nationalities in a country. The question is important, because not only the work of missionaries of enemy nationality but also that of missionaries of a different nationality from that of the governing power, may under certain circumstances seem to call for government regulation. To entrust any considerable share in the work of education to missionaries of alien nationality who may not understand or fully sympathize with the educational aims of the government of the country, may present difficulties. Governments are being forced to pay increased attention to propaganda of all kinds and to watch and regulate it. The awakening of the national consciousness of peoples expresses itself among other ways in the desire to defend their institutions and their heritage against the inrush of western civilisation and this may result in an attempt to restrict Christianity as an alien influence threatening the integrity of national life. Even European governments may sometimes look on Christian propaganda as a disturbing influence on the social order making the task

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of government more difficult. As a result of these and other causes, it is necessary that missionary bodies should unite, appoint joint committees to consult and act for them. These alone can take a broad view of the social forces which affect the lives of Asiatic and African people and help to relate missionary policy with what is best and most progressive in the policy of governments.

In other fields *e g.*, in education, it is necessary that Christian bodies can retain their influence in the face of coming changes in only one way and that is by combination. The missionary societies must consult and act together; and the action of such joint effort in India has produced two very good fruits viz, the Women's Christian College at Madras and a Commission for the study of the problems of village education. Large questions of a similar nature, affecting the work not of one society but of all, arise in connection with medical missions and with the provision of an adequate Christian literature.

The presentation of the missionary cause to the home church, the necessity that exists of the missionary cause striking its roots deeper into the national life—these can only be done by combining the gifts and resources of the various missionary bodies; and the work can be effectively accomplished only through co-operation.

Missionary co-operation must thus become a clearly recognised element in the policy of missionary societies.

The Aims of the Labour Party

Sir L. Chiozza Money, late Parliamentary Secretary to the Ministry of Shipping explains in the April number of *The English Review* the aims of the Labour Party. The Coalition Liberals under the leadership of Mr. Lloyd George, are, he says, not so much the expression of a partnership of political opponents, as a fusion of men who in essential things have come to think very much alike. Nor indeed do the Free Asquithian Liberals differ in their appeals, very much in point of policy or promise from those made by the Coalition Liberals. The sons of rich Liberals and Radicals of two generations ago for the most part embraced conservatism as the expression of class-feeling in politics. The capitalists joined the landlords politically and changed the orientation of the conservative party in industrial matters and carried the unfortunate opposition to Labour aspirations with which their fathers had associated the Liberal party. Simultaneously the Liberals and Radicals losing much of their class connections largely accepted the earlier views of the Conservatives on industrial matters. Then came the almost purely political turmoils of 1885-1905 beginning with Gladstone's advocacy of Home Rule and ending with Chamberlain's advocacy of Tariff Reform.

As Protectionists the Conservatives preached their fiscal policy as a panacea for all social and industrial ills. As Free traders, Mr. Asquith's Liberal government of 1905-14 were content to concern themselves with Irish Home Rule, the House of Lords etc. and a parsimonious Old Age Pensions Act. As to the profound underlying economic questions both parties had become largely neutral; and the birth of the British Labour Party was a direct consequence of this attitude. It appeared in some strength in 1905 and has now risen to a representation of 62 in the recent election—according to a system of proportional representation, its votes would have given it 133 seats. In the few years preceding the war Labour became both conscious and vocal as never before; and when the war broke out the Labour party was making marked progress in the constituencies. The conduct of the war compelled the Government to socialistic methods and to become the greatest industrial capitalist and ship-owner in the country. The Coalition Liberals, the Free Liberals and the Coalition Conservatives all avoid any reference to disturbing the existing structure of individualism; while the Labour Party stands for industrial democracy and the socialisation of industry. The experiences of the war make it the more remarkable that the power of Government in industry should be resigned in peace to private control. The war has proved beyond all doubt the national weakness and danger of the pre-war industrial system and that vital industries should not be left in the hands of capitalists whose first object is profits and of workers whose first object is wages.

The Labour Party, Sir Chiozza concludes, is insistent upon industrial democracy as a means to a far greater output of material wealth and an equitable distribution of the results of that larger output. It also sees in industrial democracy the only means of giving full citizenship and self-respect and a proper sense of social responsibility to the individuals of a modern industrial state. It aims to substitute democratic for the individual ownership of industrial capital, as distinguished from personal property in the real sense *i e.* the things proper to the personal use and conforts of the individual.

On War

A writer in *the Positivist Review* for April, 1919, says that both Bacon and De Quincey regard war as being in a sense healthful and beneficial. Bacon rather insists on its advantage as affording exercise which braces the national constitution, while De Quincey puts his case even higher and claims that it ennobles and elevates the ideals and planes of living and thinking. Two extracts from them are given below.

"No body can be healthful without exercise, neither natural body nor politic; and certainly, to a kingdom or estate, a just and honourable war is the true exercise. A civil war, indeed, is like the heat of a fever: but a foreign war is like the heat of exercise, and serveth to keep the body in health; for in a slothful peace, noble courages will effeminate, and manners corrupt."—LORD BACON, "Of the True Greatness of Kingdom and Estates."

"War has a deeper and more ineffable relation to hidden grandeurs in man than has yet been deciphered. To execute judgments of retribution upon outrages offered to human rights or to human dignity, to vindicate the sanctities of the altar and the sanctities of the hearth these are functions of human greatness which war has many times assumed and many times faithfully discharged. But, behind all these, there towers dimly a greater. The great phenomenon of war is this and this only, which keeps open in man a spiracle—an organ of respiration for breathing a transcendent atmosphere, and dealing with an idea which else would perish—viz., the idea of a mixed crusade and martyrdom, doing and suffering, that finds its realisation in a battle such as that of Waterloo—viz., a battle fought for the interests of the human *race*, felt even when they are not understood."—DE QUINCEY, "On War."

Bacon however says that civil war within the nation is like the heat of a fever. We thus reach the idea that war is a disease and may admit that like a disease, it may, if not fatal, have beneficial and even ennobling results.

Wordsworth seems to have passed through two stages in his declared views on this point which show him at first more or less in agreement with Bacon and De Quincey, and afterwards, if he did not abandon them altogether, to be hesitant.

Among his "Poems dedicated to National Independence and Liberty" there is one which appears in "Part II." entitled "Ode. 1815." It was composed in 1816 amid conditions not wholly dissimilar from those obtaining in the world to-day. As at first published it contained four lines which have been often quoted—De Quincey quotes them in his essay—and are well known :—

> "But Thy most dreaded instrument
> In working out a pure intent,
> Is Man—arrayed for mutual slaughter,
> —Yea, carnage is thy daughter!"

Many readers and admirers of Wordsworth appear, quite intelligibly, to have stumbled a little at this attribution of "carnage" as God's "daughter." And in 1845 these lines were eliminated, and the two following printed in place of them:—

> "But man is Thy most awful instrument
> In working out a pure intent."

Wordsworth was, however, always impressed with the truth that a war may be not only "just" but "*necessary*," as may be seen particularly in his fine tract on the "Convention of Cintra"—of which it has been said that if he "had never written a single verse, this essay alone would be sufficient to place him in the highest rank of English poets."

But it must be possible to find remedies less heroic than war for diseases of the body-politic.

Emanuel Swedenborg

Swedenborg was, until he turned fifty, a scientist of the most eminently practical kind, whose encyclopædic knowledge was always turned into utilitarian channels. His intellect was very wide and his mental activity was all-absorbing. Other persons besides Swedenborg have been encyclopædic, amassing vast stores of miscellaneous knowledge, but few, if any, have possessed at the same time Swedenborg's extraordinary capacity for utilizing the knowledge gained and turning it to practical account. His philosophy recognises the synthetical as well as the analytical method as requisite to arrive at true conclusions. Both are necessary in reflecting upon a tracing one and the same thing; for in order to do so there is required both light *a priori* and experience *a posteriori*. "He who is possessed of scientific knowledge and is merely skilled in experiment, has taken only the first steps in wisdom. For such a person is only acquainted with what is posterier and is ignorant of what is prior. Thus his wisdom does not extend beyond the working of the senses and is unconnected with reason. Whereas nevertheless true wisdom embraces both."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This Swedenborg, so writes *the Occult Review* for April, was a medium of communication between this world and the world of spirits. He became gradually led by his philosophical speculations to an investigation of the nature of the soul and its operation in the body and the mutual relations of the two. It was while continuing this persuit that Swedenborg found himself in touch with another than the physical world which he decribes in the Introduction to his work *Arcama Cœlestia* (1749). He regarded that the Bible must be taken as a divinely inspired book, but in the allegorical sense. His doctrine of correspondences was merely the recognition of the allegorical relationship between the spiritual and the material. The Universe is symbolical throughout; and all material things are derived from their spiritual archetypes. His doctrine of Degrees is that the 3 degrees of the human mind correspond to the 3 kingdoms of nature *i.e.*, spirit, soul and body, corresponding to animal, vegetable and mineral. He insisted that sex is a spiritual as well as a physical distinction, denied the virtue of celibacy and declared that true chastity resided in the perfect marriage relation. What is important to us however is that his spiritual communion was continuous for a number of years and this could not be considered the result of a monomania. Of his psychic gifts there is plenty of evidence quite outside the teachings of his celestial visitors.

Swedenborg's estimate of the status of the spiritual beings with whom he communicated, even if we accept their reality, need not be ours. Recent investigations and records of innumerable psychic experiences have tended to show what a miscellaneous crowd of spirits hover around the confines of this material world. Swedenborg's mistake has been made by many spiritualists of the present day, and sometimes with disastrous results. Swedenborg had not before him the evidence which we now hold to warn him of the necessity of testing the quality of his spiritual communicants. The experiences encountered overwhelmed him by their unexpected and apparently miraculous character, and his naturally sane judgment was at fault for want of a criterion by which to estimate them. Few of those who now accept the genuineness of psychical phenomena are prepared to question Swedenborg's exceptional mediumistic powers. To allow them to their fullest extent is by no means to accept the doctrine which was preached through his mediumship.

Co-operative Marketing

In a country so predominantly dependent upon land as India is, the most vital question is not for which crops the climate and soil are most suitable; but which crops will yield the highest net return to the cultivator. The second question is essentially a problem in practical rural economics. As communications have improved, the cultivators have become less dependent upon the local market and it has become possible to grow tea, coffee, jute, groundnuts and cotton for export. Where this is the case there is a tendency either towards the capitalisation of agriculture as exemplified by the big tea estates or towards dependence upon powerful middlemen. The individual cultivator is not in a position to study the requirements of distant markets and his own output is too small for his embarking on commercial transactions. So long as he grows staple crops he can without much difficulty secure something approaching a fair price; but where the crop is a speciality for which there is no regular market quotation, the producer is at the mercy of the middleman. The production of specialities is thus dependent upon the system of marketing; and it is the defective organisation for marketing that accounts for the small out-turn of high paying special crops and for the devotion of so large an area to less paying staple crops.

The Bombay Co-operative Quarterly (March 1919) puts forward an urgent plea for the introduction of the co-operative method which alone can protect the small cultivator and secure for him all the advantages which his crop can earn. Now the small cultivator pours his produce into the nearest market which is not unseldom the worst. He knows nothing of the advantages of warehousing, storage for a better price, preservation to last over a glut, grading in order to secure a higher price for better produce, etc. The result is all round inferiority and waste By co-operation the cultivator will be relieved of the necessity of growing food for his family on land that is better adapted to something else and will be able to concentrate his resources on the most profitable crop. In a country of small holdings this is of very great importance. Co-operation will gain all the advantages which a large scale efficient organisation can give. It will reduce among other things, cost of packing, commission sales, railway rates, losses from failure to recover the sale money and give the cultivator improvement in cultural skill.

Neutrality.

Mr. R. F. Roxburgh, writing in the *Journal of Comparative Legislation* (for April 1919) traces in outline the development of the conception of neutrality, with particular reference to the changes it has undergone during the late war.

The conception gradually developed during the 16th century when the Swiss confederation, by its policy of holding a loop from wars between neighbouring states, afforded a constant example of neutrality in practice, however imperfect it may have been according to modern notions. Grotius did not use the term neutrality and established only two doubtful rules. In the 18th century, thought ripened into two rules; *viz.*, a state, if neutral, should not give active assistance to either belligerent; and a neutral should not be passive in permitting its citizens to give aid to either belligerent through acts over which it was supposed to have control.

The First Armed Neutrality was the earliest organised attempt by a group of neutral powers to extort from belligerents in the name of neutrality greater security for their maritime commerce. The attitude of U. S. A. during the years 1793—1818 marked the next step in the evolution of neutral rights and duties. Washington's proclamation of a determination to stand aside from European quarrels enabled the conception of neutrality to acquire important political and diplomatic significance on the American continent.

After the Napoleonic Wars, small states wedged between great powers were permanently neutralised; and the term 'neutralisation' came to be applied to certain arrangements made by convention with regard to various international waters. One of the ideas of the Congress of Vienna was that wars might at least be localised by making neutrality easy and belligerency difficult. The Crimean War, the Boer War, the wars of 1870 and 1898, and the Russo-Japanese War were each confined to a few belligerents; in all these the political power of neutral states was very great; and belligerents became bound by political expediency to acquiesce in neutral claims. Neutrality as a maxim of state policy seemed to possess high ethical quality when contrasted with the horrors of war.

Rules of neutrality were moulded by a long series of conflicts and compromises, determined primarily by reference to the relative political power of the contending parties, though under the influence of the dominant principles and personalities of the time. The International Conferences at the Hague and in London in 1899, 1907, 1908–9, removed some of the uncertainties and reconciled some of the divergent practices in maritime law and advanced the cause of international peace.

In the course of the present war, access to the supplies of money, munitions and raw materials which could be drawn from neutral countries was seen to be a vital and perhaps determining factor in the struggle. In these circumstances, each group of belligerents resorted to a systematic propaganda in neutral countries against neutrality of thought. Neutral governments strove hard to fulfil their obligations; but as the belligerents were not restrained by the fear of bringing neutral powers into war against them the belligerents resorted to reprisals against one another. Moreover, the rules for belligerent and neutral conduct evolved by the previous international conferences proved to be inadequate and ill-adapted; and the Allied Powers fell back upon the admitted and historic rules of the laws of nations, so far as they were not actually bound by conventions.

The collapse of the neutral fabric, built with so much care during the past fifty years is due to the number and strength of belligerents in this war and the consequent weakness of the neutral powers and also to the great miscalculation of the German Government which adopted a policy of deliberate lawlessness in the false hope of escaping the consequences. As a maxim of foreign policy neutrality has lost its former ascendency. This is due in part to the fact that so many peoples have felt it their duty to bear their share in the war; and partly to the realisation that modern war inflicts such hardships on neutrals as to make their condition hardly more tolerable than that of belligerents.

The Maharaja of Bikaner on India at the Peace Table.

On his arrival from England at Bombay on July 17, His Highness the Maharaja of Bikaner accorded an interview to the *Times of India*. In the course of the interview, His Highness said :—

We had a most interesting and strenuous time in Europe though after yet another absence, this time of 8 months, I am very glad to return home and after a little rest which I now very badly need, I hope to be enabled to devote myself to the affairs of my State which since the outbreak of war I have necessarily not been able to attend fully. At the time of our arrival in England neither the Dominion Representatives nor we from India had any idea of the exact part which we were to play at the Peace Conference. In fact we did not know whether any of us would even be directly represented or not. But as you are aware, it was finally arranged for representation to the five representatives of each of the five big Powers, Great Britain, America, France, Italy and Japan, India and the Dominions should have separately the same representation at the table of the Peace Conference as some of the other powers. The British Empire had two representatives each from Australia, Canada, South Africa and India, whilst New Zealand had one representative. And to show that this was no minor point it will perhaps suffice to add that Powers such as China, Portugal and Rumania also had only two representatives each.

THE PEACE CONFERENCE.

Owing however to the adoption of the panel system the Dominion representatives as well as those of India were eligible for inclusion among the five representatives provided for Great Britain over and above the number reserved for each part of the Empire, as already stated, when some members of His Majesty's Government were away from Paris. Besides our work at the Peace Conference we conducted much important business at the meetings of the British Empire Delegation. Thus both at the Peace Conference as well as in the deliberations of the British Empire Delegation, India had representation and voice on a footing of absolute equality with the Dominions. It will appear therefore that India took her full share in the Peace Congress, and its recognition by the world at large of her important position in the British Empire is a matter of sincere satisfaction. Just as the resources and the armed strength of our Empire—and we must not forget what the world owes specially to the all powerful British Navy very materially for the achievement of victory—so it will be a matter of pride to all residing within that Empire to know that the British Delegation had a considerable say in the deliberations and decisions of the Peace Conference. I do not know that I can tell you much that will be news to you or which would be of special interest to India.

THE LEAGUE OF NATIONS.

India's inclusion among the original members of the League of Nations, which, considering our present transitional period, was not as easy as it may appear to the ordinary man in the street, is also a step the significance of which cannot be over estimated. And it is a matter of peculiar gratification to me to feel that it was left to me alone to conduct the final negotiations as regards her inclusion in the League during the unavoidable absence in England on urgent official business of both Mr. Montagu and Lord Sinha. The membership of the League of Nations carries with it the responsibility of adherence to the Labour Convention. In this connection the Indian delegates had to urge the special circumstances of the Indian labour and industries and the peculiar social, economic and climatic conditions prevailing in this country which required specially to be safeguarded, and I am happy to say that our efforts here were also crowned with success. Mr. Montagu, Lord Sinha and I had the honour of being appointed Plenipotentaries, Commissioners and Procurators in respect of the Indian Empire by His Imperial Majesty the King-Emperor under the Royal Sign Manual and Signet, authorising and empowering us to negotiate and conclude any treaties, conventions or agreements which might ensue as a result of our deliberations and discussions at the Peace Conference. And in accordance with this authority the Peace Treaty with Germany contains the signatures of Mr. Montagu and myself as only two representatives each could sign on behalf of India and the respective Dominions, that being the limit as I have already said of our representation at the Peace Conference. The omission of Lord Sinha's name on this occasion was purely a matter of accident. He will continue of course to be one of the plenipotentaries and no doubt will sign on behalf of the Indian Empire other treaties still to be concluded.

. . . . . .

THE TURKISH QUESTION.

In connection with the terms of settlement with Turkey the most important duty of the Indian Delegates was to keep before and persistently to urge upon the British Prime Minister and the Council of the Allied and Associated Powers the sentiments and the feelings of our brother Moslems in India and throughout our stay in Europe this important subject continued to receive our special attention. As you will have already come to know Mr. Montagu, Lord Sinha and I, accompanied by His Highness the Aga Khan, Sahibzada Aftab Ahmed Khan, and Mr. Yusuf Ali formed a special deputation for the purpose of putting the Indian Moslem case before Mr. Lloyd George, President Wilson, M. Clemenceau and the Italian Prime Minister, a body commonly known as the Council of Four. This was brought about through the good offices of the British Prime Minister and the active support of Mr. Montagu than whom nobody could have worked more energetically or sympathetically and with greater effect in this direction. Although no final decision had been arrived at up to the time of my departure from Europe I would beg my Moslem fellow countrymen to believe that Mr. Montagu as well as Lord Sinha and I have to the utmost of our ability and energy constantly and strongly pressed the Indian Mahomedan point of view and that we spared no pains to acquaint all concerned with the true Mussalman sentiments regarding this important question.

UTTERANCES OF THE DAY

Mr. Lloyd George on the Peace.

Replying to the debate on the second reading of the Treaty of Peace, Mr. Lloyd George said: He looked to the League of Nations ultimately to repair and redress imperfections in the Treaty of Peace. The League would exist as a court of appeal to readjust crudities. Nevertheless he claimed that the Conference had redressed many old wrongs while he could not think of any new ones created. Moreover they had established guarantees and securities as far as human foresight permitted against the repetition of past horrors. They had disarmed and punished and had demonstrated to the world that national rights and liberties would not be trampled upon. (Cheers). The Treaty would be a lighthouse in the deep, a warning to nations and rulers of nations against the perils upon which the German Empire had shattered itself. (Loud Cheers.)

Mr. Asquith on Coalition Government.

A Coalition may be, and often is, a necessary instrument in time of war. It is in my judgment wholly unsuited to the constructive tasks of peace. For what is it? Assuming, as we are bound to assume, and as I am sure we readily assumed, that all its members are animated by honest convictions, what is it? It is a conglomerate in which the pebbles are imprisoned and isolated in an alien material, but those are the conditions under which the Coalition is carried on, and I express to you, for whatever it is worth, my own deliberate judgment when I say that we must return to healthy political and Parliamentary conditions, until we see once more an independent Liberal Party pursuing its own ideals by its own methods, and upon its own lines.

Marshal Haig on the Citizen Army.

Only by adequate preparation for war can peace in any way be guaranteed. It is the duty of every man to prepare himself beforehand for his country's defence. Let us not forget the lessons of the war. My message, as a man who has seen enough of war to make me determined to spend my utmost efforts to prevent its recurrence, is to urge that we should set up forthwith the organisation of a strong Citizen Army on Territorial lines—an organisation that will ensure that every able-bodied citizen shall come forward when the next crisis comes, not as a willing, patriotic, but militarily ignorant volunteer, but as a trained man. To meet whatever danger might threaten us we need to organise at once our democratic Citizen Army. (*Speech on receiving the Freedom of London.*)

Sir George Lloyd on the Reforms.

Peace is to bring to India new responsibilities and with them possibly new dangers. The Reforms Bill is, I am glad to say, now before the Parliament, and I hope will be passed into law without any great delay. It is our task, both the task of my Government and of you, gentlemen, to guide India's national aspirations and enthusiasm, which, after all, the British people are responsible for awakening and it is our pride that we are so responsible out of the difficult and sometimes stormy waters of transition into the ample harbours of prudent and deliberate achievements. Just as in your armies a regiment that tries to move with forced marches becomes a rabble, so equally in our national development, you should remember that safety and solidarity of a State is perfected by steady advance rather than by forced marches. But this must not delay us in starting out on the march.

Sir John Rees on Brahmin Oligarchy.

The Brahmins and a few other classes had always been the, or, at all events, a predominant factor in the Government of India. It was suggested that there should, therefore, be special representation of the lower castes. But suppose it were seriously suggested here that the products of the public schools, the Universities, the educated, and the upper classes generally should be ruled out from appointments in the public service, everybody would say we had gone mad. Our position must be that equal opportunities must be offered for all. He could quite understand that the Indian Civil Service did not like the proposed changes, but it was too late to resist them now. It was no use to stand up for autocracy and bureaucracy. These things had been swept away by the war wave, and no man who stood up for their reconstruction, could be called a practical politician. (*Speech in London.*)

Mr. Runciman on Free Liberalism.

There was a tendency in Government circles to govern this country independent of Parliament. Members asked that they might be freed from Parliamentary control, just as the Prime Minister, before the election made his request that when he was returned, he would be returned without any of the disadvantages of criticism. There was a growing tendency to be little Parliament, and that was the gravest peril into which democracy could slip . . . He would rather be outside the House of Commons as a free Liberal than he would be inside the House of Commons with his wrists shackled and his tongue tied.

H. H. The Maharaja of Bikaner.

i. Letter from Mr. Montagu.

On the eve of his departure for India H. H. the Maharaja of Bikaner received the following letters:—From the Right Hon'ble Edwin Montagu, M.P., Secretary of State, 25th June, 1919:—

I cannot let you start on what I hope will be a pleasant and speedy voyage home without a word of farewell. We have now been working together for the best part of a year and I have to thank you for a colleagueship which I value and appreciate. You, Lord Sinha and I have worked together in Paris and in London for the welfare of India and you have earned the welcome which I am sure awaits you from those on whose behalf you have spent so many months in Europe. We have seen India welcomed by the Allies as a member of the League of Nations. We have seen India a party to the Labour Convention and we are to sign, on behalf of India, the Peace which Germany had accepted. We have taken a full share with the Dominions in the deliberations of the British Empire. These events cannot but lead not only to an assured status for India in the world but I trust to a progressive realisation of the partnership she has earned in the Empire. All the time we have had many an opportunity of discussing together those questions in which you are more particularly interested and you have been able to give me much assistance and advice with regard to the Native States. It is unnecessary for me to assure yon that I mean to do my part in achieving the recommendations which the Viceroy and I made on this matter. I can imagine the pleasure with which you are returning to the State you love so well. Please accept my best wishes for its continued prosperity and my thanks for the great public services.

ii. From the Premier.

From the Right Hon'ble D. Lloyd George, M.P., Prime Minister, 28th June, 1919:—

Now that you are returning to India I want to thank you for the services which you have rendered since you accepted my invitation last autumn and came to assist in our deliberations. It seemed to me obvious that the Indian Princes, whose share in our victory, both personal and from the resources of their States, has been so splendid, should be represented at the Peace Conference by one of themselves. You have devoted yourself to the interests of the Indian Empire and can return with the satisfactory knowledge that you have played a part much appreciated by your colleagues. I can assure you that the views expressed by you and the other members of the Indian Delegation on matters of particular interest to India will continue to be carefully considered. I look forward to the part which is to be played by the Indian Princes in the affairs of the Indian Empire when we have achieved those reforms in the Government of British India which the Bill now before Parliament contemplates.

The Maharaja of Alwar on Reforms.

On the occasion of laying the foundation stone of a Council Hall at Jamnagar by the Maharaja of Alwar, His Highness made an interesting speech, in the course of which he said:—

Some people maintain that we have no connection with British India; nevertheless I cannot conceive how as Indians we can remain interested spectators of what is going to happen outside of our very doors. As Indians we cannot but rejoice at the prospects that are before our countrymen of making a substantial advance, as we hope it will be, towards the ultimate goal of political salvation which has been laid before us by the great people in whose hands lies at present the destiny of our country. As Indians we cannot but hope and pray that that advance may be rapid and on sound and progressive lines. What the exact path is going to be may not be our direct concern. As to the exact method some of us may agree with it, others may not. There must be details on which some must always disagree for that is only human nature. I certainly can claim to be no great student of democracy and so cannot persume to preach the precepts of a doctrine with which I myself am not thoroughly familiar, but what I can claim, however for the sake of our order, is to pray that whatever line may be chalked out for India's destiny my mother country will rise at no distant date to that position which will enable her to be placed on a position of equality with the other great dominions within the British Empire.

The Late Ruler of Bhavnagar.

The State of Bhavnagar has been in mourning owing to the death of the Maharaja. Great sympathy is felt for the Maharani of Panna, who is the daughter of the Maharaja. His Highness followed a progressive policy for the 23 years he was on the *gadi* and introduced many important reforms in his State. It was only recently that he abolished the drink traffic in the State and founded a People's Representative Assembly in October last year.

The New Dewan of Mysore.

Sirdar M. Kantaraj Urs., B A, C S.I., assumed charge of his high office of Dewan on the 14th July amidst the customary honours and ceremonies. A deputation of representative bodies waited on him the next day to offer the citizens' congratulations on his recovery from illness and the assumption of office. He is the first close kinsman of the Maharaja to be called on for such a high office since the Rendition.

Mr. Gandhi on Indians in S. Africa.

Under the auspices of the Home Rule League, a public meeting was held on the 13th at Gokuldas Hall Bombay to protest against the proposed legislation relating to Indians in the Transvaal. Mr. Faiz B. Tyabji, presided. Mr. M. K. Gandhi moved :—

(1) That this public meeting of the Bombay citizens respectfully but emphatically protests against the Asiatic Land and Trading Amendment Bill reported passed by the Parliament of the Union of South Africa as it contravenes the Smuts-Gandhi Agreements of 1914 and it violates the elementary rights of the British Indians lawfully resident in the Transvaal and, therefore, calls upon the Government of India and the Imperial Government to intervene so as to secure the repeal or the veto of the said Bill (2) That this meeting tenders its heartfelt sympathy and assurance of support to their Indian fellow-citizens in Transvaal who are heroically struggling against the unjust and the unwarrantable encroachments made by the said Bill upon their rights as citizens of the Empire.

Mr. Gandhi gave the history of the anti-Indian legislations in South Africa which had led to the passive resistance movement on the part of the Indians residing there. By the Act of 1886 it was enacted that no Indian in Transvaal could own landed property and that the Indian traders should obtain a licence costing £3 to trade there. The latter provision had been done away with but the former disability still remained. Mr. Gandhi said that in 1914 he had corresponded with General Smuts as a result of which, an agreement was arrived at viz. that the vested rights which the Indian settlers in Transvaal had up to that time enjoyed should continue. This was also their present contention. Mr. Gandhi told the audience that while he was in Transvaal he found on a reading of the laws there, that there were two ways left for the Indians to become owners of land there. One was to take lands from the Europeans by mortgages and thus become landowners or to form themselves into corporations for the purpose. He gave advice to the Indian settlers who took advantage of it and became owners of landed properties. They have been enjoying these rights and under the new legislation it was proposed to deprive them of those rights. There was also a section in the Act under which Indians would not be granted licences to trade in the gold area. Mr. Gandhi said that these encroachments on the rights of Indians were intolerable and what Indians in this country had to do for their countrymen in South Africa was to raise a voice from one end of the country to the other for the repeal of this measure. By doing that he assured the meeting that they were strengthening the hands of the Government of India who were with them in this matter. He did not know what view the Imperial Government was likely to take for their past experience showed that they had a tendency to give in before the clamours of the Colonies. After other speakers had addressed the meeting the resolutions were carried.

Mr. Manilal on Indians in Fiji.

The following extracts from the petition of the Indian Imperial Association of Fiji, of which body Mr. D. M. Manilal, M.A., LL.B., is Chairman explain the situation in Fiji :—

1. We have heard that there are movements on foot amongst the European residents of this Colony to propose the annexation of Fiji with New Zealand or Australia. And we also read of a third proposal, namely, the idea of a federation of Fiji with the surrounding groups of Islands in Australasia.

2. We do not see our way to agree to the former two proposals as put forward by the white residents. We as Indians distinctly realise that Fiji is one of those Colonies where the future mainly if not entirely depends upon the Indian element. And therefore we sincerely believe that such Colonies should, in a scheme for re-arrangement of the British Empire, be connected rather with India which is our Mother-Country than with any other portion of the British Empire. The white population can never expect to be in the majority as regards numbers in tropical climates, and they cannot retain their commercial and social superiority for ever. Time will come when the Indian section will be fully educated and brought up to realise its self-respect, dignity and responsibilities so as to take a place on terms of equality with the European section, and then numerically being in the majority they will be the main factor to consider in matters of government.

3. If, as Professor Seely has observed, "Colonies depend upon the Mother-Country as fruit upon the tree," we certainly feel that our destinies can more naturally be nursed by India, our home, than from the home of a minority of this Colony's population.

Food Grains in India.

A press note issued by the Department of Statistics in India states :—The wholesale prices of cereals and pulses in India in the middle of June, 1919, showed a rise of 2 per cent., as compared with the previous fortnight. The noticeable provincial fluctuations are an increase of 11 per cent. in rice and jawar in the Madras Presidency.

In the middle of June, 1919, the wholesale prices of food grains and pulses in India increased by 90 per cent. (unweighted average) as compared with the average of the prices which prevailed at the corresponding date in the last three years. The weighted average showed a rise of 100 per cent. The price of rice rose by 62 per cent. In the chief rice producing provinces the increase was 67 per cent. in Bengal, 110 per cent. in Bihar and Orissa, 47 per cent. in Burma, and 48 per cent. in the Madras Presidency. Wheat prices advanced by 70 per cent. The price of barley increased by 65 per cent. (unweighted average) the weighted average showing a rise of 86 per cent. The average prices of jawar and bajra rose by about 127 per cent. Gram prices showed a rise of 95 per cent. (unweighted average) while the rise by using the weighted average was 110 per cent.

The Tata Silk Farm.

The Tata Silk Farm in Bangalore, the premier silk institution in the country has a staff of 100 students and employees, 20 reeling basins and 20 hand-looms. Every process is here taught, including silkworm rearing, silk reeling, warping, bleaching and weaving., and a bright future is drawing for silk as a cottage industry throughout the length and breadth of India. Commenting on the report just published of the farm's activities during 1917 and 1918 "Indian Engineering" says it shows that these two years have been very marvellous ones as regards its work, although during the last six years it has made a rapid advance. It also serves to show that the day of hand industry is not finished, but if carried on proper business lines it will still hold its own. The farm's work here is educational, but it has also advanced on business lines to show its students and apprentices that it can be made into a profitable business as well as to help men to self-support. The farm authorities have just had three letters from large firms in Australia, who want to do business with it, in which they say they would sooner deal with India than China and Japan. The farm keeps more than two villages engaged in rearing silk worms all the year round.

Mr. Gandhi on Swadeshi.

The production of cloth, says Mr. Gandhi, can be increased in the country by three ways (1) by starting more mills, (2) by purchasing foreign yarn and weaving it on hand looms, (3) by weaving oneself or getting woven cloth out of yarn spun in one's own country.

Now apart from my views against machine-made cloth, it will be seen that it is no easy thing to start mills as quickly as we would. It certainly takes some time to erect buildings for the mill, to get machines from abroad and to procure labour. Assuming therefore for a moment that there would be no difficulty in obtaining capital, it is not possible for us to add to the stock of our cloth by means of having new mills. It is not doubt possible to weave cloth from yarn obtained from abroad, and the second Swadeshi Vow was devised with the view that it is far better to use cloth woven in our country out of foreign yarn, and thus to save some money at least going out of the country, than not to use Swadeshi cloth at all. But the more I think, the more I see dangers in this. Our demand for foreign yarn in a quantity sufficient for cloth neeessary for lakhs of men, is likely to send up the price of foreign yarn to such an extent that the rise will be equal to the wages we have to pay for labour here which would mean that we had gone ahead only to fall back. If, therefore, we could find some way out, we would not have to depend on foreign yarn. This brings us to the third way, viz., to get yarn spun here, and to get it woven on handlooms. This is the royal road, and the surest to lead us to the goal. If this is adopted by the people, the goal will be reached with the least possible labour and in the shortest possible time. This would also provide thousands of men and women with an independent calling, and hundreds of thousands of poor women and widows with a means of livelihood, to be pursued in their own homes.

India to Australia by Air.

The Rangoon Cantonment Committee recently discussed arrangements for the landing ground for the proposed aerial flight of the Handly-Page machine from India to Australia in October. The part of the *maidan* which is used as a race course is suggested, and the removal of trees, light stands, race course rails, etc., will be necessary. General Borden's plan was considered with the notes by Major Thon, M. C, late of the Royal Aerial Force, now residing in Rangoon as Manager of Messrs. Douglas and Grant Ltd.

Banana Syrup.

Cut the fruit in thin slices and place them in a jar. Sprinkle with sugar and cover the jar, which is then enveloped in straw and placed in cold water and the latter is then heated to the boiling point. The jar is then removed, allowed to cool and the juice is poured in bottles. A little absolute alcohol may be added if desired.—*Industry.*

Mr. Devadhar on Danish Agriculture

On the evening of the 9th instant Mr. Devadhar lectured to the students of the Agricultural College at Poona on the above subject under the Presidency of Mr. P. C. Patil, Deputy Director of Agriculture, who had been to Denmark. Mr. Devadhar said that though he had very short time at his disposal he managed to spend about a week in Denmark, which country is regarded as a model for agriculturists. Owing to the keen competition of Russia and the United States, which began to pour tons of grain into European markets, Denmark had to introduce improved methods of agriculture. The state encouraged the formation of small holdings, co-operation was well developed and an alliance between the theoretical scientist and the practical farmer was effected. Thus though its soil is not very rich Denmark is now pro rata to its area and population the greatest grower of farm produce that History has seen. He showed how grain crops were displaced by potatoes and other root crops. After quoting some up to date statistics regarding the progress of the co operative movement in Denmark he described the conveniences and up-to-date scientific appliances and facilities for transport that he noticed even in small villages or rural areas of about 3,000 people. The lecturer then showed how every Danish farmer was a member of some six or seven different co-operative organisations and how practically every one connected with agriculture was served by the movement. He also showed a large number of photos and pictures of agricultural life in that country. The lecture was illustrated with full up-to-date statistics and concluded with an appeal to the students to study the progress of agriculture in Denmark based upon scientific and co-operative methods.

Value of the Indian Cotton-Seed Crop

A paper on the treatment of cotton seed for commercial purposes was read recently before the Royal Society of Arts, London. The following abstract of that part of the paper which dealt with the potential value of the Indian cotton-seed crop is taken from *Indian Engineering*. The total area under cotton in India has been of late nearly 23,000,000 acres, and the total estimated output of cotton from this acreage is 4,500,000 bales of 400 lbs. each, or about 800,000 tons of cotton. From these figures the quantity of seeds produced during the year may be roughly calculated on the basis of 30 per cent. lint and 70 per cent. seeds, which amounts to 1,870,000 tons. The amount of seeds required for agricultural purposes would be, at the rate of 14 lbs. per acre, about 100,000 tons, leaving about 1,750,000 tons for feeding cattle and for crushing. The author of the paper remarked that he had gone carefully into the matter, and, assuming that only 1,500,000 tons of seed per annum were potentially available in India for crushing, and that the residual fibres on such quantity were properly turned to account, the average Indian cotton-seed crop should have a market value, under pre-War trading conditions, of certainly not less than 18 to 19 crores of rupees. After deduction of the costs and expenses of treatment (about two crores), this worked out to a return of about 106 rupees per ton of seed. The average price of cotton seed up country in pre-war times did not exceed 45 rupees per ton. Hence, the net loss in revenue owing to the absence of a fully developed crushing industry might be put at £4 per ton of seed, or £6,000,000 per annum as a minimum figure. Doubtless, were 1,500,000 tons of cotton seed milled scientifically in India, and the products dealt with in the light of modern knowledge and experience, the actual net loss in revenue would prove to be much higher than £6,000,000 per annum.

Agriculture in Bengal

The Bengalee writes:—The formation of small associations of agriculturists is suggested to test and adjudicate on proposed improvements to discuss their success and failures and to bring their needs to the notice of the department. How much we wish that primary education had been free and compulsory and education had made some progress among the agriculturists to enable them to derive the greatest benefit from such organisations. These are expected to be useful in bringing to fruition in the interior the successes obtained by experiment and the Government will be furnished with a first-hand agency for ascertaining the needs and the wishes of the agricultural population. We should like to see these organisations as efflorescences of private effort with as little of official influence as possible. But to make the Agricultural Department a useful body in the truest sense of the expression, it should be manned largely, if not exclusively, by Indian Agricultural graduates hailing from the West find themselves quite at sea in coming face to face with the peculiar agricultural conditions of the country.

NOTICES OF BOOKS

[SHORT NOTICES ONLY APPEAR IN THIS SECTION.]

Men I have seen. By Pundit Sivanath Sastri. Published by R. Chatterjee, *Modern Review* Office, Calcutta.

These interesting reminiscences originally appeared in the pages of the *Modern Review*. Pundit Sivanath Sastri had the privilege of intimate association with some of the most remarkable personalities of recent times in Bengal. He can therefore write with the ease and familiarity born of intimate knowledge of his subject; and his style is engagingly racy and vivacious. Besides he is happy in his themes—for who would not be anxious to know more and yet more of such men as Iswar Chandra Vidyasagar, Devendranath Tagore, Ramkrishna Paramahamsa and Ananda Mohan Bose?

Internationalism. By Dr. Wilbur F. Crafts. The International Reform Bureau, 206 Pennsylvania Ave. S. E, Washington, D. C.

In a concise outline this book brings together the scattered facts about the increasing co-operation of nations. Chapter one recalls the Crusades and other instances where three or more nations have co-operated in war. The second chapter records *the great treaties* made by three or more great powers at the end of wars to keep the peace of the world and "the balance of power." The fourth shows international co-operation in commerce; fifth, in philanthropy, such as the Geneva Red Cross Convention. Chapter six records the progressing crusades against the white man's rum and opium as a hindrance to progress. There are other chapters on the international white slave traffic, international action needed on gambling and Sunday and immigration.

A History of the Sikhs. By J. D. Cunningham, Edited by H. L. O. Garrett, M.A., I.E.S., (Oxford University Press).

This well-known historical sketch of the Sikhs has been revised and edited in a manner at once clear and intelligible to the lay reader. The Editor has added fresh notes to elucidate difficulties in the text and has included no less than [illegible] appendices which are of great historical value. Two maps have been added and every effort has been taken to make the book attractive. We have much pleasure in commending it to the public.

Indian Labourers in France. By Capt. P. Kashi Nath, Oxford University Press, Bombay.

This is the latest of the war pamphlets issued by the Oxford University Press. Sir Stanley Reed writes an appreciative introduction in which he points out that Captain Kashi Nath "writes with a knowledge and experience which invest his narrative with authority."

The New Elizabethans. By E. B. Osborn, John Lane, London.

Under this happy title Mr. Osborn has supplied a judicious selection of the lives of young men who have fallen in the war. The book is a fitting tribute to the memory of the young heroes who have died chivalrously in the full flush of their promise. As such it must be dear to the relatives and comrades who live to mourn their loss. The lives are primarily of those with a gift for utterance and the criticisms are appropriately generous.

The Training of Teachers. (Bureau of Education, India. No. 8).

With a view to facilitate the training of teachers by suggesting better and easier methods, this volume has been issued recording the description of systems obtaining in Madras and United Provinces by H. S. Duncan M.A. and A. H. Mackenzie M.A., B.SC., respectively.

Quarter Century of Moral Legislation. By Wilbur F. Crafts, PH. D. The International Reform Bureau. Washington.

This volume gives some of the chief debates in the American Congress since 1888 and indicates where others may be found. The object of this publication is to promote various temperance measures and to advance generally right moral laws. The activities of the International Reform Bureau must be of great interest to all, especially to those interested in social reform.

DIARY OF THE MONTH

June 24. Public meeting in Bombay presided over by Mr. Gandhi protests against the Rowlatt Legislation and prays for the withdrawal of the deportation order on Mr. Horniman.

A memorial is sent to the Viceroy signed among others, by Sir N. G. Chandavarkar and Sir D. E. Wacha praying for Mr. Kalinath Roy's release from jail.

June 25. The Deccan Sabha earnestly appeals to the Viceroy to stay execution of all capital sentences passed by the Martial Law Commission in the Punjab.

June 26 The All India Congress Committee send a cable to the Prime Minister, the Secretary of State and Lord Sinha requesting suspension of the execution of all sentences passed by the Martial Law Commission pending enquiry.

The Home Department, Government of India, say that they are unable to postpone execution of sentences passed by the Martial Law Commission.

June 27. Mrs. Besant addresses the Labour Conference at Southport on the subject of Home Rule for India.

June 28 The Peace Treaty was signed to-day.

June 29. H. M. the King Emperor's message to the Empire on the signing of the Peace Treaty is published in Simla.

President Wilson sails for New York.

June 30. The Young Men's Buddhist Association, Burma, decides to send a deputation to England in connection with the Reform Scheme.

July 1. H. E. Sir George Lloyd pays a visit to Ahmednagar in order personally to inspect the Famine Relief Works in the district.

July 2. The Press Association of India cables to the Prime Minister, the Secretary of State and Lord Sinha urging repeal of the Press Act.

Official celebration in Madras of the signing of the Peace Treaty.

July 3. Mr. Gandhi writes to the press protesting against the proposed restrictions on the Indians residing in South Africa.

Mr. Lloyd George speaks in the House of Commons on the Peace Treaty.

July 4. The Editor of the 'Punjabee' is placed under censorship under the Defence of India Rules.

July 5. Lord Willingdon holds an informal Conference at the Banqueting Hall to discuss the future of the Madras Publicity Board.

July 6. The Governor-General-in-Council has reduced the sentence of imprisonment on Kalinath Roy from two years to three months.

July 7. The Amir's letter discussing armistice terms is received in Simla.

July 8. Sir Sankaran Nair leaves Simla for Madras where it is announced that he will hand over charge of his office of Education Member.

July 9. The Martial Law Commission delivers judgment in the Amritsar Conspiracy Case convicting several persons.

July 10. Sir N. G. Chandavarkar appeals to Mr. Gandhi through the Press, not to resume Civil Disobedience.

July 11. H. M. the King Emperor approves the appointment of the Hon. Rai Bahadur Krishna Sahay as member of the Bihar and Orissa Executive Council.

July 12. The Madras Liberal League cables to the Premier and Secretary of State offering congratulations on the conclusion of Peace and praying for amnesty to political prisoners.

July 13. Sir Sankaran Nair arrives in Madras.

July 14. Sirdar M. Kantaraj Urs. B.A., C.S.I. assumes charge of office of Dewan of Mysore.

July 15. H. E. the Viceroy accompanied by H. E. the Governor of Bombay visits the old Peshwa's Palace in Poona.

July 16. The Joint Committee of the House of Commons holds its first sitting.

The Special Tribune sentences Lala Govardhan Das to three years rigorous imprisonment and a fine of Rs. 1,000.

July 17. H. M. the King Emperor approves of the appointment of the Hon. Mr. Shafi in succession to Sir Sankaran Nair.

Death of Dr. T. M. Nair in England.

July 18 The Maharaja of Bikaner is entertained at a public reception in Bombay.

July 19. Peace celebrations in Madras.

H. E. the Governor unveils the King-Emperor's statue.

July 20. Death of Mr. T. Ananda Rao, Ex-Dewan of Mysore.

Meeting of the All-India Congress Committee at Calcutta.

July 21. Mr. Gandhi has issued a communication to the press announcing postponement of civil disobedience in deference to the warning conveyed by H. E. the Viceroy and several friends.

July 22. H. E. the Commander-in-Chief accompanied by three Generals have left Simla, for the North-West Frontier.

Literary

What the Indian Reads.

Professor Oliver Elton in a paper read under the auspices of the English Association said that in India everything educational was really political, more especially instruction in the English language and literature, for English was the language imposed by the conquerors, and needed by the conquered for intercourse and affairs. The goal to be gained by the Indian speaking broadly, was not culture of letters, but a salaried position, however small, under the State. For this the graduate had a better chance. "B.A." gave him dignity in his own eyes, and in that of his world; even "failed" B.A. might give him a wife with a better dowry, for he had been near the rose. (Laughter.) There were 28,000 students reading in the Calcutta University alone. The Indian had been forcibly fed with our literature ever since Macaulay's Minute enacted that English letters, history, and lore should be the diet of the literate class in schools and colleges. Consequently the Indian in general accepted it as the order of things; he did not always dislike it; but did the training sink in the soil? "Romeo and Juliet," the "Vita Nuova," or "Jane Eyre" were equally impossible subjects for the Indian college. The Indian liked Dickens, found something in Scott, and always cared for Shakespeare best of all. The educated Indian generally had a brain which was quite different from ours, but to under-rate it was a common political mistake. The Indian, among other things, had a swiftness of temperament which instantly made him aware of how he was being treated. (Cheers.)

M. Rolland's Letter to Sir Tagore.

The following letter (published in the *Modern Review*) has been sent by the great French author, Romain Rolland to Sir Rabindranath Tagore:

"Certain free spirits, who feel the need of standing out against the almost universal oppression and servitude of the intellect, have conceived the project of this declaration of Independence of the Spirit,—a copy of which I enclose.

Would you give us the hononr of uniting your own name with ours? It appears to me that our [illegible] are not out of harmony with yours. We have already received the consent of Henri Barbusse, of Paul Signac, the painter, of Dr. Frederick Van Eeden, of Prof. Georg Fri Nicolai, of Henry Vander Veldo, of Stefau Zweig and we expect the consent of Bertrand Russell, Selma Lager, of Upton Sintclai, Benedetto Croce, and others. We think of collecting at first three or four signatories for each country,—if possible, one writer, one savant, one artist—and then publish the Declaration making appeal chiefly to the intellectual elite of all nations. If you can recruit for us some names in India, Japan and China, I should be very much obliged. I could wish that henceforth the intellect of Asia might take a more and more definite part in the manifestation of the thought of Europe. My dream will be that one day we may see the union of these two hemispheres of the Spirit, and I admire you for having contributed towards this more than anyone else. Allow me to tell you in conclusion, how dear to us are your wisdom and your art, and accept, I pray, the expression of my profound sympathy."

To this M. Romain Rolland added the following postscript. "I have allowed myself to lay stress on certain passages of your lecture of 1912 at Tokyo, in one of my articles published during the War. I am sending it to you under a separate cover with the request that you will pardon the imperfection of the French translation. I enclose with it a little pamphlet, dedicated to one of our old philosophers of Europe, who has exercised a great attraction over my thought and whom perhaps you will love also—Empedocles of Agrigentum."

SIR RABINDRANATH'S REPLY.

The following letter was sent in reply by Sir Rabindranath to M. Romain Rolland:—

"When my mind was steeped in the gloom of the thought that the lesson of the late war had been lost, and that people were trying to perpetuate their hatred and anger into the same organised menace for the world which threatened themselves with disaster, your letter came and cheered me with its message of hope. The truths that save us, have always been uttered by the few and rejected by the many and have triumphed through their failures. It is enough for me to know, that the higher conscience of Europe has been able to assert itself in one of her choicest spirits through the ugly clamours of passionate politics; and I gladly hasten to accept your invitation to join the ranks of those free souls who, in Europe, have conceived the project of a Declaration of Independence of the Spirit."

Educational

New Deccan College.

The opening ceremony of the Willingdon College at Sangli was performed by Sir C. H. Setalvad, the Vice Chancellor of the Bombay University. There was a large and representative gathering of ladies and gentlemen, including, among them, the Chiefs of Sangli, Miraj (Senior and Junior), Jamkhandi, Ramdurg and others. The life members of the Deccan Education Society, including Principal Paranjpye and other professors of the Fergusson College and Dr. Mann, were also present.

The proceedings were opened by the Chief of Sangli welcoming the Vice-Chancellor and expressing the warm appreciation of the Chiefs of the Southern Maratha Country of the benefits to be derived from the College.

Principal Paranjpye invited the Vice-Chancellor to declare the College open. The College has received the warm support of all in the Southern Maratha Country; the Chief of Sangli has made available capacious buildings for housing the College till the permanent buildings come into existence. The Chief of Miraj has presented a good laboratory and library of 5,000 volumes and the Chief of Ichalkaranji has endowed large sums for scholarships. Further endowments were announced at Sunday's gathering. The College has created great enthusiasm and there are already more students seeking admission than can be accommodated.

After unveiling the photographs of Lord and Lady Willingdon and declaring the College open, Sir C. H. Setalvad addressed the gathering. He paid a warm tribute to Lord and Lady Willingdon and to the great educational work of the Deccan Education Society. That society, he said, with its noble and talented band of life-members has set an unique example of self-sacrifice and patriotism and they will bring to bear in the conduct of this institution their vast experience of over thirty years.

Proposed Relief to Parents.

The Board of Education have proposed to the Royal Commission on Income Tax that Income Tax relief should be granted to parents with children at a University. The scale proposes an abatement of £ 225 a year for a son or daughter between 21 and 25 years of age.

Appeal for Educational Scholarships.

The Maratha Aikyechha Sabha, which, for over thirty years, has been trying to ameliorate the condition of the Marathi-speaking Hindu backward classes, has petitioned to the Bombay Government for the grant of special scholarships to members of these classes following the precedent of the grant of the special scholarships to Muhammadans with a view to stimulate professional studies. It is pointed out that the number of Medical, Engineering, Forest and Agricultural graduates among the backward classes is extremely small and that it is in fact insignificant in proportion to the population. The Government has granted two scholarships of Rs. 10 each per month to students drawn from the backward classes attending the Medical and Engineering Colleges but it is urged that the value and number of the scholarships should be increased to Rs. 25 and 27, respectively. Lastly the Sabha points out that the bestowal of these scholarships would have beneficial effect in stimulating the educational progress of the community.

Mrs. Sinha's Gifts.

Mrs. Radhika Sinha, the wife of Mr. Sachchidananda Sinha has made a gift of about a lakh of rupees each to the Lahore, Allahabad and Patna Universities. The money will be appropriated to the foundation of a chair in the first two Universities and to the construction of a public library and reading room, at Bankipore wherein Mr. Sinha's splendid collection of books is to be housed and which is also to serve the purpose of a public hall for the holding of political and social meetings.

Sir H. Harrison and Modern Languages

Sir Heath Harrison, of Brasenose College Alderman of Hampshire and formerly a ship-owner of Liverpool, has offered the University of Oxford the sum of £25,000. The proceeds of the trust fund are to be expended as to not more than one-fourth of the annual income in providing instruction within the University in French and other modern European languages, and as to the rest of the income in the institution of travelling scholarships. It is provided that such travelling scholarships shall be held exclusively by natural born British subjects, and being undergraduate members of the University of Oxford, while studying French or other modern European languages in foreign countries.

In Convocation a decree will be proposed gratefully accepting the gift, decreeing the establishment of the fund, and making regulations relating thereto.

Legal

The Kaiser's Trial

It is announced that von Bethmann-Hollweg, after refraining at Government's express wish from the same step on May 20th, addressed on June 25th a communication to M. Clemenceau requesting the Allies to allow him to stand trial instead of the ex-Kaiser and placing himself at their disposal. Von Bethmann Hollweg says:— He bears for his period of office sole responsibility under the German constitution for the Kaiser's political acts and therefore claims that the reckoning, which the Allies desire to demand for the alleged acts against international morality and the sanctity of treaties, shall be solely demanded from him. He hopes that the Allies, in respect of the legal position fixed by public constitutional law, will yield to this urgent request.

A message from Paris subsequently stated: The Allies will not ask Holland to extradite the ex-Kaiser but will merely ask her in the name of the League of Nations to inform the ex-Kaiser that he must appear before an International Court or leave the country. It is expected that Holland as a member of the League of Nations will not refuse.

A high French authority on International Law in the course of an interview said: The proceedings against the ex-Kaiser would be carried out on moral grounds, therefore the sentence of the Court would be of an exclusively moral character. There could be no question of a sentence of death or imprisonment. Probably only the crimes of the ex Kaiser against international morality in starting the War and violating Belgian neutrality would be severely condemned. The Hohenzollerns would be declared for ever deposed and it would be made impossible for the ex-Kaiser to do further harm by allotting him a residence which he would be forbidden to leave.

Since the above was in the press, we learn that the five sons of the Kaiser and von Hindenburg have also offered themselves to be tried in place of the Kaiser.

Punitive Police in Amritsar

We hear, says the *Civil and Military Gazette*, that 200 punitive police have, to use the official nomenclature, been sanctioned and entertained in connection with Amritsar for the protection of the civil station for a period of three years.

Women as Magistrates

The Bill enabling women to be appointed magistrates passed its third reading in the House of Lords on 25th June with a clause added, confining its operation to women of 30 and over. The Bill now goes to the House of Commons.

The Amritsar Executions

Mr. Montagu has ordered the postponement of the execution of Bugga Ratanchand in connection with the Amritsar riots pending an immediate appeal to the Privy Council.

Lawyers and Satyagraha

Notices have been issued by the Bombay High Court under section 10 of the Letters Patent, against Messrs. Vallabbhai J. Patel, Barrister-at-Law, Jiwanlal Desai, Barrister-at Law, and Krishnalal H. Desai, High Court Pleader, to show cause why they should not be suspended from practice, or otherwise dealt with, under the Disciplinary Jurisdiction of the High Court on the ground of their being signatories to the *Satyagraha* pledge against the Rowlatt Act. Similar notices under the Bombay Regulations Act 12 of 1827 have been issued against Messrs. Kalidas J. Jhaveri, Manilal V. Kothari and R. B. Dabolkar, District Court Pleaders and signatories to the *Satyagraha* Pledge.

Madras Lawyers in the 18th Century

In the eighteenth century, the European lawyers of Madras came from almost every profession except the legal, says Mr. Dodwell in an interesting article which appears in the current number of the *Calcutta Review*, entitled, "Madras Nabobs." He writes that at the beginning of that century, the Madras lawyers were described as "broken linen-drapers and other cracked tradesmen." In the middle of that century, one Attorney was a man of all-work who had served Clive in his commissariat business. Three more were young servants of the Company who were destitute of any legal training or experience. Another was a decayed mariner and yet another a discharged soldier who had also been butcher to the garrison. Private trading was universal, even ministers of the Gospel were not averse to it. In 1727 a reverend gentleman was dismissed as "he had exchanged his study for a counting house and had turned super cargo." Even ladies were fond of trading. At Pondicherry, the wife of the Secretary to Government was selling chintz and carpets in 1745.

Medical

Mortality in Bombay.

The *Times of India* commenting on a recent debate in the Corporation on the high mortality in Bombay city, shows that though the death rate nominally stands at 88·29 this figure is calculated on the census of the population taken in 1911 and it is trustworthily estimated that the population now in the city is double of what it was then. Still the unusually high figures cannot wholly be attributed to the method of calculation, for the mortality is now nearly twice as high as it was at this time last year. The returns for plague, small-pox and cholera are unimportant and plague at any rate is much lower than last year. Dr. Viegas pointed out in the Corporation that a feature of the situation is the prevalence of pneumonia. The *Times of India* says:—In so far as this is a complication following influenza it may be caused by dust-borne germs, for dust is now very bad indeed in the city and to that extent must disappear when rains break, but pneumonia is also a complication of relapsing or famine fever and this is very prevalent. Germs are conveyed by vermin and so its spread is greatly encouraged by the terrible overcrowding of the city which is worse than ever.—

Anti-Influenza Measures.

The following press communique has been issued by the Education Department:—The method and value of nasal douching as a preventative of influenza:—

The Sanitary Commissioner with the Government of India recommends the douching of the nasal cavities and throat as preventative of influenza. The following description of the method of douching is published for general information:—(a) dissolve one teaspoonful salt in a pint of warm water, (b) gargle the throat with some of the solution; (c) place the remainder of the solution in a basin; (d) immerse the nostrils in the solution; (e) sniff slowly some of the solution up the nostrils until it is felt at the back of the throat; (f) raise the head from the basin and allow the solution to flow from the nostrils into a bucket; (g) repeat this process two or three times. The whole ritual should be carried out four or five times daily. The above procedure has been reported to have given very good results during the last epidemic in South Africa. For instance, out of 91 persons, mostly nurses, who were especially exposed to infection only three developed slight attacks.

Treatment of Rheumatism.

A new treatment described for joint affections, such as rheumatism, is being used very successfully at a foreign military hospital where it has been introduced. "Double nitro-peroxide" is employed, which actually "extracts" the inflammation. It is used mixed with a starchy substance which holds its action until it is placed on the skin over the deceased parts, from which, we are assured, it extracts the impurities, the germs and their poisons. The material is sprinkled on lint or gauze and placed on the skin. When the doctor removes the dressings, from six to twelve hours later, there will be seen blisters. If there is no infection the treatment will not affect the skin.

Cures for Influenza.

Doctors never differed more than they do to-day writes the *Popular Science Siftings*. They are not even in accord about the simple domestic remedies for preventing influenza. For instance, Dr. Robert A. Lyster recommends "a solution of permanganate of potash . . . for gargling and 'snuffing' up the nose." Sir Malcolm Morris says, "the solution of common salt and permanganate of potash for washing the nostrils and throat is a most horrible mixture." It is recommended by the Local Government Board. Sir St. Clair Thompson says, "No healthy nose should be douched . . . he is entirely opposed to the use of permanganate of potash." Others could be quoted to as varying an effect. Well may it be asked, what do the doctors know that they are agreed on?

Vitality of the Indian People.

The annual report of King George V Anti-Tuberculosis League, Bombay, for 1918, records: "The vital resistance has been reduced during the last 50 years by various social, economic and industrial upheavals which have tended to change the life and habits of the Indian people. The great expansion of towns, the growth of modern industries and the continual migration from villages to towns have revolutionised our methods of living to a very great extent. We have frequently given instances of cases coming under our observation of patients from Bombay going to upcountry and spreading infection there, and *vice versa*, people coming to Bombay from villages for work and contracting this disease in a few months. The outcome of this main cause has been to give rise to (a) overcrowding and insanitation, (b) poverty and want (c) high rents and dear food (d) intemperance, all of which tend to cause a vicious circle leading ultimately to the lowering of vital resistance."

Science

Indian Science Congress.

The seventh annual meeting of the Indian Science Congress will be held at Nagpur from January 13th to 18th, 1920. Sir Benjamin Robertson, Chief Commissioner, has consented to be the patron of the meeting, whilst Sir P. C. Ray will be the president. The following sectional presidents have been appointed :—Agriculture D. Glouster Esq ; Physics and Mathematics : Dr. N. F. Moss Esq ; Chemistry : B. K. Singh Esq ; Botany : P. F. Fyson Esq ; Geology : P. Sampat Iyengar Esq ; Medical Research : Lt.-Col. J. W. Cormwall, I.M.S. The Honorary local Secretaries are M. Osen Esq and V. Bose Esq. Further particulars can be obtained on application to the Honorary General Secretary, Dr. J. L. Simmonsen, Forest Research Institute and College, Dehra Dun.

New Method of Detecting Flaws.

An X-rays photograph of the interior of the carburetter of an aeroplane engine, showing a block in the petrol feed was one of many interesting exhibits at the Royal Society, when a joint meeting of the Rontgen and Faraday Societies discussed radiometallography.

It is now possible to take photographs through two inches of hard steel, and to detect flaws in castings of turbine propeller shafts, aeroplane engines, and new alloys. A difference in thickness of a 200th part of an inch is revealed in a steel casting two or three inches in thickness by X-rays photography.

Professor Bragg, F.R.S., showed X-rays photographs of various mechanisms in which flaws were detected without taking the intricate parts to pieces. So perfect is the picture made by the rays that the most delicate structure of a fresh cherry blossom was shown.

Telephoning To Canada.

It is announced by the Marconi Wireless Telegraph Company that they have succeeded in establishing wireless telephone communication between Ireland and Canada.

Mr. Godfrey Isaacs, at a conference lunch of the American Chamber of Commerce in London, referred to the matter, and prophesied that business men in New York would soon be able to converse clearly and easily with their equals in London by wireless telephone of any kind.

Indian Scientific Departments.

A comprehensive programme of the work of the various scientific departments for 1919-20 has been issued. The important work of the Geological Survey will be continued in Bihar and Orissa, the Central Provinces and Burma. Economic enquiries in wolfram and tin in Tennasserim, in sulphur and chromite in Baluchistan and Seistan and in mica in Bihar and Orissa will be conducted.

The scientific research work of the Survey of India will consist of a gravimetre survey, atmospheric refraction, meteorology, a magnetic survey and solar photography. Seventy-five permanently marked repeat stations in India, Burma and Ceylon will be visited and observation will be taken at each to determine the annual charges in the magnetic elements for the period of 1915–20.

Beside this, work will be done in various other directions such as forest, botany, chemistry and zoology and agriculture.

Academy of Scientific Navigation.

A representation having been received by Government from some Indian seamen on the question of establishing a fully equipped institution or academy for training Indians in the art of scientific navigation, as no facilities at present exist for their obtaining competency certificates for higher posts in the mercantile marine, and as difficulty has been experienced of late in the manning of new vessels from 200 to 600 tons, which are being constructed in India, the Government of Bombay propose to establish a State-aided institution on the lines of training institutions in European countries. Government have accordingly appointed a committee of the following officers and gentlemen to consider the proposal and submit their conclusions :—Port officer and Shipping Master, Bombay. Mr. F. C. Annesley of the Bombay Steam Navigation Company, Mr. F. L. Barnell, Marine Superintendent, Moghul Line, Capt. H. J. Rouse of the B.I.S.N. The committee will decide where the nautical institute can be most suitably situated, its equipment and staff and its establishment and maintenance cost.

Telephoning by Light

A searchlight telephone, in which conversation is transmitted by a beam of light, was exhibited at a Royal Society *cvnversazione* at Burlington House recently. Clear and distinct messages were received in the principal library some distance from the transmitter, and the inventor, Dr. A. O. Rankin, stated that the apparatus had been tested over a distance of 1½ miles with success.

Personal

The Late Dr. Nair.

The death of Dr. T. M. Nair in London on July 17 removes from public life a vigorous and interesting personality. Though a successful medical specialist, Dr. Nair has for long been associated with the public life of this Presidency. His interest in politics began in the early nineteen when he was yet a student at Edinburgh where he graduated M. B. & Ch. B. in 1894 and took his doctorate in 1896. He was Secretary and later President of the Edinburgh Indian Association, one of the editors of the University Magazine, and a member of the University Students' Association. Having apprenticed at Brighton he specialised in ear and throat for a time in Paris. And in 1897 he returned to Madras and set up a successful practice.

But he did not confine himself to medicine. He soon found his *Metier* in Municipal politics. His earnestness, his thorough mastery of details, his independence, and his eloquence soon won for him a commanding position in the Corporation of Madras. In fact, the way in which he led the opposition during the recent debate on the City Municipal Bill in the Madras Legislative Council is still fresh in the minds of all. And even those who could not see eye to eye with him in his recent political adventures found in him the sturdy champion of the people's rights.

It is unfortunate that all the energy, eloquence and courage of this indefatigable fighter should have been in recent years, misspent.

Hon. Krishna Sahay

The Hon'ble Rai Bahadur Krishna Sahay (who has been appointed member of the Executive Council, Bihar) was born in October 1868 and graduated from the Presidency College in 1890. He was enrolled as a Vakil of the Calcutta High Court in July 1892 when he commenced his practice in the district courts at Patna where he soon rose to eminence. On the creation of the Patna High Court he joined the highest tribunal of the Province and was elected President of the Vakils' Association about two years ago. He was appointed Law Lecturer of the Patna College in 1894 and held that post till 1909. In 1909 he was first elected a member of the Bengal Legislative Council by the Bihar Landholders' Association. After Bihar and Orissa were converted into a separate province the Rai Bahadur was returned to the Provincial Legislative Council in 1913 to the Imperial Legislative Council in 1916. On the creation of the Patna University he was nominated a Fellow and a member of the Syndicate by Government.

The Rai Bahadur, says the *Express*, has always been a staunch Congressman with sober and moderate views. He was one of the nineteen members of the Imperial Legislative Council who signed the famous memorandum on the Reforms. At the last session of the Council he took a lively part in the debate on the Rowlatt Bills and strongly opposed the passing of the measure. The Rai Bahadur cast in his lot with the moderate party of the Congress in 1918 and was nominated a member of its deputation to England in the beginning of the current year. He visited England in 1914 and has always been a keen social and political reformer.

Mr. Asquith.

The *New Statesman*, commenting on Mr. Asquith's speech analysing Lord French's First Book of Revelations, observes :—

The chief value of Mr. Asquith's speech, the public service which it rendered, was that it came as a sudden and vivid reminder of days not, after all, so long past, when personal loyalty and public decency had still a very important place in English political life. It is not a question of political opinions. In that matter it is quite possible in the future that for our own part we shall more often find ourselves supporting Mr. Lloyd-George than Mr. Asquith. But even Mr. Asquith's strongest political opponents cannot, and, in fact, do not, fail to recognise that quite apart from his extraordinary intellectual gifts, he is pre-eminently a man who honours the best traditions of British politics, and so exemplifies them in his own person that his disappearance from the political arena would leave a sense of more irreparable loss than even that of a Gladstone or a Disraeli.

The Late Mr. Ananda Row.

We regret to record the death on July 20 of Mr. T. Ananda Rao, C.I.E., late Dewan of Mysore at the advanced age sixty-seven. The late Mr. Ananda Rao, was the son of the great Indian statesman Sir T. Madhava Rao. Mr. Ananda Rao joined the Mysore service early in life and retired at the end of 1912 after two years of Dewanship. It was during his administration that the Mysore Economic Conference, which has very recently been made permanent, was established.

Political

India Office Reform

The following is the official summary of the proposals made in the report of the Committee on the Home Administration of Indian affairs.

(1) Save in the case of absolute necessity, legislation should not be certified for enactment by the Council of State without the previous approval of its substance by the Secretary of State, on the ground that its enactment is essential in the interests of peace, order, and the good government of India.

(2) Where the Government of India are in agreement with a majority of non-official members of the Legislative Assembly either in regard to legislation, or in regard to resolutions on the budget, or on matters of general administration, assent to their joint decision should only be withheld in cases in which the Secretary of State feels that his responsibility to Parliament for peace, order, and good government of India, or paramount considerations of imperial policy, require him to secure reconsideration of the matter at issue by the Legislative Assembly.

(3) As a basis of delegations, the principle of previous consultation between the Secretary of State and the Government of India, would be substituted in all cases in which previous sanction of the Secretary of State in Council has hitherto been required.

(4) In the relations between the Secretary of State and the Local Governments the principle should, as far as possible, be applied that, where the Government are in agreement with a conclusion of the Legislature, their joint decision should ordinarily be allowed to prevail.

(5) Assent to or disallowance of Indian legislation by the Crown should be signified by His Majesty in Council.

(6) The powers and authority now vested in the Secretary of State for India in Council should be transferred to the Secretary of State.

(7) The Secretary of State should be assisted by an Advisory Committee, to which he shall refer such matters as he may determine and he may provide by regulations for the conduct of the business of the committee.

(8) The Advisory Committee should consist of not more than 12 and not less than six members, appointed by the Secretary of State.

(9) Not less than one-third of the members of the committee should be persons domiciled in India selected by the Secretary of State from a panel of names submitted by non-official members of Indian Legislature.

(10) The tenure of office of a member of the committee should be five years.

(11) The members of either House of Parliament should be ineligible for appointment to the committee.

(12) The salary of the members of the committee should be £1,200 a year.

(13) The Indian members of the committee should receive a subsistence allowance of £600 a year in addition to salary, in respect of their domicile.

(14) Statutory provision should be made for recommendations (6) to (13) inclusive.

(15) The Secretary of State should regulate, by executive orders the conduct of correspondence between the India Office and the Governments in India.

(16) Action should be taken with a view to the transfer of the agency work of the India Office to a High Commissioner for India, or some similar Indian Governmental representative in London.

(17) No formal system of interchange of appointments between a member of the India Office and India services can be recommended, but deputation between the two countries should be encouraged.

(18) Occasion should be taken now and then to appoint an Indian to one of the posts intermediary between the Secretary of State and heads of departments.

(19) The charges on account of political and administrative work of the office should be placed on the estimates, those on account of agency work of the office being defraved from Indian revenues, the appointment to be determined by agreement between the India Office and the Treasury.

(20) The Committee are not in favour of the proposal to establish a Select Committee of the House of Commons on Indian affairs and Sir James Brunyate, Prof. Keith and Mr. Basu have stated their views in a separate memorandum.

The Joint Committee

In the House of Lords the following were appointed on the motion of Lord Sinha to serve on the Joint Committee of the Government of India Bill: Lords Crewe, Selborne, Middleton, the Duke of Northumberland, Lords Islington, Sinha and Sydenham. Among the members of the Commons appointed to serve on the Committee are Mr. Montagu, Sir Henry Craik, Mr. T. J. Bennett, Sir Donald Maclean, Mr. Ben Spoor and Commander Ormsby Gore.

General

Mr. Gandhi on Civil Disobedience

In the course of a letter to the press dated the 21st July, Mr. Gandhi writes :—The Government of India have given me, through His Excellency the Governor of Bombay, a grave warning that the resumption of civil disobedience is likely to be attended with serious consequences to public security. This warning has been enforced by His Excellency the Governor himself at the interviews to which I was summoned. In response to these warnings and to the urgent desire publicly expressed by Dewan Bahadur L. A. Govindaraghava Iyer, Sir Narayan Chandavarkar and several editors, I have, after deep consideration, decided not to resume civil resistance for the time being. I may add that several prominent friends belonging to what is called the extremist party have given me the same advice on the sole ground of their fear of a recrudescence of violence on the part of those who might not have understood the doctrine of civil resistance.

The Calcutta Postmen.

The *Catholic Herald* takes up the Calcutta postmen's case and comparing it with that of the railway employees who threatened a strike writes as follows:—"Some time ago, the Covenanted Officers of a big Railway Company respectfully represented to the authorities that they and their families were starving on Rs. 350 a month, and that unless they were given Rs. 500 they would go on strike, hold up all railway traffic, starve town and country, cut off troops and supplies necessary to carry on the Afghan War and suppress the revolt in the Punjab. A big gentleman went to Simla, and there other big gentlemen sat in conclave, with the result that the Covenanted Officers got the Rs. 500 they claimed, and were warmly congratulated on their patriotic restraint and law-abiding behaviour.

"A week later, the Calcutta postal peons respectfully represented to the authorities that they and their families were starving on Rs. 15 a month, and that unless they were given Rs. 20, they would go on strike. No big gentlemen took any notice of it, and on strike they did go, with the result that one man got 20 days' rigorous imprisonment for being the Treasurer of the Strike Funds, five others were condemned to three weeks' rigorous imprisonment for being the leaders, eight others were fined, others were sacked, and the rest pardoned and kept on the old rates.

2nd Clown: But is this law?

1st Clown: Ay, marry, is't crowner's quest law.

2nd Clown: Will you ha'the truth on't? If these had been white gentlemen .... &c.

1st Clown: Why, there thou say'st: and the more pity that great folk should have countenance in this world to hang the public more than their even Christian. Come, my spade."

Child Welfare in India.

A Press Communique states: The unhappy condition of Indian women in child-birth and the high rate of infant mortality in India are so well known that the public will undoubtedly welcome the announcement that an exhibition in maternity and child welfare will be held in Delhi next February under the patronage of Her Excellency Lady Chelmsford.

The problem before the organisers is how to adapt exhibitions of a similar kind which had been held in other countries to the special needs of India and it is hoped that the educated public not in Delhi alone but in other parts of India also will co-operate as far as possible. There must be many people both Indian and European, who have thought on this subject and advice exhibits or gifts of money will be gratefully received by the organisers. Further information can be received by application to the Honorary Secretary, Infant Welfare Exhibition, Dufferin Fund Office, Simla.

The King-Emperor's Message

The following Royal Proclamation by the King-Emperor, dated 1st July, 1919, is published:—

Whereas a definite Treaty of Peace between us and the Associated Governments and German Government was concluded at Versailles on the 28th June last, in conformity thereunto I have thought fit hereby to command that the same be published in due course throughout all Our dominions and we do declare to all Our loving subjects Our will and pleasure that upon the exchange of ratifications thereof, the said Treaty of Peace be observed inviolably as well by sea as by land in all places whatsoever, strictly charging and commanding all Our loving subjects to take notice hereof and to conform themselves thereunto accordingly.

Given at Our Court at Buckingham Palace this first day of July in the year of Our Lord 1919 and in the 10th year of Our reign.

God save the King-Emperor.
